5. *Library Tracts*. — One tract (no. 4) has been added to the series. It is on library buildings and rooms, and was prepared by Mr. Charles C. Soule. With the present great interest in the subject of library architecture, this tract should prove one of our most useful publications.

6. *Printed Cards for Periodicals* not covered by "Poole's index." — The issue of these cards has gone on steadily, the number of titles printed in 1901 being 2,849 as against 2,843 in 1900, and 2,916 in 1899. The estimated expense of \$75 per year for the entire set has not been exceeded nor quite equalled. As the advantages to the smaller libraries, or those having special collections, of subscribing for the needed portion of these cards come to be more recognized, the number of partial subscriptions has largely increased and is now fifty-one. As will be observed there is a small profit on these cards. A further increase in the number called for would permit a reduction in the price.

7. *Cards for "Miscellaneous Sets"*. — This has been a popular and successful feature of the Board's work. In 1901 cards were issued for six such sets: Old South Leaflets, National Museum Bulletin, Smithsonian Miscellaneous Collections and Contributions to Knowledge, U. S. Bureau of Education Circulars, and Massachusetts Historical Society Collections. The

demand for these cards is such that one set is already out of print, and the others nearly so. Three additional sets are already issued in 1902, and others will follow. Suggestions of additional sets which should be so indexed will be gratefully received. By arrangement with the Massachusetts Library Club and the Massachusetts State Library, a set of cards for the Massachusetts Public Documents was issued at the bare cost of the cards and printing, and the supply was at once exhausted.

Cards for the British Parliamentary Papers are in type and will be issued probably this month. They will be found very useful, even where, perhaps especially where, these Papers are not regularly received, as they will be a guide in the selection of such as may be wanted.

8. The Board has undertaken the issue of cards prepared by the Bibliographical Society of Chicago indexing the contents of the leading bibliographical publications (and the bibliographical contents of library periodicals). Subscriptions are being received for these cards, and may be made to cover all issued or such of them as refer to selected periodicals. Special attention is invited to this important undertaking.

9. *Portrait Index*. — This will be one of the Board's largest publications in book-form, probably exceeded only by the A. L. A. Index. The material required by the plan of the work is nearly all in hand, and the alphabetizing and digesting of this material is under way. This should prove one of the most useful of reference books.

10. *English History Cards*. — The issue of these cards, edited and annotated by Mr. W. D. Johnston of the Library of Congress, has been continued under somewhat adverse circumstances, which resulted in the delaying of the cards for the last publications of 1900 until May of this year. Those for books of 1901, it is hoped, will be issued relatively earlier, and probably in two portions instead of four. This publication still lacks sufficient support, while highly prized in a few libraries.

11. *Reading for the Young* has been al-

lowed to go out of print. The time has come when an entirely new work in this line should be prepared, and it is to be hoped that with the present development of children's librarianship, and the increasing demand for a good up-to-date guide to children's reading, such a work may soon be forthcoming.

12. *List of Subject Headings*. — This work is much in demand, and has for some time been more than self-supporting, so that its compiler has been receiving some slight return for his work, which, however, was freely rendered as a labor of love.

13. *List of Books for Girls and Women*,

14. *Bibliography of the Fine Arts and Music*. — These continue to have a slow sale, far from commensurate with their real value. The Board will apparently not be able for a long time to cancel its indebtedness to Mr. Iles for his financial support of these publications. It should be said that he asks for no payment except such as shall come from sales, the indebtedness to him thus constituting no charge on the assets or income of the Board except upon this one account.

15. *A. L. A. Catalog of 5,000 Volumes*. — Just as this report goes to press, we are advised of the recent action of the N. Y. State Library Association and State Library, by which the preparation of an entirely new edition of this book (the former edition being entirely out of print and also out of date) is assured in the near future; and that its publication under the auspices of either the Library of Congress or the U. S. Bureau of Education is also assured. Present plans look to the issue of printed catalog cards for this entire list by the Library of Congress at very low rates, so that new libraries using this list as a basis of purchase may secure the necessary catalog cards at once, at an expense much below that of cataloging in an inferior manner for themselves.

16. *Handbook of American Libraries*. — The Board has not received this work for publication as yet, but it is still in the hands of the committee charged with its preparation.

Attention is called to the financial statement appended hereto. It should be noted that the account is closed Jan. 1, 1902, and the apparently large balance on the debit side is accounted for almost wholly by one or two items like the amount due Houghton, Mifflin, & Co., which represents the entire cost of the new edition of the "A. L. A." index, the sales of which had but just begun. In another year this account will be nearly or quite balanced.

The payment of \$600 by the Trustees of the Endowment Fund toward the support of our

publications authorized by the A. L. A. Council was not actually made until after Jan. 1, 1902, though it properly should belong to the year 1901. This would have increased our cash balance as stated by this amount.

It remains true, as was said in last year's report, that the proper conduct and development of the work of the Publishing Board "requires a better financial condition than it yet has." One of the most important questions that can come before the Association is how to secure this.

REPORT OF THE COMMITTEE ON LIBRARY ADMINISTRATION.

BY HILLER C. WELLMAN; W. R. EASTMAN; N. D. C. HODGES.

THE subject of Library Administration is so broad that the committee has been in doubt as to the scope of its work. Any comprehensive treatment would mean a large volume. The committee determined, therefore, to give consideration to a few definite subjects and especially to recent developments.

COST OF CATALOGUING, ETC.

Considerable time was spent in drawing up tables of statistics, with a view to getting accurate figures on the cost of getting a book on to the shelves of a library. The attempt had to be abandoned. Dr. Steiner in his interesting paper on the subject could make only a vague guess as to the cost in his own library; and owing to the overlapping of the work of different departments and the absence of suitable statistics, it seems hardly feasible to get an accurate estimate of this item of expense.

A rough idea may be gained by examining the cost of recataloguing various libraries where outside assistance has been employed, which shows usually a cost varying from 10 cents to 20 cents per volume. This figure includes a shelf-list, but does not include the cost of ordering and accessioning. It does include, however, the time spent in hunting up and extracting old cards from the catalogue, and in erasing old numbers on the book-plates.

One figure given to the committee showed a cost of cataloguing amounting to only six cents per volume.

In another case an experienced library organizer states, "With such local help as I can train and manage I can handle 1,000 books in a month for a small public library in a fairly satisfactory way." Allowing a hundred dollars per month for salaries, the cost, exclusive of supplies, ordering, and shelf-list, would be 10 cents per volume.

At Brookline, Mass., an expert classifier and one or two assistants have been employed for a year in reclassifying the library on the decimal system. A highly-paid classifier was se-

cured so as to ensure the best possible work. A new shelf-list has been made and the catalogue and catalogue cards have been thoroughly revised, many of the cards being newly typewritten. The cataloguing is rather elaborate with many analytical cards. During the year 7,347 volumes have been reclassified and the service cost \$1,384.60; that is, 18 $\frac{3}{10}$ cents per volume. It is the opinion of the classifier and also of the librarian that the time consumed in looking for books temporarily out of place, in searching for cards in the old catalogue, — especially when the previous cataloguing was erratic, — in erasing numbers, in cancelling entries on the old shelf-list, and in making over imperfect cards, has made the work certainly as great and perhaps greater than it would have been if the books had been ordered and set up anew. If it had been possible, it would perhaps have been an economy to recatalogue the books entirely anew, and throw away the old cards bodily, rather than to pull out each set of cards and attempt to make them over. The cost of supplies hardly exceeds 1 $\frac{2}{10}$ cents per volume, so that 20 cents per volume is a generous estimate of the cost of putting non-fiction on the shelves of that library of 60,000 volumes. For fiction, of course, the cost would be very much less, probably under 10 cents per volume.

On the whole, it is safe to say that for the ordinary public library of 50,000 volumes the entire cost of getting a book from the dealer to the shelves, omitting only the cost of selecting the books to be purchased, ranges from 10 cents to 25 cents per volume. This cost is likely to be materially reduced by the use of the printed catalogue cards issued by the Library of Congress, a report of which follows.

PRINTED CATALOGUE CARDS ISSUED BY THE LIBRARY OF CONGRESS.

Through courtesy of the Librarian of Congress a joint circular was sent out containing requests for information regarding the improve-

ment in the distribution or in the form or contents of the printed catalogue cards issued by the Library of Congress, and also certain questions regarding their use for the enlightenment of the committee.

About 110 replies were received, but only 70 of these were from libraries where sufficient cards had been used to make the answers of value. Of these, 36 used the cards for maintaining one card catalogue only, while 31 ordered duplicate sets to provide for two or more catalogues, in two cases the number of catalogues being 14 and 19 respectively. Fourteen libraries used the cards also for shelf-lists.

In five libraries it was thought no saving of time had been effected, but in 60 libraries a marked saving of time was observed. In most cases this saving was estimated, although in one or two cases a similar result was reached by actual account of the time consumed for special lots of books in ordering, checking, sorting, and marking the cards, handling the books, etc. The estimated saving ranged in amount from ten to seventy-five per cent., and the majority were of the opinion that from one-third to one-half of the time of the cataloguer was saved. A further economy in some instances resulted from the employment of cheaper labor for the mechanical work of ordering the cards.

There was pretty general agreement that the stock of the printed card is not at present quite equal to the standard Library Bureau stock, a fact especially shown when erasures are necessary; but there was still greater agreement as to the excellence of the cataloguing. The replies clearly demonstrated the fact that cards for current copyrighted books are received with great promptness, nine-tenths of them, perhaps more, within a week of ordering, when the library is not too distant from Washington; and in general the same is true of current non-copyright or foreign books when the cards are ordered from the proofs. But delays are considerable and the proportion of cards not supplied is large, when the cards for foreign books are ordered without first ascertaining that the book has been received by the Library of Congress.

When the cards can be sent for at the same time that the book is ordered, they are fre-

quently received before the book. When they are ordered after the book has been received, in most libraries it is found feasible to place the books in circulation at once without waiting for the cards, by keeping a record on a memorandum slip, which sometimes serves afterward as copy for the printed bulletin of accessions. In large libraries, where more elaborate record is needed, a temporary author-card is inserted in the catalogue; and in small libraries simply checking the receipt of the cards against the title in the accession book is sufficient to ensure that no book slip through without being catalogued.

From these facts your committee conclude, that by ordering printed catalogue cards from the Library of Congress for all current, copyrighted books (a class comprising most of the accessions of the ordinary American library), and by ordering cards for other books so far as proofs are available to show that they have been catalogued, it is now possible for public libraries to secure promptly printed catalogue cards, not only more legible than manuscript cards, but vastly superior in fulness and accuracy to the cataloguing of the average library, and at the same time costing less than the ordinary manuscript cataloguing.

The advantage seems so great that minor differences in the form of entry, etc., should not be allowed to stand in the way.*

Besides use in the catalogue, these printed cards are now or may be employed in the following ways: for a card shelf-list, for a chronological or accession list, for duplicate catalogues especially at branches, for special catalogues or card bibliographies, for copy for the printed bulletin, for exhibiting accessions on the bulletin boards, for notices to persons interested of the receipt of special books, for bulletins of accessions in schools or branches, possibly for charging records, and — when selected cards are received without order — as suggestions for purchases. Doubtless with the present ability to procure these cards at small cost, other important uses for them will soon be found.

We regard this co-operative cataloguing, made

* In the opinion of the chairman, a library formerly using a card which varies as much as half an inch in length from the printed cards can advantageously use the latter by cutting them to the proper height.

possible by the use of the Library of Congress printed cards, as the most important development in library administration in recent years, and unhesitatingly recommend its advantages to libraries which have not yet profited by them.

CO-OPERATIVE LISTS, ETC.

A useful series of brief co-operative lists for free distribution among the patrons of a library has been issued by the New York Library Association. The subjects covered thus far are "The United States and its government," "Debating," "Botany," "Gardens and gardening," "Books that most men like," and "Stories of delicate workmanship." These lists are without library numbers and each contains a dozen or more titles of books in most libraries. By purchasing them from Mrs. H. L. Elmendorf, of Buffalo, a library is able to distribute among its patrons these attractive little bibliographies or bulletins at the extremely moderate outlay of fifteen cents per hundred.

Another co-operative enterprise of great value is the list of fiction for children in preparation by the Children's Librarians' Section of the A. L. A. This list is to be longer than the New York lists, and will eventually include non-fiction, and will be a catalogue or finding-list of children's books. A simple form of numbering is to be used, and by making the numbering of the children's books conform, it should be possible for libraries of the smallest means to procure and retail to their juvenile readers for an almost nominal sum the best catalogue of children's books that can be devised by the combined efforts of the leading children's librarians in the country.

Other publications to be recorded are, a graded catalogue of books for school children issued by the Buffalo Public Library, 30 cents; a list of the first 1,000 volumes for a public library, issued by the New Jersey commission as an appendix to their second report; the edition of 1902 of a "Suggestive list of books for a small library" recommended by the state commissions of Wisconsin, Minnesota, Iowa, Nebraska, Idaho, and Delaware; and the handbook of library organization issued by the Minnesota library commission in co-operation with the Commissions of Iowa and Wisconsin.

HOME DELIVERY.

Delivery of books at the houses of readers is a new feature tried by a few libraries. The committee has received reports on the subject from Milton, Somerville, and Springfield, Mass.

In Springfield Mr. Dana made the experiment of sending in April, 1901, 1,200 circulars, offering to deliver books at the door to all cardholders in a household once a week for ten weeks, upon payment of five cents per week — not per volume delivered, nor per individual, but five cents per *household*.

A hundred and twenty households, representing an average of three borrowers each, paid for the delivery, and about 222 volumes were issued weekly. Nearly 50 per cent. of the subscribers were not previously users of the library. The receipts were \$6 per week, and the cost to the library for horse-hire and the services of a high-school boy, etc., amounted to nearly \$10 per week.

The next autumn a thousand circulars were sent out, offering to continue the home delivery at the rate of 8½ cents per week. Less than sixty households subscribed, and the number decreased by May 1, 1902, to thirty-two. The receipts the past year, therefore, have ranged from a maximum of \$4.80 to a minimum of \$2.56 per week, and the cost has averaged from \$3.75 to \$4 weekly, including \$2 per week for horse hire.

This latter figure represents the cost of the delivery proper, and does not include the expense of sending circulars and lists of books, or of looking up and charging the books.

The percentage of fiction issued in this way has been somewhat higher than that at the library. The most frequent complaint was caused by the failure to get the book desired, especially the new novel. Generally, when unable to fill an application, the library chose a volume as a substitute, and many readers left to the library the selection of books to be sent. This gives the library a valued opportunity to distribute good literature, but the reader is not always satisfied, and the labor involved is a very considerable item.

In Somerville Mr. Foss began last October a system of home delivery, conducted by school boys, usually twice a week. Each boy has assigned to him a district containing about

3,000 inhabitants, and this he is expected to canvass thoroughly, and to deliver and collect books at two cents per volume the round trip. This fee he pockets for his labor, and a good boy should earn about \$1.50 per week.

Thus the library is not involved in the scheme financially, but must devote much time to organizing and supervising arrangements and to selecting and managing the boys.

Between two and three hundred volumes are delivered weekly, and the character of the literature is about the same as that issued at the library.

In Milton Miss Forrest began, Jan. 1, 1902, a system of home delivery covering sections of the town remote from the library, which is paid for by the library without any charge to the borrower. A man is hired to "make the delivery on Thursday of each week, for \$5 a delivery, with the understanding that the price is to remain the same, should the number of books to be delivered increase."

The messenger serves about eight hours per week, and, of course, distributes call slips, bulletins, fine notices, etc. The delivery has increased from 23 to 80 volumes per week, making the cost now about seven cents per volume, and fiction is only 62 per cent. of the issue. The home delivery, Miss Forrest states, "has increased the circulation and the number of card-holders, and has reached many residents of the town who have never before used the library."

These are the facts so far as ascertained. Your committee is unwilling yet to pronounce an opinion, but thinks the Association should give careful consideration to the matter, with a view to weighing the *pros* and *cons* and determining whether the advantages of greater convenience to readers and of interesting persons not previously using the library, outweigh the disadvantage of losing the benefits derived by the reader from visiting the library itself.

LIBRARY INSTITUTES.

In library work it is of the first importance to provide capable and earnest librarians. The training schools and the great annual library meetings, supplemented by state associations and local clubs, are doing essential work, but the library movement outruns any and all of

these influences. Small libraries are multiplying more rapidly than trained librarians can be secured, and with resources far too slender to afford trained service. Not one library in ten, in many states not one in twenty, is directly reached by the most enthusiastic or most instructive gathering at state or national library meetings, or by any of our library schools or training classes. Every state commission feels the necessity of going out personally to talk with trustees and librarians about the most elementary and practical things.

From the first it has been a feature of the Wisconsin work that those in charge of traveling libraries in given districts have been called together to talk with the librarian of the commission and to compare notes. In Western Massachusetts meetings of librarians, trustees, and townsfolk have been held at various points to learn from the experience of representatives of larger institutions who went expressly to visit them. Similar work is doubtless done in many of the states. A systematic effort of this kind is reported this year from New York.

Under the direction of a special committee of the New York Library Association a series of institutes was held with the distinct purpose of improving library methods. The state was divided into eleven districts. In three of these where there were local library clubs the work was commended to their attention. For each of the other eight districts a local secretary was appointed, furnished with a list of libraries, and requested to put himself at once in communication with them, and take steps to awaken an interest in their coming together. Dates in April and May were assigned for meetings and a general program prepared, covering three sessions of two to three hours each.

The subjects chosen presented in miniature a somewhat complete course in library economy. An evening of popular addresses to the public was also part of the plan, and in three cases these were supplemented by a lantern exhibition of library building plans.

For each institute a conductor was appointed who called in such help as was available and was responsible for details. The first institute opened April 15, the eighth meeting closed May 10. Three meetings were held the first

week, two in the second week, and three in the last week.

The interest shown was on the whole extremely gratifying. Numbers at the instructional sessions ranged from 22 to 75; at the popular sessions from 25 to 200. The number of libraries represented was from 8 to 18. At the largest gatherings special efforts had been made to interest the women's clubs.

The topics were presented in their very simplest terms and familiarly discussed. Where numbers were small the result was probably more valuable on that account to those present. The plan was considered a success in bringing together librarians of experience and those who lacked in this respect. The one hundred and ten libraries reached were only one in six of those invited, which fact offers a wide field for future effort in the same direction.

The cost of such meetings and of the organization required to maintain them presents a difficulty. In this case the expense was practically shared by the state association, the state library, and several private individuals who gave their services and paid their own bills. For many reasons it would be desirable for the state to be wholly responsible for work like this as it is for similar work with teachers.

Whether conducted by state, club, or individual effort, your committee commends this form of activity to all who have at heart efficient administration in the smallest libraries.

STUDENT HELP.

In a library staff where there may be from ten to a hundred or more members, it is certain that the work is not all of the same grade, and does not all of it require special library training. The question is whether for minor positions it is desirable to employ boy and girl students from high schools and local colleges.

With reference to pages, every librarian knows that there is no future in a library for the boy of fourteen who leaves school to accept a position as page. The boy is tempted by the pay, but after being in the library three or four years he has received little training which is of advantage in the business world. Some librarians report that their pages secure good positions in offices and factories, but the majority would consider it an injury to a boy of limited

education to tempt him into a library as a page.

The libraries which report favorably on student help are: the Detroit Public Library, where school boys have been employed as pages; the Cleveland Public, where student help both from colleges and high school has been employed for evening assignments, dinner hours, and half-holidays; the John Crerar Library, for evening service only; the Chicago Public, which is now working under civil service rules, which prohibits any preference being given to special classes of applicants, but formerly got satisfactory results from student helpers "who, as a rule, are bright and good workers;" the Providence (R.I.) Public, which employs students from Brown University as clerks during the evening and pupils from the high schools as pages—"These have frequently been students of much force of character (who, perhaps, otherwise would not have undertaken anything so laborious) and we have profited from their characteristic ability;" the Salem, Mass., Public Library, where high school boys have been employed; the Case Library, at Cleveland, with a limited experience of two instances only; the Boston Athenæum, which has employed college students for Sunday duty "very successfully in our particular case." Mr. Bolton remarks: "This is a serious problem, but I fear there is no solution unless the boys will study, — few will;" the Amherst College Library, which has employed Amherst students; the Boston Public, where student help has been used for Sunday and evening service and for extra work on Saturdays, — Mr. Whitney states that the results have been very favorable; the Minneapolis Public Library, — Dr. Hosmer reports: "We have had excellent service from university and high school students and see no reason against employing them;" the Lowell, Mass., Public Library and the Brooklyn Library, where they have just begun to engage high school boys "for evening work and find them much better than ordinary pages — more intelligent and more interested;" and, finally, the Worcester, Mass., Public — Mr. Green emphatically states that, in view of their experience, he looks very favorably on the employment of school boys

and girls and college students, as the library offers no future for employees of limited education.

On the other hand, Dr. Canfield, of the Columbia University Library, writes: "I have used what is called 'student help' by the hour in several institutions before coming here—both in the library and elsewhere—and have always found it the most expensive and least effective service that could be secured," and adds that it is not possible to offer a fairly well-educated, bright, ambitious boy sufficient inducement to remain in the library. It is generally true that "as soon as we have a boy thoroughly well trained as a page, some downtown office gathers him in and we are obliged to begin over again." Miss Lord, of Bryn Mawr College Library, gives it as her experience that "such amateur work is not of sufficient money value to the college to pay the students enough to amount to real help; he or she had better borrow the same amount of money and finish in a shorter time, and the library had much better get assistants giving their time and undivided interest to its work;" Mr. Collins, the reference librarian at Princeton, is also inclined to the belief that college students ought to be able to get more remunerative side jobs. Mr. Anderson, of the Carnegie Library at Pittsburgh, reports that they have tried student help, but do not approve of it. Mr. Crunden, of St. Louis, states that formerly student help was used in St. Louis, but he does not believe it a good policy; most of the boys drop out after two or three years and seek positions elsewhere. An effort is made to stimulate the boys to study and the reading of good books.

In view of the above testimony, and notwithstanding some adverse criticism, it is the opinion of your committee that in many instances by employing college students for special work, intelligent and cultured service can be secured at a low cost; and that in gen-

eral by hiring high school students by the hour to serve as pages and in other minor positions, a more intelligent worker can be retained at less cost, and without cumbering the staff with permanent employees who as their time of service lengthens will naturally clamor for advancement to positions for which lack of general education renders them unfit.

RENEWAL BY TELEPHONE.

The question of allowing renewal by telephone has been discussed at some length in the library periodicals. Your committee simply call attention to the purpose of requiring a renewal, which is to force the borrower to take a certain amount of trouble in order to retain a book after it is due, this with a view to ensuring its being returned and made available for other readers unless the first reader really desires to use it, in which case he will take the necessary pains to have the time extended. Your committee are not certain that the interests of the public are benefited more by the convenience of using the telephone in cases of legitimate renewal than they are harmed by its abuse in cases where the borrower merely wishes to avoid the trouble of returning on time a book which he has finished reading; and we suggest this question for discussion.

FINES.

Many of the poorer patrons of a library, especially children, are debarred from using it because of having incurred small fines which they are really unable to pay. A two-cent fine often deprives such persons of the privilege of ever again drawing books. We repeat the suggestion, which has been made before, that for young children at least, an alternate penalty be fixed, so that deprivation of library privileges for a certain period may be considered as equivalent to the payment of a small fine, and thus readers may not be driven permanently from the library's influence.

REPORT OF COMMITTEE ON PUBLIC DOCUMENTS.

BY ROLAND P. FALKNER, *Chairman.*

YOUR Committee on Public Documents desires, before presenting its report, to express its regret at the retirement of its former chairman, Mr. R. R. Bowker, and to bear testimony to the efficiency of his long continued service. He has taken an active interest in the work of legislation. During his connection with the committee some of the most glaring defects in the system of printing and distributing the public documents of the United States have been removed, and to this result his efforts have contributed in no mean degree. His successor knows no better program for the work of the committee than to follow the course marked out by Mr. Bowker.

LEGISLATION.

No legislation affecting the public documents has been accomplished by the present Congress. Two measures of interest to librarians are before it. One authorizes the Superintendent of Documents to distribute to libraries the first editions of the Nautical Almanac and American Ephemeris instead of the second editions as heretofore.* A second measure is of wider interest. A bill, Senate 4261, providing in substance that the publications of the executive offices shall be issued to libraries as soon as they are printed, has passed the Senate and is now in the possession of the Committee on Printing of the House of Representatives. The text of the bill is appended to this report. It provides no general amendment of the existing laws, but contains a few simple provisions of especial interest to libraries. Besides the features already noted, it increases the number of volumes at the disposal of the Superintendent of Documents for distribution to 600. At the present time the law does not give him a sufficient number to meet the demand were all possible depositories actually designated.

This Association has placed itself on record over and over again in favor of a more expeditious

delivery of public documents to depositories. The Superintendent of Documents has kindly furnished tables showing the date of delivery to libraries of some of the more important annual publications. These have been selected because the offices in question are generally prompt in issuing their reports. Assuming that the cloth-bound issues are ready January 1 of the year following the close of the fiscal year, the following table shows the approximate delay in distributing them to depositories:

TABLE SHOWING APPROXIMATE DELAY IN MONTHS IN DISTRIBUTING CERTAIN REPORTS.

	Finance.	Navigation.	Ind. Affairs.	General Land Office.	Navy, Dept.	Post Office.	Average.
1890	48	..	44	40	42	78	50
1891	37	..	34	32	32	40	35
1892	44	..	56	31	31	31	39
1893	25	..	26	25	26	26	26
1894	15	..	14	15	13	14	14
1895	22	..	25	25	24	24	24
1896	35	36	27	29	36	29	32
1897	25	32	24	24	25	24	26
1898	13	25	23	27	12	23	21
1899	15	15	15	15	15	16	15
1900	13	16	..	13	15	13	14

It shows that from a period of three to four years the interval between printing and distribution has been reduced to a little over a year. This probably represents the maximum which can be obtained under the present law, and the zeal and energy of the Superintendent can accomplish nothing further in this direction without modification of the law. Even at the present time the date which intervenes between the first publication of the regular reports and the issue of the same in the sheep-bound form to libraries is considerable and vexatious. To eliminate this delay is an object much to be desired. Not only will it obviate the necessity of securing, in the case of the larger libraries, duplicate copies of these volumes, but it will probably secure to these libraries the receipt of the cloth-bound issues at an earlier date than

* Since the preparation of this report the resolution in question has been passed. — R. P. F.

they would be obtained through private correspondence.

As respects the scope of the act it suffices to say that it does not apply to publications prepared by Congress only, and would, therefore, have no reference to the House and Senate reports. The Senate documents of the 56th Congress, second session, comprise 34 volumes, of which 15 would not have been affected by such a law, giving an immediate distribution of 19 volumes. The House documents numbered 137 volumes and of these 17 volumes only have been undisturbed by such a law, giving an immediate distribution of 120 volumes. This would have left for distribution in the document form 43 volumes (including the reports) instead of 182 as the matter actually stood.

As the passage of the bill described would remove the most serious inconvenience in the present method of distributing documents, your committee presents a resolution expressing the approval of the Association of this measure.

There are, of course, a few other matters connected with the federal documents which might appropriately be the subject of suggestion or recommendation on the part of the Association.

1. All who have occasion to use those volumes of documents which contain a large number of separate issues have appreciated the difficulty in finding such as are desired. A return to the old method of printing the document number on each page of the document would avoid this inconvenience.

2. Beginning with the 3d session of the 53d Congress the bound volumes of the *Congressional Record* issued to depository libraries have borne no indication of the dates covered by each volume. The inconvenience which results from this omission, since a majority of references in the Record are by date and not by volume or Congress, has been felt by librarians generally. Here, again, a return to the old method of lettering the backs of the volumes would be desirable.

3. The inadequacy of the indexing of the *Congressional Record* is a source of constant trial to those who have to use it. The index at present is purely a title index, and in no

sense of the word a subject index. In view of the wide latitude permitted for debate on certain measures, such as appropriation bills, it frequently happens that the most important speeches are indexed under titles which give absolutely no clue to their contents. A single illustration from the present session of Congress will suffice. Before the introduction of the Cuban reciprocity bill there had been no less than five speeches dealing with the relations of the United States with Cuba. The indexes to the *Congressional Record* do not, however, enable the searcher to discover the fact. It would be to the advantage of all concerned if the indexes at least to the bound volumes were made much fuller, and while preserving the excellent features of the present index should add the subject feature also. The additional cost of such work would be amply repaid by the benefit derived.

It has been deemed proper by your committee to make these matters the subjects of appropriate resolutions.

PUBLICATIONS.

The year past has been particularly rich in publications concerning the federal documents. The Superintendent of Documents has issued the document index for the 56th Congress, 1st session, and also for the 56th Congress, 2d session. The latter has not yet been distributed in the sheep-bound edition. If the law already noted were in force this document would already be in the libraries and the documents of the 56th Congress, 2d session, would not lack a key.

A comprehensive catalogue for the 55th Congress has also been issued. The advantage of having all the matter pertaining to different sessions of the same Congress in one volume is plainly shown by an examination of the present issue.

The most noteworthy achievement of the year has been the publication of the tables and index of the Congressional documents from the 15th Congress, 1817-18, to the close of the 52d Congress, March 3, 1893. This work repeats substantially (with 24 exceptions only) the serial numbers given in the earlier check list of the office, with fuller bibliographical notes respecting the contents of the several

volumes, noting especially irregularities in numbering and omissions. The second part of the work is an index to the more important documents included in the sets. It is an index of titles, and certain of the more frequently recurring items of personal or temporary interest have been omitted. In a work of this magnitude one is tempted to utter a wish that even more might have been omitted. A complete index by subjects would be, however, too great a task to be undertaken. In a notice of the work in the *Library Journal*, the reviewer states that one of the documents here represented by single entry requires in an analytical treatment over 150 entries, and this gives an inkling of what would be necessary in a complete analysis of the volumes.

This volume, the most valuable key to the public documents of the United States which has thus far been printed, is one of a series in preparation in the office of the Superintendent of Documents. Of the remaining volumes, one will include the Congressional documents before the 15th Congress, the other the Department documents. When this work, already far advanced, shall have been completed, we shall have with the comprehensive catalogues a complete key to all of the documents issued by the United States government so far as the office of the Superintendent of Documents has been able to discover them.

The office of the Superintendent of Documents has also prepared for the Committee on Naval Affairs of the House of Representatives, a list by years of the speeches, reports, and public documents relating to the navy of the United States from 1880 to 1901, intended as a documentary history of the new navy. It has also begun the publication of price lists on special subjects which are not comprehensive bibliographies, as they give only those books which are in his office for sale; but are still useful guides of the subjects of which they treat. A list on irrigation and another on labor, industries, trusts, and immigration have already been issued; one relating to inter-oceanic canals, ship subsidy, commerce and transportation, Pacific railroads, and statistics will shortly be issued.

General Greeley's list of the public documents, 1st to 14th Congress, has also been published

since the last report of this committee. This list divides the documents into four classes — Senate documents and reports, House documents and reports, and gives a chronological list of each class. Notes also indicate the libraries in which the documents can be found.

In certain directions, aids in the use of the government documents can be found in other publications issued during the year. A serial finding list, Senate Document 238, 56th Congress, 2d session, by Mr. J. M. Baker, assistant librarian of the Senate library, contains a record of the places in the sheep-bound volumes of most of the important serial publications, which will be very useful for libraries which are unable to have special sets of reports or whose sheep-bound volumes do not bear the serial number. Bulletin 177, of the United States Geological Survey, is a catalogue and index of the publications of the Survey from 1880 to 1901. Bulletin 51 of the United States National Museum is a check-list and index of the publications of that office. Useful bibliographies of special subjects are found in some of the recent publications of the Library of Congress. A list of books on trusts notes the articles in the consular reports dealing with this subject. Lists upon irrigation and reciprocity note all of the documents upon these subjects, while a second edition on mercantile subsidies will contain references to all documents bearing upon shipping and mail contracts.

STATE DOCUMENTS.

As the National Association of State Librarians will present a report upon the binding and distribution of the state documents, your committee must refrain from discussing what is desirable in legislation or noting a number of valuable suggestions received from a number of state librarians and confine itself to stating what has been accomplished since its last report was presented. Inquiries addressed to the state librarians have elicited replies from all but twelve and it is probable that these had nothing of interest to report to the Association.

Since the last report of this committee the state of Alabama has established a Department of Archives and History which unites some of

the functions of the state library and a state historical association. Connecticut has authorized the state comptroller to print 375 additional copies of state reports, to furnish to the state librarian a sufficient number for exchange purposes, and to distribute the remainder to such public libraries in the state as may apply for them. Iowa has increased the number of documents printed and placed 500 copies at the disposal of the state library commission. It has also provided more generous editions of some of the special reports. Rhode Island in 1901 created the office of state librarian, and in the present year has authorized that officer to exchange publications with nations, states and municipalities, and to make requisition upon state officers for the documents required for this purpose. South Dakota (March 9, 1901) in its general printing law provides that the secretary of state shall distribute journals, public documents, and statutes to each state and territorial library, and to the Library of Congress. Washington by law of March 6, 1901, provides that the reports of state officials shall be bound in collected form as public documents, assigns a certain number to the state library and to the educational institutions of the state, and furnishes 50 copies to the state library commission for exchange with other states. California and Montana report that the next legislature will be asked to provide a suitable exchange system.

BIBLIOGRAPHY.

During the past year the principal publications of bibliographic interest relate to Kansas. The State Library has issued a catalogue of its Law Library, and the State Historical Society has issued a list of the Kansas state and territorial documents in its library. The somewhat earlier publications of the Illinois State Historical Library, its catalogue of 1900 and its publication No. 3, "Territorial records of Illinois, 1809-1811," have not been previously noted in these reports. The check lists in the reports of the State Librarian of Pennsylvania for 1900 and 1901, and of New Jersey for 1900, have also escaped attention. Important bibliographic work is in progress in some of the state libraries. Wisconsin is preparing an index to its

public documents. Indiana has classified and catalogued all the state documents in the library, and proposes to print these catalogues in the forthcoming report of the library. The New York State Library has almost completed an index of New York Senate and Assembly documents, which they hope to publish soon, probably within the next year. To render more available the material contained in the governors' messages of the various states, it has analyzed and classified messages of 1902 so that the recommendations on any particular subject may be consulted easily. In the fall it will publish a brief topical digest of these messages.

During 1901 more than 40 new state boards and offices were created. A number of old boards were reorganized under new names and several were abolished. Besides these, various new state institutions were created. These numerous creations, changes of name, and consolidations make the task of the librarian who attempts to keep a complete file of state documents extremely difficult. The "Annual summary and index of state legislation" will be altered to show in concise form the annual changes in state boards and officers.

The reports of special investigating commissions are usually the most valuable and most difficult to obtain of the state documents. After two or three years it is almost impossible to secure one of these special reports. To enable librarians to better keep track of them as they are issued, it is proposed to include in the summary and index of legislation a list of special investigations ordered each year.

ARCHIVES.

Considerable progress is being made in preserving and making available the early archives of the various states. Connecticut has made provision for editing and printing the state archives from 1780-1788. In the Virginia State Library there is a large collection of valuable unpublished manuscripts which is now being arranged and catalogued. The librarian expresses the hope that before long at least the more important material may be published. In the last report of the American Historical Association Professor Osgood has published an important report on the archives of New York

state. The publication by Mr. Ford, of the Massachusetts House Journal of 1715, is another evidence of the same interest.

The committee notes with pleasure the appearance of the first part of Miss Hasse's book upon the cataloguing of public documents, which will undoubtedly increase the interest in public documents in the libraries generally. The inclusion of a course in the care and treatment of public documents in the summer course of the Wisconsin Library Commission is further evidence of a gratifying increase of interest in documents.

In conclusion your committee desires to submit the following resolutions:

Resolved, That the American Library Association respectfully urge upon the House of Representatives the early consideration and passage of Senate Bill 4261 relating to the distribution of public documents. The libraries of the country are vitally interested in the success of this measure which would greatly increase the use of the official publications of the United States in libraries, and enable them to give a more efficient public service.

Resolved, That the president of this Association be authorized to communicate with the Public Printer and the Joint Committee on Printing of Congress, calling attention to the desirability of a return to old customs in the issue of public documents respecting

1. The printing of document number on every page of numbered documents.

2. The lettering of the bound volumes of the *Congressional Record* in such manner as to show the dates covered by the contents of the same.

Resolved, That the president of this Association be authorized to communicate with the Joint Committee on Printing of Congress, urging a more copious Index to the *Congressional Record*. Without omitting any features of the present Index, this Association deems it highly desirable that the scope of the Index be so enlarged as to include references to the subject of debates, in addition to the record of bills, resolutions, and other formal titles under which debate arises.

The bill (S. 4261) for a better distribution of documents to libraries, previously referred to, is as follows:

A BILL

To provide for printing, and binding in cloth, additional copies of the first edition of government documents and publications for distribution to the designated depository libraries in lieu of the sheep-bound copies of the document edition, so called, now supplied to said libraries.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That whenever any annual report, serial, periodical, or miscellaneous publication of an executive department, bureau, board, commission, or office of the government shall be ordered printed upon the requisition of the head thereof, or upon the order of Congress or either House thereof, the public printer shall print six hundred copies in addition to the number named in the requisition or order of Congress, unless previously ordered, to be known as the "library edition," for distribution by the superintendent of documents to state and territorial libraries and designated depositories; *provided*, that this Act shall not apply to confidential matter, blank forms, or circular letters.

SECTION 2. That Congressional numbers shall not be printed upon any of the documents or reports provided for distribution to state and territorial libraries and designated depositories under the provisions of section one of this Act.

SECT. 3. That in binding the library edition the best grades of cloth shall be used, and the public printer shall, as far as practicable, assign a distinctive color to the binding of the publications of each department and office, and when a color has been assigned the same shall not be changed; and, to insure prompt delivery, the public printer shall give precedence in binding to documents intended for distribution to libraries and depositories.

SECT. 4. That whenever any printing shall be done upon the order of Congress or either House thereof, or upon the requisition of the head of an executive department, bureau, board, commission, office, or Congressional committee, except matter marked confidential, blank forms, and circular letters, two copies shall be sent, as soon as printed, by the public printer, if printed at the Government Printing Office or any branch thereof, or by the head of the office upon whose order the same was printed if printed elsewhere, to the superintendent of documents for entry in the monthly catalogue; and whenever the injunction of secrecy has been removed from any document printed as confidential, two copies of the same shall be sent by the proper official to the superintendent of documents.

SECT. 5. That beginning with the first session of the Fifty-eighth Congress, the public printer shall deliver to the superintendent of documents for distribution to state and territorial libraries and designated depositories, bound, of House documents and reports and of Senate documents and reports, except those included in the library edition, each six hundred copies.

SECT. 6. That all laws in conflict with the provisions of this Act are hereby repealed.

REPORT ON GIFTS AND BEQUESTS TO AMERICAN LIBRARIES, 1901-1902.

By GEORGE WATSON COLE.

THE period covered by this report is from July 1, 1901, to June 1, 1902, or eleven months. As a rule it includes single gifts of \$500 or more in money, as well as those of 250 volumes and over. Other noteworthy gifts, not strictly falling within these limits, have been included, together with some that have hitherto escaped notice in these reports.

The total number here recorded is 721, representing a money value of \$11,974,298.54, of which \$2,705,247.91 was donated for endowments, running expenses, etc., and the remaining \$9,269,050.63 for the erection of library buildings, sites, etc. Of this latter amount \$7,604,000 was contributed by Andrew Carnegie to 234 libraries, 214 of which are in this country and to which he has given \$6,359,000. In addition to this sum for the erection of buildings, gifts have been made of 23 buildings and 27 sites upon which no valuation has been placed. To complete this survey we must also take into account 177,666 volumes and 97,016 pamphlets (some of great value) which have been presented to various institutions throughout the land, as well as gifts of a special character, as works of art, museum specimens, etc.

If the total number exceeds that recorded in my former report, which covered a period of thirteen months, it is probably due to the fact that a more careful examination has been made of the library periodicals of the interval covered—viz., the *Library Journal*, *Public Libraries* and *Public Library Bulletin*, from which much of the information herein contained has been gathered. A more extended application for information has also been made to the libraries themselves. Their number, however, is so large that it has been found impracticable to reach them all, especially the smaller ones, by personal correspondence. In order, therefore, to secure the fullest information possible from sources other than those already named the library commissions of each state, so far as they exist, were, as last year, asked to contribute infor-

mation concerning the gifts made in each of their states.

I was much surprised to learn that most of the state commissioners do not attempt to keep a systematic record of the gifts made within their respective jurisdictions. It would seem that nothing could do more to stimulate a liberal spirit towards libraries than by carefully keeping such a record and giving it as great publicity as possible. Nothing could be better adapted to excite a noble emulation among those interested in libraries to contribute of their means for the establishment and support of these universities of the people. If some states, therefore, appear in this report to have received more than their proportional share of donations, it is largely due, no doubt, to the fact that the library commissions in those states have been more alive to the advantages to be derived from keeping the people fully informed as to what is being done toward the founding and maintenance of libraries.

The thanks of the compiler are extended to all who have assisted him by furnishing any portion, however small, of the information embodied in the list which follows.

It will be noticed that while there are a greater number of individual gifts in this year's report, the average amount, as well as the grand total, is considerably below that of last year. This may be accounted for, in part, by the change of policy adopted by the chief donor to American libraries, Mr. Andrew Carnegie. Last year's report contained the announcement of his gifts to the largest cities in the country, in amounts which from the very nature of the case can never be repeated. And just here it may be said that the zeal of the reporter carried him so far as to include two or three of these gifts, which were announced between the Waukesha Conference and the appearance of the Conference number of the *Library Journal*, which, strictly speaking, should have appeared in the present report.

Mr. Carnegie's change of policy, to which

reference has just been made, consists in giving amounts much smaller in size than formerly, thereby increasing the number of recipients. Last year's report contained 121 of his gifts, of which 112 were in the United States. This year he gives 234, of which 214 are in this country. Last year, his largest gift of \$5,200,000, was made to New York City. In four other gifts he gave a sum of \$3,500,000. Last year his gifts averaged a little over \$114,000 each, while this year the average is only about \$29,650. Until recently Mr. Carnegie has issued no authorized statement of his benevolences. Just before leaving for Europe this spring he gave out a revised list which was reprinted in the *Chicago Tribune* for May 4th. In this list are included gifts to 368 cities and towns for free public libraries. These contributions have covered a period of more than a decade, though in increasing numbers year by year.

It is safe to say that not one of his gifts will have so far-reaching an influence for good as that of \$100,000 to the Publishing Section of the American Library Association, announced in the president's address at the Magnolia Conference. By means of this timely gift the Publishing Section of this Association will be enabled to publish several important works which it has had in preparation for some time past and to enlarge its plans, which have hitherto unfortunately been hampered from lack of funds.

Several gifts mentioned in the following list call for special mention. Among the most important is that of the Duncan Campbell Memorial collection, received by the New York State Library from the executors of Miss Ellen Campbell. This collection is especially rich in old and rare printed volumes and manuscripts, including, as it does, 45 incunabula and 19 mediæval manuscripts. The whole forms one of the most important collections ever received by this library.

The Library of Columbia University, through the generosity of Mr. William C. Schermerhorn, has come into the possession of the DeWitt Clinton collection of about 1100 letters, consisting of about 9000 pages, addressed to him by many of the most important authors, statesmen, and other notable persons of the first quarter of the last cen-

tury. This collection will prove of great value to the historical student of that period.

The library of Brown University has also acquired a valuable collection of 5000 ms. pieces, consisting mainly of the correspondence of the diplomatist, Jonathan Russell (Brown, 1791), United States minister to Norway and Sweden and one of the five commissioners who negotiated the Treaty of Ghent. It has also received a smaller but very valuable collection of letters and papers of Henry Wheaton (Brown, 1802), the celebrated writer on international law.

It is a noticeable fact that libraries are more and more beginning to receive collections, which until of late were supposed to belong more properly to museums than to libraries. The relationship existing between libraries and museums has always been closer in England than with us, and it is a somewhat curious fact that the first of the British municipal libraries, that at Warrington, was established under the Museums Act of 1848, two years before Ewart's Act was passed for the establishment of public libraries.

I hasten rapidly over some of the most important of these gifts. Those of about 3000 prints to the New York Public Library and an equal number of photographs and reproductions of noted paintings to the library of Plymouth, Mass., fall more properly within the true functions of a library. From these to 2139 medical medals presented to the Boston Medical Library and a collection of over 5000 butterflies, valued at over \$10,000, given to the Public Library in Plainfield, N. J., is a greater step toward the museum idea.

We learn with great pleasure that two of our university libraries have received specimens of literature dating back to most ancient times. Princeton University Library has received 95 Babylonian cylinders and cone-shaped seals and 400 clay tablets, while the library of Haverford College has received 400 cuneiform clay tablets from Babylonia, all in the Assyrian language, and of an average date of 2500 B.C.

Time and space fail us to comment farther upon the gifts enumerated in the following list. We leave to each reader the pleasure of finding in it such as from their character or locality are of especial interest to him.

AMERICAN LIBRARY ASSOCIATION.

AMERICAN LIBRARY ASSOCIATION; *Publishing Section*. \$100,000, June 17, 1902, the income only to be expended in the preparation, and publication of reading lists, indexes and other bibliographical and literary aids especially adapted to free public circulating libraries, from Andrew Carnegie.

CALIFORNIA.

- ALAMEDA. *Public Library*. \$35,000, July 10, 1901, for building, from Andrew Carnegie. Increased from \$10,000 previously offered. City council has voted to appropriate not less than \$7000 yearly for its maintenance.
- BERKELEY. *University of California*. \$2000, for law books, from Mrs. Jane Krom Sather. •
—\$2000, for books on architecture, from Mrs. Phœbe A. Hearst. \$3000 promised for next year.
—\$500 (annually), for books on mechanics and electricity, from Mrs. Andrew S. Hallidie.
—About 2000 volumes and 2000 pamphlets, being scientific and geological library of the late Dr. Joseph Le Conte, including many presentation copies, with autographs of authors, from Mrs. Joseph Le Conte.
—250 volumes on viticulture and viniculture, from the California Wine Makers' Corporation. This probably makes the university's collection upon this subject the most complete in the United States.
- LOS GATOS. *Public Library*. \$10,000, Oct. 20, 1901, for building, from Andrew Carnegie.
- PASADENA. *Public Library*. 600 or 700 volumes, from the estate of Mrs. E. F. Bowler, as a memorial to her.
- POMONA. *Public Library*. \$15,000, Feb. 17, 1902, for a building, from Andrew Carnegie.
- RIVERSIDE. *Public Library*. \$20,000, Sept. 2, 1901, for a building, from Andrew Carnegie.
- SAN BERNARDINO. *Public Library*. \$15,000, March 13, 1902, for a building, from Andrew Carnegie.
- SAN FRANCISCO. *Public Library*. \$750,000, July 5, 1901, for buildings, from Andrew Carnegie. Accepted July 15. Mr. Carnegie recommends that about one-half of the amount should be expended on a central library building and the rest on branches.
—\$25,000, April 10, 1902, for a branch library, from Andrew B. McCreery.
—3200 volumes and pamphlets, from William Emmette Coleman.
- SANTA CRUZ. *Public Library*. \$5000 additional, April 15, 1902, for building, making a total of \$20,000, from Andrew Carnegie.
- SANTA ROSA. *Public Library*. \$20,000, March 13, 1902, for a building, from Andrew Carnegie.
- STANFORD UNIVERSITY. *Stanford University Law Department*. About 500 volumes, pri-

vate library of the late Judge Sawyer, of the U. S. Circuit Court, from his sons.

COLORADO.

- CANON CITY. *Public Library*. \$10,000, Dec. 17, 1901, for a building, from Andrew Carnegie. A site has been secured. The city already appropriates \$1100, and \$600 is added from private subscription.
- DENVER. *Public Library*. \$200,000, March 13, 1902, for a building, from Andrew Carnegie, provided that an annual maintenance of \$30,000 be guaranteed.
- GEORGETOWN. *Public Library*. \$10,000, March 7, 1902, for a building, from Andrew Carnegie.
- LEADVILLE. *Public Library*. \$100,000, July 12, 1901, for a building, from Andrew Carnegie, provided the city furnish \$2000 (?) a year for its maintenance.
- PUEBLO. *Public Library*. \$60,000, Feb. 14, 1902, for a building, from Andrew Carnegie. Accepted.

CONNECTICUT.

- BLOOMFIELD. *Public Library*. Bequest of \$15,255.85, for a library fund, from Levi Prosser, of Boston, Mass., on condition that town provide a suitable room. A building is being erected for library purposes.
- DURHAM. *Public Library*. Site and \$4000, towards a library, name of donor not stated.
- FAIRFIELD. *Fire Department Library*. 1200 volumes, as a nucleus for a library, from the Mill Plain Circulating Library.
- Public Library*. \$30,000, for a new memorial library, raised by popular subscription.
- GREENWICH. *Havemeyer School Library*. 2000 volumes, from Henry O. Havemeyer.
- HARTFORD. *Case Memorial Library*. \$1000, for the purchase of periodicals, from Mrs. Charles B. Smith.
—About 600 volumes, from the library of the late Rev. A. C. Thompson, D.D., of Boston.
—315 volumes, from Mrs. M. D. Thompson.
—*Public Library*. Bequest of \$5000, from Mrs. Martha Wood Brown, several years since (corrected report of last year).
—*Trinity College Library*. One of the finest of existing copies of Audubon's "Birds of America," value not stated, from Dr. Gordon W. Russell, of the class of 1834.
- LITCHFIELD. *Noyes Memorial Library*. New library building, costing about \$20,000, as a memorial to Mrs. William Curtiss Noyes, from her grandson. Dedicated July 5, 1901, and is also used as the headquarters of the Litchfield Historical Society.
- MERIDEN. *Curtis Memorial Library*. New library building, from Mrs. Augusta M. Cur-

tis, as a memorial to her husband and daughter. Corner-stone laid Sept. 28, 1901.

— *Free Public Library*. \$4115, from public contributions and subscriptions, including \$1000 each from George A. Fay, Francis Atwater, J. D. Billiard, and Mrs. E. H. White.

MIDDLETOWN. *Wesleyan University Library*. Bequest of \$20,000, as an endowment fund, from Mrs. (Stephen) Harriet Hoxie Wilcox, of Brooklyn, N. Y., who died Aug. 21, 1901. By the terms of the will the executors have 10 years in which to settle the estate, but interest at the rate of four per cent. is to be paid after two years.

— \$5018, June 24, 1901, to April 15, 1902, to the Alumni Library Endowment Fund, from subscriptions. The fund now exceeds \$35,000.

— 418 bound volumes, from library of the late Rev. Joseph Pullman, class of '63, from Mrs. M. E. Pullman, of Stamford, Conn.

NEW HAVEN. *Yale University Library*. Bequest, as residuary legatee, expected to amount to \$150,000; one-half of the income to be devoted to purchase of Belles-lettres, the rest to the general purposes of the library, from Edward W. Southworth, of New York City. (Yale, '75.)

— \$1200, divided among six of the seminary libraries of the university, from George E. Dimock, of Elizabeth, N. J.

- HAMPTON. *Normal and Agricultural Institute Library*. Gift (offered) of \$100,000, for the erection and equipment of a library build-ing, to be known as the "C. P. Huntington Library," from his widow, Mrs. Huntington. This amount will also provide a fund for carrying on its work. Amount unreported last year.
- NORFOLK. *Carnegie Library*. Site, valued at \$15,000, for the new Carnegie library build-ing, as a memorial to the late Dr. William Selden, the first president of the Library Association, from his children.

WEST VIRGINIA.

- CHARLOTTESVILLE. *Public Library*. \$20,000, for a public library building, from Andrew Carnegie.
- HUNTINGTON. *Public Library*. \$25,000, Jan. 6, 1902, toward a library building, to cost about \$80,000, from Andrew Carnegie.
- \$10,000 additional, March 22, 1902, for a public library building, making a total of \$35,000, from Andrew Carnegie.
- MARTINSBURG. *Public Library*. \$5000, to-ward erection of a public library building, from an unknown lady, provided \$5000 more is raised for the same purpose in two years and site furnished.
- MORGANTOWN. *West Virginia University*. 18,000 volumes, the private library of the Hon. W. T. Willey, formerly United States Senator, from his heirs. The library is in-valuable because of its completeness in the early history of West Virginia.

WISCONSIN.

- BABABOO. *Public Library*. \$12,000, March 13, 1902, for a public library building, from Andrew Carnegie.
- BELOIT. *Public Library*. \$25,000, Aug. 30, 1901, for a building, from Andrew Carnegie. This offer was accepted Sept. 3.
- CHIPPEWA FALLS. *Public Library*. \$20,000, Feb. 17, 1902, for a building, from Andrew Carnegie.

- EAU CLAIRE. *Public Library*. \$40,000, for a building, from Andrew Carnegie.
- FOND DU LAC. *Public Library*. \$30,000, Feb. 8, 1902, for a building, from Andrew Carnegie. This gift has been accepted.
- \$6000, for site of the new Carnegie library building, raised by popular subscription by women's clubs.
- GRAND RAPIDS. *J. D. Witter Free Travelling Libraries*. Bequest of \$5000, to maintain a system of travelling libraries for Wood County, from J. D. Witter.
- T. B. Scott Public Library*. Bequest of \$5000, for a library endowment fund, from J. D. Witter. Mr. Witter had previously given \$5000 for the same purpose.
- GREEN BAY. *Kellogg Library*. \$5000, Oct. 14, 1901, for a building, in addition to a former gift of \$20,000, from Andrew Carnegie.
- LANCASTER. *Public Library*. \$1500, for library purposes, raised by popular subscription.
- MADISON. *Public Library*. \$75,000, Dec. 30, 1901, for a building, from Andrew Carnegie. Accepted Jan. 10, 1902.
- State Historical Society*. 694 volumes, mostly English literature, from Mrs. Charles Kendall Adams.
- 172 volumes and 785 pieces of unbound music, the musical library of the late Prof. James S. Smith.
- A deposit of 723 bound volumes and 550 pamphlets and newspaper files on Mormon history, from Albert Theodore Schroeder, of Salt Lake City, Utah. This collection probably will be later presented to the library.
- \$4000, for a fund for the purchase of books on art or of objects of art for the museum, from Mrs. Charles Kendall Adams.
- University of Wisconsin Library*. 2300 volumes, a portion of his private library, from Dr. Charles Kendall Adams, formerly president of the University of Wisconsin.
- Wisconsin Free Library Commission*. \$895, for free travelling libraries, from citizens.
- \$1355, for German Travelling Libraries, from citizens and libraries.
- MARINETTE. *Public Library*. \$30,000, Sept. 17, 1901, for a building and site, from Isaac Stephenson, on condition that the city puts itself under bonds to appropriate at least \$3000 yearly for its support. This offer was unanimously accepted by the common council on Oct. 2.
- MILWAUKEE. *Public Library*. \$10,000, from Mrs. Antoinette Keenan. This amount has been devoted to a special collection of works on literature, kept in a separate room, and known as the "Matthew Keenan Memorial Collection."
- Pair of beautiful bronze electroliers, April 26, 1892, from Judge J. M. Pereles, the retiring president of the Library Board.
- MONROE. *Public Library*. \$20,000, March 19, 1902, for a building, from Andrew Carnegie.
- NEENAH. *Public Library*. \$10,000, Oct. 17, 1901, towards a building, from Andrew Carnegie.
- \$15,000 additional to Carnegie gift, towards a building, raised by popular subscription.
- Gift of an appropriate library site, valued at \$3000, from Mrs. Theda Clark Peters.
- NEW LONDON. *Public Library*. A collection of German books, number of volumes not stated, from Senator W. H. Hatten.
- OCONTO. *Public Library*. \$15,000, for a building, from James Farnsworth, of Chicago, Ill., provided the city furnishes a site and \$1500 annually for maintenance.
- PORTAGE. *Public Library*. Bequest of \$5000, from Mrs. George Krech. \$2000 has already been turned over to the library, the remainder will be paid when the estate is closed.
- Nearly 2000 volumes, from the Free Library Association, an organization of ladies.
- 500 books, from Miss Maria Austin.
- RACINE. *Public Library*. \$50,000, Aug. 5, 1901, for a building, from Andrew Carnegie. Accepted Dec. 12, 1901.
- \$9500, for site for new Carnegie library building, raised by popular subscription.
- RIPON. *Public Library*. \$10,000, April 15, 1901, for a building, from Andrew Carnegie.
- SHEBOYGAN. *Public Library*. \$10,000 additional, March 17, 1902, for a building, making a total of \$35,000, from Andrew Carnegie. The city council has agreed to appropriate \$3500 yearly for maintenance.
- SPARTA. *Public Library*. \$10,000, Feb. 12, 1902, for a building, from Andrew Carnegie.
- STANLEY. *Moon Memorial Library*. New library building, cost not stated, from Mrs. Sarah F. Moon, of Eau Claire, as a memorial to her late husband, Delos R. Moon. It was dedicated Dec. 17, 1901.
- Public Library*. \$500, for the purchase of books, from S. T. McKnight.
- STEVENS POINT. *Public Library*. \$20,000, for a public library building, from Andrew Carnegie.
- \$3000, for a site for the new Carnegie library building, raised by popular subscription.
- WAUKESHA. *Public Library*. \$15,000, March 13, 1902, for a building, from Andrew Carnegie.
- WAUSAUKEE. *Public Library*. Public library, reading-room, and gymnasium building, to cost \$5000, from H. P. Bird.
- \$1000, for the purchase of books, from H. P. Bird.
- WEST SUPERIOR. *Public Library*. Site, value not stated, for the new Carnegie library building, from the estate of John H. Hammond and money raised by popular subscription.

WHITEWATER. *Public Library*. Bequest of \$17,000, from Miss Flavia White, of St. Paul, Minn., upon condition that the greater part be used to erect a new library building on the site of the present one.

PORTO RICO.

SAN JUAN. *Public Library*. \$60,000, July 30, 1901, for a building, from Andrew Carnegie. The city council has agreed to appropriate \$6000 annually for library maintenance.

— \$100,000, for a building, from Andrew Carnegie, provided the city appropriate \$6000 annually for its maintenance, "supplemented by action on the part of the insular legislature, bringing the total up to \$8000 or \$9000." The building will be erected fronting on Plaza Colon.

CUBA.

HAVANA. *Public Library*. \$250,000, for a library building from Andrew Carnegie.

— Over 3000 volumes, only 300 of which are bound, from Señor Figarola Canedo.

DOMINION OF CANADA.

BRITISH COLUMBIA. VICTORIA. *Public Library*. \$50,000, March 13, 1902, for a building, from Andrew Carnegie.

MANITOBA, WINNIPEG. *Public Library*. \$100,000, July 25, 1901, for a building, from Andrew Carnegie. This gift was accepted Feb. 10, 1902.

ONTARIO, BELLVILLE. *Public library building*, offered by Gilbert Parker, the novelist.

— BERLIN. *Public Library*. \$15,000, March 13, 1902, for a building, from Andrew Carnegie.

— COLLINGWOOD. *Public Library*. \$10,000, July, 24, 1901, for a building, from Andrew Carnegie.

— CORNWALL. *Public Library*. \$7000, for a building, from Andrew Carnegie.

— GALT. *Public Library*. \$17,500, April 17, 1902, for a building, from Andrew Carnegie.

— GODERICH. *Public Library*. \$10,000, March 13, 1902, for a building, from Andrew Carnegie.

— GUELPH. *Public Library*. \$20,000, Jan., 1902, for a building, from Andrew Carnegie.

— KINGSTON. *Queens University Library*. Fine set of Canadian historical portraits, valued at \$5000, from Gilbert Parker, the novelist.

— LINDSAY. *Public Library*. \$10,000, Jan., 1902, for building, from Andrew Carnegie.

— LONDON. *Public Library*. \$10,000, March 13, 1902, for a building, from Andrew Carnegie.

— MONTREAL. *McGill University Library*. \$20,000, for the purchase of books required in the regular university course, from Sir William MacDonald.

— MONTREAL. *Public Library*. \$150,000, Aug.

4, 1901, for a building, from Andrew Carnegie.

— PEMBROKE. *Public Library*. \$10,000, July 16, 1901, for a building, from Andrew Carnegie.

— ST. CATHERINE'S. *Public Library*. \$20,000, Jan. 2, 1902, for a building, from Andrew Carnegie.

— ST. THOMAS. *Public Library*. \$15,000, March 13, 1902, for a building, from Andrew Carnegie.

— SARNIA. *Public Library*. \$15,000, Jan. 20, 1902, for a building, from Andrew Carnegie.

— SMITH'S FALLS. *Public Library*. \$10,000, Jan. 31, 1902, for a building, from Andrew Carnegie.

— STRATFORD. *Public Library*. \$12,000, Dec. 25, 1901, for a building, from Andrew Carnegie.

— THOROLD. *Public Library*. \$10,000, May 1, 1902, for a building, from Andrew Carnegie.

— TORONTO. *University of Toronto Library*. \$10,000 (received), from Mr. and Mrs. Goldwin Smith.

NEWFOUNDLAND.

ST. JOHNS. *Public Library*. \$50,000, for a building, from Andrew Carnegie.

ENGLAND.

GREENWICH. *Public Library*. £10,000, for building, from Andrew Carnegie.

STRATFORD-ON-AVON. *Public Library*. Gift, April 17, 1902, amount not stated, for a building, from Andrew Carnegie, on condition that a site be furnished.

IRELAND.

WATERFORD. *Public Library*. £5000, Oct. 7, 1901, for a building, from Andrew Carnegie.

SCOTLAND.

ANNAN, DUMFRIESHIRE. *Public Library*. £3000, July 13, 1901, for a building, from Andrew Carnegie.

CLACKMANNAN. *Public Library*. £1200, for a building, from Andrew Carnegie.

COATBRIDGE, LANARK. *Public Library*. £15,000, July 12, 1901, for a building, from Andrew Carnegie.

DALKEITH. *Public Library*. £4000, Aug. 23, 1901, for a building, from Andrew Carnegie.

DUNDEE. *Public Library*. £37,000, Oct. 21, 1901, for branch library buildings, from Andrew Carnegie.

GLASGOW, KINNING PARK. *Public Library*. £5000, for a building, from Andrew Carnegie.

LARBERT, STIRLINGSHIRE. *Public Library*. £3000, Sept. 8, 1901, for a building, from Andrew Carnegie.

PAISLEY. *Free Library and Museum*. £27,500, from James P. Coates, of the J. V. P. Coates Thread Mills, Pawtucket, R. I.

RUTHERGLEN, LANARKSHIRE. *Public Library*. £7500, Aug. 29, 1901, for a building, from Andrew Carnegie.

To the above should be added \$2,000 given to the Seaboard Air Line Travelling Libraries by Andrew Carnegie. Gifts of 23 buildings and 27 sites, upon which no value was placed, also fail to appear in the tabulated summary.

THE PROCEEDINGS.

BOSTON, MASS., SATURDAY, JUNE 14; MAGNOLIA, MASS., TUESDAY, JUNE 17 — FRIDAY, JUNE 20, 1902.

FIRST SESSION.

(BOSTON PUBLIC LIBRARY, SATURDAY MORNING, JUNE 14.)

The first session of the Boston and Magnolia Conference was in the nature of an informal gathering for announcements and short addresses of welcome. It was held in the lecture room of the Boston Public Library, and was opened at 9.30, with a greeting on behalf of the local committee by JAMES L. WHITNEY, who said:

It is twenty-three years since the American Library Association met in Boston. At that time the free public library movement in this country was almost at its beginning. Since then conferences have been held yearly in many cities throughout the country. It is time that another meeting be held here in order that this part of the country may realize the progress that has been made in library work.

As representing the libraries of Greater Boston, in behalf of the local committee, I bid you welcome, and trust that your stay here may be full of profit and pleasure.

Rev. Dr. JAMES DE NORMANDIE, vice-president of the board of trustees of the Boston Public Library, said:

The true librarian needs to be alert in reading the character of all comers, and in fitting to that character the books which shall help to mould and strengthen it. The old notion of a library was a rather poor and miserable one. It was simply the notion of getting more books than any other library had, and being somewhat miserly about their use. Now we have only the generous rivalry by which each library is in a race to open all its treasures and opportunities to the seekers after knowledge everywhere. Reciprocity is a word in high favor among librarians. Every good library has some one characteristic, some well developed branch under some active, energetic head, whose results all other libraries can appropriate.

The great work of the library always will be the acquiring of books; and when we think of the vast numbers of them which fall from our busy presses like leaves of the forest, what is more important than for a body of trained men

and women to select and to circulate these books, which, joined to the few which the ages have sifted and canonized, shall more and more accomplish the best results of literature, the deepening and enrichment of the soul?

We welcome you as members of this the latest of the professions; we welcome you to the fine opportunities which it offers, in the refining and uplifting influences of a most humane age. May we all be helped to find in this profession something by which life and thought and public spirit and public morals and public piety may be lifted to ever higher levels, that over these great depositories of books we may write the inscription found on the old Egyptian library, "Nourishment of the soul."

CHARLES W. JENCKS was introduced as one of the members of the first Librarians' Convention, and an honorary member of the American Library Association. Mr. Jencks spoke on

THE LIBRARIANS' CONVENTION OF 1853.

I highly appreciate the honor you confer by electing me an honorary member of your association. I am asked to bring a greeting from the meeting of 1853 to that of 1902, and to make a few brief remarks about the first convention of librarians ever held in the country, and I bring a letter written by the late Dr. Guild, formerly librarian of Brown University, which was read before the Unitarian Club some years ago when the topic of the evening was "The aims and opportunities of libraries." The speakers were William C. Lane, librarian of Harvard University, who spoke of the necessities of libraries in our present civilization; H. L. Koopman of Brown; J. L. Harrison of the Athenæum; W. E. Foster of our public library; and then Dr. Guild's letter, giving an account of the first attempt to form a national association of librarians.

Dr. Guild's letter is as follows:

You ask me about the great Librarian's Convention that was held in New York, Sept. 15 and 17, 1853, which you attended as librarian of Mechanics' Library, Providence, and which I attended as librarian of Brown University. That was forty-six years ago, when we were young men. In looking over the twenty-one names that signed the call for the meeting I recognized, as among the living beside my-

self, Rev. Edward Everett Hale, Hon. Henry Barnard, and S. Hastings Grant. My recollections of the convention are very distinct. It was the first convention of the kind ever held in the world's history. We met at the rooms of the University of the City of New York. Eighty delegates were present, representing forty-seven libraries in thirteen different States of the Union.

Prof. C. C. Jewett, formerly librarian at Brown, was chosen president; S. Hastings Grant, of New York, was chosen secretary, and a business committee of five, of which I was a member, completed the organization. The discussions, from day to day, were very interesting, and some of the papers presented were of real value. The Rev. Dr. Osgood, who, although then living in New York, represented, by special appointment, the Providence Athenæum, of which he has been an active director, made the remarks of the occasion. They were eloquent, practical, and more than up to the times. He closed with a resolution providing for a special committee of three to prepare a Library Manual. The resolution was heartily adopted, and Mr. Osgood, Edward Everett Hale, and myself were appointed this committee. Several years later I published, as you know, "The librarian's manual," a quarto volume with illustrations, which has found its way into our public libraries, both here and upon the continent, and which I have reason to think has been useful.

You ask who were the delegates from Providence. Besides ourselves, Thomas Hale Williams, librarian of the Athenæum, Albert Jones, director, and Charles Akerman, director of the Mechanics' Library. The convention adjourned to meet in Washington, after appointing a committee of five to arrange for permanent organization. The committee failed to make arrangements, and there was no further meeting of the librarians until 1876, when the present American Library Association was organized in Philadelphia. The committee on permanent organization has been criticised for its failure to act. The chairman, Professor Jewett, about this time had a controversy with Dr. Henry of the Smithsonian Institution, and eventually left Washington to organize the Public Library of Boston. He was too busy to arrange for another convention. The second man on the committee, Prof. Charles Folsom, resigned as librarian of the Boston Athenæum, and no longer served the cause. The third, S. Hastings Grant, gave up his position as librarian of the Mercantile Library and went into politics on a much larger salary. Elijah Hayward, the fourth, lives in Ohio, and the fifth man, your humble servant, did not feel inclined to shoulder the burden alone. Besides, the prime mover in the first convention, Gen. Charles B. Norton, had met with reverses and was unable to go on as in the beginning, acting as agent of librarians. Then came the financial crisis of 1857, the Civil War, reconstruction, etc. The tenth meeting of the American Library

Association was held at the Thousand Islands, so called in 1887. This meeting you and I attended.

I learn that eight original members of the 1853 meeting are still living, viz.: Prof. Willard Fiske, Florence, Italy; President D. C. Gilman, Baltimore, Md.; S. Hastings Grant, Montclair, N.J.; E. H. Grant, Washington, D.C.; Rev. E. E. Hale, Boston, Mass., E. A. Harris, Jersey City, N.J.; C. W. Jencks, Providence, R.I., and Dr. Anson Judd Upson, Glens Falls, N.Y.*

Invitations were extended from the Boston Athenæum, Harvard University, and other libraries, and announcements of local excursions were made. Sunday and Monday were given up to visiting the libraries of Boston and vicinity and to local entertainment, and to Council and committee meetings at Magnolia.

SECOND SESSION.

(OCEANSIDE HOTEL CASINO, MAGNOLIA,
TUESDAY MORNING, JUNE 17.)

The meeting was called to order at 10 o'clock by President JOHN S. BILLINGS.

The PRINTED REPORT OF 1901 MEETING was approved as presented and distributed.

F. W. FAXON presented his

SECRETARY'S REPORT.

Since the close of the Waukesha meeting last July, there have been added 222 new members, and some 75 have rejoined, making 297 to be counted as the actual gain during the eleven months, — the largest number ever added in one year. There are now 1,265 active members of the Association, and doubtless 150 or 200 more will join during this meeting.

The secretary is more than ever convinced that a person who drops out ought to have a new number given him on rejoining, both in fairness to those who retain membership from year to year, and that the compilation of statistics may be made more easy.

During the last few months efforts have been made by the treasurer to enroll on our list of members all who were present at the Librarians' Convention of 1853. Eight such have been found, and according to a previous vote of the Association are now on the list as honorary members.

In March 5,250 copies of the Preliminary

*The death of Dr. Upson was announced at the meeting on the 16th.

Announcement (two pages) were sent out, covering (a) all names on the membership list, (b) all those of members of the local and state clubs east of Ohio, and (c) all head librarians, members of such clubs, throughout the West.

After a delay of nearly three weeks caused by the failure of western railroads to act promptly on rates, the Final Announcement (a four-page circular) was mailed May 28, an edition of 5,500 being almost exhausted, so great was the interest awakened in the meeting.

A supplement to last year's handbook was printed (edition 2,500, cost \$83 for forty-four pages and cover), containing additions to membership list, the constitution, and the by-laws passed last year. There is also in this supplement a list of changed addresses and positions, and the A. L. A. necrology brought down to date. This was mailed to all members with the Final Announcement.

The secretary recommends that in future the handbook be in larger form, small octavo, or duodecimo, similar to that of the L. A. U. K.

There was also included with the final announcement a private post-card, which should serve as advance registration card and also hotel rooming contract. About 1,000 of these cards were returned to the secretary, 500 of them stating that the sender would go to Magnolia. It was then necessary, before the printed list of advance registration could be issued, to add the 400 names of those going who had not received the card or who had

thrown it away because they had previously written for rooms.

The program (edition 2,500) was issued the first of June, and mailed to all members as an enclosure with the souvenir book sent out by the Boston-Magnolia Local Committee, the A. L. A. paying the expense of mailing both.

A sufficient number of supplementary handbooks and programs has been printed to cover the probable demand during the week of sessions. The Advance Registration Printed List (edition 1,000, 44 pages and cover, \$58) contains 905 names, almost double the number registered at any previous conference of the Association. Buttons are supplied numbered to match the numbers on this list, so that identification will, it is hoped, be easy.

The secretary's expenses for the year, exclusive of supplementary handbook, have been about \$400, the chief items being printing and postage. The number of letters written and received, not counting those concerning hotel rooms at Magnolia, is about 1,200 and 1,100 respectively.

Gifts to the Association sent the secretary during the year have been:

Current issues of *Library Journal* and *New York Public Library Bulletin*, *World Almanac*, and the annual reports of many public libraries.

In closing my second year as secretary, I wish to thank all who have aided me for the cordiality and promptness with which the desired help has been given.

GARDNER M. JONES presented the

TREASURER'S REPORT.

Balance on hand, Jan. 1, 1901 (Waukesha conference, p. 109) \$307 60

Annual members (paid for 1901)	902
Library members (paid for 1901)	29

980

During the year 1901, 274 new members joined the Association and 6 died.

The above report covers the financial year from Jan. to Dec., 1901. From Jan. 1 to June 13, 1902, the receipts have been \$2,033.00 and the payments \$519.25, leaving a balance of \$1,876.76 on hand at the beginning of the present conference. Most of this amount will be needed to meet the expenses of the conference.

GARDNER M. JONES,
Treasurer.

The following report of audit was appended:

The Finance Committee have performed the duties laid down in the constitution; they have examined the accounts of the treasurer during the period covered by his report and find them properly kept and vouched for.

JAMES L. WHITNEY,
CHARLES K. BOLTON, } *Finance Committee.*
GEO. T. LITTLE,

Necrology.

1. Theodore August Meysenburg (A. L. A. no. 1225, 1893), born in Flamersheim, near Cologne, Prussia, July 23, 1840; died in St. Louis, Mo., March 29, 1901. At the age of sixteen he came to America with his father, who settled in St. Louis. In May, 1861, he enlisted as a private in the Third Missouri Infantry. He was promoted until he became acting adjutant general to the commander of the army corps, with rank of colonel, and served with distinguished ability until his resignation in January, 1865. He returned to St. Louis and was appointed assistant engineer in the water department. He resigned from this position in 1869 and became interested in the

manufacture of iron, being successively at the head of several of the largest iron manufacturing establishments of the city. He was connected with the St. Louis Public Library for twelve years. In May, 1889, he was elected as a representative of the life members to the board of managers of the Public School Library. When the library was made free, in 1893, he was appointed a member of the first board of directors; and upon its organization he was chosen vice-president, which position he continued to hold until 1900, when he declined re-election, as he had before repeatedly declined the office of president. Colonel Meysenburg was one of the founders of the St. Louis Museum of Fine Arts.

(Condensed from a memorial volume.)

2. Edward Capen (A. L. A. no. 5, 1876), librarian emeritus of the Haverhill (Mass.) Public Library. Born in Dorchester, Mass., Oct. 20, 1821; died in Haverhill, Oct. 20, 1901. His ancestry reached back in Dorchester to 1630. In early youth he removed to South Boston and was graduated from the Boston Latin School, receiving the Franklin medal, in 1838. He was graduated from Harvard in 1842 and from the Harvard Divinity School in 1845. He served for one year as minister of the Unitarian Society, Westford, Mass., but met with little success, owing to his sympathy with Theodore Parker. From 1847 to 1852 he was private secretary for Dr. John Collings Warren. In January, 1852, he became secretary of the Boston School Committee. On May 12, 1852, he was appointed librarian of the Boston Public Library, being its first librarian. This position he held for 22 years. In November, 1874, he became librarian of the Haverhill Public Library and was made librarian emeritus in October, 1899. Mr. Capen attended the 1876 conference and was a life member of the A. L. A.

(L. J., Nov., 1901.)

3. Mrs. Anna Amory Weld (A. L. A. no. 1609, 1897), died at Dublin, N. H., Nov. 14, 1901. Miss Anna Sears Amory, afterwards Mrs. George F. Weld, was appointed a member of the Massachusetts Free Public Library Commission in 1896, which position she held until her resignation, on account of ill health, in 1899. She was much interested in the work of the commission and made many visits to libraries in the smaller towns at her own ex-

pense. In 1891, while a summer resident of Wareham, Mass., she bore the entire expense of founding a public reading-room, well supplied with current periodicals, and gave to it over 700 volumes.

4. Prescott C. Rice (A. L. A. no. 636, 1887), for 29 years librarian of the Fitchburg (Mass.) Public Library. Born in Natick, Mass., April 18, 1846; died in Fitchburg, Jan. 26, 1902. He was for several years a telegraph operator on the Fitchburg Railroad, the assistant librarian of the Public Library under Mr. Henry Jackson, and when, in 1873, Mr. Jackson was made city auditor, Mr. Rice was elected librarian. He joined the A. L. A. in 1887 and was a member of the Massachusetts Library Club.

5. William R. Snead (A. L. A. no. 1503, 1896), president of the Snead & Co. Iron Works, died at his home in New York, March 27, 1902. His firm, formerly at Louisville, Ky., and afterwards at Jersey City, N. J., were the manufacturers of the book-stack and shelving invented by Bernard R. Green for the Library of Congress. Mr. Snead was a graduate of the Mass. Institute of Technology, and unmarried.

6. George Bigelow Chase (A. L. A. no. 373, 1879), trustee of the Boston Public Library from 1876 to 1885, died at Dedham, Mass., on June 2, 1902, in the 67th year of his age. Mr. Chase was a member of the Massachusetts Historical Society from 1876 until his death, and was much interested in its work and prosperity. At the Boston conference in 1879 he was chairman of the reception committee and gave a reception to the members of the conference at his residence on Beacon St. He was a life member of the A. L. A.

7. Anson Judd Upson (A. L. A. no. 1124, 1893), chancellor of the University of the State of New York. Born in Philadelphia, Nov. 7, 1823; died in Glen Falls, N. Y., June 15, 1902. He graduated from Hamilton College, Clinton, N. Y., in 1843. In 1845 he was appointed tutor in that college and in 1849 adjunct professor. From 1853 to 1870 he was professor of logic, rhetoric, and elocution in Hamilton. From 1870 to 1880 he was pastor of the Second Presbyterian Church, Albany, N. Y. In 1880 he became professor of sacred rhetoric and pastoral theology in Auburn Theological Seminary and in 1887 professor emeritus. In 1884 he was elected a regent of the University of the State of New York, was made vice-chancellor in

1890, and in 1892 was elected chancellor. Dr. Upson attended the 1853 convention of librarians in New York City, registering as librarian of Hamilton College. In 1893 he joined the

A. L. A., but resigned in 1896. In 1902, as a survivor of the 1853 conference, he was made an honorary member of the A. L. A.

(*New York Tribune*, June 16, 1902.)

CHARLES C. SOULE presented the

The following report of audit was appended:

At the request of Charles C. Soule, treasurer of the Endowment Fund, I have examined his accounts and securities, and find evidence of investment of \$3,700 in mortgage loans; of deposit of \$1,093.22 in the Brookline (Mass.) Savings Bank; and of \$1,705.44 deposited with the International Trust Co. of Boston.

I also find his account correctly cast, with proper vouchers for all expenditures.

JAMES L. WHITNEY,
Chairman of Finance Committee.

The secretary read the

REPORT OF COMMITTEE ON INTERNATIONAL CO-OPERATION.

Dr. E. C. Richardson, the chairman of this committee, has been in Europe during the greater part of the past year, where he has visited a number of libraries. In his visits he has discussed with librarians the matters that come within the province of this committee, with special reference to the printed cards issued by the Library of Congress. Dr. Richardson finds that, while there is no sign of immediate action with reference to international co-operation in this direction, there is hope for practical results in the future, especially after the catalogue rules of the Library of Congress have been printed.

No member of this committee was present at the International Publishers' Congress at Leipzig. The gentleman to whom was entrusted the matter of bringing to the attention of the Congress a uniform classification of book production statistics did not find the opportunity to do so, and so the matter was not presented.

The work of the International Catalogue of Scientific Literature has proceeded with such difficulties as might be expected from a new enterprise. The Smithsonian Institution has temporarily undertaken the work of a Regional Bureau in the United States with the hope that Congress will contribute the necessary funds for its continuance. The catalogue has been subscribed for in the United States to the extent of the equivalent of 71 sets, being over \$30,000 for a period of five years. The first part of the volumes on chemistry and botany will appear in a short time, to be followed by parts on physics and physiology. It was found necessary to publish these volumes in two parts. The next publication will be the complete volume of

mathematics, astronomy, meteorology, and bacteriology for 1901.

We recommend that the committee be continued.

SAMUEL H. RANCK, } *of the*
MARY W. PLUMMER, } *Committee.*
CYRUS ADLER,

J. C. DANA read the

REPORT OF COMMITTEE ON CO-OPERATION WITH LIBRARY DEPARTMENT OF THE NATIONAL EDUCATIONAL ASSOCIATION.

Your committee sent the circular letter hereto attached to 67 of the largest normal schools in the country, taking one or more from each state.

To this inquiry were received 32 replies, all favorable with one exception, and offering, as the accompanying statement shows, a few suggestions for the modification of the proposed pamphlet.

To the inquiries at the end of the circular in regard to the librarians of normal school libraries were received a total of 32 replies which, being tabulated, make the following showing:

No. 1.	Yes, 30; No, 2.	No. 3.	Yes, 24; No, 4; Some, 4.
No. 2.	Yes, 24; No, 8.	No. 4.	Yes, 18; No, 9; Some, 5.

Circular sent to Normal Schools.

This committee wishes to compile a brief outline of work for the normal school library. We cannot do this without the help of the normal schools themselves. Will you kindly answer the following questions and return this sheet to me as soon as possible? You may find it convenient to refer the questions to your librarian or to one of your teachers. The outline is to take the form of a small pamphlet, the title of which may be "Normal school libraries: an outline of work." What additions, changes, and omissions would you suggest to the following list of subjects to be treated?

J. C. DANA.

1. Book-making, including paper, type faces, type composition, printing and binding, machine and hand; book plates.
2. Differences between books as regards their making. Importance of buying well-made books. Care of books.
3. Book-buying, price lists, trade catalogues.

4. Book handling: Stamping, labeling, book pockets, book plates.

5. A lending system. Book cards, student's cards, professor's cards, special privileges.

6. The library rooms, location, size, arrangement, desk, cases, tables, etc.

7. List of books essential in a normal school library, reference books especially.

8. Elements of reference work; dictionaries, encyclopedias, annuals, periodicals, indexes, bibliographies.

9. English and American literature, best handbooks, books on method.

10. Books for young people, lists, prices, etc.; books and articles on the subject.

11. Books in the school-room: General works for teachers, books for children, different methods of using them — for reference, for reading, for lending.

12. School-room collections, furnished by the school board or by the public library.

13. A general library in a school building, advantages, disadvantages, character, methods of use.

14. Possible relations of teachers with the public library.

15. Importance to teachers of collecting libraries of their own.

16. Do you have a librarian?

Is the librarian a member of your faculty?

Are students taught how to use a library?

Does your course in literature include the study of books for young people?

We sent to 42 libraries the following inquiry:

Please note the Ginn & Co. leaflet enclosed. If twenty or thirty of the leading publishers in the country will issue circulars of this nature, with attractive extracts, or notes on the use of books, reading, children, etc., would you circulate them from your library among teachers and parents? This committee proposes to ask publishers to issue such lists, and wishes to say to publishers that if such lists are issued librarians will be willing to distribute them.

J. C. DANA, *Chairman*.

To this we received a total of 28 replies, of which 20 were favorable.

We then sent to 40 of the leading publishers of the country a circular letter, quoting the foregoing inquiry, and adding:

To this inquiry we received 27 replies, of which 19 were favorable. We are confident that more than half of the libraries of the country, as our answers indicate, would distribute such circulars. We have in mind, as the inquiry indicates, little leaflets, attractively printed, containing brief notes about the use of books, and especially about the use of books by children, and by schools. We hope by the circulation of these among teachers to increase their interest in this subject. The American Library Association is not in position to publish and distribute widely, free of charge, litera-

ture of this kind. Recognizing the interest publishers have in the increase of knowledge of the importance of right reading by children, we have thought it probable that you would issue one or two special circulars as indicated.

You can get from principals, superintendents, and librarians, if you desire it, suggestions as to reading to be incorporated in these circulars. This committee will aid you in this if you wish.

Several libraries have made use of such material as we are speaking of. The leaflet published by Ginn & Co., called "Children's books; a list of books for supplementary reading and school libraries, arranged by subjects and graded" — is a good example.

Yours very truly,

J. C. DANA, *for the Committee*.

To this we have to date received 9 replies, all expressing a wish to be of assistance in the work we are undertaking, some of them asking for further information, some of them making helpful suggestions.

Your committee suggests that you, as an Association, endorse the plan of the publication of a small book or pamphlet on the subject of normal school libraries, with some reference to library work in general, and ask consideration of it by the Library Department of the N. E. A.

It is the purpose of your committee, if you thus endorse the general plan suggested, to present the matter to the Library Department of the N. E. A. and ask for their further assistance in the compilation and publication of such a pamphlet.

J. C. DANA,	}	<i>Committee.</i>
MELVIL DEWEY,		
F. A. HUTCHINS,		
JAMES H. CANFIELD,		
ISABEL ELY LORD,		

MISS AHERN: I would just like to say, in regard not only to this report but the one that was prepared under the auspices of the A. L. A. several years ago, and issued by the National Educational Association, that Mr. Shepard, the secretary of that association, has repeatedly told me that no publication which the National Educational association ever sent out created so much interest, was so widely read, or had done so much good, as this pamphlet on public libraries. I feel quite certain that if the Association backs up this suggestion of Mr. Dana's, as it did his other suggestion with regard to the other pamphlet, it will meet with the most

hearty reception by teachers and particularly by the Library Department of the N. E. A.

FREDERICK J. TEGGART read the

REPORT OF COMMITTEE ON HANDBOOK OF
AMERICAN LIBRARIES.

Your Committee on Handbook of American Libraries reports that progress has been made during the year past on the collection of data.

It is, however, evident that because of the failure of libraries to reply to repeated requests, and for other reasons, it will be impossible to make the material included complete, and this being the case it becomes desirable to finish the work with as little as possible additional delay.

The data received have been put in definite form and it is the plan of the committee to submit the copy relating to each library to its librarian during the current year.

After this revision the printing may be undertaken. Your committee feels assured that the handbook will be ready for distribution at the next meeting of the Association.

FREDERICK J. TEGGART,
CLEMENT W. ANDREWS, } Committee.
THOMAS L. MONTGOMERY,

Mr. TEGGART: The feeling of the committee in regard to the handbook being ready is contingent, of course, on the possibility of its being printed. So far there has been no definite scheme elaborated for the printing, and it is perhaps unjustifiable optimism on the part of the committee to hope that it will get into print. However, the material will be ready, probably by the end of the current year.

President BILLINGS: I think one reason why definite arrangement has not thus far been made for the printing is that no information has come to the Council or to the executive board as to the prospective size of the handbook, or its cost, or how much money should be set aside for it. As soon as that information is available, I have no doubt the matter will be carefully considered.

W. I. FLETCHER presented the

REPORT OF COMMITTEE ON INDEXES AND TITLE-
PAGES TO PERIODICAL VOLUMES.

W. I. FLETCHER: The duties of this committee for the past year consisted simply in

issuing to publishers of periodicals a circular which had been submitted to and approved by the last conference and the handling of such correspondence as might result.

The circular sent out is as follows:

To the Publishers of

As a result of much dissatisfaction among librarians with the irregularities and uncertainties connected with the issue, by publishers of periodicals, of title-pages and "contents" of volumes, the American Library Association has had a special committee considering the subject with a view to drawing up a suitable memorial to be presented to such publishers, looking to the securing of more uniformity and propriety in this matter. After mature consideration the committee have prepared the following recommendations as embodying the minimum of improvements which may reasonably be hoped for:

1. *Title-pages and tables of contents should always accompany the number completing a volume, and not the first number of the new volume.* There are several cogent reasons for this recommendation:

(a.) In many cases it is a serious detriment to the usefulness of a set in a library, if a completed volume cannot be bound until the receipt of the next number.

(b.) More important is the need that the numbers of a volume shall constitute the volume in its entirety, so that as they are bought and sold there shall not be the necessity of handling also another number belonging to a different volume in order to complete the first. Now that libraries are buying periodical sets and volumes in such large numbers for use with Poole's and other indexes, it is of great importance to the book trade, as well as librarians, and must have a real bearing on the business interests of the publishers, that this matter, often trifled with, shall receive due attention. Publishers must come to feel that it is necessary (which it generally proves not to be) to delay a completing number a day or two in its issue in order to insure its completeness in this respect; the delay is abundantly compensated for.

2. *Title-pages and contents should be furnished with every copy of the issue of a completing number.* We earnestly believe that by inserting title-pages and contents in all cases, publishers will at once put a premium on the preservation and binding of their magazines, suggesting it to many who otherwise would not think of it. In the long run the demand for back numbers to make up volumes must more than compensate for the extra expense of putting in the additional leaves.

The policy of sending title-pages and contents only to those calling for them is suicidal, as it results in flooding the market with numbers from which volumes cannot be made up, and by destroying the hope of making up sets

weakens the demand which would otherwise exist for volumes and numbers of the periodical in question.

If an alphabetical index, in addition to a table of contents, is furnished, which is the preferable practice, the former should be paged to go at the end of the volume. When such an index is furnished, and no table of contents, the index should be printed to follow the title-page, in order that the title-page may be accompanied by other leaves to make a separate section, as suggested by the following paragraph.

3. As to the form in which title-pages and contents should be issued: *they should be printed on a two, four, or eight leaved section, separate from other printed matter, either advertising or reading.* Nothing is more important in binding volumes to stand the hard wear of our public libraries than that none of the earlier leaves in the volume shall be single leaves pasted in. One of the greatest abuses of the book trade at present is the disposition to have title and other preliminary leaves pasted in. Librarians find to their cost (what is not so obvious to the book manufacturer) that this does not work. An absolute requirement for good bookmaking is that the first and last portions of the book especially shall be good solid sections, no single leaves, nor do most librarians or owners of private libraries like to include advertisements, in order to secure these solid sections for binding. We feel sure that it is abundantly worth while for the publishers to squarely meet this demand.

4. *It is highly important that the section comprising title-page and contents (or index) should be secured by pasting or stitching to the number which it accompanies and not to be sent laid in loose.* This last practice leads to the loss of many of these sections, which are invaluable later.

5. Admitting that there may be cases in which it is practically impossible to furnish title and contents with the completing number of a volume, *we would recommend for such cases that such a separate section as has been described be made and furnished with the first number of the new volume, stitched in at its end, not at its beginning.* The last named practice is likely to cause more trouble to librarians than any other that is common, as it is difficult to remove the section without making the number unfit to place in the reading room.

We would like to call the attention of periodical publishers to the difficulties arising from the common practice of printing some first or last leaves of reading matter on the same section with some pages of advertising. Most librarians prefer to remove the advertising leaves before binding the magazines. The practice referred to makes it necessary to bind in some advertising leaves or else take off and paste in single leaves of reading matter, sometimes three or four in one place, which is very

inimical to good binding. *Publishers are requested to have all advertising pages printed on separate sections if possible.*

Desiring to meet, so far as possible, the views of publishers in regard to the matters referred to above, the committee will be pleased to hear from any to whom this note may come.

WILLIAM I. FLETCHER,
ARTHUR E. BOSTWICK,
ERNST LEMCKE.

The circular was distributed to a number of the leading publishers of periodicals, but so far as I can now tell I believe the correspondence resulting is *nil*. We are sowing the seed, and I suppose we shall continue to distribute this circular where we observe examples of the errors which it is intended to correct.

CHARLES H. GOULD presented the

REPORT OF COMMITTEE ON FOREIGN DOCUMENTS.

The Committee on Foreign Documents begs to report, in the first place, that the "List of French Government serials" has been completed and published. In this connection it is the pleasant duty of the committee to remind the Association of the thanks due to the New York State Library, which has done the printing, — the "List" having appeared as one of the bulletins of this library.

The committee has also to report that material has been accumulated for a list of German documents similar in plan to the French list just mentioned.

What has already been got together would, perhaps, nearly equal in amount that of the French list. It comprises not merely German Imperial documents, but also those of Prussia, Saxony, Bavaria, Würtemberg, and other states.

The committee is quite ready to endeavor to obtain additional material; but before doing so, and before preparing for the printer what is now on hand, the committee thinks it would be well to ascertain if, in the opinion of the Association, such a list of German documents would be of sufficient value to justify an attempt to arrange for its publication.

Respectfully submitted,

C. H. GOULD,	} <i>For the Committee.</i>
CLEMENT W. ANDREWS,	
LUCIEN BRAINERD GILMORE,	

ROLAND P. FALKNER read the
REPORT OF COMMITTEE ON PUBLIC
DOCUMENTS.

(See p. 92.)

W. C. LANE: Mr. Falkner's report is so full and interesting that I am tempted to ask for information in regard to two or three points. Is there any prospect at present for securing printed catalog cards for United States documents? I have noticed that a few come from the Library of Congress, but not very many. Secondly, just what is the cause of the year or two years' or three years' delay in the distribution of current documents? Is it because they are to be bound differently, or because they have to wait for other documents which are not yet printed to be bound with them, or is it simply lack of proper organization on the part of the Government Printing Office?

MR. FALKNER: I will answer the second question first. I think the reason for the delay is that these documents must be bound separately, as at present, during the session of Congress. The demands on the Government Printing Office are very urgent and pressing, and if they get off one edition of a volume bound in cloth, they put the rest aside until summer, when Congress is not in session and there is no immediate hurry. In regard to the availability of printed cards for documents, I understand from Mr. Ferrell that he has been in conversation with Mr. Putnam on that subject. Mr. Ferrell reported to me informally that he had come to the conclusion that, however desirable for practical reasons, in view of the enormous cost that would be involved it would be an impracticable proposition, much as he would like to see it carried through.

MISS ALICE FICHTENKAM: I would like to say, in behalf of Mr. Ferrell, that he would be willing to have such cards printed in the Government Printing Office if Congress would be willing to appropriate the money.

HERBERT PUTNAM: As to printed cards for public documents, I did have a preliminary word with Mr. Ferrell, but can merely say that no definite plan has been arrived at thus far.

ARTHUR E. BOSTWICK read a paper on

PAINS AND PENALTIES IN LIBRARY WORK.

(See p. 29.)

W. C. LANE: Mr. Bostwick's paper reminds me of what has taken place in the history of

Harvard College. In the course of the eighteenth century, the earlier custom of corporal punishment gradually died out. Corporal punishment had previous to that frequently been administered in the library, in the presence of the president and fellows, preceded and followed by prayer. As the custom declined, the severer forms of corporal punishment were put aside, but the right of boxing the ears of the offender was expressly reserved to the professor in charge of the library. But as this declined, the system of fines—which Quincy, the historian of our college, calls "pecuniary mulcts"—came into use, and gradually a long list of offences, some thirty or forty in number, grew up, which were appraised at from "tuppence" up to several shillings apiece. Quincy seems to think, however, that this system had little effect on the students, but was very annoying to their parents. That particular aspect of the matter, however, does not bear on the question of libraries. As a matter of fact, the fines still continue in Harvard College Library, but I think they have been discontinued in the other departments of the college.

For my part, in regard to what Mr. Bostwick says on the general question of fines gradually changing from a penalty to a payment for a privilege, I see no very strong objection to that taking place, so long as it concerns merely such infractions of library rules as are not matters of right or wrong or of injury. I see no reason why the detention of a book overtime should not be regarded as a privilege and charged for accordingly—at a sufficiently high price not to have it too long continued.

F. M. CRUNDEN: The true theory of library fines for undue detention of books seems to me that of compensation for injury upon the other persons concerned. In the first place, the fine acts as a deterrent, and it accomplishes this result with rich people almost as well as with poor. I believe that the richest people who use our library have just as much objection to paying fines as the poorer people. If there were no fines, everybody except the few conscientious people that are in every community would keep their books over time. The fine is a compensation to the other people who have been kept from using that book. The compensation that is given in the form of a fine enables the librarian to buy more books, which

is a sort of direct compensation to the other people. So much for the theory of a fine. It does not belong to any of those abstract principles that Mr. Bostwick lays down. It is simply a kind of compensation.

There were some other points that I have noted. One of them is the question of paying for duplicate books. I think that is perfectly justifiable. There is certainly no moral wrong about it, and there is a great deal less friction than if you buy a very limited number of copies of books and disappoint people constantly. The people are perfectly satisfied with this arrangement, and as the thing goes on I think we shall find that they will be more and more satisfied with this arrangement of using the fines to pay for the extra books. They would rather pay for them in this way than wait indefinitely for the comparatively few copies of new books that the library would be justified in purchasing otherwise.

C. A. CUTTER: One suggestion Mr. Bostwick made I find very effective, namely, increasing the fine when I want to produce a special effect. For ordinary detention of a book beyond time, we use the ordinary fine, — two cents a day, — which, by the way, I do regard, as Mr. Crunden does, as damages, as compensation. In case a person keeps out overtime a book, after he has been notified that somebody else has asked for it, and has been told that he must return it within two days, the fine is made ten cents a day, and we exact it. Similarly, when the college girls go home for their vacation, if they do not return the books which they have had out on the last day, the fine is ten cents a day, and this rule is very effective in getting the books back, — although, in the case of the senior class, we have no means of enforcing it.

DR. BERNARD C. STEINER: It seems to me that Mr. Crunden has put the matter in the right way. I should regard the fine as reparation for a civil tort. There is a civil injury done; there is a damage committed, but not to the patron of the library, otherwise the fine should be paid to such patron. The damage is done to the library by making the library less able to fulfil its purposes because of the detention of that book on the part of the borrower who detained it. That being a civil injury, there is no difficulty with reference to the rule of punishment. I regard it not as a punish-

ment, as in the case of a criminal measure. It is a civil damage, a civil tort.

Another thing I wish to emphasize, is the necessity of making the persons receiving fines accountable. It seems to me, without having a cash register or going into all that minutiae, it is perfectly possible to have a system of accounting, so that if at any time it is desirable, the clerk who has received the fines may be held rigidly up to his account. In our library we have a daily return at night by the clerk at the fine counter, and while we do not verify that return every night, it is possible for us to go down in the morning and take the returns of two nights, before the library is opened, so that we can reach the amount of money received the day before. That is done from time to time, not daily of course, for it is not worth while to do that; but whenever it is desirable it can be done, and the clerks in charge of the fine drawer, not knowing when it will be done, are in no danger of being careless — because in most cases dishonesty comes in the first place from carelessness. If we are to carry on business by business methods, as we ought, there must be an accountability at the fine counter just as there is at the librarian's office.

DR. J. K. HOSMER: I sometimes have experiences which make me think we have been rather too quick in giving up the old Harvard College plan, to which Mr. Lane alluded. Our library is largely used by the pupils of the public schools. It happened not long ago — a sample of what frequently happens — that a boy of seventeen took out a translation and tore out some sixty or eighty pages from it to use as a "pony." He was detected in it. There is a severe penalty attached to such an offence, but our board was much disposed to be lenient towards him. They said they could not blast the prospects of the young man. So what was done? His poor father paid a dollar and a half for a new book, and his library card was taken away from him for a year. But he was not hurt at all. He did not pay the fine — it was paid by his father; and his father and mother and sisters all had library cards. So he suffered no penalty of any kind. My feeling at that time was regret that the boy could not have been called up in the old-fashioned way and received a good ferruling.

HARLAN H. BALLARD: I think, with regard to our library rules, that there is danger of

being too strict. The libraries are for the benefit of the public. One thing is certain—if in any community the fine list grows to an excessive degree, that is a proof that in that community there is a popular demand for a longer retention of the books, which ought to be granted. The object of a library is not to increase its circulation so much a year, but it is to give the books to the people for as long as they want them. I wish every library could at times take off all restrictions. That would be an ideal way, to let every person take as many books as he liked and keep them as long as he wished. We do that in our library, practically, so far as it does not interfere with others. That must be the one restriction. We often say to people when they ask us how many books they can take out for some special purpose: "Take as many as you like, and keep them as long as you want. If we have any need of them, we will send for them." That arrangement proves very popular, and I believe it is a just method. What is the reason that a man should be cut off from the use of a book in exactly fourteen days? It may be he is prevented from using it just at the time he expected to. He may have wanted to prepare an important speech or discussion, and the very day he wants to use it he has to carry it back. Consequently, I think the time limit ought to be extended as far as possible.

MR. FLETCHER: Mr. Cutter did not say all he might have said or all that I think ought to be said in favor of his own system. Our library has taken a leaf from his book, and we issue a large proportion of books on the principle that the person borrowing them keeps them as long as he wants to, subject to recall when anybody else wants them, but on such recall there is a fine of five cents a day if not returned. I think it might well be ten cents a day, on Mr. Cutter's principle. It works well. I want to say a word on behalf of a large section of the community which is well represented in western Massachusetts, where we have been making careful inquiries into the conditions affecting library work in rural districts. A great many people go to the library and take out a book and have to pay a fine on that book for detaining it. They come and take one more book and perhaps they have to pay a fine on that, and then they get tired and won't take out any more books. People do not realize how quickly

two weeks pass, and borrowers, especially in the rural districts, are not in the habit of paying close attention to regulations of this sort and soon find themselves bothered with fines and give up using the library. This is a serious detriment to the usefulness of the library. Of course, under certain limitations, as in the case of libraries where ten thousand books have to circulate fifty thousand times in six months, there must be restrictions; but where you have a comparatively large library and a comparatively small circulation, as in most of our country districts, I think the time is coming when there will be no time limit, because when a book is wanted it will be called back.

A DELEGATE: Do you think that in country districts there is a large supply and a small demand?

MR. FLETCHER: Yes, in proportion to the demand, the supply is large. I have come to that conclusion from visiting one or two small towns where I had supposed that the small circulation was on account of having so few books; but I found their shelves crowded with books and very few volumes taken out.

MR. CRUNDEN: It has been said that libraries were for the convenience of the public. Yes, they are; but they are for the convenience of the whole public, not of a few aggressive, unconscientious people who will take advantage of any opportunities for cheating their fellow-members by depriving them of equal privileges. It would be impossible, or at least it would be impracticable, in a large public library with fifty thousand card-holders, for the assistants to remember that certain books are out and notify the persons who have them. The only feasible plan is to establish certain regulations and to live up to them, and the better you live up to them the less trouble there will be. When I took charge of the St. Louis Public Library I had probably, on an average, half a dozen people a day come to me and offer excuses to get their fines remitted. I never have anybody come to me now. Everybody knows that a fine has got to be paid and paid on the spot. There is no friction about it. Of course, people do not like it exactly, I know; but they know it is their own fault. That is the general principle that should be laid down in all library regulations, that the careless people must pay for their own carelessness and not divide up the penalty of their own

carelessness among all the other people. If they lose books they must pay for them; if they keep them overtime they must pay for the privilege. I have found a few people who were not annoyed at being fined for keeping books out overtime. They have said, "Yes, I knew it. I am perfectly willing to pay the fine." But they are the exceptions. Most people prefer to escape fines by returning the book. The same principle goes into the question of making people pay for an extra card. If they lose their card in our library, they have to pay ten cents and then wait a week, and it is perfectly proper that they should do so. We find a double penalty necessary and thoroughly effective. In the case of most of the men they will pay the dime in a minute without much ado, but they hate to wait a week. In the case of women and children, they do not mind waiting a week so much as they do paying the dime. If a man could pay the dime and get another card some men would lose their cards once a month,—that is, they would leave them at home and go down to business and then come and get a book and pay ten cents for another card. In that way there might be ten or a dozen cards out in the name of the same person. But when a man finds that he has to wait a week before he can get another card, if he finds when he gets down to the office that he has left his card at home, he will go home and get it. Its saves the trouble of having so many cards out and makes careless people pay the expense of their carelessness, so that the stationery and clerk hire that is used in making out those new cards does not cost the library a cent.

JOHN THOMSON: It seems to me that one point has not been mentioned. Of course I think you must absolutely have a time limit. Fourteen days is just as good as twenty-one or twenty-eight days. To let people take out books and keep them indefinitely is an injustice to the others who go to the library. But there is a way of minimizing the fine, and that is by renewing the time that a book may be withdrawn. In most libraries, I presume, — certainly in our own, — the renewal applications are very large in number, and persons who want to use a book more than fourteen days can do so without paying a fine by sending in a renewal request for two more weeks. That

application is granted without hesitation, provided the book is not wanted by some other reader. In that way those who want the books and are entitled to have them returned are protected from their being held out too long, while those who want to use the books can keep them without paying a fine by sending in a renewal application.

A DELEGATE: Would you give a renewal beyond four weeks?

Mr. THOMSON: If it is desirable and does not interfere with anybody else. We do not give renewal cards in the department of fiction; but on all other books we allow this privilege on a proper explanation and reason being given.

SILAS H. BERRY: There is another side to the question in the case of libraries that are institutional libraries, that deal with a membership that pay a fee. In our own case, that of the Young Men's Christian Association in New York, we found that our members objected to the idea of being punished as if they were naughty boys, by being compelled to pay a small fine. Therefore, in the drafting of our new regulations we have said nothing about fines; instead we have a charge, just as we have at our boathouse. Members are permitted to use a boat for an hour or two hours every day, and if they want to keep that boat out an extra length of time, they can pay twenty-five cents an hour and keep it out as many hours as they want. So they can draw books at the library, two at a time, and renew them by telephone, by postal card, or in any other way; but if another member wants to use a book and the member who has it does not find it convenient to return it, we prefer to think that he wants to use it and we charge him two cents a day for such use; and we devote the income to the purchase of popular books.

Adjourned at 12.10 p.m.

THIRD SESSION.

(NEW MAGNOLIA HOTEL, TUESDAY EVENING,
JUNE 17.)

The meeting was called to order by President BILLINGS at 8.30.

HILLER C. WELLMAN, president of the Massachusetts Library Club, spoke in

GREETING, ON BEHALF OF THE MASSACHUSETTS
LIBRARY CLUB.

*Mr. President and Fellow-Members of the
American Library Association :*

For the first time in its history this Association has chosen its place of meeting, not at the instance of an individual, or of a library, or of a city, but in response to the invitation of a library club representing a whole state, in fact, representing two states. Because of this circumstance it is my pleasant privilege, in behalf of the Massachusetts Library Club, to give you greeting. In the past an address of welcome has customarily been made by some speaker outside of the Association who has devoted his energies to extolling the noble average of brains and beauty presented by this brilliant body. I confess to a strong personal conviction on this subject, but I feel that it would hardly become a *member* to enlarge upon it.

In fact, though our feelings of welcome are warm, my words must be few, for I am unwilling to detain you from the program which is to follow. I wish simply to express the great and sincere pleasure which it gives to us of Massachusetts to welcome you to the state.

The pride of Bostonians in their native city has become proverbial; you have doubtless heard countless witticisms on this subject perpetrated at our expense. Imagine for yourselves, then, the delight we feel in initiating our best friends from every corner of the land into this paradise. And if you find that in any respect it falls below our heavenly ideal, be magnanimous, I beg you, conceal the fact as best you may and spare our images!

Parkman, writing of a period a century and a half ago, in referring to our cold and disagreeable temperament, says: "Then, as now, New England was best known to her neighbors by her worst side." May there be a ray of comfort for you, therefore, in the hope that on closer acquaintance you may find us not quite so bad as we seem.

This year the Public Library movement in America celebrates, in common with the nobly representative institution in Boston, its fiftieth birthday. From this conference we look back on half a century of effort and achievement; and nearly half this period has elapsed since the last meeting of the American Library Association in New England. At that conference held in Boston, twenty-three years ago, not

one person in twenty attending this meeting was present, and the whole membership numbered less than two hundred. Two topics on the program, it was announced, would receive especial attention, and a discussion was promised both able and brilliant. These problems, it was understood, would be then and there settled for all time. The problems to be disposed of thus summarily were, first, the general subject of fiction in libraries and, second, the matter of children's reading. Owing to an unexpected vitality these problems are still with us to-day. Not all committees have been so frank as that appointed then to consider the exchange of duplicate books among libraries. Mr. John Edmands, in behalf of the committee, "begged leave to report their failure to accomplish anything." Those who since attacked the same problem have hardly fared better.

Yet it is encouraging, it is surprising, to review the progress which has been made during those twenty-three years. The final edition of Poole's "Index to periodical literature" had not then appeared; the "List of subject-headings," the bibliographies, and the other co-operative publications of this Association had not been issued.

Systems of classifications and details of library organization have during this period been elaborated and applied. Not only have public libraries multiplied all over the land, but the efficiency of librarians in reaching and influencing their communities has increased enormously. The scheme of co-operative cataloguing has at last, through the agency of the Librarian of Congress, reached a triumphant consummation. The age limit on drawing books in those days commonly excluded children. Not only has this restriction now for a long time been modified, but we have at last taken one of the most important steps of all in beginning systematic instruction of the community—through its younger members—in scientific methods of using a library. In short, no feature of our American civilization during the last quarter century has been more significant than the wonderful growth of public libraries.

One thing remains unchanged. The *library spirit* was the same then that it is to-day; and this fact is in large measure due to the influence of the American Library Association. There

is excuse, therefore, for our affection toward this organization.

In recent years the Association has met in various parts of the country. It has enjoyed a generous and hearty welcome in the North, at Montreal; it has found an enthusiastic reception in the West, at Waukesha; it has delighted in the luxuriant hospitality of the South, at Atlanta. But nowhere, I assure you, — and I speak for Boston, I speak for Massachusetts, — in no section of this land is there in the hearts of librarians and people toward you and this Association a truer loyalty, a juster pride, or a more whole-hearted pleasure in your presence than here in the old Bay State. We bid you cordially welcome.

Dr. BILLINGS then delivered the

PRESIDENT'S ADDRESS.

(See p. 1.)

Dr. C. W. ELIOT, President of Harvard University, followed with an address on

THE DIVISION OF A LIBRARY INTO BOOKS IN USE AND BOOKS NOT IN USE, WITH DIFFERENT STORAGE METHODS FOR THE TWO CLASSES OF BOOKS.

(See p. 52.)

Adjourned, 10.15 p.m.

FOURTH SESSION.

(OCEANSIDE HOTEL CASINO, THURSDAY MORNING, JUNE 19.)

The meeting was called to order by President BILLINGS at 10 o'clock.

After announcements by the secretary and treasurer, GEORGE WATSON COLE read the

REPORT ON GIFTS AND BEQUESTS.

(See p. 97.)

W. I. FLETCHER: I think we shall all be greatly interested in the summary on the last page of "Gifts and bequests to libraries." There is one item that may escape the attention of some, which reminds me of the old story current in our part of the country, that the farmers used to say that they would have their boys go to college if it took "the last cow in the barn." We note under Nebraska record of the gift of a cow — perhaps it was the last cow in the barn — for a public library in the community.

Dr. STEINER: I would make the suggestion that it would be well to distinguish between Mr. Carnegie's gifts which are accepted and Mr. Carnegie's offers. While, of course, the Carnegie offers are just as creditable to Mr. Carnegie's generosity, they do not show what the country has actually received. For instance, under the heading of Maryland, there are reported two of Mr. Carnegie's offers, one of which was refused and the other of which has not been yet voted on, according to the best of my information at the present moment. So, instead of there being recorded two gifts of Mr. Carnegie to Maryland, there has been as yet no actual gift to the state. There have been two offers, one of which has been refused.

ARTHUR E. BOSTWICK read the

REPORT OF COMMITTEE ON LIBRARY TRAINING.

At the close of the report of the Committee on Library Schools at the Montreal conference of 1900 various recommendations were made regarding the permanent status of this committee, providing that its work be laid out for it each year by the Association, that it should report on certain definite things, that it should visit existing library schools regularly, and that its expenses should be paid by the Association. It still seems desirable that this plan should be adopted, but as it has not been adopted, this committee is somewhat free to follow out its own line in preparing a report. The absence of a provision for paying the expenses of the members of the committee in visiting the various schools makes it practically certain that the report in this direction will be at best partial and unsatisfactory, and in the present instance circumstances affecting the individual members of the committee have made it unusually so. Only one member of the committee besides the chairman has been able to make such visits, and they have visited but two schools between them. Such features of these, however, as appear to be new, interesting, or striking in any way will be very briefly described.

The absence of any specific directions on the part of the Association, however, seems to make this an appropriate time to discuss such of the broader features of library training as it may appear desirable to touch upon. The way in which these features strike the individual

vary much with the personal and local standpoint and it has been thought best, instead of trying to generalize points of view so that this discussion may be incorporated in the committee's report, to make the report brief and supplement it with short papers from such of the members of the committee as may wish to present them.

The library schools on which we are ready to report are as follows:

The Albany school has been visited by the chairman and by Mr. Green. Some features of special interest here are:

(1.) The inclusion in the course of instruction in business methods and office procedure, with a view to increasing its practical value. A modern library is a business institution and in most cases the librarian is its business head; yet too often he has had no experience in business methods and is apt to be impatient of what he regards as their red tape. This plan, therefore, is to be commended.

(2.) A course in methods of book-selection. This includes the preparation of what are known as librarian's book-notes, giving such facts regarding a book and its author as will be of real help to a librarian in deciding whether he wants that particular book in his library. The course is most admirable as indicating to the student the lines along which his own practical evaluation of literature may most profitably proceed.

(3.) The inclusion in the course of novelties like the Belgian modification of the Decimal Classification, which even if not likely to be of practical use in the small library, broadens the librarian's horizon and prevents his professional knowledge from becoming hide-bound.

In the report of his visit, Mr. Green commends the thoroughness and high grade of the instruction and the capabilities, spirit, knowledge, and aptitude of the staff. He says: "The students appeared alert and interested; to be working hard and with good results," and he adds: "I wish that a few months' apprenticeship in a good library could be added to the equipment of every member of a library school."

The Pratt Institute School has been visited by the chairman. Recent features in the instruction that seem to deserve special mention are:

(1.) The construction of what Miss Plummer

calls "ladders," or graded lists of fiction "leading consistently from the reading of a third or fourth rate novelist to one of the first rank." This is not only of the highest value as an exercise and as leading to a broader knowledge of fiction, but its results are destined to be of considerable use to the working librarian.

(2.) The construction by the students of a coronation picture-bulletin, which is really a collection or cycle of bulletins bearing on English history, from the earliest times to the present day. Although the ordinary library would scarcely undertake anything so elaborate, this is the last word in picture bulletins, and is a monument of careful and painstaking work.

(3.) The sending out of a circular to graduates, asking for criticisms of the course. The answers are considered in detail in a report read to the Graduates' Association in January last, and it would seem that they have been taken seriously into account. The course has been modified in several respects on account of them, and where the criticisms seemed not to be well founded they are analyzed and discussed. This plan is highly to be commended as making for better instruction in the school, and for good feeling toward it on the part of the graduates, most of whom are now working librarians.

It is much to be regretted that the members of the committee did not have opportunity to make other visits. A report of course might have been made up from data obtained from correspondence; but it has been thought best to include only observations made during personal visits.

In closing, your committee would strongly recommend that the Committee on Library Training be set a definite task by the Association for the ensuing year, and granted an appropriation for carrying out that task.

Respectfully submitted,

ARTHUR E. BOSTWICK, *Chairman.*

President BILLINGS: This report, I understand, is to be followed by brief statements from two members of the committee—Mr. Bostwick, the chairman, and Mr. Brett. I will now call on Mr. Bostwick.

A. E. BOSTWICK: What I have to add to the report of the committee is prompted by the fact, which seems in the highest degree unfortunate, that the large public library (I speak

especially from my own experience) is not able to make the use of the library school graduate that it would like to do. The fact that it cannot, and the fact that some of us think this fact worthy of discussion, may seem to reflect in some way on the library schools. Nothing can be further from the case, and it is to put the case clearly, as it appears to some of us, that this brief statement is written. We are confronted, like Mr. Cleveland, with "a condition, not a theory," and the condition is this: the library school graduate demands a larger salary than the public library can pay in its lower grades, and it is rarely able to offer him positions in its higher grades. At present this is a misfortune for the library, not for the graduate, for the latter has usually no trouble in placing himself in the higher grades of some newly established smaller institution. At present there is no dearth of such institutions. But this state of affairs will not continue indefinitely, and library extension will some day reach a condition of stable equilibrium. It is of the status of the library school graduate at this time that I wish to speak, for it is not far distant, and some of its conditions may even now be present. It strikes me that we can get a clearer view of the situation by looking at the library profession, not by itself, but in connection with other professions and occupations, and in trying to formulate certain statements that will hold good for all. Any such statement will necessarily be only approximate, and will be open to objection, but I believe that there are a few that contain broad elements of truth.

All workers who are laboring directly or indirectly for the public must receive some kind of preparation for that work. This holds good for those who are practising the so-called learned professions, for teachers, for soldiers and sailors, and for those engaged in all the various phases of the production and distribution of articles in demand by the public. We can hardly expect that library work will be governed by different laws from those that govern the general class of occupations to which it belongs, or that training for it will follow other lines of development than those followed by similar kinds of technical education.

Training for library work is now accomplished by three agencies — the library schools, the apprentice classes, and the summer schools.

The library schools are trying to do for librarianship what the law school does for the legal profession, West Point for the army, the normal school for the teacher, or the theological school for the ministry. That they do not yet fill exactly the same place as these institutions is evident from the fact that the other two agencies exist side by side with them. While the library-school training aims to be general, that of the class is commonly directed toward preparation for the special work of the particular library in which the class is held, while the summer school offers particular facilities for those who can give only vacation time to their work of preparation, and more especially to working library assistants who desire to perfect themselves in the technique of their profession.

That there is at present a place for all three, their continued prosperity sufficiently indicates. Yet that a work which is done in similar cases by one set of institutions should here require treble the number seems at least to offer a field for investigation.

Librarianship, as has been said, is simply one among a great number of professions or occupations that require both special training and general education. In the course of the latter certain features may be introduced that bear directly on the technical part of the training. This technical part may be acquired entirely by actual practice or partly by such substitutes for it as may be available in connection with the more theoretical part of the training. Thus the education of a person who expects to take up such an occupation may either be divided sharply into two parts — the general education and the actual practice of the occupation — or we may throw these more or less together by combining some general features with the theoretical part of the training, and supplementing it with a certain amount of practical work. The first is instruction by apprenticeship; the latter, instruction by a technical or professional school. The point that needs to be emphasized here is that the school instruction, though we speak of it as having largely supplanted apprenticeship, still needs to be supplemented by practical work before the person who takes up the occupation can be regarded as thoroughly trained in it. This is fully recognized in the learned professions. In law, the graduate of a law school is

glad to spend several years in an office at a nominal salary, or at no salary at all, in acquiring that experience without which his professional services would lack value. The graduate of a medical school is eager to obtain a hospital appointment where he spends his time in accumulating valuable experience at a small salary or without salary. The normal school graduate often begins his work as a substitute or waits for a year or more before securing a position. The newly ordained clergyman often goes into mission work or accepts the position of assistant at a nominal salary for the same reason; in almost every case he begins at least with a small pastorate. The graduate of West Point or Annapolis enters the service in the lowest grade for small compensation. The lawyer or the physician does not expect to jump into a lucrative practice at once; the clergyman does not complain because he cannot at once command a large church with a corresponding large salary; the normal school graduate does not ask to step into a principalship; the embryo soldier and sailor do not expect to be promoted at once to colonelcies and captaincies. This state of things is now pretty well understood and accepted. Yet it was not always so, and the tradition of the time when it was otherwise has not passed. The college graduate, in the estimation of the newspaper paragraph writer, is still a youth who regards his education as finished and the honors and emoluments of any career he may choose as ripened plums ready to drop into his lap. That there is still some justification for these squibs is undeniable, for there was still an earlier time when he was in a measure justified in doing so. When there was a greater demand for college-trained men than could be supplied from the few institutions then in existence a college graduate was not so far out of the way when he regarded the world as at his feet. Then came a period of increase in the supply and of brisker competition; the conditions were altered, but the newly-fledged graduate continued to act as if they were still the same. Finally he accepted the situation and his self-confidence is now but a fading tradition.

As school-training for library work is of recent date, so we cannot be surprised to find that it has not reached the position of stable equilibrium just indicated. The library-school graduate is still either in the first or the second

of the stages described above—in which of them statistics alone can decide. Probably he is still in the first or just passing into the second; in other words, his expectation of being able to earn his living by library work immediately after graduation without further experiential training is still justified or has been so until quite recently. That he has not passed into the third stage, where he realizes that such further training is demanded and accepts the situation, is quite evident. How many library school graduates are willing to serve in a public library without salary for six months in order to learn the special methods of that library and give proof of their own personal capability for the work? How many are even willing to accept positions in the lowest grade with salaries of \$35 to \$40 a month? The usual reply to such a proposition, "I cannot live on \$35 a month," clearly indicates that they believe that the school training should render them self-supporting immediately on graduation.

Nothing herein contained must be construed as approval of any particular minimum salary. The point is that library school training has not yet reached the stage, from the economic standpoint of supply and demand, where training for the learned professions rested some time ago.

Is this mental attitude of the graduate justified or not? In other words, is he in the first or the second stage? If he is still in the first, that is, if he really is able to secure self-support within a reasonable time after graduation, he must thank the great recent extension of library work due to stimulation of public interest and to large benefactions. That he cannot rely on the large public libraries is evident from the fact that these are coming more and more to fill the higher positions by promotion. A vacancy at the top means a general moving up all along the line, and the final result is that the opening for the ambitious graduate is near the bottom. If he wants a higher place he must look to the newly created institutions. At present the supply of these keeps up bravely. The situation is as it used to be with law and medicine, when the graduate could always "go out West" and find a newly founded town ready for his services. The West has now been well supplied with lawyers and clergymen for some time; it will also be

come supplied with librarians. When the profession is filled with a solid mass moving slowly upward it will be as hard to get in at any place except the bottom as it now is in the learned professions — harder, for with them there is no formal promotion from grade to grade.

Then the library-school graduate will pass into the third stage. He will accept the situation just as the law-school and medical-school graduates have done. He will reckon beforehand not only on so many years in the library school, but on so many additional years during which it will be necessary to give all or a part of his services in return for the acquisition of experience. That the learned professions have benefited by the natural selection forced upon them by crowding is undeniable. That the library profession will similarly benefit seems certain. When the second stage comes, however (perhaps, as has been said, it is already here), when the confidence of the graduate in immediate self-support is no longer justified, we should do all in our power to make this stage as short as possible, and to hasten the period when the situation will be calmly accepted. When this has arrived those public libraries that now maintain apprentice classes may substitute therefor probationary classes without formal training and requiring a library-school certificate for admission. Members of these classes will be paid a small salary or possibly no salary at all during the probationary period. All the assistants in the ordinary library will be graduates and the *raison d'être* of the summer school will have vanished. Thus two of the present methods of library training will have given place to the third, a consummation devoutly to be wished.

[At this point the president withdrew, and the first vice-president, Dr. J. K. Hosmer, took the chair.]

Dr. HOSMER: I recall a reminiscence that I have heard of Dr. Oliver Wendell Holmes some twenty-five years ago. As vice-president of the Harvard Alumni Association, he was constantly called upon by the president to preside. He began his duties in this way:

"I ought to thank the president,
He has kindly broken the ice.
Virtue should always be the first,
I am nothing but the vice."

I have but one clear idea as to the duties which I am to perform this morning, and that is to threaten well the people who are in the back part of the room. That, I notice, is one of the principal functions of the presiding officer. I wish to remark that if the people in the back part of the room manifest any derelictions they will find that the "vice" is a monster of most frightful mien. We are now, I believe, to hear from Mr. Brett.

W. H. BRETT: When I accepted the honor of a position on the committee on library training, it was with the resolution that I would, during the year, visit each one of the library schools, but the pressure of unforeseen business engagements has prevented me from carrying this out. I have visited only one of the schools and that was due to the fortunate chance that business took me within reach of Pratt Institute. I am, therefore, unable to speak from personal observation of the work, and have been unable to prepare anything which I feel would be a valuable contribution in the subject.

W. C. LANE: Mr. Bostwick's paper was an exceedingly interesting one, but I think there was one point that he left out, which, to make the interest complete, should be added, namely, the fact that the successful lawyer or doctor, after he has served his apprenticeship, gets a very much larger income than the librarian. That point, it seems to me, has a decided bearing on the fact that we can expect a doctor and a lawyer to serve a good many years after his school training at a salary which barely supports him. I wonder if Mr. Bostwick thinks, or the company in general believe, that, as the condition to which he refers is attained, the rewards of the higher places in library work will be at all equivalent to those of the doctor and the lawyer?

Miss AHERN: I was very much interested in Mr. Bostwick's paper, but I am afraid we have come to a point where there is a little divergence. It seems to me that the line of comparison he made was too comprehensive. In the so-called learned professions, the lawyer and the doctor and the others of whom he spoke are not under a stated salary. In our own work the only legitimate comparison seems to me to be along the line of educational work. The salary of the school teacher who has re-

ceived a certificate from an accredited normal school is far beyond now, and always has been beyond, that which is offered to the graduate of the library school. While there is room for question as to the administrative ability, the power of personal direction, of the person in charge of a library or in the different positions in the lower grades, at the same time, the pressure, it seems to me, ought to come on the library schools rather than on the graduates of the library schools if we are going to compare with the normal school graduates, which to my mind is the only legitimate comparison. The pressure should be on the line of what the graduates of the library school really need. In most of the normal schools with which I am acquainted a certificate is not given to a graduate when the course of study prescribed by the school is finished. The graduate is expected to go into the field and show forth his fitness for the work which he or she has chosen before the certificate of the school is given. If the library schools were to adopt some plan of that kind so that there should be one or two years' actual experience in a library of standard grade before the certificate is given by the school, it seems to me that there would be very little question of what the salary should be. That would rest entirely between the library and the student. But for a graduate—one who has received a certificate and has gone through the professional period—to go to a public library at a nominal salary, or no salary at all, seems to me most unfair to all concerned.

F. M. CRUNDEN: Since the matter of salaries has been raised I would simply say, for the encouragement of all, particularly the younger people, that during my time the salaries have been about doubled. I remember when I first went into the business that the salaries of the two men who then might be considered at the head of their profession were respectively three and four thousand dollars. Now, younger men in the profession are getting from five to six thousand dollars, and salaries among assistants have, I suppose, shown a somewhat similar increase. We can never expect, in work of this kind,—which must be in its basis more or less altruistic and regardless of pecuniary compensation,—the same pecuniary compensations that are to be obtained in other professions where money is the main pursuit, and where there are unlimited opportunities for making

it. We must accept that fact. But there is no question about it, the trend of salaries is constantly upward and will continue to be so.

WILLIAM BEER: We have looked at this matter from the point of view of the library school graduate, but in the city of New Orleans there is a civil service law which, to begin with, prohibits the employment of any one not a resident in the city for twelve months. We wanted the services of a student who had had some years' experience in the library schools, but she had only lived for six months in New Orleans, and so was prevented from entering the examination and could not get on the list of eligibles. The largest employers of persons for library work to-day are the municipalities, and I think this Association ought to take some steps to look into the conditions under which municipalities are making it harder and harder every day for the obtaining of skilled assistants from the outside.

MELVIL DEWEY presented the

REPORT OF COMMITTEE ON A. L. A.
EXHIBIT AT LOUISIANA PURCHASE EX-
POSITION.

MELVIL DEWEY: The committee seems to be generally agreed on two main features of the exhibit planned for the St. Louis exposition: First, a model library, which it is hoped will be built in the exposition park and used after the exposition as a branch library for the city; and second, a representation in that building, in its equipment and selection of books, of the best library thought of to-day. The committee feel that in this building there should be absolutely nothing commercial; that library appliances—stacks and pamphlet cases and the other devices that may be shown—should not be shown in the library building; but that in the library building itself there should be two special exhibits, one from the Library of Congress of the maps and materials connected with the Louisiana purchase, and the other a smaller collection of books of special interest to visitors to the exposition. The library should represent not only a model town library for a town or a small city, but also a branch library. This would provide a place where one could go and read or write letters, and be a kind of library headquarters. We consider it desirable to devote this building entirely to the educational side of our work, and to limit the exhibits

brought there to charts, photographs, graphic illustrations, — those having reference entirely to the present status of library science, and not to attempt the antiquarian or historical side of the subject. The feeling is strong that we should make an exhibit more for the public, and to influence the public to understand the function of public libraries, than for the librarians themselves. If librarians wish to study technical details, they will have other opportunities, and it is probably better at St. Louis to try and make an exhibit of interest to the general public.

Our other exhibit will be the much-talked-of "A. L. A. catalog." The initial proposition for this undertaking came up at the last meeting in Boston twenty-three years ago this summer. At the Chicago exposition in 1893, we were able to put out a tentative "A. L. A. catalog" through the aid of the Bureau of Education. That catalog was put out without any of the annotations which were essential to it, yet in spite of that Dr. Harris told me the other day that the more he handled the book, the more he was convinced that it was one of the most useful that had ever been published in this country. The demand for it is constant, and there is a still greater demand that it should be brought down to date. A supplement was put into the hands of a committee in 1894, and they have been working on it without appropriations and without salaries, as time could be given. Part of their material is ready for the printer, but the opinion of the Publishing Board and of this committee is practically unanimous that it would be wiser not to publish the supplementary matter, but from that and from the old book to prepare for St. Louis a new single catalog, that should bring up to date the best selection of books we can give for the average town library. Then comes the essential question of annotations, and our suggestion is this: many thousands of notes have accumulated, but it is impossible to annotate every title in the way it ought to be done, in time for the St. Louis Exposition. Our proposition is to use the best of the notes we have at present for the first edition, and then to follow up that first edition immediately by continuous work in editing until we finally have an annotation for every title that seems to require it. The plan is to print the classified catalog so that it may be delivered in sec-

tions. If any library wishes the section on education or science or biography, that section may be printed from the plates, providing also for an index which shall give the classification numbers.

The work has met with almost insuperable difficulties from the time it was first proposed. We have appointed committees and editors, but we have never had any appropriations. It has been purely a labor of love, except what was done in 1893 by the Bureau of Education. Mr. Putnam is willing to print this catalog, so that it will be printed and distributed from Washington, and that is the first great step. Such a work belongs in our national library, and now that we have a national library that we are all looking to as headquarters it is proper that this catalog should be printed there and distributed from that centre.

The second point is that just as soon as that book comes from the press the editors have got to begin on the second edition. There will have to be an editor who will give his whole time to it. He must devote himself to collecting suggestions as to books and materials for notes, and we may hope with succeeding editions not to bring out a series of supplements, but from time to time to issue a book that shall represent the best books that can be chosen, with the best annotations that our combined efforts can procure. I am convinced that there is no single publication that we can make, no single piece of work that this Association can do, that will do so much for the smaller libraries and for individual readers as a book of that kind.

Any further exhibition at St. Louis is dependent on the means at our disposal. I hardly think the A. L. A. has funds enough in its treasury to warrant us in making an appropriation for this purpose. The model library exhibit and the "A. L. A. catalog" will be the best exhibit that we can make. Beyond this the committee have only to report progress, and express the hope that we shall have funds to supplement this with the other exhibit.

H. L. ELMENDORF: There may be a number of the librarians present who would like copies of the old "A. L. A. catalog," which is, I believe, out of print. There are something like five hundred copies stored away in the Buffalo Library. The copies are in good condition and if any of you would like them and

be willing to pay the freight or express charges I would be glad to send them.

H. J. CARR: If Mr. Elmendorf will ask the Bureau of Education for a frank, the whole bundle of catalogs can be sent back to Washington, where any one can get them without expense.

W. I. FLETCHER presented the

REPORT OF THE A. L. A. PUBLISHING BOARD.

(See p. 83.)

W. T. PEOPLES read the

REPORT OF COMMITTEE ON RELATIONS WITH
THE BOOK TRADE.

Upon receiving, in October last, from the secretary of the Association notification of our appointments as members of the Committee on Relations of Libraries to the Book Trade, steps were taken at an early date to acquaint the book trade of our appointment, and to this end the following letter was addressed to the president of the American Publishers' Association:

MR. CHARLES SCRIBNER,

President American Publishers' Association, New York.

DEAR MR. SCRIBNER: At the twenty-third general meeting of the American Library Association held at Waukesha, Wis., in July last, one of the topics considered and discussed was the "Relationship of publishers, booksellers, and librarians."

A full and complete report of the proceedings of the conference may be found in the *Library Journal* for the month of August last.

As a result of the very thorough consideration of the above-mentioned topic it was decided that the council of the American Library Association be requested to appoint a "Committee on relations of libraries to the book trade."

At a meeting of the executive board of the Association held on September 30th last, the following-named persons were selected to compose this committee:

W. T. Peoples, of New York, Chairman,
H. L. Elmendorf, of Buffalo,
W. Millard Palmer, of Grand Rapids,
John Thomson, of Philadelphia,
Miss Tessa L. Kelso, of New York.

It will be the province of this committee, not only to guard the purchasing interests of the various members composing our Association, but also to endeavor to promote amicable and harmonious relations with your Association as the representative of the book trade.

As chairman of the committee I am in receipt of several communications complaining of some of the inequalities existing in the new arrangement of issuing "net books."

These complaints cannot be enumerated here. The object of this communication is to acquaint your association of the existence of our committee.

I shall shortly ask you for a personal interview as the most satisfactory and expeditious mode of adjusting the complaints which have thus far come to our knowledge. I am,

Very respectfully yours,
W. T. PEOPLES,
Chairman.

Through correspondence and personal interviews your committee has been constantly in touch with the Publishers' Association and individual members thereof, whereby the trade has been kept thoroughly informed of the dissatisfaction existing among the members of our Association, with the so-styled "net price system." In our first interviews we found considerable irritation existing, caused by what was considered to be erroneous and ill-advised statements by individual members of our Association. To a very great extent, we think your committee succeeded in removing these and overcoming a feeling at first inclined to resentment, until eventually we had assurances from leading members of the American Publishers' Association that they would listen to our appeal and at the same time favor granting us a concession in the way of an increased discount.

We then asked that a meeting of the Publishers' Association be called, that this matter might be considered at the earliest possible time. In this connection your committee desires to say that in all their interviews with the publishers they were careful to disclaim any desire to interfere with or injure the local booksellers in any way.

Various obstacles intervened to prevent the meeting of the publishers being held before the 27th of May last. In the meantime the annual meeting of the Pennsylvania Library Club and the New Jersey Library Association was held at Atlantic City. At their meeting the following resolution was adopted:

Resolved, That the American Publishers' Association be requested to consent that the dealers and publishers be permitted to give to librarians a discount up to 25 per cent. on net books.

The adoption of the above resolution had the effect of arousing and antagonizing the executive committee of the American Booksellers' Association. A meeting of that executive committee was held, and a memorial prepared addressed to the American Publishers' Association.

Among other things this memorial requested that the publishers instead of increasing the discount to libraries, should require them to pay the full net price for books. In addition this memorial contained other matter relating to libraries and librarians, which in our opinion is unworthy of a body of representative men, which we do not deem it wise to discuss at this time, and we regret to say that this memorial was signed by one of the members of our committee.

The outcome of the American Publishers' Association meeting, for which we had been laboring, held on May 27th, is shown by the following letter received from Mr. Charles Scribner, the president of the Association:

DEAR MR. PEOPLES: Probably you have heard that the Publishers' Association took no action upon the library question at their meeting, but this is to make good my promise to let you hear from me. In opposition to the suggestions from the library associations, the meeting had before it a request from the Booksellers' Association, enforced by some thirty odd letters from representative booksellers, to take away all discount from libraries, and to extend the protection over net books for another year. The meeting also had to deal with the price cutting in New York city, and other matters of importance. As a consequence of this situation it was resolved to take no action upon the library question. There is a desire on the part of some members that the library discount be increased, and I think it possible that some more favorable action may be taken at another meeting.

Yours very truly,

CHARLES SCRIBNER.

In reply to an inquiry, we also received the following:

DEAR MR. PEOPLES: Replying to your inquiry concerning the last meeting of the Publishers' Association, I would write that the Association refused to extend the protection to net books beyond the one year now agreed upon.

Yours sincerely,

CHARLES SCRIBNER.

Your committee respectfully suggest that the Association adopt the following resolutions for presentation to the Publishers' Association:

First: That the Publishers' Association having agreed to limit the net price protection strictly to one year, print on the back of the title page the month as well as the year of copyright, that all may know the date when the protection expires.

Second: That the Publishers' Association grant to libraries an increased discount over their present allowance on net books.

W. T. PEOPLES,
JOHN THOMSON,
H. L. ELMENDORF,
TESSA L. KELSO.

MARTIN HENSEL: Most questions have two sides to them, but this one seems to have three, the publisher on one side, the bookseller on the other, and last, but not least, the librarian. Now, what the librarians want, I believe, is cordial relations with both and nothing else. The complaints in regard to library discounts come mostly, in the first place, from the booksellers themselves. They are dissatisfied with the conditions of things to-day. I was a bookseller myself for twenty-five years, from 1865 on, and I know something of the dealings of the book trade. To-day the libraries are among the best advertising and distributing agents that the publishers have, and I believe the relation between the libraries and the publishers is very fraternal.

The discount of ten per cent. on net books would be all right if the publishers did not raise the price on a good many books beyond what it should be. There are some books, I know, on which the publishers were compelled to raise the prices; but when they put a book that is listed at \$1.50 long, at \$1.35 net and give ten per cent. off of that, it makes it come to \$1.22, or less than twenty per cent. of what the book really ought to be to the library. Now, all we want in this matter is fair play, and I hope the committee on the relation of the libraries to the book-trade will be able to give us the fair play that we want.

T. L. MONTGOMERY: I very much regret that this committee did not take some notice of the unwarranted attack made upon a member of this Association in the memorial prepared by the Booksellers' Association, and I would very much like to make a motion that any member of that committee who was in any way responsible for that attack upon Mr. Dewey should be expelled from this Association, if he is a member. I think that was the most dastardly attack that has ever been made upon any one ever connected with our Association.

W. I. FLETCHER: It seems to me very essential that we have a clear understanding of the points involved. As has been said, it is probable that really the most dissatisfaction that has arisen, and the most justifiable dissatisfaction, has been with the failure on the part of the publishers to reduce their list prices sufficiently to meet the reduction of the discount allowed. I have been told on behalf of some publishers that they are at last beginning

to recognize that a very strong case has already been made against them on those points, and they are prepared to yield something there. The other point is quite a different one — what the amount of discount shall be on those prices. The prices might remain if it is intended that the prices of books shall be raised all along the line, but if they do not intend to have the actual cost of the books raised, they certainly should give us more discount. Let us keep those two points distinctly in mind, and it is almost a matter of indifference to us whether the publishers approach the subject on one side or on the other, — whether they reduce list prices, as compared with former list prices, of books evidently of the same value, or whether, not reducing any more than they have done, they increase the amount of discount given to libraries. It seems to me we are in a position to demand that there be a more equitable solution of this matter on the part of the publishers in one way or the other.

It is very evident to all observers that this book trade reform is in an experimental stage, and that we ought to put up with it for a year. I say "put up with it," not to cast any opprobrium upon the reform, because, on the whole, I myself believe in the reform, but I mean that we should put up for a year with the difficulties that some publishers tell us are incidental to the reform. It seems to me that the action we should take to-day is very fairly expressed in the resolutions offered by the committee, and I hope they will receive their proper reference to the Council and stand as the action of the Association.

MR. BERRY: We must not fall into the danger of thinking that the publishers are trying to make it easy for libraries to get books at the old prices. As a matter of fact, they have attempted to reduce the price of a dollar and a half book to a dollar and thirty-five cents in order to meet the difference in the present discount to the booksellers and the former discount to the booksellers, allowing a straight discount of twenty-five per cent. instead of forty per cent. as formerly. They are not trying to meet the difference between the former discount to the libraries of forty per cent. and the present discount to the libraries of ten per cent. It is the bookseller they are trying to protect, and the local bookseller needs the protection, as we must all of us believe, especially

if we have ever had anything to do with the book trade. But what we want is a little more equitable distribution of the profits. The publisher is the gainer in the present raise of prices, and not the bookseller. The object of this raise was to give the bookseller a little more chance; but he is not getting it, and he does not feel satisfied about it, and he kicks the A. L. A. instead of the A. P. A. as he ought to do. I believe, however, if we treat this matter with moderation and care, as the committee has suggested, that it will be left on safe ground. The committee is favoring moderation, but it is also favoring action, and therefore I believe in its policy.

HILLER C. WELLMAN: The facts are clear; the only question is, what are we going to do about it? It is not surprising in any way that the booksellers send a petition to the Publishers' Association asking that no discount be allowed to libraries. They would be foolish if they did not, because they are in for making money. The action of the Publishers' Association is essentially that of a trust: it removes competition, and so of course the booksellers desire to give no more discount than possible. If there were any competition, you would not find a bookseller in the United States anxious to have a rule prohibiting him from giving a discount to libraries. It is a very peculiar business that cannot afford a discount to the purchaser who buys in the course of a year from a hundred to three or four or five thousand times as much as the ordinary purchaser, and certainly a business of that kind can be conducted at a smaller cost when \$5,000 is involved than when \$1 is involved. I think we all sympathize with the bookseller because I do not think he is making very much out of it either way. It is the publishers that are at fault, and the question is, what are we to do?

I think the first thing to do is to make the general public realize that the prices of books have been advanced about 25 per cent. It is a matter of supply and demand, and as soon as that fact is realized by the ordinary purchaser, the publishers will put down their prices. There is no question about it. Our first endeavor, I think, should be to get the matter aired in the newspapers. Not only libraries are suffering, but the public itself is being mulcted. The public has not yet realized that when "\$1.35 net" is put on a book, the pur-

chaser is paying more than when \$1.50 was the long price.

The second thing, I think, is that as an association we should take active measures for our own protection. The librarians of the country ought to combine to discriminate in making their purchases against publications that are obviously listed too high. In a very short time then the publishers would hesitate before putting too high a price on their books. I hope we shall take the matter up vigorously, because it is a thing that in the end will right itself without doubt. Our object should be to hasten the remedy as much as possible.

H. L. ELMENDORF: I heartily concur in the report of this committee of which I am a member. I would like to give a little further information, and that is that the committee have every reason to believe that the Publishers' Association will make a moderate concession in their discounts. We have been so informed by individual members of the association. I want also to say to-day that a very great point has been gained in their refusing the request of the Booksellers' Association to extend the time of protection longer than the year proposed. Mr. Scribner was very definite on that point, that the time would be strictly limited to the time proposed, and that, I think, is a point which has been gained by your committee.

Then I want to speak of an impression that was given last night in our meeting that I think is entirely erroneous. It was stated last night that publishers considered the librarians to be of very small account. I can assure you that to my personal knowledge this is not the position of the publishers. In fact it is a consideration with a publisher before accepting a book and publishing it whether that book will be taken by the librarians. If it is a book that commends itself to the public libraries, the success of the edition is assured. It is the desire of the Publishers' Association to make this affair an equitable business matter between themselves and the libraries and the booksellers. They consider both parties as their customers and the matter as a business one. They certainly want more money for their books than they received at the time when they were all failing, for one reason and another, and there has been an effort on all hands to get for themselves first — besides incidental protection

to the booksellers — a higher price for their books for their own protection. If this Association will take temperate action and will continue a suitable committee on this matter, I have no doubt but that a state of things will be reached by which the libraries will benefit very much more than they do under the present arrangement, and where the arrangement will be considered equitable on both sides.

Miss KELSO: This question is one of considerable interest to the publishers, but I think that the librarians should realize that after all their combined purchases are really only a small proportion of the publishing business of any one house. I think it extremely ill-advised for the Library Association to go any further into the discussion of what the publishers shall charge for their books. We overlook the fact that the publishers nowadays are spending thousands of dollars in advertising to make their books known to the general public, and their chief interest is in the sale of books to the general public. Thousands of copies are taken by the general public where hundreds are taken by the libraries, and that matter of fifteen or twenty cents a copy on the retail price is a matter that must and will remain in the hands of the publishers and booksellers. On the other hand, it is true that libraries are recognized by publishers as most valuable advertising mediums and promoters of the reading of books, and our great point should be to bring forward all the arguments to the publishers that we can, showing them this side of the question. I do not think anything is gained by finding fault about the prices; the presentation of the rights of the librarians should be put upon different ground, — the fact that they are large buyers. It does seem unfair that a library which often purchases more books than all the local booksellers in a community should not receive a proportionate discount.

I may say, too, that I think the bookseller is rather likely to want a new adjustment before the year has passed. We who know anything about the bookselling business to-day, know that it is simply impossible for the average bookseller to take charge of and care for properly the trade of a library, even of only twenty or twenty-five thousand volumes. What does he do? He cannot afford to make the prices, so he turns over the whole list to the nearest large

dealer or jobber, and this fact in itself is likely to result in the situation adjusting itself. It is the general opinion of large dealers and jobbers that librarians should have a much larger discount, because they realize so thoroughly and practically the failure that must ensue from this endeavor to make local dealers care for library orders from year to year. So I think that this matter will adjust itself, and the Association could well go on record and go before the Publishers' Association with a temperate request for a definite discount, as large distributors and users of books.

MR. PEOPLES: I think it is generally realized that during the past year individual publishers have made errors in fixing the prices of some of their books. Of course, the American Publishers' Association cannot go to the individual publisher and tell him at what price he shall publish a book. I know we have the sympathy of a great many of the publishers. Just previous to presenting my report. Mr. William H. Appleton, of the firm of D. Appleton and company, who is present, expressed to me his sympathy with our side of the question. Therefore, I trust that any action taken will be considered with moderation.

E. H. ANDERSON: I move the acceptance of the report of the committee and that the resolutions they offer be referred to the Council.

Voted.

MELVIL DEWEY: I think it is only right to call your attention to our peculiar relations in Albany. The state library is a distinct institution, like your libraries, but I am also director of the Home Education department. We have an appropriation of \$60,000 for the benefit of public libraries. That money is assigned to public libraries, and it can be spent only for such books and at such prices as we approve. The law when it was passed distinctly authorized us to supply the books ourselves, instead of giving the money to the libraries. This plan has always been followed in Massachusetts, which buys books not only with all the state aid, but also very often with local money sent in to secure lower prices. We discussed this matter at considerable length, and I urged that this should not be done — that we should not supply the books as authorized by law, but should turn this business over to the bookseller. We have always recommended to these

libraries to buy of their local booksellers, provided they could get satisfactory service and the price that they wanted. We are compelled to certify that this money has been spent in accordance with the rules, but have been in an unusual degree considerate of the bookseller, and if subject to criticism it would be for regarding him too much, not too little. We often buy for our own use ten sets of a single traveling library. We also have bought fifty or one hundred copies of a very few English and American classics regularly studied in our schools, and lend these to students unable to supply themselves. We have a perfect right to sell any of these, but have never done so except that we had about five copies of four books some ten years ago of which some were sold. These are the collections which have been used to furnish a text for the recent attack on me personally by the Booksellers' Association. They guessed that as we bought duplicates we sold them, but they never took pains to ask, but printed an explicit statement wholly inconsistent with the facts. Now that they are made public we shall wait with interest for the apology which gentlemen always make when they have made unwarranted and offensive and harmful statements under a misapprehension of the facts. I should not have mentioned this subject had I not learned that many people were stoutly defending us for adopting the Massachusetts plan of supplying books when in fact we have never done so, though we have it urged on us as a duty to the public.

The Publishers' Weekly — and my relations have been most friendly with the office of that paper — has always misrepresented what I have said about the function of a library. I was asked to prophesy what was going to happen in the next century, and I prophesied — and I still believe in my prophecy — that the library is to follow exactly in the steps of the development of the public school and public education. I claimed that the tax-supported high school had displaced the private school carried on for the personal gain of its teachers, and the tax-supported library is displacing the circulating library and is being supported at public expense. It is absolutely free. We cannot stop this movement. I have never tried to help that movement on, but I predict again that this is inevitable. When the high school, as it has done in so many cases, gave a better

course, with a larger faculty and a better equipment in every way than the private school, the pupils of the private school went over to the high school. The high school is an institution of which we are proud, and the public library is following on the same lines.

You cannot replace a stage-coach with the trolley line without injuring the business of the stage driver. To help people buy and own the best books, I have always contended is a peculiarly good thing. A book owned is a great deal better than a book loaned. We must work back from our local library to the library in the home and in the house and the library of the individual. That means the owning of books, and the books must be gotten from the publisher to the person who is to own them. I have always made this qualification, that the bookseller may continue to live in the larger towns, but he has already disappeared from the smaller towns. It is as foolish to hope for the revival of the competent bookseller in the little community as it is to restore the stage coaches.

Now, I have never said this before, but I am going to say it, that there are booksellers who, instead of being the strong allies of good reading are the worst enemies of good reading. You know men who are so-called booksellers, who sell tobacco and cigars, etc., and who will sell the very worst publications quicker than they will sell the best literature if they can get five per cent. more profit. There are men claiming the privilege of retail booksellers who have no education and no ethical standards. They say, "Our only concern is dollars and cents." They would just as soon sell whiskey at one end of the counter and tobacco at the other. They handle the cheapest commercial literature and they sell it whenever they can make one cent more profit than in selling the best editions. The bookseller of the old standard, aiming to educate and uplift the community, belongs with us. He ought to be a member of this association. But we would be cowards if, because a man who says distinctly, "I have no interest except to make dollars and cents," puts on his sign, "Bookseller," we should admit that he should take his place with us as a member of a profession which we honor, in which we mean to work, and in which we mean to maintain our self-respect.

FIFTH SESSION.

(OCEANSIDE HOTEL CASINO, THURSDAY
EVENING, JUNE 18.)

The first part of the evening session, from 7.30 to 8.30, was conducted by the officers of the Bibliographical Society of Chicago. It was opened with a paper by CARL B. RODEN on

THE ORGANIZATION OF BIBLIOGRAPHICAL WORK IN THE PAST.*

Mr. Roden briefly outlined the three bibliographical enterprises, now in existence, which are engaged in international bibliography, viz., the Office International de Bibliographie, the International Catalogue of Scientific Literature, and the Concilium Bibliographicum. "The first of these is the most ambitious, its goal being nothing less than a general international bibliography; the second limits its scope to the literature of the sciences; the third to that of one science only." From the kindred work undertaken independently by these three bodies it was evident that the scientific world had awakened to the urgent necessity of prompt and effective bibliographical effort.

AKSEL G. S. JOSEPHSON followed with a paper on

PLAN FOR THE ORGANIZATION OF AN INSTITUTE FOR BIBLIOGRAPHICAL RESEARCH.

(See p. 61.)

President BILLINGS called the meeting to order at 8.40. The secretary announced that the

ELECTION OF OFFICERS

would be held on Friday morning between 9 and 12 o'clock. The tellers were announced as Malcolm Wyer and George H. Stockwell.

CHARLES F. BURGESS read a paper on

SELECTION OF TECHNICAL AND SCIENTIFIC BOOKS.

(See p. 56.)

EDWIN H. ANDERSON: I would like to ask when this list to which Professor Burgess refers will be available, and by what means libraries will know when it is available.

* Mr. Roden's paper was a review, from material already in print, and was not intended for publication.

Mr. BURGESS: It is hard to say when the list will be available. I expected to have it some time ago. We will make a great effort to have it out within a month or so, but in what way it will be published I am unable to state. It may be that our society will issue it, and your president has suggested that possibly this Association might be willing to take it up and publish it in connection with some of their other publications. We should like to have it published in the way that it would do the most good.

President BILLINGS: When the list is finished it is probable that the Publishing Board of this Association can find a way to bring it to the attention of libraries.

I am somewhat familiar with the Correspondence Schools of Scranton, and I have taken the trouble to look at their books, and I regret that I cannot concur with Professor Burgess as to their great value. I think his committee will be able to get a much better list of books than those books will give them.

N. D. C. HODGES spoke on

THE SELECTION OF SCIENTIFIC BOOKS.

As a general statement, only the larger libraries can care for the needs of trained engineers — taking engineers in the broad sense to include chemists and all graduates of technical schools. These experts want the sets of transactions of engineering societies and the sets of technical journals. The cost of these in any completeness precludes the possibility of their being on the shelves of a small library. The small library can supply the systematic treatises, more or less popular, on the different branches of applied science. These treatises are always somewhat out of date, are generally a year or two behind the periodical literature, but they serve the purposes of the artisans, the amateurs, and the general readers. Engineers appreciate that they are hardly competent to judge of literature of this kind. It is not written for them, and is of very little service to them. Information on a good many side subjects, such as basket-making, printing, and the allied industries, lithography, is sought at a public library, either in treatises or recent volumes of trade journals, or it may be that everything that is wanted can be found in the Universal Encyclopedia. The "Encyclopedia Britannica" articles are too technical for the average

public library patrons. It would be presumption on my part to suggest a list of books for the technical room of a public library. Such a list has been under consideration by a committee of the Society for the Promotion of Engineering Education. I will only say that we do not like to purchase any technical books if the copyright dates back more than three years. Such books quickly become dead books — the *Makelatur* of the Germans.

We opened in March a Useful Arts' Room at the Public Library of Cincinnati. We have in that room the current numbers of 140 scientific journals. We have also the scientific books and the recent volumes of patent specifications and drawings, and the necessary patent indexes. I would be inclined to buy for the average public library the books of the day, making the best selection possible in all lines of applied science. At one time these would run to automobiles, at another to wireless telegraphy, and at a third to liquid air. In five years whatever is purchased should be handed over to the junkman. There may be some money loss in the transaction, but this will be made good by the gain of freedom in your habits of thought and action. There are a few standard works on engineering which have longer lives, and which should be on the shelves constantly. But if any one is to use these standard text-books it will be necessary for him to buy his own copies. A public library can seldom supply text-books to those who are studying.

A paper by W. DAWSON JOHNSTON ON

THE WORK OF THE DIVISION OF BIBLIOGRAPHY OF THE LIBRARY OF CONGRESS,

(See p. 63.)

was presented, in Mr. Johnston's absence, by HERBERT PUTNAM.

C. W. ANDREWS spoke on

A PROPOSED BIBLIOGRAPHY OF BIBLIOGRAPHIES.

Mr. ANDREWS: The first bibliography of bibliographies known to me was published in the seventeenth century and since that time so many have been published as to call for the preparation of a guide to them, which was done by Mr. A. G. S. Josephson in his pamphlet entitled "Bibliography of bibliographies chronologically arranged." The necessity for or possibility of such a guide is so foreign to the ideas

of the reading public that some well-educated people, including at least one librarian, have failed to understand this title and have assumed that the list is another one of the works which it records. It might be better, therefore, however forced it might seem, were the title given in full as a "Bibliography of bibliographies of bibliographies," or to expand one of the titles quoted in it, "A book about books which relate to books about books." Or perhaps a mathematical expression may be allowed and the title expressed as (Bibliography) ⁴.

Although this work records 156 titles, yet the larger part of them are either general or deal with the literature of special countries rather than with that of special subjects. Only five treat specifically of the bibliography of science; one is dated 1862, another is six pages in length, while the other three treat of individual sciences. Some of the more general lists of subject bibliographies, especially those published by the Harvard College Library at intervals up to 1891, by the Boston Public Library in 1891, and the New York Public Library in 1899, are valuable aids, but less so in science than in other fields. For these reasons it has seemed to us that the publication by The John Crerar Library of a "List of special bibliographies" would fill a gap and serve a useful purpose. The list, which will be issued early in the fall, is essentially a reprint of the 016 section of the classed catalog and gives not only the distinctly bibliographical works on each subject, whether periodicals or monographs, but also the titles of works which contain bibliographical material thought to be of interest either because of the number of titles given or the minuteness of the subject treated. It includes also general indexes to periodicals covering more than a single year, whether the periodicals contain bibliographical material or not, and further the catalogs of special libraries which often are valuable bibliographies. Its scope of course is that of the library, and practically includes all science in its broadest sense, except philology and medicine, or, as we express it, "the social, physical, and natural sciences and their applications." The list is much fuller than the library bulletins which have been mentioned, and so far as the incidental bibliography brought out is concerned, is approximately of the same class as the bibliographical notes made by the Library of Congress and Harvard

University. Still it is very far from being a complete presentation of all bibliographical lists; for while it will give about 3,000 references in the main work and about 150 in the appendix, de Margerie's "Catalogue des bibliographies géologiques" contains almost 4,000 titles on geology alone. The latter includes, it should be said, besides much material classed elsewhere in more general lists, periodical articles, "lists of works by the same author," and much other material of like unimportance. The list is to be indexed both by authors and subjects, using for the subject entries the catch words occurring in the titles and perhaps even in the contents notes. We may, therefore, hope that it will give assistance even in such a case as that of guilds, on which no special list is known to us, except one prefixed to a chapter in a larger work.

W. I. FLETCHER read a paper on

THE WORK AND PLANS OF THE PUBLISHING BOARD.

The Publishing Board came into existence in 1886, but was prefigured in the arrangements made ten years earlier for the production of the new edition, published in 1882, of Poole's Index. Dr. Poole at the first meeting of the A. L. A. in 1876 proposed his scheme of collaboration for the preparation of this work, which met with an enthusiastic response; and it was perhaps not so much the success of the method of collaboration as applied to this particular work as it was the spirit of earnest united effort among librarians which was thus manifested, that led directly to a more formal organization for the furthering of other similar undertakings.

From the first the Board has been at work on co-operative cataloging, attacking the catalog problem at two points which may be called its right and left wings. For the right wing, there is the furnishing of printed cards to supersede the necessity of each library doing original cataloging work, and so effect an immense economy. This phase of the Board's work, while always recognized as one of extreme importance, was, not unexpectedly, found to be one of great difficulty. At last it seems that the chief difficulties have been met, and through the instrumentality of the Library of Congress, the libraries will ere long be supplied with catalog cards not only for new books, but for the great

number which are common to the general run of libraries. This undertaking on the part of the Library of Congress is so great that it will be natural for that library to leave to others, working through the agency of the Publishing Board, the furnishing of cards for analytical entries for sets, the Library of Congress itself using our cards of this kind. The Board's work in this matter of analytical cards for sets of periodicals and serial publications not covered by such indexes as Poole, the Cumulative, or the A. L. A., is well established and is going on on a firm basis.

But there is a point, not clearly established, at which libraries will naturally stop in the matter of analytical cards; or more properly there is a large field of analytical entries better covered by indexes in the form of printed books. The distinction here made is clearly brought out by observing that while many libraries were making analytical subject cards for articles and periodicals before Poole's Index was published, few would now look with anything but dismay on the discontinuance of the several good periodical indexes now published, and the consequent necessity of making analyticals for periodical articles. The "A. L. A. index" is being more and more widely accepted as carrying the same principle into the field of general and miscellaneous literature, and few libraries now beginning to make a catalog will make card analyticals for the books covered by that index or would fail to consider the "Index" immensely superior to the results of such analytical work as they could do in its absence.

A more striking example of the value of this part of the Board's work is found in the "Portrait index" soon to be issued. Years ago some libraries found it worth while to attempt to make card analyticals for portraits in collections. This was done to a large extent in the Boston Athenæum and the entries there made form a basis of the material accumulated under the editorship of Mr. Lane for our "Portrait index."

I have thus shown how the Board's work attacks the right wing of the catalog problem by supplying printed cards where that method seems the wise one, and the left wing by the issue of printed index volumes to take the place of elaborate and voluminous analytical subject cataloging.

Beyond this work, which may be regarded as "co-operative cataloging," the Board has on hand several important undertakings. Its annotated lists (1st) of "Books for girls and women and their clubs," (2d) of books on the fine arts and music, and (3d) of the "Literature of American history," represent an effort to provide for the evaluation of literature, an effort owing its initiation, as well as substantial financial support, to Mr. George Iles, whose endowment for this part of our work exceeds \$10,000. Then there is the issue of "library tracts," intended to comprise a series of brief handbooks on the best methods of starting and organizing libraries. The name "Tracts" suggests the missionary aspect of this series of publications and they are intended to be used in arousing interest in library matters where such interest does not exist, and second, to give the necessary and helpful direction to those who are engaged in the beginnings of library work. These "tracts" will find their best use in a free distribution by the various library commissions.

My purpose has been to show the general trend thus far of our work and to emphasize its value. But I am to speak of not only the "work" but the "plans of the Publishing Board." You may well believe that this portion of my paper, if written in anticipation of this meeting, had to be rewritten. Of course what is now expected is some indication of what use the Board will make of the income assured to it by the munificent gift of Mr. Carnegie, announced to us in the address of our president. We may well suspect that we have to thank Dr. Billings for more than the mere announcement.

A fair consideration of the work lying before the Board can only be had by looking over a larger field. Mr. Carnegie's gift to the Association for the work of the Board was made after deliberation on the part of the officers of the new Carnegie Institution as to the possibility of including in the scheme of that institution a department of bibliography. That question is, as we understand, not yet determined. But it is practically determined that should the Carnegie Institution undertake such work, its scope would be such as not to include the kind of work to which the Board principally gives its attention; it would rather be in the field of bibliographic research — the advance-

ment of knowledge. Should the Carnegie Institution develop its activities along this line some of the undertakings contemplated by this Board might naturally be turned over to that institution. The field of the Board's work would thus be limited, as indicated in the terms of Mr. Carnegie's gift (terms nearly identical with those used in presenting the matter to him), to the preparation and publication of reading lists, indexes, and such other bibliographical and literary aids as would be specially useful in the circulating libraries of this country.

In passing it may be well to remark that the scheme for an American Bibliographical Society might be held in suspense until, in case the Carnegie Institution enters at all the bibliographical field, it shall be seen what ground remains for such a society to work in between the Carnegie Institution on one hand and the Board on the other.

There has not been time since the Board was informed of its present good fortune to formulate any definite plans for its future work. Only a general answer can be given to the question, "What are you going to do with that money?"

In the first place this increased income will enable the Board to maintain a decent office equipment, including *personnel*. What it has long needed is a paid executive officer to do much of the work which has devolved on the members of the Board, but which has become, with the growth of its work, too onerous to be so carried. Probably it is safe to say that one-half of the increased income of the Board will be absorbed in promoting, in this and other ways, its general working efficiency. As to the publications which it shall issue, attention should be called to the fact that, as shown by our report, several important undertakings are immediately before us, the proceeds from which will be received only after considerable delay. The new financial basis of the Board will prevent the necessity of delays caused by financial inability, to meet the necessary expenses of editing and printing.

The "Portrait index" is nearly ready for the printer and the printing can now go forward without fear that the Board's treasury will be swamped.

The "A. L. A. catalog," in its new edition, must be prepared at once if it is to be ready for

the St. Louis exposition, and a considerable sum can be very wisely expended in facilitating this work and making the annotations as complete as possible.

A new catalog of reading for the young, including copious annotation and an index to juvenile periodicals, is also much called for. Additional "library tracts" to a considerable number may also be printed.

Mr. Iles's scheme for the evaluation of literature may be thought of as one of those things which the Board may now carry without difficulty into the many fields not yet covered by it. But when it is also observed that the volumes already issued have been made possible only by gifts from Mr. Iles, far exceeding what the Board could supply even from its increased income, it is evident that the continuation of this scheme on the same high level of editorial merit calls for further special financial support of the sort of which Mr. Iles has furnished so brilliant an example, or may perhaps come properly within the province of the Carnegie Institution.

GEORGE ILES spoke on

GENERAL BIBLIOGRAPHICAL WORK.

Four years ago a "Guide to the literature of American history" was undertaken by this Association. The task of general editorship was accepted, at our request, by Mr. J. N. Larned, he giving his services without charge. Until eighteen months ago, when the manuscripts were finished for all departments except that of Canada, the work was under Mr. Larned's direction; since that time it has been completed and carried through the press by Mr. Franklin O. Poole and myself. The book is now before you and I trust that you will find it worthy of the sponsorship you have assumed in giving it to the world.

At first the work was planned on a much smaller scale than that to which it finally grew. A selection of about one thousand titles was contemplated in the beginning, and a provisional list was made up on that view, printed as a pamphlet, and submitted for amendment to many of the leading scholars, teachers, and critics of the country, whose co-operation was sought. From among these a large staff of highly qualified contributors was engaged. Some historical writers and students, whose services were greatly desired, could not be se-

cured; but, on the whole, a more satisfying enlistment of special scholarship for the critical work wanted, in the varied fields of American history, could hardly have been achieved. With advice and help from many of the contributors, and with much careful study of such extraordinary labors in the bibliography of American history as those performed by the late Justin Winsor, the list of titles was thoroughly revised, after a conclusion to enlarge it to the full limit of need had been reached.

To secure for every book so listed a descriptive and critical note from, as nearly as possible, the best qualified pen in America proved a difficult task and consumed much time. It was found that when the titles had fully gone their rounds there were a good many books that nobody cared to deal with, but which had to remain included nevertheless. There was nothing for it but to draw upon trustworthy criticisms in print, or to engage critics who would read these works afresh for the bibliography.

The actual gathering in of contributions was slow work. Every man of mark in America has too much to do, so that there was inevitable and sometimes serious procrastination. Often the galley-proofs came back with corrections so radical as to show a keen sense of responsibility in the contributors. Signing their notes as they did, and usually from the chairs of leading colleges and universities, they endeavored rather to voice the view of a judicial bench, to give us "the consensus of the competent," than to utter individual opinions. And this is just what "appraisal" means. The Guide may disclose faults on careful examination, and similar books in time coming may be better in detailed particulars, but just as it is, this work marks an immense forward stride in librarianship. It brings the seeker to the knower more helpfully than in any preceding aid of the kind; it affords the reader or student anywhere access to the most trustworthy adviser who could be impressed for his service. A supplement to the Guide is in hand; its titles and notes for 1900 are completed; those for 1901, to be incorporated therewith, are in preparation. The main bibliography and this continuation of it will, I trust, be the first steps in the systematic appraisal of the whole working round of our literature. How may further steps be taken? Pray permit a suggestion or two.

It has long been a dream of this Association that there might arise a Library Institute to conserve and promote the interests of public libraries as a whole. In such an Institute might be shown everything to inform the founder or builder of a public library, whether plans, elevations, fittings, or the like; together with the fullest help for the librarian by exhibition of approved methods of administration, of all aids adopted in the best practice. At such a central home might be conducted the co-operative cataloging which does so much to unlock the treasures of periodical and official literature. In this Institute might well be prosecuted the work so happily inaugurated by Mr. Larned. The officers in command of "appraisal" should have a constant outlook upon the field whence to draw their critical forces, and should have the experience necessary to give accuracy and despatch to the mechanical side of the work. These officers and their staff might be organized somewhat as are those of a great critical journal, everybody's whole time being engaged for the allotted task.

All this demands a large endowment. In seeking that endowment it is first needful to discuss plans and methods to the end that the best may be sifted out and formulated. There can be little doubt that the wealthy and generous men who have done so much for the creation and extension of public libraries, so much for the most fruitful acceptance of literature by all the people, will provide the keystone for an edifice already without parallel for the sagacity and munificence displayed by its builders.

JOHN THOMSON followed with a

REPORT ON INCUNABULA LIST.

When the Free Library of Philadelphia came into possession of the collection of incunabula gathered together by Dr. W. A. Copinger, it was thought desirable to get together a hand list of other incunabula in this country so that it would be known where copies could be consulted by students if the owners were willing. Lists were sent out to a large number of persons inviting information, and each owner was requested to give a variety of particulars, including the title of the book, the name of the printer, place and press, with date and name of author (where given) and references to Panzer,

Hain, etc., where practicable. Answers were received from 33 libraries and 20 private owners, and the number of books reported, on amounted to 2,417, 2,273 of these belonging to the libraries, and 144 to private owners. Several private owners declined to give the information, on the ground that it was very undesirable to let booksellers have full particulars of any particular individual's collection, as if it were known what were the lacunæ in any owner's library, the chances of filling them up excepting at a high price were lessened. The appropriations made to the Free Library were considerably reduced during the years 1901 and 1902, and it became necessary to abandon the execution of various hand lists and bulletins, which, however much they were wanted, could only be completed and printed at some considerable cost. The hand list of incunabula was, therefore, laid aside for these reasons only.

If the Bibliographical Society of Chicago or its successor (should there be an American Bibliographical Society established) would be willing to undertake the completion and printing of this hand list, it is not to be doubted that the trustees of the Free Library of Philadelphia will cheerfully authorize the particulars of information already gathered together to be handed over to such society. In this way, the work already done would be utilized and I for one should be most willing to co-operate with those who shall undertake the work and give of my services as best I can to make the hand list valuable and complete.

The collection in the Free Library numbers 517 volumes, and amongst the particulars given of other collections may be mentioned: 136 volumes in the Columbia University Library, 132 volumes in Cornell University Library, 257 volumes at Harvard, 279 in the New York Public Library, 336 in the Union Theological Seminary at New York, 97 at the Newberry Library, 88 at Princeton, 80 at Hartford Theological Seminary, and 68 in possession of the Grolier Club.

Probably it will be felt by the great majority of those whom I am now addressing that this mass of information ought not to remain unused. The Free Library will only ask that due recognition of its preliminary work be given in the introductory remarks to the hand list when it is published.

Adjourned 10.05 P.M.

SIXTH SESSION.

(OCEANSIDE HOTEL CASINO, FRIDAY MORNING, JUNE 20.)

President BILLINGS called the meeting to order at 9.20.

The secretary, after announcement, read report of business transacted by the Council.*

J. C. DANA: I would like to bring up the matter of the relation of the public libraries to the book trade, and if I may be permitted I would like first to call your attention to the resolutions in the report of the committee on this subject, which were received yesterday and referred to the Council. The gist of this report is found in the two resolutions at the end. Whether or no these resolutions will be passed by the Council, of course, we have no assurance; and even if they should be, I have a feeling — and it is a very strong one — that the passage of these resolutions by the Council would not be as effective as some action by the Association itself, dealing directly with this matter. I have talked with a number of librarians and some publishers since I came here to this meeting, and I am convinced that if we cease our activity in regard to this subject, as this action which we have now taken is in effect doing, the Publishers' Association will take no further action; while I am just as strongly convinced that if we do take some decided stand we shall secure a further reduction on these prices of net books. Consequently I offer the following motion: That the executive board appoint a committee of three to investigate further the question of library discounts and the net price system, to confer with the Publishers' Association and take such action as may be necessary to procure reasonable prices.

President BILLINGS: Under the rules of the Association that motion will be referred to the Council, and will be reported to the Association this afternoon.

Mr. DANA: I do not want to bring up a constitutional question, but still I think this is an important one, and I am going to appeal from the chair to the house.

President BILLINGS: I will give the grounds of my decision. The constitution provides that the Council shall act upon all resolutions pre-

* See Transactions of Council and executive board, appended.

sented before a meeting of the Association, except that "by a three-fourths vote of those present and voting" the Association "may take direct action, or revise the action of the executive board or Council, or give them mandatory instruction." The intent of the constitution is to have all matters for executive action come before the Council, and then be reported back to the Association before the general meeting acts upon them. It is on this provision of the constitution, and in accord with its general spirit,—that a matter like this should be reported on by the Council before any action is taken by the Association, and before the use of the three-fourths vote privilege,—that I rule that the motion which insists upon this vote by the Association this morning is out of order.

Mr. DANA: As I understand it, if the ruling of the president is correct, this Association cannot do any business as an association whatsoever—

President BILLINGS: Until it has been before the Council.

Mr. DANA: If the Council does not choose to bring it up, the Association cannot touch it. That is, the hands of the Association as a body are perfectly and completely tied. Now, I have talked with many members of the Association about the formation of the Council and the extension of its duties, and I know perfectly well that it was not the intent of the framers of that constitution that the power of the A. L. A., as a body, should be entirely taken away from it, or rather that it should entirely give away its powers. If the president is correct in his ruling, then this Association has created out of itself a body more powerful than itself, and I question if we had not better decide that here and now. As I say, it does not concern me very deeply, but it is a very interesting academic question.

Mr. LANE: I hope the chair will consider this matter again, because I think this would make a rather unfortunate precedent. The articles of the constitution which relate to the Council and the management of the business of the Association, as I understood them and as I think they are commonly understood, were intended so that we might refer to the Council matters which would take up too much of the time of the Association, and also in order that the promulgation of recommendations should be left to the Council rather than be decided

upon by the Association. But this is simply a minor vote in the ordinary course of business, and if such votes are uniformly referred to the Council, it seems to me that it will produce a feeling in the Association that the members have no part in the conduct of affairs and will diminish interest.

President BILLINGS: The effect of this motion is as follows: a report has been presented from a committee, accompanied by resolutions. That report has been referred under the rules to the Council. That reference was made yesterday; the Council has had no chance to act upon it. The committee is not discharged; the committee is still in existence until it is discharged. The Council has had no opportunity to take any action on the recommendations of the committee, or to consider whether this committee shall be continued, or whether a new committee shall be appointed, or anything of the sort. The matter would come up in the business of the Council this afternoon and would be reported on at the meeting this evening. This motion is to prejudice the case without waiting for a discussion of the matter in the Council, and this assumes that the Council is going to be hostile and is not going to do what the mover of the resolutions desires. The precedent is bad,—very bad. I have no particular objection to the motion of Mr. Dana; but to take the matter entirely out of the hands of the Council, having created the Council for advice in this matter,—this is a kind of motion that I think is out of order.

Mr. DANA: Excuse me, Mr. President. I would like to have it thoroughly understood what it is we are voting on. We are not voting on the question as to whether or no my motion is out of order as regards its relation to the Council. We are voting on an interpretation of our constitution. If we sustain the president then we decide that this Association as an association can do no business except as the Council permits it to do business. We cannot pass the simplest of motions; we cannot request the executive board, even by a three-fourths vote, to appoint a committee—

President BILLINGS: That you can do under the constitution.

Mr. DANA: Not under your interpretation, until the Council has given the Association an opportunity to pass on it. Now, if what the president says is correct about the relation of

my motion to the resolutions offered yesterday and referred to the Council, I am perfectly willing to withdraw it. I am not making any fight against the Council whatsoever. No man has stood more strongly for the existence of a Council in this Association and for giving it strong powers than I have. I believe in it most heartily, but I think you should understand very thoroughly that you are now interpreting a point in your own constitution and that it means a great deal to you. It is not a question of reprimand to me or reprimand to the Council, whether you sustain the president or me. The question is purely one of interpretation of your own affairs.

F. P. HILL: For the benefit of those of us who have come in since the resolution was presented, I will ask the secretary to read the resolutions.

President BILLINGS: Will the secretary read the resolutions?

Mr. DANA: I do not see any occasion to read the resolutions. That question is not before the house. There is a motion now before the house.

President BILLINGS: I have decided that the resolutions presented should be, under the rules, referred to the Council, and should not be voted on by the Association. An appeal is taken from that decision.

Mr. DANA: The question is whether or no a motion can be acted on by this Association and whether or no any motion can ever be acted upon by this Association.

Mr. HILL: Do I understand that the motion is to take these resolutions out of the hands of the Council?

Mr. DANA: No.

President BILLINGS: It is to prevent the resolutions from going to the Council and to give directions preventing the Council's action on the report of the Committee on Relations with the Book Trade.

Mr. HILL: If the Council decides adversely on the resolutions, does that end the matter?

President BILLINGS: No, then the matter comes up this evening. The Council must report back to the Association this evening.

Mr. DANA: Let me say one more word. What I would like to get at is an understanding of our constitution. Now, if the president is correct, why, let us agree to it. I think there are some advantages in the Association's not

being able to do business; but you may not think so. The question has come up and if we can understand it enough to vote on it, let us vote on it. If we cannot, I think the suggestion that we defer it would perhaps be a good one.

President BILLINGS: I think it would be well not to attempt to decide the point now, because we should need considerable discussion from older members, and from those who had to do with the framing of the constitution and know what is its intent, and that we have hardly time for.

Mr. DANA: I suggest that we withdraw the matter until this evening, and let some of these older heads talk about it, and present the case this evening. I feel pretty strongly about this net price business, and I know you are making a mistake when you leave the matter in the way in which you have left it.

President BILLINGS: It has not been left in any way yet.

Mr. DANA: It will be.

President BILLINGS: That implication is precisely the reason why such matters ought to be referred to the Council first.

Mr. DANA: I mean, Mr. President, that even if the Council brings in these resolutions and allows us to pass them this evening, or brings them in and approves of them, unless we vote on them the matter will be left very much in the air, so far as the Publishers' Association is concerned. If the Council brings them in and allow us to vote on them and express our opinion as an association, that we think we should receive a greater discount than heretofore, I am satisfied.

Mr. DEWEY: I think the resolutions of Mr. Dana should go over until the evening session, after we have a report from the Council. I am not a member of the Council, but I have always stood for the entrusting of these questions to the Council; and if we have ever had any question in this Association that ought to be handled by our wisest and most careful people and ought to be guarded against mistakes and hasty action such as are liable in a big meeting, this is such a question. If we are to be able to buy only two books in the place of three, that is a very serious matter to the libraries of this country. Any mistakes made now will delay the matter for years. I favor the question going to the Council, if, as is understood, the Association

will have an opportunity to revise its action. But that is not the question that is before us. It is a question of the constitution. We are establishing a precedent, and if we vote this morning that the chair is right in saying that the matter cannot be considered here, then we are estopped for the future. The constitution is perfectly explicit. If three-fourths of those here present and voting vote to appoint this committee, they have a perfect right to do so, but I think it is an unwise thing to do. I am against taking such action this morning. While I am entirely with the president in saying that we should give the Council a chance to report on this matter, I am compelled to vote and insist that we ought to vote against his decision that this Association has not the right to act on this matter if it sees fit.

President BILLINGS: My decision is that this motion should go to the Council. The appeal of Mr. Dana is from that decision of the chair. I decide that this is a motion which should go to the Council, and I decide that this ruling will stand until I am overruled by a three-fourths vote of the Association. Those in favor of sustaining the decision of the chair will please rise.

Thirty-eight rose.

President BILLINGS: Those of the opposite view, that the decision of the chair should not be sustained, please rise.

Forty-seven rose.

President BILLINGS: Under the decision of the chair, therefore, the matter will go to the Council.

Mr. DEWEY: But the vote was 38 to 47.

President BILLINGS: That is not a three-fourths vote.

Mr. DEWEY: Where is the rule which requires a three-fourths vote? This is a parliamentary question.

President BILLINGS: This is a parliamentary question, and I decide that it requires a three-fourths vote to overrule a decision of the chair, and that the matter must go to the Council, unless an appeal is taken.

Mr. DEWEY: I appeal from the decision of the chair.

President BILLINGS: The question comes on sustaining the decision of the chair that a three-fourths vote is required to overrule a decision of the chair.

The question was put and carried in the negative.

Mr. DANA: Now, Mr. President, I think Mr. Dewey is right. I have talked with Mr. Dewey a good deal about this and he feels as I do about the importance of bringing the question strongly before the Publishers' Association. That is all I care about. I want to disclaim any intention whatsoever of reflecting on the Council. I say again that I do not believe any man in the Association has done any more in recent years to strengthen the Council than I have. I believe that this Association should not be carried this way and that on different occasions, but that it should have a body like the Council, and should refer important matters to it. I think you are right when you say that it would be wiser to have the Council bring this matter up, only I would like to have the matter brought up so that the Association can act upon it itself. The American Publishers' Association does not know anything about our internal organization, and a mere protest from the Council is not going to count as much as a statement from ourselves. I withdraw the motion until this evening.

Mr. DEWEY: I move that we refer this matter to the Council with the request that the Council report back its action to us this evening. I have no doubt we will be perfectly satisfied with the action they take, but it seems to me that this motion should go to the Council, and that we should hear from it to-night.

Voted.

President BILLINGS: We will now proceed to the discussion of Mr. Hastings' paper on

DISTRIBUTION OF PRINTED CATALOG CARDS BY THE LIBRARY OF CONGRESS.

HERBERT PUTNAM: I should like to recall the present situation with reference to this matter. The Library of Congress began the distribution of printed cards in November last. The distribution has proceeded for nearly eight months. This period was an experimental one. I have asked Mr. Hastings at this meeting to submit a statement as to what had occurred, to give the statistics of the distribution thus far, and to note the modifications in contemplation. Mr. Hastings read his paper yesterday. It was necessarily brief, but was, I think, perfectly clear as to the distribution up

to this time. He referred to a handbook which is to be issued in July which will state more fully than has been stated heretofore what are the methods of distribution, the rates of subscription, and the various conditions involved; also descriptive of the field which the cards will cover, and so on. That is intended to be a complete and clear statement of the system of distribution as in operation — not to-day, nor during the past six or eight months, but as in operation in July or August. That is, for the coming immediate future.

There will be modifications of our first methods. Let me recall to you that the distribution has been of three classes. In the first place, the library has determined upon certain local libraries or institutions which are made the depositories in each case of a complete set of these cards. These depository libraries are in centres of research, centres of library activity. There are necessarily but a few of them — thus far only eighteen.

In the second place we have offered to supply a copy of any card that we print or any number of copies of any card to any library subscribing the cost plus ten per cent. as required under the law.

In the third place we have, during the past six or seven months, issued to subscribing libraries, and in effect to any library applying for them, copies on proof paper of the titles which we print on cards. We have issued these proofs thus far without any charge.

Now there are to be certain modifications, and what these are to be will be determined in part, of course, by our experience, as already on file with us, and in part by suggestions we have received. There may be a change, for instance, in the type, from 12 point to 11 point. There will undoubtedly be a change in the conditions of distribution of the proof slips. We have thought it our duty to distribute as widely as possible information as to this card distribution; we have therefore distributed these proof slips freely and without charge. Beginning with July 1st there will have to be a charge for the proof slips. That charge will not, for a year's subscription, exceed thirty dollars. In the case, however, of a library which is a large subscriber, there will be a rebate on this, which, in case of a considerable subscription, will fully reimburse to the library the amount of the subscription.

The number of libraries, as stated in Mr. Hastings' paper, subscribing to date is 171.

The cards are, as a rule, prepared ready for distribution within a fortnight of the time the book is received by the Library of Congress, in case of copyrighted books. The delay in the case of non-copyrighted publications is considerably greater.

Our experience, as far as the cost of the work to us is concerned, will not result in a deviation from the present prices for a subscription in ordinary cases. There will have to be a special variation in price where the order received requires an extra amount of labor in the handling. That will be fully set forth in the handbook. It has been one of the matters upon which our consideration has been most careful and most anxious. We are compelled under the law to reimburse to the government the cost of this distribution. We do not charge for the cost of the cataloging; we do not charge for the composition; but we must charge for the cost of the extra stock, the extra press work, the cutting and the punching and the handling, — and the handling, as Mr. Hastings has noted, is very expensive. Now, we have not secured reimbursement for these items in the past seven months, and we cannot secure reimbursement at the present rate unless the subscription list is much larger than at present. We shall not, however, need, we think, to modify the main prices; so, unless there be questions as to these, I do not suppose they will enter into the discussion. What we do feel very strongly is that if there are any questions concerning the distribution of the cards, the form of the cards, — not the mere form of catalog entry, which would be better discussed in the Catalog Section, but the general methods of distribution, — the area covered by the cards, the promptness of issue, etc., they had better be brought up now, because the system as revised July 1st should remain unmodified during at least the next twelve months.

C. W. ANDREWS: I rise to discuss this question, in the first place as chairman of the committee appointed to advise the Publishing Board as to the possibility of co-operative cataloging of foreign books. A meeting of that committee has not been called as yet, because it seemed to me that the Library of Congress is doing most that we could hope to accomplish, but I would like to ask those who feel the need of

any considerable extension of the work into foreign languages to mention the fact. The Library of Congress is now purchasing, and will purchase in the future, an increased proportion of books in foreign languages, greatly enlarging their collections, so that the libraries who now feel that there are gaps which they cannot fill with the Library of Congress cards, may hope in the future to obtain a greater proportion.

Secondly, I rise to ask that those present will give the details as to their use of the cards. We have all been experimenting during the last six months and the details which have been evolved ought to be interesting. From the numbers given in the *Library Journal* it is doubtful if we are yet making the largest possible use of them. There are many ways in which they can be employed aside from the catalog, although the catalogs themselves might well be enlarged by the more liberal treatment which they make possible.

Some of the details as to the experience of the largest single subscriber may be of interest. The John Crerar Library has sent twenty-five hundred orders to its agents in the first five months of this year and triplicates of these orders have been sent to the Library of Congress. Cards for eleven hundred titles have been received already to cover them. There are also some five hundred more which they promise to send us as soon as they receive the books which they have ordered. The result is that forty per cent. of our current orders are now cataloged by the Library of Congress, that we may hope to obtain sixty per cent., and that these are seventy-five per cent. of all the accessions which we really care for, the remainder being books of minor importance or old material which we are simply cataloging, in the rather blind fashion of large libraries, without much regard as to whether the catalog entries will ever be used. In regard to bulletin work, we are now face to face with the problem of dropping our present form of electrotypes and following the Library of Congress plan of using one kind of type for cards and for bulletin work. Our plans will now be considered with reference to the permanence of the distribution of the Library of Congress cards.

It is probable that our library is the one referred to as the "patient waiter" in Mr. Hast-

ings' paper, for we do not think it is necessary that every foreign book should be cataloged the moment it comes into the library, and we are perfectly willing to wait three or four months for the Library of Congress to send us the cards and meanwhile spend our energies in getting out the bulletins and other library aids which we could not undertake if we did not have the relief which the cards for this forty or sixty per cent. of our current work gives.

In the discussion preceding the establishment of this system one of the fears expressed was as to the number of cards which would be found not to be available by the libraries receiving them. I asked for a detailed report on this point and found that the number was so small that the details became uninteresting. They may be summarized by the fact that out of the eleven hundred titles received only thirty were found to be useless by the John Crerar Library, and twelve of these were our own fault in ordering duplicates or asking for titles of books burned in a fire for which we already had the cards; fourteen were the fault of the Library of Congress, for all of which they apologized and took back the cards; the others were due to the fault of the system and represent the actual amount of what the engineers would call the "slip" in the process of the conveyance of information. The Library of Congress, of course, catalogs from the copies which it gets as they are copyrighted, and we find that there is sometimes perhaps, especially in scientific books, a difference between the advance sheets sent to the Library of Congress and those which are put in trade. The publisher sometimes complies with the law by submitting the advance sheets and then the author makes additions and corrections and the book is not actually issued until so near the end of the year that the next year is put on the title-page. Again in four cases the Library of Congress has supplied us with cards for books which we have not yet been able to obtain. Therefore from one and a half to two per cent. may be put down, I think, as the maximum "slip" if the library exercises proper care in giving its orders. Of course, if you order a wrong edition, you cannot expect the Library of Congress to understand which edition you want, or if you do not give the edition you cannot expect the Library of Congress to be in mental communication with you and find out

what edition you had in your library. It is probable that an addition of one per cent. to the calculation of cost will cover the cards which will be useless to a library.

As to the use of the cards by the John Crerar Library, it is not necessary to give the details, because they are in the circular which the Library of Congress sends out. We have experimented more than most libraries in trying to make them of the widest possible use, and have recently found a new method of employing them. We order more than are wanted for immediate use, in order to have over-cards to supply those of our readers who want well-made titles convenient for memoranda, and we have received several orders for lists of books in this form. We find the proof-sheets very valuable, using them to form order-slips. The only possible addition to make them of the most value to the order department would be the inclusion of the price, but I am afraid that that would not be possible.

Mr. WELLMAN: I want to add a word for the benefit of the small libraries. For such libraries the proof sheets are so numerous and so unwieldy that it is almost impossible to use them in ordering the cards; but the plan of ordering a selection of either current accessions or the more important books in English, would certainly be much better. If a selection of cards is ordered in that way, it is not only convenient to have them to put into your catalog as soon as you get the books, but the cards themselves are very valuable as suggestions for purchase, and if it were possible to have the prices included that would greatly increase their value as suggestions for purchase.

Mr. PUTNAM: I fear that would be impossible. It would mean changing the form, unless we are to have the price on the permanent card, and I doubt the propriety of that.

Mrs. BOND: How can we find out which are the eighteen depositaries?

Mr. PUTNAM: I think that will be given in the handbook. The list is now merely provisional, but the depositaries selected will be continued. The deposit has two purposes. In the first place, to inform local investigators as to what books are in the Library of Congress or whether a particular book is in the Library of Congress,—not what subjects are included, because the cards form merely an author catalog; and second, to convenience that library

and adjacent libraries in ascertaining what cards the Library of Congress has printed, for it will form a complete index, of course, to the cards which the Library of Congress has printed and may be expected to have in stock. The conditions upon which the deposit is made include the stipulation that the cards shall be properly accommodated in a catalog case, shall be kept in alphabetical order, and shall be made available to any inquirer. Now it is a matter of perplexity, after the first dozen depositaries have been selected, to determine what others have the best claim. We must enlarge the list very slowly and very carefully, and until we have gone further in the experiment with the proof slips and until we have gone further with the experiment of issuing cards in groups for particular departments of literature, I should not recommend libraries to become applicants for the deposits, as they involve a very considerable expense to the recipient library. The cost of handling and accommodating them is not a small matter.

Mrs. BOND: My present inquiry is with reference to a small library which expects to recatalog its whole collection by means of the Library of Congress cards. We thought if we could compare our accession lists with the lists in one of the depositaries, we could learn what proportion of the cards could be ordered by number.

Mr. PUTNAM: It is the need of just such a small library that we hope to meet in part by these deposits. Assuming the library is in the vicinity of Boston, the State Library of Massachusetts would be its nearest depositary. In that case the small library may take its shelf lists to the state library and go through this author card list of what we have in stock, and see what books of its collection are covered by these cards. Now, if a small library or any library in Massachusetts should attempt that to-day it would probably find a very small percentage of its collection actually covered; but within the next five years the recataloging—at least, so far as the author entry is concerned—of the existing collection of the Library of Congress will, we hope, be completed and that will mean that we shall have a card in stock or ready to be reproduced for every book in that collection, with the intervening accessions, which are now amounting to seventy-five thousand printed books a year.

We shall keep in stock cards for every title represented in the revised "A. L. A. catalog." Now, if a new library is forming and starting with a purchase of from five to ten thousand volumes, based largely on that A. L. A. list, I do not see any reason why, within this period, giving us time in which to compile those cards, it should not be able to get a complete outfit of cards for those books. The proof slips are, as Mr. Wellman says, exceedingly bulky, — forty slips are a day's output, — and it is very apt to be the case that a library hastily applies for those and assumes, as it does in the case of government documents, or in the case of an entire set of our cards, that the information which it will secure will be so valuable that it will pay it to handle the material. Now that is very doubtful. Some libraries receiving these proof slips have been in the habit of cutting them up and pasting them on the backs of cards as a substitute for the printed card. But that is very extravagant. You can secure a copy of every card we print for a year — and that is fifty thousand cards, we will say, based on the present output, — for two hundred and fifty dollars. You can secure a set of proofs for not over thirty dollars. But if you should cut up those proofs and paste them on cards you would find you had spent more than two hundred and fifty dollars in doing that work and you will have, as a result, the titles complete, but you will have only pasted cards in place of printed ones, and you will have defrayed, in addition to the cost of the proof slips, the cost of the stock upon which you paste.

Mrs. BOND: I should like to ask one more question. Will there never be any difference in the stock? The different libraries use different thicknesses of cards, and of course one-half of the cards in any ordinary library will have to be written, not being covered by the Library of Congress cards. We use 33A, and the cards you use are 32B, and they do not combine well together. Wouldn't it be possible to have the cards printed on different stock for different libraries?

Mr. PUTNAM: The question is whether variations in the stock could not be made, so as to accord with the stock in use in particular libraries. The same sort of question is involved as to the size of the cards, — a much more common variation, — as between the index and the

postal size. I think that, considering that we must keep the expense of this whole work as low as possible, we ought not to attempt to vary either the size or the thickness of the card. We use a stock that is admitted not to be as good as the Library Bureau's stock, except by the public printer, who thinks it is better. (He claims it is the best linen ledger stock, and you cannot get anything better, and he can make better rates with his contractor than he has been able to make thus far with the Library Bureau.) We certainly have improved the stock very much over that of a few years ago, but I think we cannot vary the stock except as we get a better grade, and perhaps approximate as nearly as possible the Library Bureau stock of the standard weight and thickness.

Mrs. BOND: It makes a great deal of difference in the amount of room required.

Mr. PUTNAM: Those questions will have to be decided by each library for itself. It is a similar question as to whether it pays to get the postal size cards, and cut them down to the index size. I have been told by a librarian who uses the index sized cards, that in cutting down the postal size there was only a very small percentage of them in which, by the reduction, any really necessary matter was eliminated. As a rule, by cutting them down from the postal to the index size, nothing is lost that is necessary to a permanent record.

Mr. DEWEY: I wish Mr. Putnam would tell us about the travelling catalogs.

Mr. PUTNAM: Mr. Hastings, who has had charge of that distribution during the past six or eight months, in addition to the means of information furnished by the proof strips and the depositaries, proposes to get out a set of cards which shall be available to be sent about from place to place to give information as to what the library is printing on a given subject, and to convenience a library at a distance from any depositary. Of course, the A. L. A. list will meet the case of that library whose selections chiefly conform to that list; but there would be other libraries whose needs might be met by a collection of from fifteen to fifty thousand cards not limited to the titles in the A. L. A. list.

The area covered by these cards is a very important matter, and our doubt is not merely as to the convenience with which these cards can be

used, but whether they will cover enough titles to interest a large number of libraries. The fact that many libraries are in the end getting the same book does not mean that they are all getting it at the same time. But how far these cards will be of interest to other libraries is dependent, of course, upon the simultaneity of the acquisition by the Library of Congress of the book with its acquisition by the particular library. Now, we are getting copyrighted books and non-copyrighted current publications which, if this card distribution were not in operation, would be naturally such as would be bought by the national library of the United States, which is chiefly a library of scholarly research; but we are now in our purchases recognizing that this card distribution may impose upon us a special obligation. If, by getting a book that we should not get in that way, but which is a book purchased by a great number of libraries, we can save those libraries the cost of cataloging, we had better get it, even though the book itself be not used very much from our own shelves. Our purchases are being modified in that way. The yearly expenditure for that class of purchases will not form a very large charge upon our funds. We are getting up the purchasing funds to a reasonable dimension. They were only \$10,000 in 1897; this coming year they will be \$91,000, for books and periodicals. But we do not regard that as normal, not until they reach \$110,000. We feel perfectly justified in expending out of this a certain sum for some books which perhaps we should not buy for our immediate constituency,—not the trivial books or books which would not stand a certain test of merit,—but books which perhaps we should not need immediately for the use of the library and should not regard it as our duty to buy for permanent preservation. But if we can buy such a book and by cataloging it render a service to libraries and save them some expense, a certain amount of expenditure in that direction may be justifiable.

In another direction we have modified our purchases. This plan of distribution can very much more successfully cover, of course, current publications and interest libraries taking those publications than it can the non-current publications, because it is the latter as to which there will be the most variation in libraries in their accessions.

Now, we have been in receipt, during the past few months, of copies of the order lists placed by certain large libraries—Harvard University, Boston Public, New York Public, John Crerar, University of Pennsylvania, Princeton, and Columbia—and we shall be currently receiving those and some others. We get copies of the order lists and that means that we are notified as to all the books for which they are placing orders—foreign books or books imported, I mean not those merely in foreign languages, but those in English published abroad—and so far as possible we are buying those same books at the same time. We notify the library that is ordering them that we shall secure them and that in course of time we shall have cards for them. It is upon that notice that I understand the John Crerar Library has to a large degree proceeded. As I understood Mr. Andrews' statement, out of 2,500 orders they had placed for such books during the past seven months some 1,100 were cataloged by cards they had already received and 500 others by cards they are expecting to receive in due course of time after the Library of Congress receives the book and has cataloged it.

MR. BALLARD: Perhaps one word may be useful to some of the small libraries. The manifest value of a whole set of cards as issued by the Library of Congress is evident from the fact that eighteen of the most important libraries of the country consider it a great accession to their property. It is also evident that it is impossible for most small libraries to acquire the whole set or to care for it, on account of the great space which it occupies. In the Berkshire Athenæum, we have taken these proof slips, and not cut them up with scissors and pasted them on cards, but we have sent them to a printing office which cuts them by machinery for us for nothing, so that we get the proof slips cut to card size and perforated at no expense to the library. The slips are so thin that a thousand of them will go into an ordinary catalog drawer. We happened to have an old discarded case of the right size and our outfit has so far cost us nothing, either for the slips or the cutting or punching. The smaller libraries can do this hereafter at an expense of thirty or forty dollars a year, thirty dollars for the slips and probably ten dollars for the cutting and punching.

Mr. KELLY: Is there to be a depositary for these cards for Canada?

Mr. PUTNAM: McGill University, Montreal, is the depositary for Canada.

Mr. BERRY: We have in our library what I may call our old collection, — say thirty to thirty-five thousand volumes, which have not been carried over to the new catalog — and we are proposing to recatalog this by the Library of Congress cards. Our intention was to go by classes, marking with a blue pencil the number of copies wanted. But Mr. Putnam's suggestion this morning leads me to think that possibly we may gain time by going to the depositary in our neighborhood and ordering entries that have already been made. I want to know if anybody here has had experience in that line.

C. A. CUTTER: We are recataloging — or perhaps I should rather say cataloging — the Forbes Library entirely in that way. We have the proof slips and we order from them the title of every book which we have, no matter in what class it is, and we expect to do exactly as Mr. Berry says, in the end, and order everything we can, not only from the proof slips, but from the cards which were printed before there were any proof slips. After we have filled out our catalog in that way then we shall make out our own cards for the remainder.

A DELEGATE: How soon does the distribution of cards to depositaries follow the distribution of galley proofs?

Mr. HASTINGS: At present the cards are at least a week behind the proofs. The proof goes out daily; the cards once a week.

Mr. CUTTER: I want to bear testimony in regard to one thing which seems to affect a great many libraries, and that is the delay in getting the cards of new books from the Library of Congress. We find no practical difficulty in the delay. We make a slip on thin paper for the title of each book as soon as it comes in, and this slip goes into the official catalog, which is made entirely of such slips, and is referred to for that book until the Library of Congress card comes in.

Mr. ANDREWS: We even go further back than Mr. Cutter does. We put our substitute card in our official catalog the moment the book is ordered, and it stays there until the Library of Congress card comes in. It is of a different color so that we know it represents a

book either ordered or in the library in process of being cataloged. The reference librarian prefers this arrangement to the other because he knows then what answer he can make to a person inquiring for the book, and he can immediately go to the outstanding order list to find whether or no the book is in the library. This has worked very practically in a library which is open day and evening, where the evening reference clerk has no means of getting at the day-working clerk to find out the details in regard to the books.

Mr. CUTTER: The slip that I spoke of is put into our catalog as the order slip of the card, but it is not put into the public catalog at all. Of course, as we have to make it for the order catalog, in order to know what book we have ordered, it costs us next to nothing to put it into the public catalog.

Mr. LANE: For the libraries which use the index sized card I would say that we have a very convenient little card cutter which does the work very easily. It is worked by a boy and costs very little. It cuts the card exactly to scale. Then the cards are punched by a punch which works with the foot, and has a guide fastened on the plate so that the perforation is gauged exactly.

Mr. PUTNAM: Do you remember how large a percentage of the entry on the cards is lost by the cutting down?

Mr. LANE: A very small percentage. We expect to lose the line which has the copyright number or the call number of the Library of Congress on it, and sometimes we lose the line which has the subject heading; but almost never, or very infrequently, do we lose anything of permanent consequence in the contents entry.

W. H. TILLINGHAST: I noticed in the report in the *Library Journal* that one library appeared to think itself obliged to hold books until the cards had come or to call them in when the cards came, or to wait until they came back, before cataloging them. There is no necessity at all for such a complication. We check the book as cataloged when it comes in. We do not recall it; we do not see it again when the card comes, unless there happens to be some difference between the card and the book, which very seldom happens. The book is cataloged as soon as we get it, and when we get the card we put the call number on and put it in the

catalog. We do not feel the necessity of recalling the book.

Mr. PUTNAM: I think that to go any further with this discussion would be unfair to the rest of the program. I suggest that it stop here with the request that if there are suggestions or inquiries that may involve the matter of distribution, price, etc., they be addressed as soon as possible to the Card Distribution Division of the Library of Congress, so that we may incorporate any changes or may take account of all advice, counsel, and suggestion, before our handbook is issued.

Mr. EDWIN H. ANDERSON read a paper on

BRANCH LIBRARIES: PLANNING AND EQUIPMENT.

(See p. 58.)

W. H. BRETT: With almost all of Mr. Anderson's paper I am heartily in accord. In regard to the shape of the book-wing, I regard the semicircular design as really the most practical and the most beautiful. However, where absolute economy of space is necessary, it is possible to use the square plan with perfect convenience, and with the saving of some room, by simply extending the cases toward the corners. The supervision from the centre is as complete, but the effect is not as symmetrical. Of course it is practicable, it is workable, and the reading tables can be placed in the corners just as they are here. Where there is room enough to adopt the semicircular plan, I should prefer it.

I want to emphasize my agreement with Mr. Anderson as to the absolute necessity of complete supervision over all parts of the open shelf library. In our experience in the Cleveland Library this has always been maintained. The shape of the alcoves, the shape of the floor space to which access has been permitted, has varied according to the circumstances, in some cases being either semicircular or rectangular. In another case we had what was practically an open room formed by placing the cases with a corner entrance at which the assistant in charge had her desk, affording her complete supervision of the entire interior. In another form we had two oblong alcoves facing each other across a passageway, the assistant being so seated that she had an entire view of both alcoves.

Another point is the desirability of a meet-

ing place for clubs in the basement, also the necessity of a lecture-room which, it seems to me, is exceedingly important in effective branch library work. The cork carpet we have found to be the most practical floor covering. It is noiseless and exceedingly durable, and we have met the objection of the dirt by varnishing the cork carpet after it is laid, — putting on a couple of coats of sizing and then applying two coats of varnish. Bent wood chairs we have found to be the most serviceable. I think the suggestion as to the comfort of reading in an easy chair with a light over one shoulder is an admirable one and ought to be adopted.

Miss HOAGLAND: May I ask Mr. Anderson what is the average cost of these branch libraries?

Mr. ANDERSON: The average cost of these buildings, I think, was something like \$30,000 each, but that does not mean very much. You can build a branch library like a freight car or like a Pullman car, and the cost of building in one locality is very different from what it may be in another locality. The cost of building in Pittsburgh at the present time is the highest it has ever been; it is almost prohibitive. It all depends on the kind of work you get and where you get it.

Miss HOAGLAND: For the encouragement of the smaller cities that do not have Carnegie branch libraries, I may say that it is possible to equip one adequate and comfortable library room for \$1,000.

Dr. HOSMER: It seems to me that a lecture room in connection with a branch library is of very doubtful expediency. A club room is all right, but any room where there is likely to be noise is objectionable. Music in a branch library—a musical evening, for example—is likely to be a nuisance. In a small building it is impossible to have a lecture room without disturbance to the proper functions of the library. I wish to record my emphatic approval of the high window arrangement which Mr. Anderson says has been much criticised. In our library there are several rooms that are magnificently wainscoted, with fine mahogany wainscoting, which is eight or ten feet high. At the same time there are very large plate glass windows. The consequence is that I have almost absolutely no wall space; there is no place in the library where I can hang a map.

The library, with its great windows, is the best place in the city to see the circus or a parade, and whenever there is anything of the sort a crowd always comes to view it. Now, I think the outside world should be shut out, and the light should come in from overhead as much as possible, and the walls should be blank below the windows.

JOHN THOMSON: Far from feeling that lecture rooms at branch libraries are a hindrance, I think that they are next door to an absolute necessity. We have one very palatial branch, and we find its lecture room of the greatest importance. Library associations and library clubs, and such institutions, find it a very convenient and useful place of meeting. Moreover, we have found that the Free Library has benefited very largely from having courses of lectures, and these can easily be given if you have a well-appointed and convenient lecture room. Our lecture room will hold 280 persons, when every seat is occupied, but we have had 915 at some lectures — frequently from 700 to 800. The lecturers bring within the walls of our library persons who otherwise would probably never be attracted there, and they become not only users of the different branches that are scattered throughout the city, but they also become the patrons and friends of the library, and say a good word for it. In another branch — which was an affiliated association, and later came under our wing — we find the lectures are of great importance; and there the annoyance of having a lecture in the evening is never felt, because the lecture room is on another floor.

F. P. HILL: The Brooklyn Carnegie branch library buildings, which are quite distinct from those across the river on the Manhattan side, will provide for a lecture room in each building. This room will accommodate probably from three to four hundred people, and will serve not only as a place in which lectures can be given, but as a gathering place for neighborhood clubs, and we believe that it will serve a most useful purpose.

A. E. BOSTWICK: Just a word about supervision, which I agree with Mr. Anderson is most necessary in branch libraries, but it is not absolutely necessary that supervision should be exercised solely from the central desk. In every open shelf library there ought to be some one in charge of the floor, and the supervision can be exercised from the floor as well

as from the central desk. Therefore, while I should think it desirable to have the shelves arranged so that supervision can be had, if possible, from the central desk, still it is not absolutely necessary.

MR. BRETT: We believe in lectures in Cleveland so thoroughly that we sometimes have them without lecture rooms. We had one winter a series of lectures in our East branch, in which we gave up the library room for one evening for the purpose of the lectures. The courses were of from two to six lectures, in each of four branches. They were entirely successful in drawing out audiences who were greatly interested. It was rather an experiment, but the effect was noticeable in the demand for books on the subjects of the lectures, and we felt that such work would be very acceptable and very valuable in the neighborhood if we could keep it up.

MISS ANNE WALLACE: As this seems to be an experience meeting I should be glad to acknowledge my indebtedness to Pittsburgh for valuable suggestions regarding buildings. With regard to the floors, some two years ago I wanted hard wood floors; but I don't want them any more. I will vote for cork carpet next time. It is impossible to keep nice looking floors with from a hundred to a thousand people going through the library every day. Another thing, if you are going to have a Northern architect draw the plans for your building, and you live in the South, do not trust his judgment on windows. Our architect told me very learnedly that our declination was absolutely dependent on our fenestration, and he didn't tell the truth. He allowed us to open only one panel, and we are now trying to have our windows changed so they will all open. Do not pivot your panels so that they will open up and down; pivot them so they will open sideways, and have every panel so that it will open in every window, if you live south of Mason and Dixon's line.

At our library, we not only have an ample lecture room on the upper floor, which in years to come can be converted into a stack room if necessary, but in addition we use a large basement room for club meetings. Fortunately it has an outside entrance, and it does not disturb readers on the upper floor. Two clubs meet there, one composed of working men and one of young lawyers and professional men.

MR. DEWEY: I want to say a word about this lecture business. It has been a hobby with me for a good many years and I am glad the testimony in its favor comes in as it does. If we look at the matter in a broad way we must recognize that the objection on the score of noise would apply to those who come to get books from the library, just as much as to those who attend the lectures. Disturbance is made in both cases. The old Astor Library was a great deal quieter place to go into and read than our modern libraries. Every new person makes additional steps on the stairs; people are moving about; there is nothing like the monastic quiet of the old time library. I remember years ago going into the Ridgeway branch of the Mercantile Library in Philadelphia with Lloyd Smith, and there in that magnificent suite of rooms there were just three people at work. I turned to him and said, "Why, are these all you have here?" He said, "Dewey, hardly a day passes that somebody does not come into this library!" A little later I happened to know of a man who was wanted by the officers of the law in Philadelphia and the problem was how to conceal him until dark so that he could be gotten out of sight. A friend told him, "I will hide you where you cannot be found." Detectives were watching every railway station; but this man took him to that great library and he read there comfortably all day and escaped with perfect ease. There was absolute quiet there and no element of disturbance. But see what Philadelphia is doing to-day with lecture rooms seating two hundred people and yet having to accommodate eight hundred or nine hundred! That is not quiet, but that is giving to the people information, inspiration, and recreation, and therefore it is proper library work. Not the book alone, but the book and the picture and the museum and the lecture—all these agencies belong to the public library. Let us stoutly insist that that is where they belong and that is where they should be supported.

LANGDON L. WARD read a paper on
BRANCH LIBRARIES: FUNCTIONS AND
RESOURCES.

(See p. 42.)

FRANK P. HILL read a paper on

BRANCH LIBRARIES: ADMINISTRATION.

(See p. 46.)

MR. HEDGE: I would like to ask in regard to the advisability of having in the branch library a card catalog of accessions to the main library. There is always a great desire to know what new books are added to the main library, and where a monthly bulletin is not issued the consequence is that the telephone is being continually used to ask if certain books are in the main library. Is it well to have in the branch a duplicate card catalog of the one in the main library?

MR. WARD: I think it is essential, where there is a daily delivery from the central library, to have a very full list of the books of the main library at the branch library. Of course, you cannot duplicate the whole catalog; you can simply have a bulletin or finding list or something of that sort. We have in Boston a monthly bulletin of the accessions for the month and that is distributed at all the branches and kept on file. The bulletin is put together into an annual list at the end of the year, with some eliminations, and this is of a great deal of help at the delivery stations. It is impossible to solve the problem entirely satisfactorily.

MR. HEDGE: I had in mind a library where monthly bulletins or annual finding lists were not issued.

MR. WARD: If there is a daily delivery from the main library something of this sort must be done. There is no use in having frequent deliveries from the central library unless you have some kind of a catalog of the central library at the branch.

MR. HILL: I do not want to go on record as upholding that statement of Mr. Ward. It seems to me that if we attempt to keep a catalog of the whole library at the branch we are going to run against the same difficulty met in handling the collection of Library of Congress cards; you won't have room in your building for a union catalog and a union shelf list. It is a difficult thing to attempt to show the resources of the library at more than one place. I think it is much better and cheaper to use the telephone for just that purpose.

MR. WARD: Mr. Hill misunderstood me. I did not mean that the cards should be duplicated, because you cannot do that, but simply that some sort of finding lists should be used.

Mr. BRETT: I want to register most emphatic dissent from one statement of Mr. Hill as to the selection of books for the branch library. That is, I believe that the functions of the branch library are not alone to supply books, but to suggest them, and that the most valuable guide for the selection of an initial collection for any branch library is some general list, such as the "A. L. A. catalog." I believe it is exceedingly important that every branch library in a neighborhood remote from the main library should have on its shelves not only a collection of the more used classes, such as history, literature, biography, science, and art, but that it should also represent on its shelves the whole range of knowledge, — philology, philosophy, and religion. I know that the influence of such a collection, the opportunity offered to those who look over its shelves of knowing what is included broadly in the range of human knowledge, is of extreme value. We have found this in our own experience, that books which are read unexpectedly sometimes have a large influence. In one branch library in an iron-working ward, a copy of Jowett's Plato was placed in the initial collection and that book has been drawn and read to a surprising extent.

Mr. HILL: The idea expressed in my paper related to a building pretty well filled with books. We all know that a branch library building has only a certain capacity, and we do not want more than a certain number of volumes in the branch anyway, and some provision must be made to have those books accessible. It was that thought that I wished to express, and not to take out those books of power which Mr. Brett has referred to.

Adjourned 12.40 P. M.

SEVENTH SESSION.

(OCEANSIDE HOTEL CASINO, FRIDAY EVENING, JUNE 20.)

The meeting was called to order by President BILLINGS at 8.15.

The secretary announced the

ELECTION OF OFFICERS,

giving the result of the balloting as follows:

President: James K. Hosmer, 204.

1st Vice-President: James H. Canfield, 192.

2d Vice-President: Anne Wallace, 199.

Treasurer: Gardner M. Jones, 204.

Recorder: Helen E. Haines, 202.

Trustee of Endowment Fund: Alexander Maitland, 187.

A. L. A. Council: Melvil Dewey, 155; Ernest C. Richardson, 137; N. D. C. Hodges, 113; William T. Peoples, 110; Lutie E. Stearns, 107, JAMES L. WHITNEY read a paper on

INCIDENTS IN THE HISTORY OF THE BOSTON PUBLIC LIBRARY.

(See p. 16.)

WALTER H. PAGE delivered an address on

A CLOSER RELATION BETWEEN LIBRARIANS AND PUBLISHERS.

LADIES AND GENTLEMEN. — Two wicked persons of importance in your Association, with the connivance, I think, of others of like malignity, have propounded to me a set of questions which I am asked to answer. These questions are constructed not at all with reference to anything that I thought to say, but only with reference to the difficulty of answering them.

The first question is, "Is the publication of novels necessary to a publishing house?" I should say that a great deal depends on the publishing house and a good deal more on the novels. The ideal publishing house, as viewed by librarians, would be one, I fancy, that should turn out books which would give no trouble to the librarians, and give no trouble to their readers, and novels give a great deal of trouble to both. This question seems to have been thrown at me, the only publisher in reach (and I observe that in all these questions the publisher is put upon the defensive), as a sort of implication that publishing houses publish what they find profitable and not what, from some other considerations, they ought to publish. I venture the assertion, therefore, that as much money is lost by publishers in publishing novels as is made by them. A publishing house, if it have the courage, can exist without publishing bad novels; but I think any publishing house that has an opportunity of getting a great novel would not do its duty if it failed to publish it.

Question two: "Does the number of book-manuscripts increase? and do they show improvement from year to year?" They do increase, I assure you, — increase in much faster ratio than the population increases, faster than Mr. Carnegie has built libraries, faster than

the number of librarians. Whether they show improvement from year to year, I venture this guess: the number of illiterate or hopeless manuscripts is decreasing decidedly. Publishers receive by no means so many from schoolgirls and schoolboys. The number of great manuscripts, well, they have never been numerous since I have known them. The number that tempt us to publish them because they are written with all the outward form of literary excellence—they do increase enormously, for there seem to be thousands of them. All they lack is the breath of life. If sometimes you are wearied with the number of printed books that ought never to have been published, I pray you in common charity to remember what the publisher saves you from!

The next question is—and you will see that there is a considerable variety in the progressive embarrassment of these interrogatories—“Are publishers less willing than formerly to publish books of literary value that entail a present loss?” If a publisher is wise enough to recognize in manuscript among the books which he knows will entail a present loss one that will bring an ultimate profit, he will almost always publish it; and if you have the wisdom to show him which books there are that may be depended upon to bring an ultimate profit, he will welcome your help. The meaning of this—the hidden and subtle meaning—is, “What is the publisher here for?” I will try to answer that question further on.

Let me turn to the next question: “In other words, does the present tendency in publishing show a wish on the part of publishers to develop literature, or contentment to be mere merchants of popular wares?” There are publishers and publishers, ladies and gentlemen. I have never known one that objected to being a merchant of popular wares. On the other hand, the publisher who deserves to be called a publisher, the publisher that you respect, takes a pride in throwing away possible income every year for the sake of publishing what he hopes will turn out to be literature. I resent the implication of that question.

The next question is, “Is not the tendency of popular magazines and novels to degrade the popular taste and style?” No, because those people who read those magazines and those novels that have no intellectual value, read them for the same reason that they play ping-pong.

They have nothing to do with the intellectual life whatever, and they give as innocent amusement as progressive euchre. The framers of that question made one mistake which, I fear, librarians often make, namely, that they call anything that is bound a book, no matter what it contains. Physically, I suppose it is, but from the right-minded publisher's point of view, it is not. Some are soiled paper; others are books; others are literature. Those magazines and those novels, upon which people waste time—they would waste their time on something else if these did not exist. Why deny them this pleasure? I maintain that the man or the woman who has ever contracted the real reading habit, and has developed the intellectual life, is not disturbed by all this flow of frothy matter which comes because we have fast presses, cheap paper, and cheap postage. It has no more to do with literature proper than the development of so many other popular pastimes. It is a popular delusion to conclude that, because an idle man reads a silly book, he would read a good book if he didn't have the silly one. That kind of man will never read a good book anyhow. It is your duty and your privilege as librarians to change his taste if you can. Therefore, I throw that question back at you.

The next question is, “Why are the popular magazines not better?” That is, I suppose, why are they not more interesting to the intellectual class? I can answer that question with some feeling and with some accuracy. I am absolutely sure of this: the reason why they are not more interesting to the intellectual class is that the intellectual class does not write in a more interesting way. There is no other answer. The magazines—Heaven knows they are bad! I should be the last man on earth to defend even the best of them. I have had my hand in making—I should not undertake to say how many; but I have never made one and I have never seen one made that was more than a respectable pile of *débris* beside the plan that it was first constructed by. The reason that you have this mere rubbish and trash in the magazines is because the poor editor cannot get anything better, and the audience that blames him is itself blameworthy. Why do *you* not write better?

Now, when you talk about the degradation of style by the bad contents of the magazines,

I have one very emphatic word to say. The men who write, or who think that they write, our contemporary literature, — I mean the men who have some happiness of style, — seldom have any ideas. The men who have ideas cannot express them so that an educated man takes great pleasure in reading them. Of course, this is a sweeping generalization. No man need receive it unto himself, but he is at liberty to apply it to all his neighbors. The truth of the matter is, our style ought to better. Effective style is changing. The somewhat leisurely style of a generation or two ago pleased the small circle of readers within its reach, — a mere little company which by comparison might have been got into one room, a company who had leisure and who liked to read that kind of style. Now the great world is forging forward in all its departments of thought as in all its industrial development, and the style suited to our time is different. The man who would write convincingly or entertainingly of things of our day and our time, must write with more directness, with more clearness, with greater nervous force; and the teaching of composition and the practice of style have not kept pace with the development of our intellectual life, at any rate in the United States. I would, as poor an editor as I am, contract without the slightest hesitation to make a better magazine than you have ever seen, if I could find people who could write it well; and every other editor who is struggling to do his duty would tell you the same thing if he spoke with the frankness that is provoked by such questions as these.

Next, "Why do they — that is, the magazines — not publish more critical articles?" In the first place, nobody cares for them; in the second place, nobody produces them in an interesting fashion. A magazine deserves to die that is not interesting. Now, the gentlemen and the ladies — young ones, generally — who write critical literature, do not make it interesting. Besides, we have never taken to critical literature. There is not enough kept alive in our language to make a row of books that would stretch across this table. They do exist perhaps in the libraries; but nobody ever asks you for them, and you never take them from the shelves.

The next question is, "Is writing adequately paid for?" Great writing never was and never

will be. Even good writing never will be. But in this day and generation, poor writing is paid for twice and thrice. Since I have known the current prices of ordinary writing the hack rates have doubled, and instead of living in Grub street, the hack can now live in an apartment. The ordinary rate for hack writing is higher than the wages paid to carpenters and plumbers and other journeymen; but as for paying for literature — never! There is no way under heaven whereby it can be paid for. Yet this is true; the income to authors is constantly rising, and there are tasks — delightful and useful tasks — in book making and in magazine making, which every successful publisher would be willing to pay munificently for, if he could find the men and the women who could do them well enough.

Now, Mr. President, if I have answered these questions with any enlightenment, I should like to say a word about the relation of editors and publishers (for, as I have said, I regard them as one, because a man who edits a magazine, and a man who conducts a publishing house, does one and the same thing) to libraries and to librarians. We both serve the public. We may have whatever ideals we wish, yet our one great master is the reading public. That is the only master that is worth serving in a democracy; and when you do your duty, and your institutions reach their highest usefulness, and when I do my duty, and the institution that I serve reaches its highest usefulness, we recognize our obligations to a democracy, and we live up to them the best we can. Now, since we are both driving at the same great purpose, how do we work together, and how might we work together? Our chief relations now, I fear, are financial. The publisher comes to the librarian, or sends to him, saying, "For the love of Heaven, buy my books." You answer him pugnaciously, and tell him that he charges too much for his books, when the truth of the matter is that all good, new books, are too cheap. They are so cheap that the publishers cannot well thrive on them. There is a confusion of thought here which it becomes you and the public you serve to take into account. Magazines are cheap because the advertiser pays for them. Newspapers are cheap because the advertiser pays for them. Books that go into great popular editions are cheap because when you put out a great popular edition, the cost per

copy is lessened, and the books can be sold for conventional prices. But when you have books that are new, and the authors must be paid, and the publisher has to bring them out after great expense to maintain his plant, the current prices are lower than they ought to be, and lower than they will be, for books have not even the cheap postal rate that newspapers and periodicals have. I say this not at all with reference to your present contention with the Publishers' Association, but with reference to the general proposition that good new literature, which is not published in great editions, and has not great popularity, is cheaper than it ought to be, or than it can afford to be. The margin of profit to the author and to the publisher has become almost nothing on good books, of which less than three or four or five thousand copies are sold; and it is the sad experience of many a publisher to find that he must sell two or three thousand copies of a book at the price that you and the public pay for it before he has paid his plant account, to say nothing of his costly running expenses.

But it was not the financial relation between your profession and mine that I had it in mind to speak of. I should wish that your great profession and my own should come into closer intellectual relationship, and it is this that I wish to speak of.

You are good enough to report to us — and you do a very genuine service, which every publisher appreciates — when a book comes to you that is not well made. You report also inaccuracies which you find and which your readers find in books. That also is a favor which every honorable publisher appreciates. You also send to certain literary periodicals a list of the most popular new books. That is a certain advertising service, but it is transitory and amounts to little, for the first popularity of a book is a judgment of it that is not worth taking into serious consideration. Contemporary criticism, for instance, of fiction, is not worth the reading or the writing down. Every publisher that has lived long enough to know something about literature appreciates that fact as well as you do.

But there is one service which the librarians can render to the publisher which should enable him, through you, to render a greater service to the public that we all serve. Report to us what the public wants. I mean the noble

and dignified wants of the public. You are in a position to know what the intelligent community about you desires for its intellectual development, for you occupy a closer relation to them than any other class of men and women in the world. If you would report to us what you think of the new books that come to you and what the intellectual people who frequent your libraries think of them, that would be a service that any honorable publisher would thank you most heartily for. I think that every one of us who has a noble ideal would welcome the opportunity and even give a year or more of his working life if he could sit at your desks for a while and hear what you hear and get the point of view of the people as you get it. And when I say report to us what the people want, understand me, I do not mean the shallow and transitory popularity of some idea, but I mean their real intellectual need; for the publisher wishes to serve his public and to serve it so well that he will build himself an institution on that service.

For instance, what kind of books, what great group of books, do you think ought to be taken in hand for the next generation of readers? In the memory of the youngest of us, American history has been re-written, and there were librarians twenty years ago who could have foretold that, who could have seen it; there were librarians — one honored one in particular, who had a great hand in doing it in his own way. More lately, almost since yesterday, there has sprung up a great group of books about nature study, many of them very excellent books. You saw how the teaching in the schools and the growing love of out-door life were bringing that about, and you could anticipate the publisher's knowledge of such opportunities as these if you would be kind enough to remember them.

These would be positive services. Of course, really great books cannot be foretold. Really bad books you need never pay any attention to. They are not even worth discouraging, for they are sure to die young. But it is that great middle class of books, information books, books which serve a useful purpose, — they form the greater part of what the people whom you serve read and the greater part of what the publishers publish. These are matters of calculation, and it would be a great service which you would render the public and that I assure

you my profession would most heartily thank you for, if you gave us systematically the benefit of the conclusions which you draw from your daily contact with the people.

The librarian a little while ago was a mere custodian of books; then he became the distributor of books; now he has become the director of the reading of the people. That is a noble evolution. Now, if you will go one step further and so far anticipate the intellectual needs of the people as to suggest what ought to be done to meet those needs, then I say your profession will reach its fullest bloom, and we shall have closer intellectual relations.

The publisher in the meantime is either a mere manufacturer of books or he is taunted by you as being a mere salesman of books, and he is asked why it is that the books which he publishes are so bad. He also has a positive and creative function, for he can encourage the making of good books and build an institution if he can catch enough suggestions of the way the intellectual leaders of the people are going.

All that I have said about books is applicable to magazines. If you find the magazines dull, as you do, — else you must be easily contented, — there is one way in which you can help to remedy the trouble. There is not a magazine editor in America — I mean, one worth considering, who is trying to do a serious task nobly — who would not be under profound obligations to you, if you would write him and tell him what the people would be interested in, what would elevate them, and most of all tell him who under heaven can write it well.

Ladies and gentlemen, we that inflict books upon you go through our routine year after year, sending you tons of trash and complaining that you do not buy it. You, in your routine, have card-cataloged all dead literature to a double death, so that a man who wishes to find one single fact in ten years can be sure to find that in your libraries whether he ever find a new book or not. And these things are inevitable, I suppose; they are necessary parts of our work; they are the routine whereby we live; but let neither of us forget that our great work is the work of institution-building, for that is the primary impulse of intellectual life. You are making the libraries one of the greatest and most useful institutions in our civilization. We are trying to make our publishing houses useful institutions also, but we shall all

be duller than the dullest magazine and as monotonous as the most rigid card catalog if we do not throw into our labor some imaginative, some constructive purpose. If through all the routine of your work you see the final purpose of it, — which is to quicken the intellectual life of the people, — then your profession becomes ennobled. Without that you are mere clerks, handing books across a counter, and without that I am a mere dealer in soiled paper bound between covers.

The most impressive spectacle that has ever presented itself, I think, in the history of the world is the industrial development which we witness from one end of our country to the other. But it is only a forerunner, as I look at it, of an equally diversified and wonderful intellectual development of our democracy if we succeed really in quickening the intellectual life of all the people. Of all the people, I repeat, for as many as you reach by the magnificent development of your libraries whereby you send books home to sick children and to old women, and as many as we are supposed to reach by the grace of cheap paper and cheap postage for our magazines, yet the truth remains that we have not yet touched the fringes of the intelligence of this growing democracy. Let your imagination work upon the problem, how we may really reach the intelligence of the people so as to quicken it. Then when we do that, both your profession and mine will have the noblest task, I think, along with that of the school-master, that it was ever given men to do — the intellectual guidance of a democracy.

President BILLINGS: I know that I voice the sentiment of the Association in returning thanks to Mr. Page for his humorous, instructive, and eloquent address.

Miss ISABEL ELY LORD read a paper on

THE GIFT EXTREMELY RARE.

(See p. 34.)

LINDSAY SWIFT spoke on

PUBLIC LIBRARIES AND PUBLICITY.¹

The secretary read the report of business transacted by the Council,² and presented the following resolutions as submitted by the Council:

¹ Mr. Swift's paper was not furnished for publication.

² See transactions of Council and executive board, appended.

CARNEGIE ENDOWMENT.

Resolved, That Andrew Carnegie's gift of one hundred thousand dollars, offered through the President of the American Library Association, be accepted, subject to the conditions of the donor, namely, that it be kept as a special fund, the income of which shall be applied to the preparation and publication of such reading-lists, indexes, and other bibliographical and library aids as would be specially useful in the circulating libraries of this country.

Resolved, That the amount thus given be designated as The Carnegie Fund, and be placed in charge of the trustees of the Endowment Fund, whose treasurer is authorized to receive the gift on behalf of the Association.

RELATIONS WITH THE BOOK TRADE.

Whereas, The system of net prices maintained by the American Publishers' Association has resulted in an unexpectedly large increase in the price of books to libraries; and

Whereas, That increase has worked great hardship upon libraries in limiting their purchases of current books, diminishing their power of meeting the demands of the public, and narrowing their influence and opportunities as educational institutions; and

Whereas, The interests of the library and the bookseller should be closely allied;

Resolved, That the American Library Association urges the American Publishers' Association to make such arrangement that libraries may secure an increased discount over the present allowance on net books, and may not be unduly restricted in dealing with booksellers.

It was *Voted*, That the report be approved and the resolution adopted.

Dr. JAMES K. HOSMER, who was introduced as the newly elected president, presented the

REPORT OF COMMITTEE ON RESOLUTIONS.

Resolved, That the gift of one hundred thousand dollars to the American Library Association, representing the libraries of all sections of the country, as a fund for the publication of bibliographies and lists for the general use of circulating libraries, is a timely and fitting complement to Andrew Carnegie's generous gifts to individual libraries, — that the Association expresses to the donor its sincere and grateful thanks, and the assurance

that it will do its best toward a wise and zealous administration of the trust.

Resolved, That the Association desires to express in warm terms its sense of the wisdom, persistence, and munificence of our esteemed friend and fellow-member, Mr. George Iles, as conspicuously shown in planning and carrying to completion a work so very important as the just published "Guide to the literature of American history."

Resolved, That the Association thanks heartily the Massachusetts Library Club, our hospitable host, for smoothing our way hither, for superintending so efficiently our entertainment, and for its kind thought as to post-conference enjoyments.

Resolved, That the Association acknowledges with thanks the welcome of the Trustees and staff of the Boston Public Library at the beginning of the conference,

Also, the hospitality of the Harvard University and of the Cambridge Public Libraries on June 16th, during the visit to Cambridge,

Also, the courtesy of the City of Boston in affording the harbor excursion, and of the unknown friend who gave us the trolley ride.

Resolved, That the Association acknowledges with gratitude the courtesy of Miss Katharine P. and Miss Louise Loring in extending to us the hospitalities of Burnside, Beverly, on the afternoon of June 17th,

Also, the courtesy of Mr. A. A. Covell and the Magnolia Public Library for the use of Library Hall, free of charge, for meetings throughout the conference,

Also, the good services of the proprietors of the New Magnolia, the Oceanside, and the Hesperus, throughout this happy meeting of 1902.

J. K. HOSMER,	} Committee on Resolutions.
C. W. ANDREWS,	
KATHARINE SHARP,	

It was *Voted*, That the report be unanimously accepted.

Dr. BILLINGS: I ask the Association to accept my very sincere thanks for the kind way in which they have seconded my effort to make the programs of the general session, at all events, go off on time and without interruption. I appreciate it highly. I know that without such aid it would have been a failure. I now turn over this historic gavel of the Association to you, Mr. President, and say goodbye.

Adjourned 10.30 P. M.

COLLEGE AND REFERENCE SECTION.

THE College and Reference Section of the American Library Association held a meeting in Library Hall, Magnolia, Mass., on the morning of June 18. The chairman, Azariah S. Root, presided, and in the absence of Walter M. Smith, Charles Alexander Nelson was appointed secretary *pro tem*. The meeting was called to order at 9.45, and was opened with an address by ANDERSON H. HOPKINS on

THE UNIVERSITY LIBRARY: ITS ORGANIZATION
AND ITS RELATION TO THE OTHER
DEPARTMENTS.

(See p. 10.)

The chairman called upon W. C. Lane for a review of Mr. Hopkins' paper.

W. C. LANE: Mr. Chairman, I feel somewhat as if I were in the place of Balaam, whom the king of the Moabites called to help him by cursing the children of Israel. I do not know whether it will be my fate that my steed will refuse to go forward, and perhaps when I come to the point I shall find no words with which to curse. If, on the other hand, I succeed in cursing roundly, I hope Mr. Hopkins will not mind.

In my opinion the most interesting point in Mr. Hopkins' paper was what he had to say in regard to the connection of the museum and the library. I am inclined to take issue with what he said at first concerning the relation of the laboratory to these two. But this he modified a little in the latter part of his paper. At first he distinguished the laboratory from the museum on the ground that the latter contained *permanent* and the former *temporary* material—material which is used up in the using. It seems to me that a better ground on which to establish the relation of these three departments is that the library and the museum both *contain* the material of research, while the laboratory is the place where it is *used*. From this point of view, the special seminary or departmental library should be regarded as a laboratory, and it in fact bears the same relation to the general library that a natural science laboratory bears, or should bear, to the museum. Certain subjects such as botany, zoölogy, geology, mineralogy, have to be

studied in the museum, and their laboratories should be in the museum. Other subjects, like chemistry and physics, do not require collections of specimens to the same degree as the former, and their buildings may be separate from both museum and library. Other subjects, such as history, literature, and economics, use as their material of study the collections of the library, and use them in very much the same way as the naturalist uses the collections of the museum. The library, or some part of it, is itself their laboratory. Let us then consider the laboratory as an adjunct of the museum and the library rather than of the school.

I had not realized, until Mr. Hopkins spoke of it, that scientific men commonly feel contempt for the museum. I heard Mr. Agassiz at the University Museum in Cambridge the other day, in an address which summed up in a most interesting way the history of that museum, speak of the Harvard Museum as the only one which was organized on a scientific basis as a means of instruction. I was not prepared at the time to accept his statement, but if what Mr. Hopkins says of the attitude of scientific men is true, the cause must be found in the imperfect organization to which Mr. Agassiz alludes. I am happy, from daily observation, to bear testimony to the fact that the standing and the methods of the University Museum at Harvard are quite different from this. It is the necessary working place of the naturalist, and all the instruction in natural history is centred there.

Now this brings up what, it seems to me, will be a very important point for us to consider in the future in regard to our libraries. We are naturally inclined to strengthen the university library as a whole and to keep it comprehensive and well filled out on every side, and to resent any proposed division of it into parts. Some universities, it is true, have started on the opposite principle, and have a library divided up into many groups without any strong central library, or making a central library simply of what is left over, so to speak, from the departments. Those of us who are connected with older libraries, which have

started on the other principle, mistrust the final outcome of the newer multiple establishments. But if you will take into account what Mr. Hopkins has said this morning, and what is very true in regard to the connection of the museum and the library, it may yet appear that the university library must eventually be split into two great divisions — one, a scientific division to be administered in direct connection with the museum, so that the books shall be directly at hand for the scientific worker, the other, the historical, literary, and economic division. The dividing line is not easy to draw. There is no natural line of cleavage of this kind, and perhaps the difficulties of forcing one are too great; but if it is to be made, it should, in my opinion, be made here, once for all, rather than in a multitude of different directions. Otherwise, the library is scattered into an indefinite number of small fragmentary collections. This does not of course affect the question of maintaining special supplementary reference libraries for laboratory use.

We come now to another point that Mr. Hopkins dwelt upon — the administrative organization of the library. He says that the library is co-extensive with the university, by which is meant, I suppose, that it is of almost equal use to all departments of the university and must provide for all departments. That is perfectly true, but I do not see that it necessarily follows — as Mr. Hopkins took for granted — that its administration should be modelled after the administration of the university. Its administration should be directed, of course, to securing the best result in what it undertakes to do; but the fact that it has many interests and that it is allied to many departments does not make its organization necessarily parallel to the organization of the university. It has its external and its internal relations, to be sure, but why its directorate should be composed of the three persons that Mr. Hopkins has named, I do not see. The other two besides the librarian represent, I suppose, the faculty and the board of trust, the president of the university representing the faculty interest and the president of the board of trust representing the financial direction of the institution. These two presidents are usually one and the same person; and if they are I see no reason why, as Mr. Hopkins has suggested, the board of trust need have another representative

beside the president of the university. As the matter looks to me, it is better stated in this way: The librarian is the responsible executive head who directs the current course of the library's administration. He needs the *advice* of two bodies; (1) of representatives from the faculty on the one hand, for whose benefit he works; and (2) of his staff on the other hand, who have the carrying out of the policy of the library in its details. He needs *advice* from those two. He needs *control* on the other hand from the president of the university representing the board of trust, because the board of trust has the final direction of the policy of the university and has to supply the means for carrying on whatever is done.

As to the faculty and their relation to the library, it is quite true that members of the faculty are not unprejudiced advisers. Each man naturally sees his own need clearest, and the reason why a committee of the faculty should not have the ultimate direction of the library, it seems to me, lies here rather than on the ground that the members of the faculty are not good administrators. I should take issue with Mr. Hopkins entirely in regard to his statement that professors are not good administrators. As a matter of fact, professors have an immense amount of administrative detail to look after, and must have. The good old gentleman whom Mr. Hopkins told us about, of course, was not fitted for that kind of work, and should not have been put in an administrative position. But there is an immense amount of committee work which members of the faculty have to do and which they do better than any one else could. That a man is a professor and a man of learning does not prevent his being a good administrative officer. In fact, one trouble with our colleges, it seems to me, is that professors have too much administrative work thrust upon them; and the difficulty is, not that the administrative work is poorly done, but that the professor is prevented from doing other more important things.

As to the disposition of the library's fund, I think there is another point of view to be taken. Mr. Hopkins, if I remember rightly, advocated dividing the income of the library among different fields of literature in proportion to the productivity of those fields. It seems to me that would be a mistake. The university library, despite its name of univer-

sity, is not trying to build up a universal collection equally well-rounded on all sides. I doubt if any library in the country is trying to do that except the Library of Congress, and even in that case, I imagine, this cannot be said to be its present aim, but is rather something which it has before it in the future. A university library is collecting material for the use of its different departments, and the division of its income surely should be according to the needs of the several departments and the value of the material required rather than the amount of the material produced. To do that I really think that a committee of the faculty is practically the best body that can be found. Of course, all departments are not represented on that committee. They cannot be without making it unwieldy, but I think the interests of the teaching body are best served if the general division of the fund is left to them rather than placed solely in the hands of the librarian and his staff. It is quite true that it may be wise to leave a moderate balance unappropriated in the librarian's keeping to be used for matters which are not well provided for otherwise, but that does not affect the general statement that the committee of the faculty is the best body to make that division.

Mr. Hopkins has referred to a third body to be represented, the directorate being the first, the faculty the second, and the board of trust the third. I see no occasion for a special committee from the board of trust. It seems to me that that is only introduced to get a theoretical balance between the library and the university as a whole. Its object as stated is to provide funds and to audit accounts. The auditing of accounts surely belongs to the treasurer and his office. The provision of funds is a matter for consideration by the board of trust as a whole, provided the funds are not already determined to their use by bequest.

The CHAIRMAN: In order to start the discussion, I am going to call upon Dr. Canfield. Dr. Canfield has served a long time as member of a board of trust of one of our important colleges, he has been president of two or three colleges, and has come in contact with this subject from the faculty's side, and he is now librarian of one of our greatest universities.

Dr. J. H. CANFIELD: If you will permit me, I will simply state the conclusions reached from experience and observation with regard

to two phases of university library work and administration.

The purchase of books, maps, charts, and other printed material for the use of the university seems to fall naturally into three classes. First, certain material is needed by the head of each department in connection with his professional work. The university has a perfect right to expect that the head of every department will make expenditures and quite large expenditures out of his own purse in the line of his own work, especially when the result of that work may be more immediately beneficial to him than to the university. But there is a large amount of printed material which he cannot be expected to secure at his own expense, and the university which wisely administers its purchases will see that the head of each department has for his own use and for the use of his assistants certain material along these lines. This will be in his own room continually, not to be withdrawn, at least not to be withdrawn from the university campus or grounds. It will be continually there, because he never knows when he wishes to use it, and when he wishes it, he wishes it just as the Texas gentleman does his revolver, — right away! It must be where he can get at it, and where his assistants can get at it at any moment. It ought not to be subject to the call of other people. That means that there will be built up in the private office of the head of each department a small library at the expense of the university. It will never be a very large library, and it will be for his own immediate use and the use of his assistants. That library, it seems to me, ought to be regarded as departmental equipment and not as a part of the university library. The librarian of the university may very properly assist in the purchase of that material on request. The department may very properly receive the advantage of all discounts and all contracts that the librarian may make. The librarian may very properly assume the burden of purchasing and of the various details of accounting, but that collection will not constitute a part of the university library in any sense of the word, if we are to use good common sense in library matters.

Then there will be another collection of books, charts, and other printed illustrative matter, that will be for the use not only of the

head of the department and his assistants, but for the students in the department, for their immediate use, for their ready reference. In the laboratory of the science department these books will naturally touch the work that is done in the laboratory. They are the books that the laboratory worker needs at his elbow. It is not always convenient for him to take off his apron and wash his hands and roll down his shirt sleeves and put on his coat and go over to the university library and get a book; and it is not always convenient for him to wait until he can telephone and get the book by a messenger, even though he may get it quickly. There is a certain amount of printed material needed in that science laboratory, and there is a certain amount of printed material needed in the workroom, properly "laboratory," whatever you may call it, of every department. This collection will not be very large at first; it will become larger as the department becomes more important and as the university becomes important, but it will never be very large.

I do not think that this is a part of the university library, accurately speaking. It is a part of the departmental equipment, and it ought to be purchased by departmental funds. That material ought not to be subject to the call of an outsider. No one should take it away. If it is taken away, you will find it is taken at exactly the time it is most needed. Just when you want it most, you cannot have it because somebody else has it. Just when you are using it, somebody else wants it. It is disappointing both ways to treat this as part of the library.

The university library, as it seems to me, should include only those books and that printed material of any and every description which are readily accessible to the entire university community. Anything that is accessible to a small portion of the university community only, anything that is not readily accessible — that is, within reasonable call and within reasonable reach — ought not to be called a part of the university library. President Eliot made an excellent point last evening when he said that we have overdone this matter of rapid service — that we think we must be ready to supply everything, reasonable or unreasonable, at a moment's notice. But all the printed material which is readily accessible to the entire university public constitutes the university library.

This threefold division of printed matter will mean necessarily a large amount of duplication, but that is unavoidable if the work is to be done efficiently. Until you are able to duplicate, as a matter of course, you will be obliged to devise and endure makeshifts to accomplish that which I have undertaken to outline. We are poor at Columbia University, I think on the whole we are the poorest institution in the country. We are obliged, therefore, to go without any large amount of duplication, and place at the service of the laboratory books and other printed material subject to the call of the outside world. We know, however, how confusing and vexatious and how wearisome and disappointing that is and always will be. The hours of the laboratories are about one-half the hours of the library, and unless the collection is brought back at the close of each laboratory day it is locked up; we have to find a janitor, and get a light and the keys, and go and make search for the book. When we have found it and taken it, nobody is responsible. It is gone. The next morning the head of the department simply knows it is not in place, and who had it and how and when and where he knows not. The librarian knows even less about what the department has done with it. But until your resources enable you to enter very largely upon the process of duplication, you must put up with makeshifts in that way. I am quite confident that theoretically the lines which I have indicated are the correct and natural lines which the purchase of materials and supplies for the work of the university will follow.

When it comes to the division of money, I believe very thoroughly in dividing the financial resources among the departments in proportion to the use which the departments show they have made of those resources. A university library is absolutely unlike a public library in that it is necessarily and wisely built up along the lines of greatest activity. The lines of least resistance in the university are the lines of greatest activity, the lines of greatest use. Any one who is at all competent to administer the affairs of a university library ought to know very easily and very continuously the departments which are making the most and the best use of the books that are given out. I know it is worth a great deal to develop things symmetrically and harmoni-

ously and all that, but I cannot understand why it is of any earthly consequence to put a book on the shelf for a department the head of which does not care for it, does not know it is there, forgets it is there when you tell him, never refers to it, and does not call the attention of his students to it. Here is a department whose students are hungry for that which you are able to give them in only a small proportion of their need at best. Why should you take from them even a single volume to give to those who do not care for it at all? So in the libraries with which I have had the privilege of being connected directly or indirectly in the past, it has always been the policy of the administrative body to divide the annual revenues according to the uses which have been made during the closing year. And that does not mean the use which is sometimes made in the last thirty days of the year, either. There are some departments which come in with a rush at the last of the year to spend their balances. But it means the use made by departments which have shown evident wisdom during the year in the expenditure of the resources granted them.

The policy of Columbia is to distribute the funds about as I have indicated. That distribution is made by the librarian, with the consent of the president of the university. The librarian makes that distribution after a careful consideration of the statistics of the order department and of the loan department. It would be a very unwise administrator who should undertake to do that piece of work hastily. We reserve a small amount, possibly about fifteen per cent. of our total resources, for many things in which the departments are not particularly interested as such; and that is put into the hands of the librarian and is called the "Librarian's Reserve." Generally, the departments beg it away from him before the year is half over, and it does not serve the general purposes for which it was intended, but it does serve to supplement, to "piece out," to meet extraordinary demands and unexpected emergencies; and also to meet some of the more general demands.

Those are the only two points I care to touch upon — the general division of the books and other printed matter, and the method by which the division is made, and the lines along which it seems to me, after years of experience and observation, purchases ought to be made.

The CHAIRMAN: We have ten or fifteen minutes which we can devote to a general discussion if any one is so disposed.

W. I. FLETCHER: I am inclined to say a word regarding the distinction between the university or the college library and the books which are bought for the uses of departments. With us at Amherst this matter seems to work out about as it does at Columbia. But I have long lamented that we were not, and did not seem to be able to be, building up a library. And by "a library" in that sense. I mean a collection of books for educative purposes, for culture purposes. A college or university exists for education. Now, are we not in some danger of losing sight of the fact that we are to carry out the principles of culture through the library? I have observed that in the early days of Amherst College the library funds were used in such a way as to build up a library, and that was because the idea of departments developing on a separate basis and calling for books accordingly had not arisen. Now that development has come and books are called for by departments to such an extent that we are building up a series of department collections, largely made up of books not in the general library, whereas in the old times the idea of the library committee was to build up a rounded library for culture purposes. We cannot carry out that idea; we cannot afford to buy anything that is not immediately called for in connection with the instruction in the college. I suppose if that is true of the college it is much more true of the university. But I think we ought to do a great deal more than we are doing to build up a culture library in the university and the college. Such a library should consist largely of books that are a delight to the eye, attractive outwardly, books of the best editions. The work of such a library should be largely to attract students to books and to literature, either in scientific lines or elsewhere. For example, books of science that the scientific man says are popular books and therefore he does not want them, may be the very thing that will attract the unscientific young man to science, although the professor may think them useless. So in all departments. I don't know how we are going to do it, but I think we should lay stress on that idea.

H. H. BALLARD: College libraries have

been run heretofore in the interests of the faculty. It has been difficult for students to get access even to the books which have been selected for their use by the heads of departments. In many places, the libraries are only open for short periods and at times when it is difficult for students to use them, and when they do go they have difficulty in getting free access to the books. The time is coming when college and university libraries will be run in the interests of the student body, and that body ought to have an advisory representation on the governing board.

MISS K. L. SHARP: The plan of administration of the University of Illinois is perhaps rather unusual. The board of trustees appoint a library committee of five of their own number. During the past five years their duty has consisted in receiving a copy of the annual report of the librarian. The acting library committee consists of the president of the university, the business manager of the university, and the head librarian. This committee distributes the funds to the departments of the university, reserving a general fund, which is at the disposal of the librarian, a fund for binding for all of the departments of the university, and a fund for current subscriptions. There has been a very peaceful administration under this plan for the past five years, and I can speak for its success in at least that one institution.

MR. HOPKINS: The one instance which Miss Sharp has cited has been well known to me for a number of years. There is another university library that I could name that would have very readily and gladly made the change from the old style to the new.

There are a few points I should like to reply to in Mr. Lane's criticism. He said that it was not necessary that the government of the university library should parallel the government of the university. That is all true enough. Neither is it necessary because there are two governments whose realms are nearly co-extensive, that both of them should be republics, but most of us think that it would be better that they should be republics. The co-extensiveness, of course, does not absolutely require the same sort of government, but if you have a really good form of government in one place it might not be at all bad to apply it to the other also. The fact that the "good old

gentleman" whom I mentioned was not a man that Harvard would have thought of putting into an administrative place, did not hinder others from doing just that thing. I must take exception to the committee of the faculty being on the book fund. Of course, as a body, they of the faculties are good and learned gentlemen, but some of them are neither good nor learned.

It is the business of the university to be a university, and it is the business of a university library to be a university library. When I spoke of a well-rounded collection, I did not mean that it should be the business of a university necessarily to make a collection of the reports of institutions for the insane, to use the instance cited by Dr. Billings last evening, but by all means the university library should be a well-rounded collection of good literature. Mr. Fletcher has cited the value of such a collection. If it happens that you have a man for one year or two years or ten years or a lifetime in any department who is not interested enough or has not knowledge enough to round out the literature of his department, it ought to be rounded out for him.

I would ask Dr. Canfield at once whose needs he is supplying. Is he supplying only the professors? Isn't he trying to supply the students? There may be a hundred students under that professor who does not care anything about his field of work. I remember one instance of a man who was in a professor's chair and who had been assigned one hundred dollars, and he came into the library and asked one of the under-assistants to help him find something to buy. He wanted to expend his one hundred dollars. If your administrator is what he ought to be, he ought to be looking over the whole field of literature. He ought to have with him others who are doing much the same thing and specializing in some direction, and his cabinet ought to be able to apportion the fund in such a way that all departments would be looked after to a reasonable extent, without crippling other departments where effective work is being done.

C. H. GOULD: In all that has been said there seems to have been no reference made to that important department of science which may be called the new engineering sciences. Mr. Lane spoke of the natural history sciences, but I should like to know what Mr. Hopkins or

perhaps Mr. Lane would propose to do with the books relating more particularly to the applied sciences—whether they would think it wise to keep those in the university library or whether, as a great many heads of the departments want those books, they should be particularly allotted to the departmental libraries?

MR. HOPKINS: With all due deference to what Dr. Canfield has said, theoretically every scrap of printed matter belonging to the university belongs to the university library. I have no objection to the departmental equipment; all depends on how it is administered. If it is not to be administered it cannot be a part of the university library. It then belongs in the same category with the bricks and mortar so far as the library is concerned. If it is purchased through and is administered by the university library,—no matter how slight the touch may be,—it is a part of the university library. That is my general answer, not merely for applied sciences, but for all other departmental subjects. Departmental libraries are good in their places, but do not forget the great central collection. Departmental libraries, for the most part, should duplicate material already in the university library.

N. D. C. HODGES read a paper on

BIBLIOGRAPHIES *vs.* DICTIONARY CATALOGS.

When I was asked by the chairman of this section to prepare a paper on the "advantages of bibliographies as against dictionary catalogs," Professor Root informed me that the beauties of dictionary catalogs would be set forth by Miss Kroeger. In my trepidation, I ventured to appeal to those members of the staff at the Cincinnati Public Library who are doing reference work. I cannot say that I told them which side I was to take in the discussion or that I was to argue for either side. One and all, they have handed me written statements which are to the effect that I am wrong and that for the ordinary reference work of a public library a dictionary catalog is all-essential. The question of the average reader is not what literature exists upon this subject or that, but "what book is there in this library which will give me the information I want and what is its shelf number?"

I am in an extremely tight place. Those whom I assumed to be my friends have deserted me. Yet this country is exhausting its library

resources each year probably to the amount of a million dollars in the preparation of dictionary catalogs for the thousand and one libraries, when this work might be done by one cataloging force for all libraries.

Mr. Fletcher, in his preface to the "A. L. A. index to general literature," states that its purpose is "to index, as far as possible, all books common in our libraries which treat several subjects under one title and to the contents of which the ordinary catalog furnishes no guide, although they are generally treated analytically in the more elaborate library catalogs." Mr. Fletcher believes it possible to save libraries in the future from the necessity of repeating each for itself this analytical work, as well as to place its results within reach of all libraries and of individual literary workers. But the average public library reader scorns the "A. L. A. index to general literature" simply because it does not set forth whether his own library contains the books analyzed and does not give him the shelf marks of such books as are in that library.

I have had two hobby-horses. On one I have charged against the Decimal classification, and the other I have mounted when I would attack dictionary cataloging, which seems to me so wasteful when repeated over and over again. I am not so sure that I am equal to riding both my hobbies at the same time.

Do not think because I dismount from one hobby that I shall abandon hobbies altogether. I do it simply that I may ride the second with the greater confidence. Are we spending each year a million dollars on dictionary cataloging, or are we spending only a hundred thousand, or does the sum lie between those figures? We are surely spending a good deal of money, much more than would be needed to bring out each year an "A. L. A. index to general literature." Not necessarily an "A. L. A. index to general literature" on exactly the lines followed in the edition of 1901, but a printed dictionary catalog, in several volumes, of ten or twelve thousand books. Perhaps to save expense annual supplements could be issued on the cumulative plan; but let accepted shelf marks, according to the Decimal classification, be placed against each entry. The Public Library of Cincinnati could easily afford to contribute a thousand dollars each year towards the publication of such a printed dictionary catalog of

the most serviceable books. People who demand catalogs have no conception of their cost. They do not know that the cost of cataloging averages somewhere between 50 cents and \$1.25 a title. None of us know exactly what this cataloging item amounts to, but it is a heavy charge on library resources.

We are going to have in Cincinnati six Carnegie branch libraries of eight to twelve thousand volumes each. I expect to see all of these books on open shelves. There are now in the main library more than 50,000 volumes on open shelves. They are not especially well classified. Every large library whose history stretches back for fifty years, so far as I have experience, has its books in a more or less badly shuffled condition. We are working step by step to put the books on open shelves in better order. When books are well classified on open shelves, I believe they furnish an excellent index to knowledge. Seldom, if ever, have I used a dictionary catalog as it is supposed to be used. I have used a dictionary catalog simply to get a starter on a subject, to find in what part of a library books on a certain subject were to be found, to get the latest material, whether magazine article or book chapter. In recent books and magazine articles are almost invariably printed references to the literary material upon which they were built up. Having these recent references, a reader is possessed of the keys to the older literature.

I am sceptical about dictionary cataloging when attempted by a small band of catalogers for many subjects. It has been stated that not ten per cent. of the subjects now taught at Harvard College could have been taught at the beginning of the nineteenth century. Ninety per cent. of the book knowledge of to-day is of comparatively recent creation. The men and women who can intelligently index this material are few and far between, and no one person can intelligently index more than, we will say, for the purposes of argument, one per cent. of the whole store of human knowledge. I believe that librarians are making a mistake in some of the indexing of scientific literature which they have recently undertaken. I do not believe that much scientific material, for instance, lies buried for fault of sufficient reference to it. The German *Fahrbücher* and the system of correspondence among specialists the world over, brings to the knowledge of all

those interested every important paper in whatever department it may belong.

We have many good bibliographies. Poole's Index is used without question; the others lie neglected on library shelves. For seventy-five years there has been published in Berlin a Poole's Index of the technical journals, and yet it has been my experience not to find a single scientific man who knew of the existence of this index until I called his attention to it. Human beings are lazy, and the majority of the patrons of a public library want a little information, not much, and want it quickly without the circumlocution of bibliographies. I hope that Cincinnati may be spared the necessity of dictionary cataloging its large collection, which should not differ essentially from other equally large collections of books in other parts of the country. I wish we all might have a dictionary catalog of ten, fifteen, or twenty thousand volumes, — a modified "A. L. A. index to general literature" with the generally accepted Decimal classification shelf-marks against each entry. Such a printed catalog would serve most purposes in Cincinnati. Ten or twenty thousand well chosen volumes are enough to answer most calls on a public library. The other books can be routed out for scholars by competent reference librarians or will be known to them by author and title.

I believe in the separation of books into the two classes of dead books and live books. It is a separation that is bound to come, and the small libraries of the country should limit themselves rigidly to the books which are most serviceable. If a printed catalog in book form of the ten or twelve thousand most "live" books is not feasible, certainly a printed card catalog of such a collection could be made. I can see no necessity of there being catalogers in more than a dozen or twenty libraries of the country. The small town libraries, except for local matter, should select their books from a list approved by a central council of the American Library Association, if you will, and should receive with the books cards for their catalog. Each year the central council could recommend that certain books be discarded so that the small libraries should never be overburdened and these should learn to depend on loans from larger libraries on the rare occasions when the dead books might be called for. The six Carnegie branches in Cincinnati need not

have any individuality. They need not be all of the same size, but they might well be of the class of standard small libraries which such a system would create. There are exceptions to every rule. A large percentage of some foreign element in the population of a city ward might make advisable a departure from the standard in the selection of books for a branch in that ward, but of this I am not so sure. This may seem a very mechanical way of running a small library, but library work is a business and every means for saving money should be adopted.

I believe it is proposed to reprint on cards the "A. L. A. catalog" of five thousand volumes, presumably with additions and corrections. This impresses me as an excellent suggestion and I hope it will be carried out. One reason why librarians cling to their dead books is that they have expended so much labor on their classification and cataloging in years past that they are loath to see the cards representing this labor routed out of their dictionary catalogs. A dictionary catalog is in itself a mechanical device for getting at the resources of a library. An intelligent librarian with a cultivated book-sense can handle a well-classified collection of ten or twenty thousand volumes much more effectively for the readers than the readers themselves can get at their material through a dictionary catalog. If I were given the choice of looking up the literature of a subject in a large library through either a well-made dictionary catalog or a well-classified collection of ten or twenty thousand volumes on open shelves with an author finding list of the balance of the collection, I would take the books and not the catalog. Only a small percentage of all that exists in a collection of books is brought out in the best dictionary catalogs, partly because of the great variety of material to be brought out and partly because any one cataloger is capable of subject cataloging so small a fraction of the total of human knowledge. For the person seeking a little information I would supply a well classified collection of ten thousand volumes on open shelves in charge of an intelligent reference librarian and if these books are live books, as they should be, with proper indexes and bibliographies, they will themselves be the keys to the world's literature which scholars may chance to need. We are told that children can

be trained to use a dictionary catalog: I would rather see them trained to use books.

Miss ALICE B. KROEGER followed with a paper on

DICTIONARY CATALOGS *vs.* BIBLIOGRAPHIES.

You have heard the arguments against dictionary catalogs and I am now to convince you that bibliographies will not take the place of the dictionary catalog. Mr. Hodges acknowledges in advance that the members of his staff all disagree with him and are on my side of the question. I believe that the majority of librarians, especially those in public libraries, will side against him and with his staff in favor of the dictionary catalog, with its analytics, double entries, and cross references.

When the A. L. A. Publishing Board, not many years ago, began to furnish printed cards for parts of books, I questioned the use of subscribing to these cards when an excellent and more compact index to the same books was furnished in the "Annual literary index," which in time would be absorbed in the "A. L. A. Index to general literature." It needed only a brief experience to convert me to the opinion that it *was* necessary to repeat such analytic work in the card catalog in order to make it of any considerable use to the library.

We talk much about libraries spending millions of dollars on cataloging. Do we not perhaps exaggerate the amount? At least do we sufficiently consider the value of such work? Is not a small collection of books well selected and thoroughly cataloged generally more useful than a much larger one not so well cataloged? I think many of us have had experience in using both kinds and can testify to the great value of a good catalog.

Mr. Hodges estimates the cost of cataloging at from fifty cents to \$1.25 per volume. This is too large an estimate for the general library, but granting his figures, it must be remembered that the Library of Congress printed cards will reduce the cost for current publications. This is especially true where analyticals are largely used in the catalog. And in addition, the A. L. A. Publishing Board is doing much to make analytic work less costly by analyzing and printing cards for important sets of books, to say nothing of the more extensive work in printing cards for articles contained in about

one hundred and eighty-five technical periodicals. There is now very little question that a central bureau, whether Library of Congress, A. L. A., or any other, can catalog books for libraries at less cost than the libraries can do the work separately. I believe also that the cost of card cataloging can be still further lowered by the more general use of the typewriter, which heretofore has been too much neglected in libraries. Hand work is always slower than machine. Besides, the typewriter gives us a much clearer card, more easy to read and more in line with print.

An A. L. A. printed dictionary catalog in several volumes, including ten or twenty thousand titles, with annual supplements on the cumulative plan, is open to the objection of all printed catalogs that it is never up to date in one alphabet. Constant reference to supplements is irksome to most persons. As Mr. Hodges puts it, "human beings are lazy." We know what it means to look through that indispensable tool to the librarian, Poole's Index, its five-yearly supplements, and the "Annual literary index" for three or four years, in order to get all the references on a subject. If the Cincinnati Public Library wants a printed catalog, is it not possible to use the Peabody Institute catalog which is the most complete printed dictionary catalog, and which is at the same time a bibliography of value to the student? The analytic work is thorough and supplements are printed. Why not put the call numbers of the Cincinnati Public Library in the margins?

Some such catalog as the suggested A. L. A. printed dictionary catalog might be useful to small libraries if these libraries were all uniform. Is it possible to have even small libraries uniform? I can imagine six or more branch libraries in one city being identical in character, although I would not care to see this idea carried out. But taking the country as a whole, is it possible to have small libraries uniform? Will not the personal element always enter into the question? Books that are given, books that are not in the A. L. A. catalog (and I can conceive of many such being added to a library), must be cataloged, and this again means either printed or card supplements.

The Library of Congress has under consideration the printing of cards for the A. L. A. cat-

alog. One of the defects of the present A. L. A. catalog for the purpose of a small library is its lack of analytics and double entry, but with printed cards a small library will be able to purchase at a trifling cost as many cards as are necessary to bring out the contents of each book under its subjects.

Mr. Hodges refers to the fact that in looking up a subject he generally uses the dictionary catalog to get a start on a subject, and then consults the books on the shelves. Now, in large libraries unrestricted access to shelves is not practicable and some modifications must be made. The card catalog is, therefore, most necessary in order to put the resources of the library on any subject at the disposal of the student without much loss of time. The ordinary reader must be content with the catalog in most cases. He has not the privilege of the librarian.

Bibliographies and references to authorities as given by authors in books and periodical articles are most important. But is not their practical usefulness after all very limited? The experienced librarian gets into the habit of thinking that it must be as easy for the general reader to look up his subject as it is for himself, forgetting how many years it has taken to acquire an expert knowledge of the use of what might be considered comparatively few books. Think what it means to the "average reader" to be told to consult bibliographies, when often he has no conception of what a bibliography is; perhaps he believes it to be (as applicants for admission to library schools sometimes do) a book that "gives lives of people mentioned in the Bible."

I believe that librarians should do more to interest and instruct readers in the use of bibliographies and indexes. At present in almost all libraries, bibliographies are in the cataloger's room or in the librarian's office or in the most inaccessible part of the library, whereas many of them should be in the reference department along with the cyclopædias of special subjects. They would then be more frequently used, although it is exceedingly doubtful whether they would even then assist the "average reader." It would be the reader above the average who might be occasionally helped. And with the "above the average" reader, bibliographies are also of limited use. A person must have infinite patience and great inter-

est in his subject as well as plenty of time before he will follow up his subject by means of bibliographies alone. English students who frequent the British Museum must have this time, interest, and patience, because there is no subject catalog, but the average American user of libraries decidedly lacks the virtue of patience and feels that he cannot spare the time. Recently the same subject has been brought up by British librarians and readers, some of whom are urging the importance of subject catalogs in spite of the disapproval of the bibliographers.

Consider the number of bibliographies and indexes which the student must consult, with their variety of arrangement, more or less (usually more) faulty. Then there are the annual supplements to bring the literature of his specialty to date, besides the references added to books and periodical articles. After he has found his references, consider the time that is necessary to look these up in the catalog to see whether the books are in the library. It is true that in the case of the more common indexes, call numbers may be inserted by each library after the list of titles analyzed. This we at the Drexel Institute do in the "A. L. A. index to general literature," just as in the case of Poole's Index we have a list of the indexed periodicals contained in the library posted in a conspicuous place near the indexes. Even with these aids the number of readers who consult Poole and the "A. L. A. index" are very small compared with those who use the dictionary catalog.

The fact that the Berlin technical Poole is unknown to scientific men is another argument against bibliographies. If a specialist does not know the bibliography of his subject, how much more need that he should be able to find references in the card catalog, how much more necessary to put at his disposal the A. L. A. printed card index to technical journals! And if a specialist does not know the bibliography of his subject, how much less does the ordinary user know about the literature of the subject in which he is interested, how much more necessary that we assist him by means of a good catalog to what the library has on his subject!

While it is true that catalogers even the most capable cannot intelligently index the contents of all books, still I hope that Mr. Hodges' estimate of one per cent. is exceedingly low,

otherwise what a vast amount of errors must be made in our public libraries. Even should some errors occur in indexing, much benefit may be gained from those entries which are not mistakes. In a printed dictionary catalog issued by a central bureau there are sure to be many errors and a greater number of differences of opinion about entries, so that after all, libraries will have to do considerable changing in order to make the catalog suit their needs.

While I believe that we are just beginning to understand what co-operation can do for libraries, I do not think that co-operation will dispose of the dictionary card catalog. On the contrary it will but emphasize its necessity and increase its usefulness. Before we can dispense with the dictionary analytic card catalog we must have more and better subject bibliographies and in addition a complete bibliography of bibliographies kept up to date in the same manner as Poole's Index, cumulating yearly or five-yearly.

The dictionary card catalog with its simple alphabet including analytics, double entries, and cross references, is unquestionably the form of catalog that is of the greatest good to the greatest number, and not for some time to come, if ever, will it be superseded by a printed catalog or by the general use of bibliographies.

The CHAIRMAN: I will ask Mr. Fletcher to open the discussion.

Mr. FLETCHER: Behold an angel of peace! I think it is evident that too much energy is wasted along the lines indicated by "*versus*" in this title. There is no "*versus*" about it. The case is all in a nutshell. The dictionary catalog is a necessity, and the only question is how far we shall carry it. I was called upon to speak on this subject, I understand, because of my connection with the work of the Publishing Board and its efforts to transfer to the field which we (by an almost mistaken use of terms) call bibliography, as large a portion as possible of the work that has been put into the field that is called cataloging. It was long ago recognized that a large portion of the work that is put into the cataloging could be with great advantage transferred to the field of bibliography. That transfer is constantly going on. As an example, take Poole's Index.

How many people here are writing index cards for current periodicals and putting them

into their card catalogs? All those who do so please raise their hands.

No hands were raised.

Mr. FLETCHER: Why not? That illustrates the situation. If Poole's Index, which was the first of our great co-operative bibliographical undertakings, has made such cataloging unnecessary, why will not other such undertakings make a great deal more cataloging work unnecessary? How many people here are making as many analytical cards now as they did before the "A. L. A. index" and the "Annual literary index" came into existence? I do not see any hands raised. I do not like that word "*versus*;" there is no reason for it.

C. K. BOLTON: I think the difficulty about the bibliography scheme in the average library is to keep the bibliography complete and up to date. When twelve months have gone we must throw aside our bibliography because it is not up to date. It seems to me the American Library Association might do well to issue out a small bibliography of books likely to be in every library, which any library could buy, and put its own shelf numbers on for ordinary use. Such list would not be out of date and would not have the disadvantage that is found in almost every bibliographical scheme.

C. W. ANDREWS: Attention has been called to the fact that the classed catalog furnishes a satisfactory solution of some of these difficulties. Our own solution is much like Mr. Fletcher's. We have an author catalog, a classed catalog, and a subject index to the latter in which many of the titles appear again. The use of the printed cards furnished by the Library of Congress will enable you all to have this arrangement.

Miss Kroeger said that she wanted a bibliography of bibliographies. I wonder if she knows what she is asking for. De Margerie, in his bibliography of geological bibliographies prepared for an international congress of geologists, found 4,000 references. A bibliography of bibliographies on that scale would probably run into fifty or one hundred volumes. We have done our best to supply the need of which Miss Kroeger speaks, so far as our own resources are concerned, by preparing a bibliography of bibliographies of scientific and technical literature, or a list of those books

in our library which contained lists of such books or which are lists of such books. This list will contain some three thousand titles, and it may prove of use to reference librarians.

Another point I wish to touch was Mr. Hodge's reference to the uselessness of some of the analytical work which is now done by co-operation. I agree heartily. I think that where we write entries from material already contained in scientific or other bibliographies, we do work which need not be done. We ought to confine our work to those entries which do not occur to the ordinary student, and especially to those entries which have existence as bibliographical entries, and which are being published as "separates" or as reprints. I suppose every one of us has bought a not inconsiderable per cent of "separates," thinking that they were independent works and afterwards finding them in our own library. It is that class of work which ought to be brought out in our co-operative analysis of periodicals.

F. J. TEGGART: I think it is quite possible that librarians are doing too much for the public; it is quite possible that the public would get on very well, even better than it does now, if it had fewer books and less cataloging. In other words, the whole population is divided into two parts; the first part contains perhaps 90 per cent., and the other part contains 10 per cent. The 90 per cent. do not know what they want; they go to the dictionary catalog to find out; the 10 per cent. know what they want and want to know what has been written about it and they go to the bibliography, if the bibliography is sufficiently good. We are accumulating enormous quantities of cards and very large quantities of books in the smaller public libraries, and both the cards and books are tending to swamp the administration. I think it is perfectly practicable to decide upon a standard size to which smaller libraries should conform. I do not think the small library ought to keep all the books that it has ever acquired, unless it is absolutely necessary for it to do so. Consequently, cataloging will tend to become a more and more temporary thing. We now look on the catalog as a permanent addition to the library, but I cannot look at it in that light. The only record of books that should be considered permanent should be a record in bibliographical form. The bibliography is for the student, and in our discussions we constantly lose sight of

the difference between the person who simply wants a book on a given subject, and to whom nearly any book on that subject would be satisfactory, and the person who would search the country over to find everything existing on that subject. If we are to do first-class work, we ought to have complete bibliographies, with indications of the libraries all over the country in which the books are to be found. I am now working on a subject in which some people here may be interested, books printed on the subject of library administration. It is curious to note that only perhaps ten per cent. of those books are in any library in the United States or in all the libraries of the United States put together. Now, in a bibliography of that kind there should be indication of the library where those books are to be found. The bibliography should be made complete, but it should at the same time be a reference catalog for such of the books as are available. The distinction should be clearly drawn that the average public library reader does not want to hunt up books in bibliographies. He simply wants to have some book on the subject given him with the recommendation to go and read it—which he generally does not do. The only thing that is read through is fiction, and even as to fiction I doubt the thoroughness with which that is read. I have repeatedly found, where a signature has been left out in the binding of a novel, that nobody would mention it for six months. The interests of the average person who comes to a public library are more or less superficial, and the best efforts of the library should be directed towards the studious person who is actually studying,—and this person represents about ten per cent. of the whole use of the library.

NINA E. BROWNE: I want to make a suggestion as to a form for a catalog, which seems to have been very little considered. In the first place, I would have a classed catalog. It is of minor importance whether it is arranged by Decimal classification numbers or by the Expansive classification numbers or alphabetically, so long as it gives a subject order. Then in the author catalog place with the author cards the index to the subject catalog, together with the title cards in their alphabetical order. The index card may bear at the top the subject, and below the direction, "For books on this subject, see the subject catalog, cards numbered *so and so*," if arranged by the Decimal or

Expansive classification, or "cards arranged in the subject catalog under *such a word*." In that way you can get all the material that any reader may look for. For instance, if he looks for "Birds," the card may read, "Birds," on the top line, and below, "For books on this subject *see* cards numbered 598." If he looks for "Ornithology," as the learned reader may do, he also finds a similar card referring to the same subject cards numbered 598. In that way one gets the benefit of the dictionary form of author, title, and subject in one alphabet, at the same time escaping the trying *see also* references. One also gets rid of the great bulk of subject cards which go into the dictionary catalog, and so break the continuity of the alphabet. Sometimes a subject extends through two or three drawers, and a person who is not familiar with large dictionary catalogs often loses his way in the alphabet. The index cards, of course, simply fall properly into place, and I would have these index cards of a different color from the others, so that when a reader once catches the idea of a subject index, the color will guide him and he will not look over the other cards. The title card might also be of another color. I have talked about this catalog for a good many years, but I have never had an opportunity to try it. I have been told that St. Louis is trying it.

MR. CRUNDEN: We are trying it now. Some years ago this subject was discussed, and I remember summing up my opinion by saying that the only thing to do was to have both. We have recently begun to do so. We have not done enough yet to know what the practical results will be, but as to myself I have no doubt of the necessity.

MR. BALLARD: I would like to make a suggestion that may be helpful to those librarians who feel that they would like to lighten somewhat the labor of cataloging and who feel that there is great difficulty in caring for the mass of books constantly coming to our libraries. One large division of the books bought in public libraries may be classed as "temporary," that is, almost every librarian buys books during the year to satisfy a wholly temporary demand. In the Berkshire Athenæum, instead of buying such books, we now rent them for a year. The Tabard Inn Library agrees to furnish to public libraries not less than 125 a month, and any larger number at lower rates. We take the

smallest number, 125. If these books are exchanged every month — and there are no conditions as to the number exchanged — the library receives 1,500 books during the year, or an equivalent of 6,000 exchanges, and the charge is \$150, which is less than the cost of cataloging those fifteen hundred books. I am of course speaking of books you would not care to keep more than the current year. We think our library saves \$1,000 on this arrangement; we also save the expense and time of cataloging; and we save shelf room, because at the end of the year the books go back. The volumes come prepared for issue; the numbers are upon them, and the numbers are different from those used in any library system that I know of, so that the number itself differentiates the volume. We treat them precisely as if they were our own books, distinguishing them by the numbers on the back, and letting them go out as if they were our own. One added advantage is that all of our patrons who draw these particular books may carry them away on vacation if they desire. They may be exchanged in Boston or San Francisco or any other town for any other Tabard Inn Library book, and that may be returned to us to cancel the charge. We do not care whether our readers return the same book or not, providing it is a book belonging to the system, and we are not obliged to return to Philadelphia at the end of the year the same fifteen hundred volumes received, but we can return any fifteen hundred volumes bearing the Tabard Inn Library imprint. The plan is simple, economical, and popular.

Mr. HODGES: There have been references to the ease of cataloging. The general public has an idea that the cataloging of a library is a very simple affair. The average person from outside walks into a library and says, "Why don't you catalog this library?" In what I am going to say I refer more especially to the catalog work which is done or should be done in a large library. I have had put in my hands occasionally some of the printed cards, the index cards, to scientific periodicals, and I have been asked to subject-catalog those cards. I think it is no exaggeration to say that I found it necessary to spend from two hours to four hours in determining the subject which should be placed at the head of each one of those titles. It is extremely difficult to do that kind of sub-

ject-cataloging. No one person can cover any considerable fraction of the whole field of human knowledge. Then, at the end of that time, after spending from two to four hours on each one of those cards, I was by no manner of means certain that I had put the correct subject heading on the card. If there is a genius who can subject-classify 120 cards for the titles in the Old South Leaflets in the fraction of a minute — they estimate that the cost of cataloging the Old South Leaflets is simply the cost of the cards — I should like to know him. I do not think it is much exaggeration to say that it would take me, if I took the Old South Leaflets, from a week to two weeks to properly subject-catalog all the items in that collection.

When all this cataloging has been done, what is the result? Of course, the catalog of Harvard University is not a dictionary catalog; it is a classed catalog; but it is a very elaborate catalog. Those who are acquainted with the work there have estimated that that catalog has cost about half a million of dollars. Several years ago I was looking up the subject of foundation sacrifice, and I am not sure that I found a single entry in that elaborate catalog of any material on foundation sacrifice. Foundation sacrifice is the propitiatory offering to the powers of the earth when new buildings, churches, etc., are erected. But I did take the newest book on folk-lore which I could find, and in a few moments I found a foot-note, — I think there was no formal bibliography, — and I found references to other material, and in the odd moments which I had to give to the matter, in a day or two I had on my notes the titles of about a dozen books containing chapters on the special subject in which I was interested and on which I was preparing a paper. None of that material had been brought out in the catalog, which had cost a fortune, and I hope it never will be brought out.

I was asked at one time at Harvard to find a pamphlet written by a French priest, name unknown, describing the occurrences at the time of the opening of the tombs of the French kings at St. Denis. As I say, the author was unknown, and it was merely stated to me that when those tombs were opened, a French priest very naturally was present and saw what happened, and a few days afterwards he wrote down a report of what was done, and that was printed in pamphlet form. I went to

the Harvard catalog and I looked in its drawers for about five or ten minutes. I was simply staggered at the idea of hunting down that pamphlet from that catalog, but I went to the shelves and in twenty minutes I had that pamphlet in my hands, printed as an appendix to one of the larger histories of France. There is nothing simpler than finding material of that kind. It was suggested to me that an entry ought to be made and a card inserted in the catalog; but if I had put that card in, I would very much prefer going to the shelves and finding the pamphlet again as I did, rather than try to find that card among the millions of cards in those drawers. All that was necessary, of course, was to get the most elaborate and extensive history of the Reign of Terror and to turn over the pages until the pages were reached describing the desecration of the tombs, and there in a foot-note — it was a properly made book — was a reference to the raw material on which that history was built up.

I think it is a mistake to think that cataloging is a very simple and easy matter. I confess it is distasteful work to me; I never liked it. I think it is also extremely difficult work if you are going beyond the simplest books, and it is work that takes a great deal of time and costs an enormous amount of money. You can jump at the subject from the title, but you are almost certain to jump wrong.

CHARLES K. BOLTON submitted the report of

COMMITTEE ON NOMINATIONS

presenting the name of C. W. Andrews for chairman, and George F. Danforth for secretary. The report was accepted and the persons named were unanimously elected.

A report to the A. L. A. Council was made by the Section's Special Committee on American Dissertations, appointed last year, and this report was referred to the Section for consideration. It is as follows:

REPORT OF COMMITTEE ON AMERICAN DISSERTATIONS.

The committee on American dissertations submitted in part fulfilment of the requirements for the degree of doctor of philosophy, beg leave to report their work for the past year.

It was found impracticable to send the draft letter printed in the Proceedings of the Waukesha Conference, page 207, until it was too late to have desired data included in university catalogs for 1901-02. This being the case, it

seemed best to let the matter rest still further, so that the question might reach university authorities late in the present year, to be carried into effect next academic year. A copy of the circular letter approved by the Council was finally sent to the presidents of seventy-seven institutions, including all institutions which conferred the degree of Ph.D. on examination in the years 1898-99 and 1899-1900, according to the Commissioner of Education's reports for those years. To this list were added certain other institutions of good grade, offering the degree on examination and residence, according to the list given on pages 1566-1581 of the Commissioner of Education's report for 1898-99. The circular letter was sent also to Toronto and McGill Universities, and to the librarians of thirty-three of the more important institutions, inclosing in each one of the printed cards as follows:

To the Librarian:

Your attention is respectfully called to the accompanying letter, a copy of which has been mailed to the president of your university. The inclusion of the desired data in the annual catalog, or corresponding publication, of your institution will greatly facilitate the compilation of the proposed annual bibliography of American dissertations. Hence your co-operation in securing prompt action by the faculty of your institution on this matter is urgently requested.

THE COMMITTEE.

This seemed desirable in the case of the more important universities, so as to secure co-operation of librarians in getting the matter attended to. A short foot-note to the letter was appended as follows:

A copy of the above letter is sent to such institutions of learning in the United States and Canada as confer the degree of doctor of philosophy or science after residence and examination. The committee has under consideration the compilation and publication of an annual list of American dissertations for the degree of doctor of philosophy or science, and of a similar complete list of such dissertations to July, 1900. Any communications with reference to the subject may be addressed to Walter M. Smith, Librarian of the University of Wisconsin, Madison, Wis.

The communications that have come and are coming in will be filed and forwarded to the person or committee that takes up the work of the compilation of the proposed list. It is highly probable that in time the Library of Congress will take up the matter of compiling and publishing such a list, and the committee recommend that this arrangement be made, if possible. In any case, the insertion of suggested data in university catalogs will make much easier the compilation of an annual list.

Replies are already coming in from university presidents, and all heard from so far agree to publish desired data in future catalogs.

WALTER M. SMITH,
BERNARD C. STEINER, } *Committee.*
C. W. ANDREWS,

There was no discussion on the report of the committee. The meeting adjourned at 12.45.

CATALOG SECTION.

THE Catalog Section of the American Library Association held a meeting in the New Magnolia Hotel, Magnolia, Mass., on the afternoon of Thursday, June 19. The officers of the section were J. C. M. Hanson, chairman; Miss Mary E. Hawley, secretary. The meeting was called to order at 2.30, when the chairman announced a

COMMITTEE ON NOMINATIONS,

consisting of T. F. Currier, Miss Edith Clarke, and Miss Maude Henderson.

The CHAIRMAN: It may be well to preface the program with a brief explanation. For previous meetings of this section, no stated program was announced. If this year we have decided to depart slightly from the precedent thus established, there are several reasons for doing so. This conference seemed to offer special opportunities for learning something about the card catalogs which in their respective fields certainly take the lead, — the dictionary card catalog of the Boston Public Library, the alphabetical classed catalog and the author catalog of Harvard College Library. This year we have been especially fortunate in securing Mr. Lane to speak for Harvard College and Mr. Hunt to speak for the Boston Public Library. I will, therefore, ask Mr. Lane to describe for us

THE CATALOG OF THE HARVARD COLLEGE LIBRARY.

W. C. LANE: I am glad to have an opportunity to talk about the Harvard catalog because that catalog is distinctly different from either of the two great types of catalog which have come into general use, but it is of a kind to give many useful hints to other libraries. I have brought no statistics or history in my head or on paper, so I shall not take up the subject from that side. I will simply say in passing that the library printed three catalogs in the eighteenth century (1723, 1773, and 1790), and that the last one was that issued in 1830. A supplement was printed in 1833, and then material began to collect toward a succession of later supplements; but no further supplement was ever printed. This material was soon turned over into a card catalog, the

present official catalog of the library, which I suppose is one of the oldest — possibly the oldest — strictly card catalog in existence. This has been continued down to the present time with some changes of plan and some changes of detail. The public catalog, however, is the one of which I want to speak and about which I think you will be most interested to hear. This catalog was begun in 1861. It was planned by Mr. Ezra Abbot on what was then a rather new idea, and it was developed with much skill and ingenuity. The two other types of catalog are (1) the dictionary catalog, which adopts what would seem to be the most obvious plan (though it was not the earliest), — the plan of arranging all subjects both great and small in one alphabetical series, and (2) the classed catalog which works on the opposite plan, lays out the field of knowledge into classes, then divides and sub-divides these classes until the smaller topics are reached. The Harvard catalog combines important elements from each of these and profits by the combination. As in the dictionary catalog, the arrangement is alphabetical from beginning to end, but instead of a single all-comprehensive alphabet, we have related topics grouped alphabetically under larger headings, the object being not only to bring side by side topics that are nearly related or that one would be likely to want at the same time, but to bring them also into close relation with more general works that cover the same subject. In fact, the underlying method of the catalog is that of combining similar things in groups rather than that of sub-dividing general subjects into special. A classified catalog is the result, but classification is not pressed any further than usefulness demands. Of the primary heads that make up the main alphabet, some are very extensive, as extensive as some of the main divisions of classified systems, and fill drawer after drawer of the catalog case, — such as History and Geography, Chemistry and Physics, and other sciences; while other headings are of limited scope and cover but a few cards. In a single drawer, for example, are the main headings "Famines," "Fans," "Fats," "Fences," and "Ferries," each one of them with but few

cards under it. These were left as main headings simply because there was no particular advantage in grouping them with others under a more general division. "Fences" might have been put under "Agriculture" or "Architecture" or "Carpentry" or elsewhere, but as nothing would be gained by doing so, the cards are left under "Fences."

The main principle of the catalog being a grouped arrangement, that arrangement was carried out, in the first place, to a very complete degree, but has been modified to some extent from time to time, as certain inconveniences became evident. For example, at first all biographies were brought together under the heading "Biography," under which heading were (1) general or collected biographies, divided by countries or by classes of people, and (2) an alphabetical series of individual biographies. But a few years ago it was decided that a better plan would be to scatter the individual biographies through the author catalog. That has now been done, and the result is that after the titles of books by a man follow immediately the titles of books or pamphlets *about* him or relating to him in any way.

This suggests another point which properly should have been mentioned earlier. The catalog is in two alphabets, by authors and by subjects, but that is no necessary characteristic of it; it might be thrown into one alphabet like a dictionary catalog—that is to say, the subject headings might be introduced into the author catalog without in the least changing the principle of the catalog. It seemed more convenient, from the fact that many subjects take up a great many drawers, not to interrupt the alphabetical progress, so to speak, of the author catalog, by introducing great blocks of cards under one heading, and therefore the subjects were made a separate alphabet.

Another example of the grouping tendency was the Greek and Latin authors, which Dr. Abbot brought all together under the two heads "Greek authors" and "Latin authors," in the subject catalog, including under each author's name both texts and commentaries. That appeared to us after a time to be on the whole an inconvenient arrangement, and they have now been scattered through the author catalog, texts and commentaries being of course still kept together. The classics, that is to say, are treated like moderns—perhaps

an indication of a general change of attitude toward classical studies. It is interesting to consider whether further changes of the same kind would not be for the advantage of the catalog, and if one were starting afresh, such questions would certainly require consideration. For example, under the heading "History" all the strictly historical works in regard to various countries and places are brought together in an alphabetical arrangement by places. The same is true of books of travel and description under "Geography." I am inclined to think, however, that it would be an improvement to split up these classes just as "Biography" was split up, and to scatter their contents up and down through the alphabet under the names of the places themselves. Perhaps if we did this, it would be in accordance with the spirit of the catalog to group places locally under common heads, putting, for example, the towns of Massachusetts under "Massachusetts," or even placing Massachusetts and its towns together with other states all under "United States." Then under the name of each place would be found everything of a descriptive or historical nature connected with it which now has to be sought under several different heads, Antiquities, Customs, Geography, History, Politics, Political Economy, Statistics, etc.

We should, however, probably never go so far as the Boston Public Library has done in bringing local material under the place name used as a main heading. Books on the flora, the fauna, or the geology of a place we should continue to enter under Botany, Zoology, or Geology, making subordinate place-divisions under those heads, as is now the custom even in dictionary catalogs, and the same would be true of books on the art or music of a place. But there is abundant room for difference of opinion as to whether books on the agriculture, the commerce, or the manufactures of a particular locality are best included with other descriptive works under the name of the place, or are more useful under the heads Agriculture, Commerce, or Manufactures, side by side with books relating to other places considered from the same point of view.

A change of this kind, however, in the Harvard catalog is not likely to be actually made, though in many respects it would be desirable. The labor involved forbids.

The grouping of minor subjects under general

headings requires more detailed consideration than we have yet given it. The arrangement continues alphabetical, but not necessarily in a single alphabet under any one heading. The character of the sub-heads may be such that it is desirable to group them. For example, under "Botany" some of the sub-divisions would be names of countries or places (for books relating to the flora of a particular place); others would be names of particular plants or families (for systematic works or descriptive monographs), others would relate to physiology, others would be the names of distinguished botanists (for biographies), and so on. That being the case, we do not want to mix up in one alphabet our botanists and our plants and our countries, and they are segregated into as many alphabetical groups as are desired by the use of headings, such as "Biography," "Geography," "Physiology," "Systematic," each of which serves to hold together under it headings of a similar kind.

The same is true of all the larger headings of the catalog. Under "Music" we must provide for (1) biographies of musicians, arranged alphabetically under the sub-head "Biography;" (2) Works on the history of music, grouped together alphabetically by countries under the general sub-division "History;" (3) Topics relating to musical theory, counterpoint, harmony, and the like, grouped together under the sub-head "Theory;" (4) Books on musical instruments — the accordion, the piano, the organ, the flute — grouped in alphabetical order under the head "Instruments;" (5) Books of instruction on various instruments, grouped together under the sub-head "Instruction;" (6) Musical texts, brought together under the headings "Instrumental" and "Vocal" and so on. The same practice applies to all the groups that make up the catalog. It is not worth while to take your time in going over different ones in detail. You see the principle and its application.

There is one essential part of the system which I have not mentioned — the index. For the first twenty or twenty-five years of the catalog's existence, it had no index, or had only imperfect references on the cards. You see, of course, that a complete index of all subordinate headings is absolutely essential to the usefulness of such a catalog. A person unfamiliar with the catalog — and a host of new students

come in upon us every year — does not know under what general head he should look for a subject, and becomes confused. He is bewildered at first by the different alphabets under each head and must learn to find his way. What he needs is a full alphabetical index of all the headings great and small, principal and subordinate. Such a subject index was the result of a good many years' work which necessarily involved the straightening out of many inconsistencies and imperfections in the catalog that had grown up just because there had been no index of this kind to guide cataloger as well as student.

One point in regard to the references in the index I should mention. A system of numbering, not contemplated in the original scheme of the catalog, had been introduced and applied to the subject headings so as to make reference more easy. If under "Organs" in the index it is desired to refer to the place in the subject catalog where titles on the history or construction of organs will be found we might say, Music — *Instruments* — § Organs, but it is simpler and shorter to write 6520.354, 6520 being the serial number assigned to Music, and .354 a decimal number indicating the particular sub-division under Music.

These numbers are inscribed on the outside of the catalog drawers and on the guides inside so that the inquirer is easily and quickly led to the specific heading he wants. With the index the use of the catalog is reasonably simple. I know of no subject-catalog which a novice or a person who is unwilling to take pains can use to advantage. One has to learn to use it like anything else.

The advantages of the Harvard catalog over either of the types in common use are mainly these. In the first place, new subjects as they come up can be inserted easily and naturally without limit. New subjects are coming up constantly, especially in connection with analytical work, such as the cards issued by the Publishing Board. New subjects generally appear first in periodicals, but they very soon turn up as the themes of books and pamphlets and have to be dealt with. In a classified catalog on the Decimal or Expansive system you have to find an appropriate place and introduce a new number, which in many cases will make your new subject appear to be subordinate to something else not particularly appropriate.

You have not an indefinite number of new places of the same rank as the old ones in which to introduce new subjects; you have to introduce them as subordinate to something else already established. But in our catalog it is not so. You introduce as many subjects as you like on the same rank with subjects already represented, because the arrangement is simply alphabetical.

The fact that related subjects are brought together and brought into connection with general works is an advantage which the Harvard catalog shares with other classified catalogs, but which it has over the dictionary catalog.

One other advantage of our catalog is its adaptability to printing. It would be very easy to take any of these larger sections and put them in print whenever we have the means and the time to do so, and I hope that sometime we shall be able to undertake this on a continuous plan. When we do, we need not start at the beginning of the alphabet. If chemistry or physics or fine arts are more important than agriculture, we will start with whatever seems ripest at the time, and the catalog breaks up into groups in such a way that this can conveniently be done.

C. A. CUTTER: May I make a slight correction of one statement? Mr. Lane said that a new subject inserted in an Expansive catalog would have to be inserted in an apparent subordination while it ought not to be subordinated; but in the Expansive notation, subordination is expressed entirely by indentation, and the notation is not intended to express and does not often express any subordination whatever.

J. L. WHITNEY: It was my pleasure to know Mr. Ezra Abbot; that friendship was one of the joys of my life and among my sweetest remembrances. At my first visit to Cambridge I went to the Harvard College Library and opened one of the drawers and began to study it. At that time my thoughts had not been fixed upon library work, but an hour at that catalog settled my purpose. I immediately got a blank book and copied off every heading from that list, taking several days to do it in. This I carried home and reflected upon and afterwards became a librarian.

C. A. NELSON: I have in my possession a copy of the classed catalog of the Cambridge High School, published by Mr. Abbot before

he went to the Harvard College Library as an assistant. I came to Cambridge as a student in the High School in the year 1855. The next year I became librarian of a literary society in Cambridge and made a card catalog there based on Mr. Abbot's high school catalog. When I entered college it was my privilege to be for six years under Mr. Abbot and under Mr. Sibley as a student of catalog work, and I think those years made me a librarian and a cataloger. Whatever good work I have done as a cataloger, if any, has been done because I was under their tuition.

MR. CUTTER: Since praises of Dr. Ezra Abbot seem to be in order, I want to express the immense obligation I owe to him for introducing me to cataloging and classification and bibliography. I should be nothing in the library world without Dr. Abbot.

E. B. HUNT read a paper on

THE CATALOG OF THE BOSTON PUBLIC LIBRARY.

(See p. 25.)

E. H. ANDERSON: I would like to ask Mr. Hunt what is the nature of the references in the general library to the departmental libraries?

MR. HUNT: There is no need of any references because everything in the special libraries is in the main catalog. We mean to have the Bates Hall catalog contain everything in the building, barring English fiction, which is cataloged by itself on the same floor within a few feet of the main catalog. With regard to the special libraries, I made the catalog of the Brown Music Collection practically alone. It was a work requiring a great deal of time and I went into it not knowing very much, certainly in a theoretical way, about music. So the catalog was distinctly an evolution with me and I did not print anything in the card catalog until the whole collection was practically done. This was adopted to avoid any more false starts than were necessary. That collection is very rich along certain lines; for example, there are four thousand operas in it, and at least ten thousand part songs. I cataloged not only everything which had an imprint, but I analyzed every collection and every collected edition of part songs, or church music, etc., so that the analysis part, if it should ever be printed, I think would be easily the biggest

single index to music for part songs, vocal music, and operas ever prepared. When I started, I thought I could arrange under separate headings such things as part songs and madrigals and glees and catches, etc., but I found that the same composition was called by as many different names as it happened to have editors. So I chose the one general heading, "Part songs," and put everything under that heading relating to more than two voices. Songs for one voice were in one class, duets in another class. In chamber music I made the same sort of a collection and I arranged under "Chamber music" all that music written for a number of instruments.

Mr. GOULD: I would like to ask Mr. Hunt whether he has any subdivision for trios in his music. He speaks of solos and duets and then part music.

Mr. HUNT: Music for trios for strings, or for any other instruments, would be under Chamber music.

Mr. GOULD: You don't put vocal trios with that collection?

Mr. HUNT: No, we put vocal trios in with part songs. I drew the line at three voices, and I had the advice in that matter of a good many good men, — Mr. Philip Hale, Louis Elson, Frederick Field Bullard, and John K. Paine, of Harvard.

Mr. CUTTER: Did they advise you to mix three part songs and four part songs?

Mr. HUNT: Yes, they did. The trouble is, you have very often the same thing arranged for three or four voices, and that was the difficulty in trying to keep them distinct according to the number of parts.

Mr. CUTTER: But I do not see that that has anything to do with it. If people are going to sing a particular piece in four parts, they want four part music; if three people are going to sing a piece in three parts, they want a three part arrangement. It seems to me they should be separate.

Mr. HUNT: Every part song cataloged bears on the title the number of parts and voices; but where you have the same title for a piece which is published, say, for three voices, and the next edition is published for women's voices, and the next is published for a male quartet, it seems to me altogether too finical to make three entries for that particular piece.

The CHAIRMAN: I would like to ask Mr.

Hunt if in his classification part songs are arranged by nationalities.

Mr. HUNT: No, I have not tried to do that. There are so many German part songs and songs in other languages which have been adapted to English words and appear with English words, as well as with the German or the other original language, that I have not tried to divide them according to their nationalities. They are simply arranged under the heading of part songs.

F. B. GAY: Are you likely ever to publish that catalog as a whole?

Mr. HUNT: That was the intention when the catalog was begun, but whether it will be done or not I do not know. Certainly if so I should cut it down very much from the card catalog.

Mr. GAY: If published, would it not make the most useful bibliography of music known?

Mr. HUNT: I do not believe there is another index that could touch it.

Mr. LANE: What Mr. Hunt has said gives us a realizing sense of the enormous extent of the card catalog of a great library and the overwhelming prospect ahead of us, as things go on. The same thing is true of the Harvard Library and of most large libraries. Has any one any suggestion to make as to anything that we can do, any improvement that we can make in the card catalog or over the card catalog, with the view of reducing bulk and adding convenience?

Mr. HUNT: I have heard the proposition — I don't know whether it could ever be worked out or not — that it is possible to photograph the entire catalog on very minute cards and then have these arranged in drawers where they could be examined through magnifying glasses. You could thus reduce the bulk to a tenth of its size.

Mr. LANE: How could the cards be handled?

Mr. HUNT: They would not be too small to be handled. That is a possible solution, but I do not think it is probable in the immediate future.

Mr. FLETCHER: I would like to ask Mr. Hunt if he has ever made any estimate of how long it is likely to be before the whole of Bates Hall is lined with a card catalog.

Mr. HUNT: I cannot see in the nature of things how you are going to have a great library and a great collection of books without a

correspondingly great catalog. It would not alarm me, and I do not think it ought to alarm anybody, if eventually our catalog did line Bates Hall.

The CHAIRMAN: The suggestion made to Mr. Hunt reminds me of a proposition that was made to the Library of Congress, to have the books arranged on the shelves in good order, see that they were properly lettered, and then have a photographer come in and photograph the books just as they stood on the shelves. The result would be a classed catalog, an alphabetic catalog, or anything you like. That was a proposition made in all seriousness.

Mr. HUNT: About fifteen or eighteen years ago a man in Boston offered to re-make our entire catalog, — catalog the whole Bates Hall collection, — and all the time that he wanted to do it in was six months, or even less. That offer was made in sober earnest.

Mr. CUTTER: May I carry the history of the card catalog a little farther back? Mr. Charles Folsom, who left the librarianship of the Boston Athenæum, I think, in 1856, had introduced there a card catalog. Of course that carries it back to about 1850, and I think he had introduced it from the library at Harvard College.

Mr. LANE: Our present official catalog goes back to 1834.

Mr. FLETCHER: When I went to the Boston Athenæum, that catalog was existing in what I suppose was its primeval state. It was in a series of what were apparently volumes, under the counter. If any one wanted to refer to one of those, he pulled out the apparent volume, which proved to be a box. He lifted the lid, which turned on hinges, and then there was before him something like a card catalog drawer. I suppose that was the primeval form of the card catalog of the Boston Athenæum. That carries it back to 1860. In the course of five years it was changed to ordinary drawers. Mr. Lane says that in the Harvard College library it is carried back to 1834, but its previous source, I think, must be lost in the mists of antiquity.

T. SOLBERG: I should like to ask if there is a general impression that the card catalog originated in America, or whether it originated abroad, and when?

Mr. NELSON: In France, at the time of the French Revolution, a law was passed ordering that a card catalog should be made in all the

libraries of France, and the cards to be used were the ordinary playing cards, because the playing card was the only one which could be found uniform throughout the country. They were to use the ace of spades, because that card had the most space upon it. I think that is as early a reference to the card catalog as we can find. The rules laid down were as accurately and as carefully made as any we have now. Of course there were changes in the main entries, but the cards were written so that they would stand on end. Duplicates of those cards were to be kept in the libraries throughout France, and the originals were to be sent to Paris to be kept at the Bibliothèque Nationale, as the complete catalog of all the books in the various libraries of France.

Mr. WHITNEY: Our catalog was perhaps the first printed catalog, but our catalog was borrowed by Mr. Winsor from the University of Leyden. As has been stated here to-day, the titles were printed on sheets and then they were cut out with scissors and pasted on the cards. In that way, of course, we found that the cards would double up, so that three or four would fill up an inch space. We had a roller to roll them out, but that was found to be clumsy and inconvenient, and afterwards we had the titles printed directly on the cards.

DISCUSSION ON CAPITALIZATION.

The CHAIRMAN: If there are no further remarks, we shall proceed to one of the topics which has been outlined for discussion. There is a catalog committee, consisting of seven members, who have been working on various questions in cataloging during this conference, and I suppose the greater part of the time has been taken up by the discussion of capitalization. So far we have been unable to reach any definite agreement on some of the points at least, and a discussion at this meeting would perhaps be of considerable assistance in settling these mooted questions. Some of those present may have seen the circulars sent around by this same committee after a meeting at Atlantic City in March of this year, asking for opinions on four or five different points in capitalization. I will take up those points in order.

The first rule suggested is: "If an article is used at the beginning of a title for the sake of clearness, capitalize the first word of the title following the article." I learn that this is to

be recommended in the fourth edition of Mr. Cutter's "Rules." It is therefore proposed to capitalize the word following the article, not only, as I understand it, in titles of periodicals, but in titles of fiction, etc., — titles of ordinary books. That question is now open for discussion.

Miss KROEGER: For example, the proposition is: in the case of the title "A Woman's Reason," capitalize "a" and "woman." That was the suggested change.

Mr. ANDREWS: Will the chairman please state the present practice in the Library of Congress?

The CHAIRMAN: The Library of Congress rules state that in quoting titles like "*The Nation*," "*The Times*," the word following the article is capitalized, but not the article itself. It is therefore a different case. I may add that the Library of Congress rules call for the capitalization of the article and also of the word following the article in titles of periodicals, newspapers, etc., but not in titles of ordinary books.

Mr. CUTTER: I suppose that every one has noticed that in Lorenz this practice is followed. The French, of course, always retain the article before the first noun of the title, and they always capitalize the first noun of the title. In English we do not do that. It was proposed by Mrs. Fairchild that we should adopt the French custom as an assistance in the arrangement of titles in the card catalog. Take the case of the title "A Woman beyond compare." One is almost obliged to retain the "A" there, as my rule says, "When an article beginning a title is retained for clearness or for euphony, the word following should also have a capital initial."

Mr. FLETCHER: I should like to know if the chairman of the committee is willing that it should be stated what was the result of the discussion of the committee on each of these points.

The CHAIRMAN: I do not recall the vote on this matter, but there is no objection, so far as I am concerned, to the vote of the committee being made public.

Mr. FLETCHER: The report has been placed in my hands as a representative of the Publishing Board. If there is no objection, I would state that the discussion on that point in the committee resulted in a vote of five against and

two in favor of the change. I have already heard some further discussion of the matter, and there was evident feeling that there was something to be said against the use of the second capital. The fact that French practice retains the capital is not a very strong argument, because, if we are going to follow the examples of continental bibliography, we shall find ourselves getting into pretty deep water. The typographical appearance is against such a change, unless we use capitals all through the title. The first word "A," then "Woman" beginning with a "W" and then no more capitals, — such an arrangement is not pleasing to the eye.

Miss KROEGER: It is even less pleasing when you have an adjective than when you have a noun.

A. G. S. JOSEPHSON: We have the same rule as in the Library of Congress. We capitalize the first word in the title of a periodical after the article. Of course, we always retain the initial article. It has been the custom in a good many libraries not to retain the initial article, but I do not think that is a good custom.

Miss KROEGER: I should say in regard to the vote of the committee that the committee decided that, in case of periodicals, the first word after the article should be capitalized, as in the case of "*The Nation*," and "*The Times*." That was the only exception which the committee as a whole decided upon.

Mr. SOLBERG: May not the question be properly asked, why was that distinction made? Why should the title of a periodical be capitalized, the article itself being discarded in some cases, while in the titles of books, the article being also discarded in particular cases, the capitalization of the next word is eliminated? It seems to me that the same reason ought to govern in one case as in the other.

The CHAIRMAN: For one reason it is to assist in the arrangement of the titles in the catalog. Periodicals and newspapers are entered under their titles, but in the case of ordinary books the author's name decides the arrangement. Then, in titles of newspapers and periodicals there seems to be necessity for making the word following the article stand out clearly and distinctly.

Mr. NELSON: I can see why the capital might be retained in the titles of periodicals, because

those are title entries where we want to draw especial attention to the first word in order to get at the name of the periodical. In the other cases there is no necessity for using a capital.

S. H. BERRY: Unless there is some decided reason for the use of the capital following the article we ought not to make the change. It would be difficult to change the quantity of work already done to accord with the proposed rule. If those favoring the retention of the capital in the title can offer some substantial and real reason why it ought to be there, then we might be convinced that the change would be advisable, but it must be a strong reason.

MR. CUTTER: I thought there had already been given what seemed to me to be a strong reason, namely, that the capitalization of the word after the article assists the arranger or the person who puts the card into the catalog and calls his attention to the word under which it is to be placed, both in the arrangement of titles under the author and in the arrangement of title entries. I can see, however, that there is another reason in the case of periodicals. Periodicals are known by a sort of proper name, and you want to call attention to that. Take, for instance, the title of "*The Times*." If you print the first word with a capital "T" and then use a little "t" for "*times*," it gives an uncomfortable and unaccustomed impression. Does the Library of Congress capitalize the first word after the article in the case of periodicals or the word under which it is entered? For instance, if the title is "*Daily Evening Star*," and there is a "*Daily Morning Star*," or a "*Morning Star*," then you would capitalize "*Star*," would you not?

The CHAIRMAN: For the present such titles would be arranged under "*Daily*" when that word follows the article; but that is a temporary makeshift. We have that rule under consideration. We propose to consider seriously whether it is not possible to place the name of the city where the paper is published before the word "*Daily*," and arrange newspapers under cities in all cases of that kind.

MR. CUTTER: Is it your idea to put in the name of the city in all cases?

The CHAIRMAN: No, not in all cases. We shall try to draw a line, particularly in the case of foreign newspapers published in the United

States. These would largely be arranged under their distinctive titles, other newspapers having distinctive titles would have also to be arranged under the title.

MR. FLETCHER: There is one thing that ought to be said regarding Mr. Berry's remarks as to the result of this committee's work. These so-called changes proposed in the rules are simply to bring the rules into conformity with the usual practice, so far as can be judged, of most of our libraries. Now, possibly, Mr. Berry has not been using these capitals in the way in which it is now proposed. His library may be an exception; but the committee have found, after sending their circular to twenty-five separate libraries, that nearly every one of those libraries uses capitals in very nearly the way that is proposed in these so-called changes. Therefore the objection cannot be made to these changes that they will revolutionize the practice already existing. The libraries which favor the use of more capitals — not in all these points, but in general — are such as Columbia University, Pratt Institute, John Crerar, Forbes, St. Louis, Carnegie of Pittsburgh, Peabody Institute, Brooklyn Public, Boston Public, Princeton University, and the New York Public, and these changes are proposed to bring the A. L. A. rules into conformity with what seems to be the practice of the best libraries.

The CHAIRMAN: Would it be possible to have a show of hands on this question? Those in favor of capitalizing in the title of periodicals both the article and the word following the article, please raise their hands.

The vote was in the affirmative.

The CHAIRMAN: In the case of titles not periodicals, those in favor of capitalizing both the article and the word following the article, please raise their hands.

The vote was in the negative.

MR. GAY: Do we not lose sight in this of the convenience of the public? Is the card catalog made entirely for the librarian? Every advertiser knows that it is important for him to capitalize and underline and italicise or to put up as large as possible the important words that he wishes to call attention to. When an unlearned and would-be reader of your library sees in the card catalog a long title, with the prominent subject buried perhaps in the last line, it is very unhandy for him to read it all

through. Why need we cover it up? Why not bring it out?

Mr. LANE: There is one general consideration which should have weight in these matters. Capitalizing for a card catalog is quite a different thing from capitalizing in a page of reading matter. I think that ought to be borne in mind. In putting the title entry of "*The Monthly Anthology*" along with other titles in a catalog, we can very well neglect the distinction of capitals, while "*The Monthly Anthology*" referred to in a page of print has to be brought out by one or more capitals.

The CHAIRMAN: I shall pass on to the next point. The suggested rule is: "Capitalize also the initials of generic names." I must explain that this refers to geographic names, for instance, where the distinctive name is followed by a generic word. Take "The Rocky Mountains" and the usual examples of rivers, "Yellowstone River," etc. Shall we capitalize the generic word "mountain" or "river," or shall we not capitalize it? The proposition here is to capitalize it.

Mr. FLETCHER: The committee voted unanimously in favor of the change.

Mr. LANE: What is the present practice at the Library of Congress and please state the reason for it?

The CHAIRMAN: I am sorry to say the present practice in our library is to make a distinction. We have capitalized "mountains" in "White Mountains" and we have not capitalized "mountains" in "Rocky Mountains" and we are thoroughly tired of the rule. Questions are constantly occurring: Shall we capitalize the generic word here or shall we not?

Mr. JOSEPHSON: Do we understand that the committee is unanimous in recommending the capitalization of generic names?

Mr. FLETCHER: Yes.

Mr. JOSEPHSON: Then I move that we proceed to the next point.

Mr. FLETCHER: Before that is passed, I think that the officials of the Library of Congress, who are to be governed by these rules when made, are looking to this assembly for an expression of opinion, and I think it is desirable to have this recommendation passed upon.

The CHAIRMAN: All in favor of capitalizing the generic word, please raise their hands.

The vote was unanimous in the affirmative.

The CHAIRMAN: The next rule is, "Capital-

ize even if separated by a preposition titles like 'The Secretary of State.'" The Library School rules, I believe, say, "Do not capitalize the title if separated from the name by a preposition." It is proposed now to capitalize both words. The rule has been to capitalize titles that are immediately prefixed to names, like "Count Waldersee," but not titles separated from the names by a preposition. Now, we propose to capitalize the titles also in the latter case.

G. M. JONES: I think there is quite a distinction between titles such as "Earl of Derby" and "secretary of state," one being more of a personal name than the other. I don't know exactly where we can draw the line so as to make it clear what practice should be followed.

Miss KROEGER: I would suggest that Mrs. Fairchild, if she is present, might have something to say about that.

Mr. FLETCHER: The vote of the committee was nearly unanimous in favor of the change.

Mrs. FAIRCHILD: It is a little point now under discussion, but I am very much interested in the matter that is before this Section this afternoon, because of its relation to other things. It seems to me that the A. L. A. in its usage of capitals is in danger of losing its influence in other very important matters. In other words, we vary from the conventional usage in the matter of capitals. It is quite a striking variation. Educated people in college libraries and in public libraries notice it, and they ask the question, Why this variation? It seems to me that we really lose our influence in our legitimate library work by appearing to be what some people call "cranks" on capitals. Now, is it worth while? Why should we care so much whether the first word after the article is capitalized or not? To me it seems of very little importance, scarcely worth the time to talk about it here; but it seems to me very interesting, that when this committee sent out the proposal of these four or five changes, — which are not extremely radical, not so very different from the present usage, — which were intended to put us a little more in line with the regular usage of the best publishers and the best writers, it seems to me interesting and significant that all of the twenty-five libraries consulted were in favor of making these changes, and of receding from the extreme decapitalization which we have been fol-

lowing. I very much hope that the Publishing Board will support the majority of the committee, and will support the vote of these twenty-five libraries in the adoption of these few changes, — not, as I said at first, because I care about capitals one way or the other, but because it seems to me we are losing our influence in matters which are vital, and which affect the life of the community, by making ourselves conspicuously different from the rest of the world in these small and unimportant points.

The CHAIRMAN: Mr. Dewey was anxious to take part in the discussion, but he was not able to be present. He has, however, sent a communication on capitals, and as I think it has a general bearing on the question it might be read now.

The secretary read Mr. Dewey's communication on

Changing catalog rules.

Some librarians seem to feel toward their rules as they do toward their clothes, that they are liable to be commented on unpleasantly unless they have something new each season. Whenever a few come together there is the tendency to propose alterations with the same freedom that they would try experiments in other directions, forgetting that the card catalog is the worst place in the world to make new changes, because new work is inserted at irregular places, destroying consistency and harmony, and reflecting unpleasantly on the ability of those who have done the work. When Panizzi made his rules 50 years ago the field was comparatively new. With a quarter century experience we took up the matter again when the A. L. A. was organized and the ablest librarians and catalogers gave protracted study to agreement on a code. This has been very widely adopted, and we are approximating a general uniform practice. Certain restless spirits will always be clamoring for change, and unless care is exercised will destroy much of the symmetry and consistency of the older work and all hope of uniformity. No librarian with much respect for his catalog will consent to continual changes in his rules, even if he is anxious to keep in harmony with A. L. A. committees, library schools, and the practice of printed cards.

Catalogers now change so often from one piece of work to another that the importance of recognized standard rules for cataloging constantly grows. Our one hope of seeing such rules is to stand firmly by a reasonable ground that no changes are to be made without overwhelming evidence that the change is not only an improvement, but a great enough improve-

ment to justify its cost and the inevitable confusion that must result from it. The best service that those who understand this question can render librarianship is to fight vigorously against the tendency to continual changes and modifications.

I certainly am not by nature over-conservative. I should regret of all things to see the library profession put itself on a plane with some theologians who object to all revision, who refuse to believe that we know more now than we did a generation ago, and who insist that changes must necessarily be harmful. But the American tendency for some new thing, to run after alleged improvements, is peculiarly dangerous in our cataloging work. We may change rules at the loan desk and in the reference department and for almost anything else, but those that affect the card catalog are like changes in the architecture of a great building after it is half done. They may make it more picturesque, but are much more likely to make it ridiculous in the eyes of an expert and are usually very costly. The question whether certain words shall begin with capitals or small letters is but dust in the balance whichever way it is settled, though it is only fair to say that the steady and rapid trend of the English language is to use fewer capitals, that the publishers and printers who have the widest reputation for good taste are leaders in this movement, and that if any change is made it should be to use fewer capitals, or otherwise we are working toward the middle ages instead of looking to the future, and are simply making a change that will inevitably be changed back again a few years later.

Mr. FLETCHER: Mr. Dewey is so persuasive that I think it proper, if anybody can, to show that he is dealing with a complete fallacy. The status of the thing is more like this: 'we have Cutter's "Rules" for cataloging, which are based on the practice of the libraries of America—as nearly in harmony with that practice as they could be made when those rules were prepared for the successive editions. The "A. L. A. rules" which we are revising, or looking over with the view of revising, at least, are another code of rules which in some of these minor points differ from Mr. Cutter, and we are now trying to adopt a system which shall be acceptable to those who are using either. This is not changing a well established practice. It is only trying to establish the practice a little better by doing away with divergencies—as Mrs. Fairchild has said, divergencies from the generally accepted practice in literary matters. I do not think anything further need be said about Mr. Dewey's argument except

that it is evidently fallacious in its very foundation. I differ slightly from Miss Kroeger's estimate as to the practice of the libraries to which this circular was sent. I do not think their preference is different from their practice. Those libraries have not been affected by the A. L. A. rules, and not very much affected by Cutter's rules except as these have fallen in with their practice. They find Cutter's rules agree with their practice in the main. As a general rule they follow the practice they prefer to follow in those libraries, and they do not accept the ruling of any code of rules as against what they prefer. So I say it is a fallacy to claim that we are proposing to change any established practice.

Mr. JOSEPHSON: We should remember that these rules we are discussing are primarily meant for the printed cards issued by the Library of Congress for itself and for other libraries. It is not meant that libraries should necessarily change their own old cards to conform with these rules if they do not wish to.

Mrs. FAIRCHILD: It is only fair to say that I had no knowledge of this communication of Mr. Dewey's which has just been presented to the Association. Our difference of opinion rests entirely on our conception of what the work of the Library Association is for. If it is our business to try to reform the English language, and if more decapitalization is a reform, then we must agree with Mr. Dewey. But it seems to me that, as librarians, we have other and very much better work to do.

The CHAIRMAN: The question of capitalizing the title when separated from the name by a preposition has not been disposed of. I should like to have a show of hands on that question.

Mr. CUTTER: The rule as I have it in the fourth edition of my Rules is, "Use capitals for titles of honor standing instead of a proper name," as "the Queen of England said or ordered so and so; the Earl of Derby did this or that." But when you say, "John Stanley, earl of Derby," that is a mere explanation, and the word "earl" is not capitalized. It is capitalized only where the title of honor stands in place of a proper name.

Mr. FLETCHER: I would like to ask if the committee understood this matter differently from what Mr. Cutter has stated when they seemed to favor this change.

The CHAIRMAN: No, we did not; we did not consider that titles should be capitalized when following proper names as "John Stanley, earl of Derby." In that case, we all agree not to capitalize it, as Mr. Cutter has said, but when you use the title instead of a name, and when directly prefixed to a name, the majority voted for capitalizing it.

Mr. BISCOE: According to my recollection, the Library School rules give exactly that same interpretation, that the "earl" is not capitalized when it follows a personal name, as "John Stanley, earl of Derby."

The CHAIRMAN: When the title follows the name, as "John Stanley, earl of Derby," the committee agrees not to capitalize the title "earl." But when the title stands in direct address immediately preceding, for instance, "Earl of Derby" or "Bishop of Albany," using that designation instead of the proper name, then the majority of the committee has voted to capitalize the title. All who agree with the committee on that point please raise their hands.

The vote was in the affirmative.

The CHAIRMAN: The next point is with regard to the names of government and state departments and the names of societies and other bodies. The practice has been to capitalize according to the Library School rules, to capitalize in the case of names of societies and institutions the first word, but not the other chief words in the name. That is to say, in the title, "American association for the advancement of science," you would of course capitalize "American," but you would not capitalize "association," "advancement," or "science." On the other hand, Mr. Cutter's Rules propose to capitalize in such cases all the chief words.

Mr. NELSON: The argument Mrs. Fairchild has used certainly applies here with great force. You speak of "Harvard University" and you spell "Harvard" with a capital "H" and "university" with a small "u," and that is an insult to the institution. If you adopt that on the ground that "university" is a general term and "Harvard" is the university you are speaking of, and because university is a common word you can capitalize "Harvard" and let "university" stand small, you might just as well use a capital "J" in "John Smith" and let the "s" stand small, because there are

more Smiths than there are universities. I contend that the name "university" is just as much entitled to be capitalized as the name of the university, and every organization which has its own corporate name should be capitalized in every one of the words, I don't care if it is five lines long.

Mr. ANDREWS: We tried our best to follow the Library School rules on this matter, but we could not stand it and we gave it up. I want to express my emphatic agreement with what Mr. Nelson has said. I believe "Harvard University" is a proper name and should be properly treated. Mr. Currier, what is your practice at Harvard?

Mr. CURRIER: We do not capitalize any part of a proper name except where we absolutely have to. For instance, in the case of the title, "Proceedings of the Folk Lore Society," we use a small "f" and a small "s." In the case of "Harvard University" we are very disrespectful to our own institution, as we use a small "u." It is true, as Mr. Nelson says, that for ordinary editing rules in a book, we must be respectful; but when it comes to card cataloging titles, that is a different thing. If we can reduce the number of capitals without injuring people's sensibilities, well and good, provided we can get a rule for doing it that catalogers can easily follow. The trouble with these Library School rules seems to have been that it is almost impossible to follow them easily and decide just what points agree with the rules and what do not. I advocate in some cases, like generic names, the capitalizing of both the generic and the specific name, and that might apply to institutions, except that I think it is easier to make a rule for institutions that the first word of the full name only is to be capitalized. That is an easy rule to follow, and in that way we can reduce the number of capitals. In the case of a generic name, it is often impossible to decide just when the generic part of the name is properly a part of the name, so as to distinguish where to capitalize both and where not to do so. That is why, in the case of geographical names, we have to make the simple rule to capitalize both the specific and the generic name.

Mr. ANDREWS: We should have rules which can be easily followed. I should rather adopt the rule as Mr. Cutter proposes, to capitalize all the chief words in the title. For example,

in the case of "Massachusetts Institute of Technology," where the students use the initials "M. I. T." to designate the institution, the use of small letters would fail to bring out these distinctive initials.

Mr. NELSON: I may add that this matter has caused more expense, when it has come to the printing of catalogs, than the original writing of the cards, because we have had to put on the capitals. If the cards had been written with capitals in the first place, we should not have had to waste time and money in correcting them.

Mr. SOLBERG: I am very strongly in favor of the discarding of capitals, and it is as an advocate of that view that I rise. Mrs. Fairchild has presented the view of a great many people on the non-usage of capitals by the A. L. A., and probably that objection is based very largely on just such examples as the writing of "Harvard University" with a small "u" and "British Museum" with a small "m." It would seem to be good sense on the part of those who dispense with useless capitals—and I think it is much more important than it seems, although it is not so important as other rules in libraries—that there be a yielding on these points and that some flexibility be used, so that the essential rule of the general discarding of capitals may be maintained.

Mr. FLETCHER: One practical point has not been mentioned. It really is not easy, in the case of such a title as "Proceedings of the Folk Lore Society," when that title is spelled with a small "f" and a small "s," to perceive that the society's proper name has been given. There may be a good many societies called folk lore societies. You may have the title, "Journal of the Geological Society of Essex County." Now, when "geological" is spelled with a small "g" and "society" with a small "s" a person reading that title would not know the official name of the organization; the society might be called "The Society of Essex County Geologists." When we are setting down the name of a society, especially one that contains several common nouns or adjectives derived from common nouns, if we do not capitalize those we do not indicate clearly its name.

Mr. CURRIER: I want to be sure that I was understood in regard to the instance of the "Folk Lore Society." I should not advise our

own custom to be adopted. It is something we shall change just as soon as we can get a good rule to go by. I think it is absurd to see "Folk Lore Society" written with a small "f" and a small "s."

The CHAIRMAN: The Library School rules say, in the case instanced by Mr. Fletcher, "Capitalize 'geological' and write lower case for 'society.'"

Mr. CUTTER: Let me present one other point of view, that of the rule-maker, who desires to make a simple rule not requiring explanation or exceptions, but carrying one principle through several different applications. Such a rule is also convenient for the student of the rules and for the public. Let me read from the fourth edition of my Rules a half page which applies to this matter. Use capitals:

2. for all proper names (each separate word not an article or preposition)

a. of persons and places.

E.g. John Smith, Cape May, Charles River, the Bight of Benin. This will include North, South, etc., when indicating a section, but not when meaning the compass points.

b. of bodies.

E.g. Society for Promoting the Diffusion of Useful Knowledge, Third Congregational Church. Also the abbreviation of such names used when the full name has already been mentioned or is well known, as the Bureau, the College, the Synod.

c. of noted events and periods.

E.g. Boston Massacre, French Revolution, Gunpowder Plot, Middle Ages.

d. of months, days, holidays, and holy periods and ceremonies.

E.g. February, Friday, Fourth of July (in titles better written 4th of July), Advent, Halloween, Holy Week, Lent, Lord's Supper, Thanksgiving.

There are four cases of actual proper names which we treat exactly alike. It is a very simple thing to follow those rules in preparing your catalog; doing otherwise introduces confusion. If you were to write my name, for instance, "Charles ammi cutter," then you might go on and write "Folk lore society;" but not otherwise, if you are to be consistent.

L. P. LANE: It seems to me that a few words ought to be said for the progressive wing of the catalog world. It is evident that catalogers are groping slowly toward the light; but I do not think the progressive wing has

been represented here except by Mrs. Fairchild and Mr. Andrews. I wish in particular to controvert Mr. Dewey's thesis that the construction of a card catalog by a system of rules is analogous to the erection of a building under the specifications and plans of an architect. The only condition under which that can be true is when the catalog has become popularized. A much more sound analogy is that the catalog is analogous in its growth to a set of political institutions, where there are frequent changes. We have in the Boston Public Library cards 30 years old which are quite different from those inserted to-day. I have been a cataloger for about two years and I think our rules in regard to capitals have been changed about every six months. Yet these changes, I must call to your attention, have not been vacillating; they have been steady in their aim, and I think the time is coming when we shall capitalize very much as people in general who have had good literary training do. For example, in that specific instance "John Stanley, earl of Derby," we would capitalize "earl" and "Derby."

W. H. TILLINGHAST: The Harvard College rules seem to be a little unpopular. They are based, however, it seems to me, on an entirely reasonable practice. They may be a little extreme in some details, but the theory that work for a library catalog is a different kind of work from work for ordinary composition seems to me thoroughly sound, and the fact that a large number of capitals do interfere with the easy following of a title, whether printed or written on a catalog card or on a printed page of a catalog, seems to me clear. That being so I see no reason why librarians are not entitled to act on that principle and exclude capitals as far as they may. I am quite unable to sympathize with those who see any derogation to a particular society by the omission of some of the capitals to which it may deem itself entitled. I fail to see that the "Society for the Prevention of Cruelty to Animals" is treated in an indecorous way by capitalizing simply the first word of the title, and I do not see that it gains anything by capitalizing the rest of the title, while I think that by capitalizing the rest of the title you do interfere with the ready reading of the title in which it occurs. Our rules may go rather too far in the omission of capi-

tals, and I think it would be desirable to capitalize the first word of the title of a society.

The CHAIRMAN: Will those who are in favor of capitalizing all the chief words in the names of societies and institutions, government departments and bodies, please rise?

62 rose.

The CHAIRMAN: Those in favor of capitalizing only the first word, please rise.

41 rose.

Mr. ANDREWS: What was the opinion of the committee on that point?

Mr. FLETCHER: The vote in the committee was a small majority in favor of the practice as it stands in the Library School rules.

The CHAIRMAN: The next question is: "Capitalize the names of historical events and epochs."

Mr. FLETCHER: The vote on that in the committee was five to two against using capitals for historical events and epochs unless in the case of proper nouns and adjectives.

Mr. MARTEL: It seems to me that a number of specific exceptions to that rule might be promulgated from time to time. We might start with "Reformation," "Renaissance," "Revolution," meaning the French Revolution, and such others as might be proposed.

The CHAIRMAN: May I say that in the committee the vote was influenced by this consideration, that it had been found to be exceedingly difficult to always decide what is an historical event. It was the tendency here to make a rule that could be more easily followed.

Mr. FLETCHER: It seems as though there could not be a better rule — if there is to be a rule made along the line of Cutter's rules — than that those words which are admitted to be proper names should be capitalized. That is to say, capitalize the principal words if proper names, as in "St. Bartholomew's Day." The word "day" there is a proper name, because it refers to some thing that is not a day at all. People in speaking about St. Bartholomew's Day are apt to mean the massacre itself. There are other striking examples that might be mentioned in which a word is used differently from its ordinary meaning.

The CHAIRMAN: All those in favor of capitalizing all the words in names of noted historical events and epochs please rise.

62 rose.

All those opposed to capitalizing the chief words in such cases, please rise.

3 rose.

The CHAIRMAN: There is another point which some of the librarians are anxious to have discussed. Mr. Andrews has mentioned to me the case of common nouns in German.

Mr. ANDREWS: I wish to speak on this point, as it is perhaps the one as to which the people who use our library have the greatest interest. I make no pretence of coming here as a cataloger, but simply as a man who uses the catalog from the point of view of the student, and it is from that point of view, which was indicated by Mrs. Fairchild's argument — with which I heartily concur — that I want to speak. The Library of Congress at present prints its German titles with the noun in lower case. I cannot accept that as being in accordance with the practice of the best publishers of Germany. I would like to obtain an opinion on this question from the catalogers and representatives of those libraries which have any large percentage of German literature. I have purposely limited the question because it seems to me that a library which contains 30 per cent. of its books in German is in a somewhat different position from a library which has only one or two per cent., as I suppose the majority of American libraries have. I believe that the authorities of the Library of Congress hold that it is becoming less the custom in Germany to capitalize common nouns, but I have myself seen no evidence in support of that view. The German books which I read now show as small a percentage of this alleged change of custom — in fact, I might say almost as absolutely nonexistent a percentage — as they did twenty years ago when I first began to read scientific German. It is on those arguments — that it is contrary to the best practice of German writers, and that it does therefore offend those who are accustomed to reading German in the same way that the decapitalization of titles or proper names offends the majority of us — that I make the request that those catalogers who deal with German literature would express their preferences on this point.

Mr. CURRIER: That is a good point. Having myself been brought up in America, I am

so accustomed to using small letters for the initial letters of German nouns that it has become almost a second nature. But I can see that what Mr. Andrews says has great weight. I know how it offends me in foreign titles to see what I consider a proper name or proper adjective printed with a lower case initial. I know the same thing must hold true of the German who consults our catalog, and while at present I am in favor of using lower case as much as possible, I am willing to be persuaded to use capitals in cases of that kind. The only trouble is, that there is a difference in other languages. It might be a little difficult to tell sometimes in the case of different languages just what would be the proper rule for the use of capitals.

Mr. MARTEL: While I am personally in favor of capitalizing nouns in German, I think that the use of German nouns beginning with small letters is increasing and is not quite as uncommon as Mr. Andrews seems to think. I think that the percentage of this growth may be said to be nearly equal to the growth of the use of Roman characters for writing German. I know that there is considerable correspondence by Germans in which small letters are used for nouns, and the tendency probably is that way. It is not uncommon to find scientific literature especially printed in Roman characters, and with small letters at the beginning of nouns, and if this practice is kept up in the printed cards, I think it will be in line with the tendency. The same may be true of the Scandinavian languages also.

The CHAIRMAN: The Scandinavians do not capitalize the common nouns any longer, nor do we in cataloging books in those languages.

Mr. JOSEPHSON: There was a tendency beginning in the '80's to discourage the use of capitals for German nouns. At the same time there began a tendency to use Roman letters instead of German letters. The latter tendency has grown, the former has ceased. You can occasionally find a German author who does not use capitals for nouns, but all the best standard authors and all the best standard publishers and printers use them. This question can be regarded only as a part of the general question how to treat foreign languages. In my own opinion we should treat them according to the best usage of the language itself.

A. KEOGH: I should like to ask whether we should capitalize nouns in copying lower-case titles? The German section at Yale has some seven thousand volumes, and I should say that there were five hundred printed with the nouns beginning with small letters, — even the paragraphs beginning that way. What should we do in such a case?

Mr. ANDREWS: I should follow the title-page. If they used lower case on the title-page, I would do the same; if they used capitals, I would use capitals. I would adopt Mr. Josephson's suggestions in regard to foreign titles — to follow the best custom of the country, where the author had not himself deliberately set out to express an opinion in his title.

The CHAIRMAN: I observe that Mr. Dewey is here. We have had a written communication from him, but now that he is present, he may wish to add something to it.

Mr. DEWEY: I should like to make plain my attitude. Since we started the *Library Journal* in 1876 I have studied the trend of this matter, and my observation is that the people who are troubled most about sparing use of capitals are those who work not on scholarly knowledge of the subject, but on the ordinary prejudices of the educated eye. Unless one has studied the matter with care, he has the same prejudice against the dropping of capitals that he had against dropping the "ue" from "catalog" some years ago. Originally all letters were capitals; then after the legible small letters were invented every word began with a capital; then every prominent word or every noun began with a capital. Steadily we have been getting rid of our double alphabet in the same way that the German is getting rid of its Gothic letters and substituting the simpler Roman forms. The whole tendency of the world is to produce any given result in the simplest, quickest, and cheapest way. Of course, it is an absurdity to have two alphabets instead of one. It is a condition of things which has grown out of the old hieroglyphics. If you follow this tendency as shown during the last twenty-five years, and take the authorities on this subject, you will find a steady lessening of the number of capitals used. If you send your printing to a cheap country office, where some green boy has grown up to be foreman, you will find it peppered full of

capitals. But if you send the same work to De Vinne or to some other press, famous for the beauty of its typographic work, you will see the capitals rapidly disappearing. I have noted that those who declaim most loudly about this matter of decapitalization are the people who have never really studied it and have no claim to be considered authorities. They do not like "the look" of it, that is all. They have been used to seeing a certain style of capitalization and so they declaim against any improvement without studying its merits. There is nothing so hard to change as rules for a card catalog, because it is like an uncompleted book. If you are printing a book and a change of style is suggested in the middle, common sense tells you to wait until you have completed that volume. It makes little difference whether you use capitals or small letters, but any change in the middle is offensive and disastrous. Capitalization is a little detail, compared with our great work of librarianship, but yet it is a serious thing to change. It is not the most important thing in the world, but it is annoying to have that confusion. It is not worth while to change unless we are sure we are making an improvement.

Some one has said that the work of the A. L. A. is not to reform the English language. I agree to that; but let us not put ourselves in the attitude of antagonizing a natural and helpful growth in the right direction. That growth is steadily towards the use of fewer capitals. When we discussed this twenty-five years ago in 1877 in New York, we had full consideration and agreed on a plan of restricting capitals which has been widely adopted. A good many people do not use it,

but it is the one which has been used more largely than any other code. Now, we ought to think twice before we change that code. Those of you who have looked at De Vinne's new books published this summer will find that he has taken clear strong ground, and in letters which he has written to me recently he says he wants to go still farther. He is easily the first authority on printing in this country, and for us to ignore the judgment of the closest students of these things and of the presses that do the best work, and at the same time to go back on our old practice seems to me discreditable. If you don't know whether to put in a capital or not, leave it out; if you are in doubt whether to put a silent letter at the end of a word, leave it out. It is a good rule always to do a thing in the cheapest and shortest way.

L. P. LANE: I think the whole problem will be solved when all books are printed in Volapuk. If the time is coming when all German books will be printed with the nouns beginning with small letters, then the most economical way would be to print them that way at the present time.

The CHAIRMAN: All those who are in favor of capitalizing the common nouns in German, please rise.

The vote was in the affirmative.

The report of the

COMMITTEE ON NOMINATIONS

was presented, submitting the names of Charles H. Gould, for chairman; and Miss Sula Wagner, for secretary for the ensuing year. The report was accepted, and the persons named elected.

The session then adjourned.

TRUSTEES' SECTION.

THE Trustees' Section of the American Library Association held a meeting in Library Hall, Magnolia, Mass., on the afternoon of Thursday, June 19. Deloraine P. Corey, chairman of the Section, presided, with Thomas L. Montgomery as secretary. The meeting was called to order at 2.45 by the chairman, who said:—

LADIES AND GENTLEMEN OF THE TRUSTEES' SECTION, AND MEMBERS OF THE ASSOCIATION.—I am more than pleased at the appearance of so many new faces here, which I think shows that we have a number of trustees with us. I have to say to them that they are more than welcome, and we trust they will make themselves heard and felt here. If there is anything that they wish to speak upon we would like to hear from them. This is a Trustees' Section, and we wish the trustees to speak their minds—and the librarians also. If the librarians do not like what the trustees say, they are free to reply.

It is not my intention to take up your time by any extended remarks, but to speak briefly and broadly of that which appears to claim our first and most careful attention—the relation of the trustee and the librarian, each having his proper and clearly defined field of activity, and each dependent upon the other for intelligent co-operation and support. There are matters which concern both the trustee and the librarian. There are questions which directly affect the trustee, and others which more especially touch the librarian, in which, however, each may have a sympathetic and helpful interest.

There are questions which concern us as trustees which may be considered in future sessions, but this rightfully takes precedence of all. Others are such as are modified by conditions of place and circumstances—this is one of universal application; for that which is helpful or that which is unjust in the relation of the trustee and the librarian in the large library is helpful or burdensome or unjust in the small one. While the trustee has his burden to bear—and it is not always a light one—he may with propriety remember that a burden is laid upon the librarian which he may

lighten and in the effort find his own burden lightened by the sympathy and aid of the other.

An experience of a quarter of a century must have taught me something; and it has confirmed me in the belief that this is the most important subject that can come before this Section; for upon the harmony or the discord of the trustee and the librarian largely rests the success or the failure of the library. This leads me to say that I class as a discord that indifferent or perfunctory spirit which pervades too many library boards, an indifference which mainly springs from the indifferent material of which some boards are composed. This is, perhaps, not a pleasant part of our subject, but as a trustee I can allude to it. It is on the dark side, and it is the dark side which we wish to eliminate.

This subject has so many aspects, and it is so varied in its applications, that the discussions of one session cannot exhaust it. We need the views of the many, both of trustees and librarians, that out of the many we may form a composite that will present a likeness of the real body as it exists, and that we may form another of the ideal body that might be and should be. We may not be able to raise ourselves to the level of the ideal—we can raise ourselves above the plane upon which too many library boards are placed.

There are conditions that are common to all libraries; and there are conditions which are exceptional or are confined to a class and are not common to all. So our discussion, to be complete, should be from many standpoints, embracing all the extremes as well as the means of library conditions.

There has been a spirit in some of the meetings of this Association in past years which I hope will not find a place here. I refer to a state of gentle acquiescence which precludes the best results. While such a condition may not always prevent a session from being in a degree interesting and instructive, a little opposition—a little exchange of variant thoughts—may come like the breath of one of our New England east winds at the close of a sultry summer day. Perhaps there may be a feeling of delicacy

in the mind of the trustee as he reviews the methods of the librarian. Perhaps the librarian may hesitate to speak of the shortcomings of the trustee. Let us be frank in our interchange of thought and experience as members of one family, that we may strengthen ourselves in the courses which are right, that we may correct those things that are wrong or that are not expedient.

There is so much that forces itself upon my mind in relation to trustees — their uses and abuses — that there is a temptation to enter into details to an undue occupation of your time. If the few words which I have spoken in a desultory way, and those things which may be said by other and more able speakers, should be found to be suggestive, may I not ask you to consider with carefulness the obligations of the trustee, and ask of yourselves, with that earnestness which should characterize personal examination, if those obligations are met by you?

The chairman appointed a

COMMITTEE ON NOMINATIONS

as follows:

Charles C. Soule, Dr. H. M. Leipziger, W. R. Eastman.

In the absence of Dr. JAMES H. CANFIELD, Mr. QIMBY read the former's paper on

THE RELATION OF THE TRUSTEE TO THE PUBLIC LIBRARY.

The parallel between the public school and the library is never more complete than in the matter of trustee and trusteeship — I fear that it is complete on both sides, for good and for evil. The same general qualities are desirable, and are necessary for a successful issue; and alas! are so often lacking. Mr. Beecher once said that the strongest proof of the divine character of Christianity was to be found in the fact that it had survived in spite of its preachers and preaching. Some of us have often felt that the dire necessity for public schools is clearly manifest in the survival of the system in the face of its teachers and teaching. And it may be that the public library is to prove its right to be by outliving and by living down its management and its general administration. Yet all this means, after all, in each case, that the purposes of public administrators are generally right and righteous; and that humanity neces-

sarily reaches any fixed goal by tacking back and forth, sometimes apparently wide of the route; and not by a more direct path.

In library matters as in the church and in education I hold it to be of the very first importance that a trustee shall understand that the proper discharge of his duties will demand preparation and action, time and thought; and that he will distinctly prepare for this sacrifice. It is probably true that if men gave no more or no better attention to their private affairs than to the interests which they have promised to guard in their capacity as trustees, or managers, or directors they would be bankrupt in ninety days; or if not in ninety days, as soon as the natural progress of a neglected business will carry them to bankruptcy. A trustee of a public library should note carefully the dates of the various official meetings, and far in advance of other demands should clear his engagement book for these. He should find time for an occasional visit to the library, perhaps an informal rather than an official visit, in order that he may note carefully the general progress made in administration by the librarian and the staff, as well as the uses made of the library by the public which the trustee is undertaking to serve. At the very beginning of his term he should say to himself at least, either "This one thing I do," or "This is one of the things which I propose to do, and do well." Only when he gives himself thus systematically to the discharge of his duties can he be accounted a faithful servant. To allow every chance attraction to take him from trustee meetings, to be irregular and desultory in all his ways, to lack the continuity of interest and of effort which is so necessary to success in any undertaking, — all this is not only to fall short of his duties, but is to place himself in the position of an obstructionist. For it must be true that every man who does not lift at the load in these days adds his own weight to the load and makes the lifting of others more arduous. A trustee should take a certain pride in his work, should undertake to establish a definite reputation in his work, should feel that there is an opportunity and a rather unusual opportunity for public service, and should sincerely believe that if his duty is well done his fellow citizens will keep his memory green.

The trustee ought to have a very clear conviction of the importance of the work which he

has in hand, of the real *end in view* in connection with all library effort. He should understand that the library is to be a definite force for good in the community, that it is to furnish inspiration rather than amusement and recreation, that it is a necessary adjunct of any high form of civilization. He will not come into this knowledge all at once, he will grow with the growth of the library. This knowledge and this thought of the power and place and value of the library will constantly expand as the days of his service increase in number. He will find himself studying the field, and endeavoring to determine the characteristics of the city or town, assuring himself of the lines of greatest demand as well as the lines of least resistance. He will find in his community different classes of people with different interests, whose welfare must be promoted by different methods. He will give himself to a more or less careful study of the needs of the different departments of industry; he will inquire carefully as to what reading matter will most surely interest and stimulate his fellow-townsmen in their various walks of life; he will begin to understand what it means to furnish a library to those who have none of their own, and who can have none of their own, as well as to supplement the collections of those more fortunate. He will never for a moment question the desirability and the necessity of a well equipped and well administered library, maintained at public expense, as a most sure and swift and effective agent in public welfare. His convictions will be formulated in his daily contact with his fellow-citizens. He will be able to give a reason for the faith that is in him, and therefore and thereby will be worth ten men who cannot do this. Objectors to public taxation for this purpose will cross the street rather than meet him, because they dread the keenness of his blade; he will be the champion of the library in the strict sense of the word, and he will fight his fight to a finish, and will win because he feels and *knows* that his cause is just.

The wise and successful and efficient trustee will also have or secure an intelligent appreciation of the *means* by which these much desired ends are to be reached. This knowledge of the end in view and this sincere conviction of the desirability of reaching this end, and this intelligent appreciation of means, necessarily go hand in hand — each ministering to the other, and

each quickening the other. As before, he will not come into this intelligent appreciation all at once. He will secure this by careful study of methods, by a willingness to learn rather than by a spirit of captious criticism. He will become a reader of library journals, and of library news in whatever form it may be found. He will give some of his time and some of his money to attendance upon conventions; precisely as he will do if he is a banker or a manufacturer. He will begin to feel that he is of a class, and of a class concerning which he desires to know more than at present. His recognition of a community of interest will be a great incentive in this study of ways and means; and in this also he will put himself in close touch with his librarian.

With all this the trustee will be careful *not to think himself an expert*; because after all he will simply secure that general information along general lines which belongs with the larger phases of administration rather than with the details. Recognizing this, he will turn willingly and constantly to the experts of repute in his particular field. If I desire to know anything of theology I go to the theologian for my information and not to a soapmaker. On the contrary, if I wish to secure a reasonable mastery of the process of soapmaking I am not apt to go to the theologian. The development of the specialist, the place of value of the expert, are clearly recognized to-day in all callings. The wise trustee, therefore, will undertake to see that an expert in the best sense of the word is put in charge of the library; and having accomplished this, the trustee will await results. He will advise, but he will not dictate; he will suggest, but he will not demand; he will co-operate at all times, and never simply criticize. His own efforts will constantly strengthen his librarian and his librarian's staff in all their work. He will be the granite wall between the librarian and hasty and unjust criticism in the community at large. His knowledge of the work of the library will be such as to commend his position and his opinion to his fellow-citizens and win for him their confidence; and through him this confidence and this support will pass directly and helpfully and in a stimulating way to the librarian and those working with him. The wise trustee will be strong enough and brave enough to say that a good man shall hold his place, and he will be strong

and brave enough to say that a poor man shall not hold his place. It often takes more courage to dismiss an incompetent servant than to perform almost any other administrative duty. The wise trustee, however, will be the trustee who works efficiently although with large leisure, who is never hurried off his feet, and who never loses his head because of the haste of others. He will stand firm-grounded in what he knows that he knows, but he will never for an instant imagine that he knows it all.

These, then, are some of the characteristics of the efficient trustee, and these all too briefly are the relations which he will sustain to his library. In the church and in the state, in the school and in the library, in this wise and complete union of all educational forces, we are marshalling the armies of intelligence against the forces of ignorance, we are seeking to put rational faith in place of sheer credulity, the temper which says, "I believe and I will it" in place of "I don't know and I can't;" we are putting strength against weakness and courage against fear, and hope against despair, and light against darkness. It is time for individualism, it is true, for the largest possible development of all individual capacity and power; but for individualism of that high type and order which knows that its most efficient manifestation is to be found in organization of high type and order. The last hour has already struck for the man whose individualism consists simply of self-assertion only equalled by his ignorance of the benefits of co-operation, or his unwillingness to stand by his fellow-men; who still fancies that guerilla warfare is as effective as the well-ordered movements of battalions and brigades. The signal has been given for every man to take his place, and the true place of every man is in close and sympathetic touch with his fellow-men. In this great conflict the trustees of the public libraries rank as quarter-masters; they are to see that supplies and ordnance are not wanting, that the men who are on the firing lines are cheered and sustained and stimulated, that the best care is continually given to those who should be free to wage the battle without one backward look. It is said that McKinley won his first fame by seeing that every man in his regiment had a cup of hot coffee on the eve of battle. The men who are the advance guard of civilization, preachers, teachers, and librarians, need back

of them just this sort of competent service and sympathetic and efficient attention.

Men are never quite equal to our ideals; but it is well to hold the ideal up to the fore, and not to lower the standards. Then and only then may we hope to see the day, already dawning, in which to the list of those who serve their fellow-men and who become worthy of the title of public benefactors, will be added the trustee of the public library.

The CHAIRMAN: Dr. Canfield's paper is before you for remarks or discussion.

MR. QUIMBY: It may not be amiss to emphasize that point about the individuality of the trustee. All through that paper the trustee is taken as an individual, but in fact he is only one of a group of four or five or perhaps more. It is well for the trustee to know that he is one of a number—that he is working side by side with others. The great executive power of men who have been leaders has lain in their ability to select the right agent and instrument to do their work, and the successful trustee is very dependent upon the power to pick out the right librarian. But when he has done that, that librarian is the one who is to be trusted to carry out the work.

Sometimes the inquiry comes up, Who is to choose the books? and in deciding such points we have to come down to certain principles. The community owns a library, and the trustees work for the community, not for themselves; but they are to consult the general good and the highest and best public spirit. And then, after that, the librarian is responsible to the trustees. The librarian may select the books, but the trustee must revise the selection.

A DELEGATE: In an experience of many years I have found one fault, or rather one defect, in the average board of trustees. This is a defect which is not due to the individual members of the trustees nor to the character of the board, but to the organization of the board. And this particular board to which I refer is not the class of boards which are elected for limited periods, but the trustees in incorporated libraries, which have resulted in the beginning from some gift to a town. Such boards have been frequently modified in after years, having their terms renewed. I find a defect in such boards in the long tenure of office, resulting in the retention of men who have reached such

an age that it prevents them from performing the duties which they are required to perform, so that in some cases it is difficult to obtain a quorum through actual inability to be present. A remedy for this might be found, as has been suggested, in a voluntary change in the method of the tenure of office by the board itself, and this plan has been suggested: that the board of trustees, having been duly incorporated in the first instance, should make a regulation that every five years one-third of its membership should withdraw, and not be eligible until another five years had elapsed; that would make five years for the first, ten for the second, and fifteen for the third, and that would prevent — however this board might be selected, whether by the votes of the board itself or outside election — the retention in office of men to whom such service had become a burden.

Speaking now very briefly from the standpoint of the librarian, it seems to me the first duty is to study the relations which should exist between the librarian and the board of trustees. In other words, the librarian should try to learn his own duties as distinguished from the duties of the board, so that he will not trespass on the one hand, and on the other hand that he will not expect from the trustees the performance of duties which belong to himself.

I find in many towns that the trustees have fallen into the habit of performing trivial duties; and we, as librarians, ought to remember that the trustees have no salaries, that we are paid, and that the arduous duties of detail are our function. To illustrate, I know one town where the board of trustees are required to pass upon each card that is given out, and not only that, but to fill out those cards and send them back to the library; a system of red tape annoying to the trustees. This is not an important instance, but simply an illustration of a burden which ought not to be thrown upon the board of trustees.

On the other hand, there are librarians who presume upon the functions of the board of trustees and who gradually appropriate to themselves the functions to which they have no legal right, and for which they cannot be held responsible. The result of that is, that if the librarian takes some action and makes a mistake, although it may be passively allowed by the board of trustees, the responsibility falls

upon the board, and they are annoyed and perhaps incensed that the librarian should have taken such a liberty. So it seems to me that the first person plural "we" is the key-note to the position of the librarian. He should understand clearly what matters lie outside of his position, and he should have a clear understanding of those things which lie within his duty. He should always be willing and quick to give credit for those duties which lie outside of himself.

Another thing that is wise for a librarian to do is to realize that unless he puts forth some initiative he ought not to expect every one to take an interest in his library. Therefore it is best to interest one trustee after another in some special work connected with the library. Trustees are divided into committees, and if a trustee when entrusted with certain matters will consult the men on that committee, will go to the library and look into the problem himself, he will not only be better able to secure the co-operation of his committee, but he will greatly increase his usefulness and his interest in the library's work.

Rev. J. P. BODFISH: I have been a trustee of a public library for a good many years and have served on a good many boards, and it occurs to me that there is one fact in regard to the relation of the trustees to the librarians which has not been alluded to this afternoon.

By the laws of Massachusetts, that Act of the Legislature incorporating the body called the Trustees of Public Libraries has placed all libraries and library property in their hands absolutely. They hold the keys to the buildings; it is all subject to their absolute control; they hold all the moneys that are given by bequests or taxation, and they have the sole power to spend those moneys as they think best for the furtherance of the interests of the library and the community. Therefore they have an obligation conferred upon them, by the statutes of the state, that they cannot throw off, and therefore they are really the responsible persons connected with the library, because in one sense they are holding it in trust for the public. They have the selection of the librarian, they fix his salary, and they in many places state what his duty shall be, and they pay the employees of the library.

Now, my experience shows me that they are only too glad to have this ideal librarian that

has been spoken of here, but where can they find him? You have to search north, east, south, and west for a man to whom you can entrust a great library, and what are you to do for the smaller libraries, that cannot secure the services of such a person?

NORMAN S. PATTON: Being neither a librarian nor a trustee, perhaps my remarks will be unbiased. In some matters purely pertaining to library buildings, I have noticed it as quite characteristic that many libraries almost entirely indicate the trustee; the librarian seems to be quite overlooked. I have tried to account for this and it seems to me that a man who has a place of responsibility feels that he cannot delegate this responsibility to somebody else. I have heard men say, "I am not familiar with this subject," then they will turn around and refuse to be led by the advice of some one who is an expert on the subject. In discussing library buildings I have seen many cases where the librarians were not consulted, and in almost every case the librarian certainly should have been brought into consultation. The question has been brought up over and over again in my presence, "Had we better call in the librarian in consultation?" but frequently that is not even thought of; and if you will seek for one reason why library buildings have not been more practically satisfactory than they are, I will say that it is because in a majority of cases the library trustees have ignored the librarian completely. It has been my experience in planning a building that even to say that the librarian would like to have such a thing done was often enough to defeat the purpose, the library trustees thinking that the feature desired was intended for the personal convenience of the librarian, and to save him or her labor, not realizing that the main object was the convenience of the public.

Therefore I would like to make this one suggestion, that the librarian, although having no vote, and not having the primary responsibility that the trustees bear, ought to be brought into consultation on all practical matters with which the management of the library is concerned much more frequently than is now the case.

Dr. LEIPZIGER: I don't know whether Mr. Patton's experience is characteristic of the West, but I think in the East it is almost universally acknowledged that in the administration of libraries and the construction of library

buildings the librarian should certainly be consulted, and I cannot imagine an intelligent board of trustees undertaking any work without consulting the person who has charge of that work.

Mr. Patton said he spoke neither as a librarian nor as a trustee; I speak in both capacities. It seems to me that while the development of the library system in this country is due to the librarian's intelligence and expert knowledge, it is also due in no small measure to the public-spiritedness of the trustee, the generosity of the trustee, and the character of the trustee. Trustees are in most cases intelligent men and women, and the simile used by Dr. Canfield in his paper of the relation between the locomotive engineer and the railroad president does not apply to the ordinary librarian and his trustee. Most trustees are persons of a wide culture; their knowledge of books and love for books show that any one of large culture who concentrates his mind upon the library can be of value and assistance even to the most accomplished expert. It goes without saying, that the librarian, being the executive head of the library, should be in direct control of the institution, but the function of the trustee is in representing the people. Just as we have a board of education and board of officers in college, and just as we have a President of the United States, just in the same way does the trustee stand in relation to the public library; and while we recognize the skill of the expert we must never fail to recognize the largeness of the general trustee.

The CHAIRMAN: We have been disappointed in not having Mr. J. G. Rosengarten with us. He was to speak on "American libraries from a trustee's point of view." He has, however, kindly sent us his paper, which will be read by the secretary.

Mr. MONTGOMERY read the paper by **J. G. ROSENGARTEN** on

AMERICAN LIBRARIES FROM A TRUSTEE'S POINT OF VIEW.

A short experience of the relation of a trustee to the library with which he is connected may perhaps justify some observations on that point. Too much of the time of boards and trustees is given to details of administration. Look at the largest libraries of the world — London, Paris, Berlin. Who ever hears of the governing body, whether it be a

board or a government bureau? All power is placed in the hands of the librarian, and it is of him and his work and administration that we hear. The trustees of the library of the British Museum are great officers of state and great men of letters and science, but it is only in posthumous biographies and letters that the public hear anything of their activity in the matter. Ellis and Panizzi and Garnett are the men whose work in connection with the great English library is familiar to us. So too in Paris and Berlin, where the librarian is always the prominent figure, with him alone the public has to do, and he alone is held responsible for the administration of his great charge. In this country, library boards are among the public trusts that too often fall to the lot of men who with the best intention in the world cannot forbear the opportunity of letting the world, their little local world, know how much it owes to them. Hence the frequent occurrence of experiments in library management that generally result in failure, because they are made by men who are not in close touch with the public using the library, ignorant of its real needs both as to details of management and the right use of the facilities that a library offers for both use and abuse. The ideal board of trustees is that which is neither seen nor heard. It always chooses a librarian with care, having first ascertained not only his technical knowledge and literary attainments, but also his administrative power.

Once in office, the public and the library staff and the bookseller and the reader all must look to the librarian as the mouth-piece and the eye and the ear of the board of trustees. He should be present at every meeting of the board and of all of its committees, and if not actually the secretary, should know of every subject under discussion and of every new rule adopted, and that by word of mouth from the trustees in their proceedings, and not by merely written communication, nor by or through any individual trustee or officer of the board.

All appointments should be made by the librarian, upon some system of civil service examination by a board of the old employees and after probation, and no trustee should ask or expect any appointments or other spoils of office — all applications for appointment should be filed with a registrar or other officer specially designated for the duty, who should be entirely impersonal, simply assigning a

number to the applicant, filing all testimonials with that number, and submitting them to the librarian with the official result of the examination — in this way all question of influence would be reduced to a minimum, or better still to nothing. The body of appointees would then have every inducement so to work as to earn promotion.

With the increase of library schools there need be no difficulty in making the test of examination one that will show how far the technical work has been properly learned. The question of personal fitness, a very large factor with all who have to deal with so difficult a public as those who use the library, can be tested by a short probation of actual work in each department.

Even more rigid than selection of employees should be the selection of books. No committee of any board, no matter how intelligent or conscientious, can successfully deal with the enormous list of books offered for choice and purchase. The real expert is the librarian, and he must know just where to find special experts to assist him in the selection of technical books on special subjects. If left to a committee of the board, the work will either not be done at all or will be influenced by personal likes and dislikes. The library should be broad enough to include representative books and books to meet the needs of the reading public. Readers should be invited to ask for any books they want, and with a fair discrimination, this method may be made a good test of the needs of the average reader. Books recommended or asked for by those who speak with authority as writers and students of special subjects, should be first put on the list for purchase, and technical bodies — engineers, electricians, architects, etc. — ought to be invited to send in lists of books needed.

Trustees and librarians ought to strive to set on foot coöperation of all the libraries in any given city or locality, so that expensive books above a certain fixed price, say \$50 or \$100, should be bought only for one library, that there be no unnecessary duplication. Only recently three libraries in one city got three copies of the reproduction of an East Indian Vedic manuscript, for which there can hardly be one reader in the whole city. Then too trustees and librarians should coöperate in the preparation and publication of finding lists of periodicals, so that readers may know exactly

where to find every periodical, and thus again save the time of the readers and officers of libraries in their use.

Trustees ought to be seen and not heard — they should be frequent visitors in every branch, but should never give orders or instructions, or criticise methods to employees — all these should be reserved for the librarian, through whom changes and improvements should be made. Meetings of boards and committees should not be matters of publicity, lest "cranks" attack them by letters; let all the dealings of the public be through the librarian and his office, where there should be a book of complaints in which every complaint and grievance should be recorded, to be submitted to the board or the proper committee at the regular stated meetings.

The complaints that abound in every library would soon diminish if every person who has a grievance were politely instructed that it must be stated in writing in a book kept for the information of the board. The trustees must then enforce rigidly the rule that they will not see individuals complaining of this, that, or the other grievance, but that every complaint or criticism must be duly entered in the proper record book, which will in turn bring it before the proper committee of the board and through its report to the board itself. Every library must expect criticism, and the only way to meet it is to give it a fair hearing and to weigh its value, and decide, where it is well founded, on the best method for such reform as shall effect the best result.

The personal character of the librarian is always in evidence and it must therefore be beyond any suspicion. He must have the gift of dealing with his staff and with the public and especially with the public authorities, with transparent honesty. The trustees as individuals have no standing — it is only as a board that they act and should act. On occasions when the library comes before the public, it should be through the librarian, and the trustees should be only a chorus at the opening and closing of any act of special interest. Annual reports and bulletins and other publications should be made the official vehicles for the librarian, with the sanction and approval of the trustees, and any difference of views should be threshed out in private conferences, and only the results of agreement be made public.

Under the system generally in force, by which

libraries are supported entirely or largely by public appropriations, it is the librarian who, as executive officer, should be the spokesman of the board of trustees in dealing with finance committees and the mayor and city treasurer and controller and other officers of the city. Few trustees can speak with the same accuracy as to the needs of the library, the proper distribution of the annual appropriation between the expenses of maintenance and the provision for books, — a percentage that needs careful watching, so that the public may have the best service, as well as the freest and largest use of all the books that can reasonably be provided out of the funds in hand.

Trustees may well use their strength both individually and collectively to obtain public grants and private contributions for proper library buildings. No librarian, no matter how efficient and capable, can do his best while the library is housed in temporary quarters, often unsafe and unsanitary, and always difficult to administer economically, because not built and not suited to library purposes. On the other hand, no board of trustees should accept a gift, no matter how splendid, of a library building that was not planned after long and careful consideration by their own librarian, and consultation with other librarians, expert in the needs of a thoroughly well planned library building. There are too many examples of the two extremes — on the one hand large and growing libraries cabined and confined in unsatisfactory buildings, and on the other hand libraries large and small, put in buildings that are too large for their contents, and, in a number of instances, made museums of art, attracting mere gazers, and thus interfering with the daily use of the library by those for whom it is primarily intended. To sacrifice the purpose of the library to a love for artistic decoration is to make a very serious and costly blunder, and one that trustees ought to guard against in spite of liberal donors of expensive buildings. Perhaps the most striking example of the one-man power of a librarian at its best is that of the library of the University of Strasburg. After the destruction of the time-honored building, an obscure librarian in a little German town appealed to all Germans to atone for the injury done by the German army. Restored to German nationality, Strasburg was made the object of liberal benefactions by the German government, and while the work of material

restoration was being rapidly carried on, this appeal for books for the Strasburg Library was widely circulated and responded to generously. From every corner of the world where there were Germans, gifts and contributions of books were rapidly sent in. Then the government invited plans for a new library building; they were prepared under the direction of the man who had first appealed for it, and to-day in a well appointed and well contrived and well constructed library building, he is the librarian in charge, with over 400,000 volumes, so that both the city and the University of Strasburg have a library and a librarian to be proud of. Could any board of trustees have done such a thing? With all the magnificent splendor of the National Library of Congress in Washington, the real impulse to its growing and useful activity is due to its librarian, and not to the joint committee of Congress on the library, — their real usefulness is in securing appropriations and legislation to enable the librarian to carry out effectively his plans for increasing its usefulness in many ways. Notable among them is the deposit of the Congressional Library card catalog in at least one library of every city and of every university, where men engaged in study and original research may find what books are at their command by loan.

The trustees can do little more than make the necessary provision for storing these catalog cards in a convenient and accessible place, but the librarian can direct inquirers and readers to them and can help them to obtain the books from the Congressional Library or from that at Albany or any other great library, where the librarians have effected a method of useful exchange of books, and of procuring those not on their own shelves from any other that has them.

The meetings of librarians, national, state, and local associations, full of instruction to the professional librarians and all engaged in the work, are for the most part a sealed book to trustees, whose occupation is largely in other directions. The splendid plan of a union of all the libraries of the city of New York bears the strong impress of the hand of a very able librarian — not all his trustees could carry it out, although they can give powerful help in making the plan successful. The example thus set cannot fail to inspire other cities, with scattered and separate libraries, with the wisdom

of a similar union of forces, thus reducing the expenses, increasing the efficiency, and giving to the library as a whole the advantages of the greatest good to the largest number by the simplest method.

There is no more melancholy spectacle than that of a multiplicity of libraries in one city, some burthened with debt, some with trusts that have long since outlived their usefulness, if they ever had any, each under a board of trustees in which there is reflected all the narrowness of local interest and of pride of place and of misunderstood opinion of the rights of proprietors or stockholders and the public. Make one united body, under the headship of one good librarian, and the public, as well as the individuals who use the library, will at once feel the benefit of a broad and generous management that will help materially to increase the libraries and their usefulness.

The man who wants to do a generous act is the one who helps an old library, gives it new strength and power, not he who puts up a new building, no matter how handsome, and then leaves it to the community where it is situated to sustain it, — often with an old and long-established library already in existence left high and dry in the change of time. Unite the new and the old, and each strengthens the other, and trustees may well look askance at the most munificent donor who forgets the claims of an existing library in order to establish a new one which shall perpetuate his name, and in doing so cripple the usefulness of some earlier library that has had years of experience as to what the people want in a library.

Few cities have as much reason to be grateful to their library trustees as Chicago, where the Public Library, the Newberry Library, and the Crerar Library have agreed to take each its own location and its own particular line of library work, the first of general reading, the second of special collections in the fine arts and bibliography, and the third of the exact sciences, — thus making it possible to achieve results nowhere else attained in the same time. There indeed trustees have shown the highest fitness for their task, and such an example may take its place alongside of the consolidation of all the libraries of New York in one system, as lessons by which all trustees should be guided and instructed in the right way to discharge their duties.

The CHAIRMAN: I am glad now to announce that Mr. Herbert Putnam will speak to us on

THE WORK OF THE LIBRARY OF CONGRESS.

Mr. PUTNAM: I have been a little puzzled to know why this topic should appear upon your program. It had been understood, I supposed, that trustees appear at our meetings, particularly for their own instruction; and when you referred to a customary "gentle acquiescence" at the meetings of the Trustees' Section I supposed you were going to explain it as the gentle acquiescence of the librarian in the existence of the trustee. We would not, to be sure, regard trustees with intolerance. It is quite clear, or usually becomes so from our discussions, that their functions are in general superfluous, and commonly intrusive. But we realize that they themselves frequently recognize this and exercise these functions in a properly deprecatory spirit. We would not therefore treat them with undue severity. We invite them to our meetings with cordiality. And yet in doing so we have been considerably perplexed between our desire to have them know a certain amount as to library work, and our fear lest they should know too much. They must know enough to appreciate the excellence of our recommendations, but not enough to desire to operate the libraries themselves.

Now on the assumption that the purpose of this meeting is the instruction of trustees, my topic seems to me inexplicable, because it calls for a statement of the work of a particular library, — a library which is, to be sure, or is to be, a library, but only one library; which has certain processes in common with all other libraries, but certain differences also which are perhaps even more marked between it and the libraries in which most of the trustees here present are interested.

We have at Washington a large collection, roundly a million and a half items, — say a million books and one half a million other articles, maps, manuscripts, music, and prints. Since 1897 we have been attempting to reduce this collection to order. We have had the problem of classification, and we have had and still have the problem of catalog. We have in the meantime and concurrently the problem of use. We are issuing publications. We are thus to some extent engaged in many of the activities, with the exception of the work with children,

that are characteristics of the ordinary municipal free library.

We have had occasion within the past three years to secure a large increase of funds for a work the need of which had to be explained. We have had to secure a large staff in order to cope with work for which there had been no adequate provision. Now that work has, as I have stated, many characteristics in common with the work of administration of an ordinary library; but it involves certain differences which result chiefly from a difference in function, distinguishing the Library of Congress as the National Library of the United States. We are handling an unusually large mass of material, but the difference is not in this. We are handling unusually rapid accumulations (the accessions of a single year — last year, 76,000 printed books and pamphlets and nearly 40,000 other articles — reached to the size of an ordinary library), but the difference is not in this. We have a small immediate constituency, but the difference is not merely in that.

We have, with other libraries, the problem of acquisition. Now, the difference in that is a material difference. Those of you who are trustees, who are determining the policy of a library, are called upon to discriminate — to discriminate in the choice of new material. To a very large degree the accessions of the Library of Congress — for instance, all that come from copyright and much of the rest — are accessions without discrimination, that is, are not the result of deliberate selection. You are called upon to select only the books that are worthy as literature; the Library of Congress receives an enormous number of books that are inferior as literature and unworthy from a moral standpoint. You are called upon by recent suggestion to discriminate not merely in selection, but in the arrangements for its accommodation, between the book that is active and the book that has ceased to be active. The test that you are asked to apply is, What is the present demand? The Library of Congress as the National Library is supposed to have a duty not merely to accumulate those books which are in present demand, but to accumulate for posterity. In your catalogs you consider the minimum expenditure that will suffice to cover the needs of your readers, taking into account the other aids, including human service, at their disposal; but the Library of Con-

gress, undertaking now to catalog not merely for the use of its own readers, but for the entire country, may be compelled to an elaboration in such processes not requisite for its immediate constituency.

But the most material distinction, and one which seems to preclude a description of the Library of Congress from presenting any analogy for trustees, lies in the fact that the Library of Congress has no board of trustees. The Library of Congress is administered by the Librarian of Congress. The Librarian of Congress is appointed by the President of the United States. He goes directly not to the Joint Committee of Congress on the Library but to the Committees on Appropriations for appropriations for the maintenance of the library. The appropriations made are placed at his disposal for expenditure. He is authorized to appoint his subordinates and to dismiss them. He is further authorized "to make rules and regulations for the government of the library." There is a Joint Committee of both Houses on the Library of Congress, but that committee does no one of these things that I have named, and therefore cannot be said to stand to the library in the relation of a board of trustees. It does not intervene between the librarian and the Committees on Appropriations, nor in any such way represent the library before Congress. Certain of its members may by chance be members of the Appropriations Committees, in which case they will presumably have an interest in the success of the estimates of the librarian; but this is a different matter.

I do not see, therefore, that I can cite to you from Washington anything which may have any potent analogy to the trustee of a library.

The trustees, however, who come to these meetings come, I suppose, for the purpose not of learning technique in detail, but of observing tendencies which may affect policies to be pursued by their own libraries, and there are occasionally matters discussed at the meetings which, in relation to such a purpose, may explain the presence of the Librarian of Congress upon your particular program. At the present conference, for instance, among the various suggestions which have become prominent, one concerned the limits of accumulation of a library and the method of accommodating its books. There is the suggestion to which I have referred above—that

a separation should be made between the live books and the dead books and that the dead books should be segregated from the others, with, of course, the implication that if, in addition, the librarian can determine what book is likely to be less used, he should refrain from putting that in the library, if in any manner it can be reasonably accessible elsewhere. This suggestion is that each library in its accumulations should limit itself to the books likely to be constantly in demand by its immediate constituency, and that as to others it should content itself with acting as an intermediary between its immediate readers and other institutions possessing the less used books, one copy of which in a large area might suffice. Now, the appendant to that suggestion was that we should have a few libraries in this country which might serve as reservoirs for these unused books. The Library of Congress was mentioned as one. It must be admitted that that library *is* accumulating without regard to active use, and within the field of Americana at least it will seek completeness. It will regard as appropriate, at least, every book not wholly unworthy which represents the product of the press of the United States, and, perhaps in a less peremptory degree, of the Western Hemisphere.

The other suggestion to which I may refer is that of the librarian of Cincinnati as to the superior advantage of bibliographies over catalogs. Now the argument for bibliography over catalog is simply the argument for the centralization of catalog work—the production at one point of lists that shall suffice for a great many institutions, the substitution of central and organized bibliographic work for the multiplication of effort by each institution for itself. Such questions cannot be discussed without a natural reference to the recent undertakings of the Library of Congress, which places its bibliographic work at the disposal of other libraries. We have undertaken to make that work generally available. We consider it particularly our duty to do so where by mechanical means its results may be multiplied and within legal authority distributed. One of these undertakings of the library, which is of most general concern, is the distribution of the catalog cards printed by the Library of Congress. During the past seven months this distribution has been going on. The results of it are to be reported at this meeting, and this report with

the incidental discussion has been made part of the regular program at a more general session.

Now I suggest that this undertaking is one which does concern a trustee, because its results are likely to affect that part of the administration of a library which a trustee must consider, — that is the general policy, the general direction which expenditure shall take. There is, I think, a common neglect on the part of trustees, as well as of librarians, to consider the relative efficiency of one or another form of expenditure; for instance, as between that for books, that for catalogs and other apparatus, and that for service. In a small way we have noticed this in connection with this distribution of catalog cards. We are now issuing cards at the rate of about fifty thousand titles a year. At the present rate of subscription it would cost a library two hundred and fifty dollars a year to secure a full set of these cards. By way of experiment we have been issuing also what we call "proof strips." Before the titles are run off on card stock they are printed off on proof paper. Now the proof is issued in strips, and thus far has been issued to practically any applicant. It has been issued without charge. Now we have found that certain libraries receiving the proofs are undertaking to cut them up and paste them on ordinary blank cards. They do this to secure the information which would be given by the printed card, but on the assumption that they cannot afford two hundred and fifty dollars a year for the printed cards. It is very easy to estimate, however, that the current cost of cutting up the strips and pasting them on ordinary cards would alone exceed the cost of a set of the printed cards. The cutting and pasting would take very nearly the whole time of a single person. It seems to me that this is but an instance of an inconsiderateness quite common, which is abashed at the proposal to spend two hundred and fifty dollars for a piece of apparatus, but without thought spends more than that amount in the extra service requisite which the apparatus would save.

Now, if you will excuse me, Mr. President, I will not attempt to speak further of the work at the Library of Congress. It seems to me that you have on your program other topics more important, and that in general, at the meetings of the Trustees' Section, trustees rather than librarians should be heard. The present con-

ditions in the Library of Congress and the present undertakings are set forth in the report which we issued last fall, and which is at the disposal of any one who desires it. I content myself, therefore, with referring to the card distribution as particularly worthy of the attention of trustees in its bearing upon the administration of their own libraries. The distribution has been a success and it will proceed. The past seven months have developed defects that have been studied and in part will at least be remedied.

I do not wish to speak at any length of the Library of Congress and shall refrain from doing so. But there is an "institution" in the library to which with this opportunity I cannot refrain from referring. I say an institution in the Library of Congress, because prior to 1897 he was practically the Library of Congress.

Our associated characteristics to-day — indeed, you might say the characteristics of the librarian of to-day — are prominently energy, the practical, the business push and sagacity, — I should say acuteness, — the search for system, order, and the mechanical means of doing things. There has undoubtedly been a falling off — at least a disappearance into the background — of the librarian of the earlier days. He is referred to, if not with ridicule, at least scarcely with indulgence. Of his efficiency you will find little recognition in our discussions at these meetings. And yet are we so safe in putting into the background the characteristics that give him distinction? Are we not overlooking traits that we cannot afford to spare — and for which we offer no adequate substitute? Our meetings are replete with enthusiasm; but the librarian of the earlier day was not lacking in enthusiasm. We talk much of the professional spirit; he certainly was not lacking in the professional spirit. It is not business that produces the professional spirit. He did lack system, or perhaps it would be fairer to say that he preferred system inside his head rather than outside. He did not crave disorder; but he had no relish for order. He was impatient of order — of an order which could be secured only through apparatus; and yet, on the whole, he achieved a result; and he did it not by constructing apparatus, but by associating himself with the material — the books themselves. Now, I hope it is not going to be the case that as time goes on the librarian of the

older type will become to us simply "quaint." I have observed the career of one of them. I am now observing it, and in retrospect I have studied it; the career of a man who has been for over forty years in the service of the Library of Congress, and has pursued that service with an unalterable devotion, and who now at seventy-five years of age begins his work at eight o'clock in the morning and rarely finishes it until eleven o'clock at night; a man who (not to attempt detail) is a *miracle* of the qualities of the librarian of the older type—the qualities which, believe me, are not merely lovable, but make for efficiency.

Now, order and system and the apparatus must come. They are necessary to the operation of a library attempting to serve modern needs in a modern way. But in securing them, do not surrender wholly what you can afford to retain of those qualities which distinguished the librarian of the olden time. You may have in your libraries some one who represents them. If so, I strongly recommend that you thank God for him—as we do for Ainsworth Spofford!

The CHAIRMAN: We will now have the pleasure of hearing Dr. John S. Billings, the president of this Association, speak to us on

THE ORGANIZATION OF THE NEW YORK PUBLIC LIBRARY.

Dr. BILLINGS: The subject assigned to me is the organization of the New York Public Library, which is so peculiar, although it does have trustees, and its lines of work are in some respects so different from those of most libraries, that probably my statement will not be particularly instructive or interesting. Still, there are some matters connected with the consolidation, and the way in which matters are being managed in the temporary conditions in which we find ourselves, that may possibly be of some interest to the trustees of other public libraries.

Most of you are no doubt familiar with the history of the consolidation. The Astor Library was founded in 1848, the Lenox Library in 1870, and the bequest left by Mr. Tilden to found another public library became available in 1893. These interests were consolidated under a Special Act of the Legislature, in 1895. The new organization, entitled "The New York Public Library, Astor, Lenox, and Tilden foundations," had two large reference libraries,

neither of which had been formed with any regard to circulation or home use. The Lenox Library was mainly a museum of very rare books, Bibles, unusual editions, etc., while the Astor Library had been built up with long series of periodicals and books specially selected for reference work purchased from a special fund, left by Mr. Astor with the provision that books purchased from that fund should never be taken from the building, his object being that the books should always be found in that library, by scholars coming from any part of the country.

The Tilden Library had about 20,000 volumes, mainly political history. The essence of the Tilden contribution was about \$2,000,000 as a fund for conducting this establishment.

The consolidation was consummated by the selection of seven trustees from the Astor, seven from the Tilden, and seven from the Lenox Library, making a board of twenty-one trustees, who elected officers, made by-laws, and selected a director.

They had two separate buildings, three miles apart; the Lenox being on 70th Street and the Astor on 8th Street, and the trustees saw there were two different courses they could take. They were a private corporation; they had funds enough to put an addition to one building to contain all the books and thus to make a great reference library; nothing else. And that was the easiest thing to do. They had the land connected with the Lenox building; they had sufficient funds to conduct the library and put up a building. They felt, however, that would not be the best thing to do, nor would it meet the public expectations or demand as to what was desired from this newly formed corporation. They therefore proposed to the city of New York that if the city would furnish a building sufficient to accommodate the general reference library they would put into it all their books and collections and maintain such library for the free use of the public without cost to the city. That is to say, the New York Public Library contributed about \$2,500,000 worth of books, pictures, and other material, and the income of about \$4,000,000. On its side the city of New York agreed to put up a building, to cost about \$5,000,000. It was stated to the city that with this central building should be connected a system of branch libraries for furnishing books in all parts of the city for home use, but that the funds of the

library would not be sufficient to do that and at the same time to carry out the conditions of the trust under which it was formed. But it was stated that, if the city would furnish the necessary funds, this large central building would be so planned as to be used in connection with such a system, and that the New York Public Library would agree to take charge of that side of library work also.

All this having been agreed to, plans for the new building were prepared, and the work of classifying and cataloging the books was commenced. There were a very large number of books in each library which had never been properly cataloged. There was no subject catalog. There were finding lists and rough check lists, by which you could usually find out if any given book was in the library; not always.

In 1901 the New York Free Circulating Library — which had twelve branch buildings, besides a travelling library department — decided to consolidate with the New York Public Library, furnishing a nucleus for a Circulating Department, and, subsequently, two other libraries have come in — the Saint Agnes and the Washington Heights.

In the same year Mr. Carnegie offered to give money to the city of New York to build 65 branch libraries at a cost of about \$80,000 each, and that offer was accepted by the city. His offer was intended for the entire Greater New York, and he had a general idea that it would be well to have it all under one system, but he was not very particular about that, and when Brooklyn and the Borough of Queens preferred to have what they called their share of the fund turned over to them for their own independent use, he approved of that arrangement.

A contract was made between the city, the New York Public Library, and Mr. Carnegie for the Boroughs of Manhattan, the Bronx, and Richmond, to the effect that the city should provide sites, that the New York Public Library should put branch buildings thereon, and that the money for doing so should be furnished by Mr. Carnegie to the amount of 42 such buildings at an average cost of \$80,000 apiece.

The New York Public Library is managed by a board of twenty-five trustees. Three of those are officials of the city, the Mayor, comptroller, and president of the Board of Aldermen.

They elect their own successors, and if a trustee is absent from three successive meetings, without an excuse that is accepted by the board, his seat is vacated. The business is managed mainly by committees, the four most important being the Finance Committee, the Executive Committee, the Library Committee, and the Committee on Circulation. The duties of the Finance, Executive, and Library Committees are about the usual duties. The Circulation Committee looks especially after the interests of the circulating side of the library, and will also have charge of the Central Department of Circulation in the new building. Only one member of the Circulation Committee need necessarily be a trustee of the library. The other members of that committee have been selected as representatives of the circulating libraries which have consolidated with us. The director of the library meets with all the committees. He makes a report to each, and is also present at all the meetings of the board, and may or may not make a report to the board. He is there to answer questions. There is also a special superintendent of the Circulating Department. This is a gentleman whom you all know well, Mr. Bostwick, who was the director of the New York Free Circulating Library.

The committees meet once a month, as a rule. The Executive Committee has been meeting more frequently, and is the committee which prepares the greater part of the business for the board meeting. The Library Committee has the general direction of all matters pertaining to the purchase of books and cataloging, and decides on the general plan of the work to be done each year, leaving the details as to methods to the director.

The action of the Board of Trustees has been very harmonious, and the meetings have been well attended.

The work which the New York Public Library is now doing is in a way temporary in character; peculiar because of the necessity of keeping up the supply of books for the public and at the same time preparing its materials for the new building.

The work of the library is also peculiar because of the rarity and importance of the collections made by Mr. Lenox; of the great value for reference purposes of the books in the Astor Library, and because it contains many books which are not to be found in any other library

in this country. And having the duty of preserving those and also a large amount of manuscript material, relating to American history, the relations of the New York Public Library to the public are somewhat different from those of the average free public library. The work is divided among several departments, each having a chief who reports to and receives instructions from the director. There is a business superintendent, who pays all bills and has general charge of the buildings. All bills must be approved by the director. The Order and Receiving Department, the Catalog Department, the Shelf and Classification Department, the Readers Department, the Periodical Department, the Public Documents Department, the Jewish Department, the Slavonic Department, the Oriental Department, and the Print Department, are those of most importance in the reference library.

The Circulation Department has its own order and catalog departments, and keeps separate accounts, but all its bills are paid by the business superintendent on the certificate of the superintendent of circulation and the approval of the director.

There are over 200 members of the staff. They have monthly meetings for the reading of papers and for discussion—according to programs prepared by special committees of their own selection. These meetings are held alternately at the Astor and Lenox buildings, and there is usually a special exhibit prepared for each meeting.

The trustees include lawyers, bankers, prominent business men, and so on, and the reports of the several committees receive careful consideration. I do not think that the comparatively large size of the board has been in any way detrimental to its efficiency. It has had some important and difficult questions to consider and decide upon, and has, perhaps, been a little slower to act upon some of them than a smaller board might have been, being rather conservative in character, but upon the whole I think that its work has met with general approval. I shall be glad to answer any questions.

Mr. BRETT: May I ask a question of interest to librarians? That is, the one great difficulty in getting together a staff of a library very much smaller than the New York Library, is to so arrange the time that the members of the staff may be spared from their duties. We do

have staff meetings which are in the hands of the staff itself. They are usually held in the evening, but the libraries are remote from one another and scattered.

Dr. BILLINGS: I will answer Mr. Brett's question by saying that the present condition of the reference department affords a favorable opportunity for getting these staff meetings, because the Astor and Lenox Libraries are not open at night, the meetings are in the evening, and the entire reference staff is able to attend. As regards the staff of the circulating branches, which are kept open at night, they must divide. Those who come this month will stay and attend to the library work next month, and allow the others to come.

The CHAIRMAN: I will now ask Mr. Dewey to tell us what he thinks of

THE FUNCTION OF THE TRUSTEE.

MELVIL DEWEY: I take it the supreme function of the trustee is to administer the funds which are in his hands so they will do the most good. It seems to me they are to settle the sort of books to be bought, whether it is more feasible to keep the money for books that are most useful or to spend it for something that will be useful only to the few. I think Mr. Rosengarten put very generously what the relations should be between the librarian and the trustee, from the trustee's standpoint.

From the librarian's standpoint, I can never forget that the trustees are a board, not private owners, on which rests the responsibility for the wise use of library property. If they have a competent librarian let them advise with him about matters pertaining to the library; I believe in that thoroughly. But, if they have a man or woman in charge of the library who is entirely incompetent, then it becomes their duty to get some one who is competent. A man in my office a few days ago, talking about a prominent library at the head of which is a very prominent man, said the librarian was simply an employee and asked what business he had representing the library; "the president of the board of trustees represents this library." He was an earnest, sincere man, but he actually believed that the librarian was rather impertinent to speak for the library. I said to him frankly that his attitude would be sure to ruin his library; that he was like a man with a spirited pair of horses and a coachman.

If the coachman is good for anything, of course, he will not sit still and let the man take the reins; if he is not competent and the horses are good for anything, they will run away with him, and that is what is apt to occur in a library. But, if you were out driving, as I have been in the last few days, with my little boy, and the horses became frightened, you would take hold of the reins and help him; I might do the same thing if a competent driver were on the box, but he might then get off and leave the whole thing to me.

It is not the function of the librarian to invest the funds and attend to financing, but in my conception it is a trustee's function to see that the library work is properly done, and if he does not do this it is an oversight on his part. We librarians would do well to put ourselves in the attitude of having accepted a trust, and if the trustees would meet with us and put themselves in our place, we should work together more and more in sympathy. It is not my experience that trustees who make trouble do it from any ill-will to the librarian; it is because they have not thought or studied their mutual relations; but of that enough has been said.

Two or three things occur to me as specially important. The modern church, you will find very often, has fifty or sixty distinct agencies in operation, social rooms, libraries, clubs, etc. The old high school was a place to hear a few recitations. Our modern school, in library facilities and educational methods, is far in advance of the college of a generation ago. There has been the same development in these as in our modern railways, wireless telegraphy, etc., and the library is going along with the rest. It is an age of electricity and of libraries. Libraries are as old as Hindu records, and there were books in those early days just as much as now. There were also electricity and steam; but the difference is that we have learned to use these forces, and the public is coming to understand them; and following it back we find that the printed page, which means the work of the library, is the thing which will influence men from the cradle to the grave. The world has come to understand that the whole system of education is in two distinct parts; school education, from kindergarten to university, is part; but there is another part, just as important, just as deserving, that is not for the young only, but for adults also, that is not in an insti-

tution but in the home. This, which we call "home education,"—a library,—is the second part, and those two things have to travel on together from this time on. That is the first fact for the library trustee to understand. The librarian or trustee who looks upon a library from the point of view of a generation ago, as simply a collection of books, isn't going to do the best kind of work till he gets a broader view.

As to the library staff, the trustees ought to come themselves and send their assistants to these meetings. That is what we have done in Albany. We find it pays to give our assistants the time to attend library meetings. Our observation proves it the best investment we can make. If I were running a library as a private institution, I would send my staff to this meeting every year. They do better work and it pays for the assistants all along the line. Dr. Canfield's last words to me were, "Emphasize that fact; that men won't do team work unless they have instruction," and if you can't make them do team work they are not good for much in this world. That is the kind of man that doesn't want a telephone, or any modern invention, he wants to go along in the same old way. Library work isn't done that way. We must get into full touch with all the world, and we want our trustees to come to all our meetings.

Just a word about salaries. When I was in Boston twenty-five years ago I could get graduates of Harvard college at three dollars a week, but if I wanted a boy out of the gutter I had to pay him six dollars a week, because he could get that in a factory or mill. The man who wanted to make a beginning in business would work for almost nothing to get into business. When a teacher comes out of the normal school with its training, she does not work for nothing; she gets in the beginning a higher salary because she is devoting her life to that work. In our state library school we are going to pick from the entire country the people that can do the best work. To enter they must have a high school education and must have a degree from registered college; *i.e.*, they must give eight years to secondary and college work and then two years to their technical work. It is absurd to suppose a person is going to spend ten years in preparation and then come back and accept the same pay as the boys and girls just coming from the high school. We

are doing a work essentially educational, for which we need intelligence and special training, and civil service boards ought to recognize these conditions. We send boys to West Point and Annapolis; we do it because we want the benefit of their training. To trustees I say, give a fair salary for what you are asking; and to librarians I say, don't expect to get as much pay as in any other business. We go into this work and we ought to accept a small salary, and we ought to distinguish between those who go into it temporarily and those who are taking it up as a life profession.

A great thing is to keep in mind all the modern demands on a library. In every community we have the school board, that is an established custom. We cannot get the best results unless the library business is kept distinct from the school business. A man that is in any kind of business and thinks some other business is better doesn't make much of a success, and the people we want on the library boards are the people that believe the library is more important than the school, more important, with a more lasting and longer influence over the whole community, therefore the public library should be the center of the educational life of the community, and the museum, art, history, and sciences naturally cluster around the library. It is the best place for them—not in the same room perhaps, but in the same building or adjoining, so that when people are working in the museum and want to refer to books they are at hand. Secondly for students, colleges, meetings on scientific subjects and other subjects they ought to go to the library as naturally as a home pigeon will fly back to its home. The library is the cornerstone of all this and trustees ought to recognize that. But libraries have other functions. Information is exceedingly important in an economic sense for reasons which can be demonstrated; it pays; but most important of all is inspiration. The public library should also be a source of amusement. We can give the public no amusement so wholesome as books. What can be a more legitimate expenditure of public money than to give to people so burdened down that they can hardly stagger another step, a book that takes them into another world? We librarians and you trustees together ought to see our work in the broadest way, and we ought to look forward, not back, and above all things lend a hand.

The report of the

COMMITTEE ON NOMINATIONS

was presented, submitting the names of the same officers as nominees for the ensuing year, viz., Deloraine P. Corey, chairman; Thomas L. Montgomery, secretary. The report was accepted and the officers named elected.

H. T. KELLY: Before we adjourn I would like to say a few words. While I have sat here for the last two and a half hours I have had forced upon me the change that has taken place in the Trustees' Section. Five or six years ago I was sent to one of these meetings by my board of trustees. I was then chairman of the board of trustees of the Toronto Public Library, and I must say I went home, if not discouraged, very much disappointed. I could not feel that I had brought home one solitary thing from the meetings of the Trustees' Section which I attended, and I had scarcely anything to report to my board. I never came to another meeting until now, because I thought it wasn't of any use. I have completely changed my views. Some one has expressed surprise that there are so few here. I was surprised that there were so many; and I can only say that if those who are surprised at the small attendance had been here four or five years ago they would regard this meeting with delight. You can much more easily get librarians and assistants to attend these meetings than you can get trustees. Trustees cannot come in so large a number: they are not so directly interested; but there should be some means of putting before them the information which has been derived from attending this meeting to-day. It is true it will be published in the official Proceedings of the A. L. A., but not many trustees receive that. Is it not possible to have the records of to-day's meeting, especially those two admirable papers which were read in the beginning, put before the trustees of the country in separate and convenient form?

The SECRETARY: I will bring the matter before the Executive Board. I have no doubt they will be glad to do so if they can afford it.

It was moved and seconded, That the Executive Board be requested to put the minutes of the meeting in separate form into the hands of the library trustees.

Voted.

Adjourned.

SECTION FOR CHILDREN'S LIBRARIANS.

THE Children's Librarians' Section of the American Library Association held two sessions during the Magnolia Conference. The chairman, Miss Annie Carroll Moore, presided, and in the absence of Miss Mary Dousman, Miss Clara W. Hunt acted as secretary *pro tem*.

FIRST SESSION.

The first session was held in the Oceanside Hotel Casino on Wednesday morning, June 18. The meeting was called to order at 9.45, and was opened by the reading of the secretary's report of last year's meeting, as given in the A. L. A. proceedings for 1901.

In the absence of Chesley R. Perry, chairman, J. C. Dana read the

REPORT OF COMMITTEE ON CO-OPERATIVE LIST OF BOOKS FOR CHILDREN.

To the Children's Librarians' Section of the American Library Association:

Your committee appointed at Waukesha in July, 1901, to take preliminary steps towards the production of a co-operative evaluated list of books for children beg leave to report progress.

One of the first things done was the appointment of Miss Linda A. Eastman, of the Cleveland Public Library, as editor, and thanks to her arduous and persevering labors, even through days and nights of illness, we are enabled to offer for consideration here at Magnolia a tentative list which may be said to be at least a step in the right direction. "The work of this year has of necessity been largely that of preliminary preparation." As the work of selection has progressed, the great need of a list of juvenile works made acceptable through co-operative methods of evaluation has been emphasized.

Ample funds for all expenses of the past year have been provided by the subscriptions of individuals and libraries. The amount on our subscription lists is \$85.50 and of this \$52.50 has been collected (collections have been made as follows: 4 of \$5, 1 of \$2.50, 7 of \$1, and 46 of 50 cents). Most of the balance will be collected when needed.

The expenditures have been:

By the chairman:

Postage and stationery.....	\$2 42	
Typewriting and mimeographing.....	1 00	
		\$3 42

By the editor:

Blanks and printing.....	\$9 00	
Postage and stationery	8 00	
Clerical work	5 00	
		22 00
		\$25 42

There is an unpaid printing bill of about \$15. This will leave a balance of \$12.08.

We recommend that a committee on this subject be appointed from the active members of this section and be instructed to report at the next annual meeting.

All of which is respectfully submitted.

CHESLEY R. PERRY,
J. C. DANA,
ELIZA G. BROWNING.

As the results of the work of the committee were to be presented at the second session by Miss Eastman, no action was taken.

The chairman appointed a

COMMITTEE OF NOMINATIONS

consisting of Miss Power, Miss Stanley, and Mrs. Maltby.

Miss GERTRUDE SACKETT read a paper on

HOME LIBRARIES AND READING CLUBS.

(See p. 72.)

Discussion of Miss Sackett's paper was opened by Charles W. Birtwell, originator of the home library system under the auspices of the Charity Organization Society of Boston.

Mr. BIRTWELL: Home libraries touch many sides of the lives of the poor. The subject is in competent hands with the librarians of the country. Charities and libraries are engaged in the same work. Both aim at the good of the people.

In Miss Sackett's admirable paper she referred to the source of the books. We do not rely upon people to give the books. We pur-

chase them — after critical reading from cover to cover by responsible readers. Of course we receive gifts, to which all libraries are subject! We received a donation of seventeen books lately, and one was admitted to the libraries.

Miss Sackett seemed to think the libraries applicable only to girls and younger boys. In Boston we have groups of boys sixteen, eighteen, and even nineteen years old. Once in a while a group will grow into a young men's club, and meet in a club room, and even then they may want the books in the club, — even if they do not read them so much, — from a sentimental attachment to the thing that first brought them together. Our use of young men as visitors aids in this direction. We have one home library of young married women. They have been members for a good many years. Of course they have had a faithful visitor. She still meets them once a week.

As to the sexes in the groups, it is unavoidable that some groups shall be made up only of boys or only of girls, but I confess I like a group to include both. Wholesome companionship of girls and boys, such as the little libraries offer, without special consciousness of sex, is a training in right ideas of sex and a protection against the perverted, ruinous notions that lack of such association fosters.

Among the many things Miss Sackett mentioned I noticed no mention of savings. We use the stamp savings method. The children buy stamps, with which they gradually cover specially designed cards. Then the stamps are redeemed and accounts opened by the children at the savings banks. Even parents buy these stamps, through the children, to save for various purposes.

An item that Miss Sackett mentioned is the visiting of the families of the children in the group. We urge the visitors to call once a month upon the families from which the children come to the library, in order to get better acquainted with the home life of each child.

I am very sorry that Miss Beale, our paid general visitor, is not here. She has shown enthusiasm and skill. Among other things she has been successful in finding volunteer visitors, which is one of the most difficult features of the work. We usually have from forty-five to fifty-five visitors. Their terms of service vary from a week to many years. We have losses through marriages, sudden departures

for Europe, and many queer reasons. We ask the visitors for reports each month. We do not invariably get them, but secure a fair number, and these furnish the staple of our monthly conferences. These reports range from a mere statement of the number of members, amount of savings, and similar items, to a full story of the month.

Just a word in addition in regard to one statement in Miss Sackett's paper — that the poor do not need merely relief for physical wants, but help toward higher ideals and standards of life. Of course the whole trend of charity is towards something deeper than relief. Degradation can only be done away with or prevented by measures that tend to tone up the whole life. The treasures you as librarians have in your custody are of great value to this end. To gather books, and books worth reading, and then to get those books read, is a high service to one's fellow-men. We want to see the librarians as keen to satisfy and even create the desire in men, women, and children for what books can give, as the saloon-keepers are to gratify and provoke thirst, or the newspapers to stimulate and cater to the craving for news. Now what we have to do is to work shrewdly, and try to get these books into the hands of the people, and I think, as Miss Sackett said, that the time to begin is when they are young. There are many who will stop reading, carried away by other excitements, but I can see even them, as they get on in life and sorrows come, returning to books again; and he who has never cared for reading is without that resource.

A motto which seems to me a fair one to propose for librarians is one that was given the other day at a hearing before the City Council of Boston, on a petition for an additional public playground, by Mr. Henry L. Higginson, who said, "Be bold, extravagant, and wise."

MISS SACKETT: I saw in Boston a group of Italian children who had, I think, been a library group for eight years, and the young lady in charge was one of the original group. Never for one year had the group been discontinued, and the books they were reading showed an intelligent appreciation of good literature that was most encouraging. When you spoke of older boys being in home groups, were they not boys who had begun young? Because with

older boys I have found it almost impossible to found groups in the home.

Mr. BIRTWELL: Miss Sackett is right. These groups of older boys were started when the boys were younger. A lady came to me who wanted to work among girls, wanted to devote herself to a club of girls sixteen or seventeen years old. I told her to form a group of ten-year old girls, and in six years she would have what she wanted.

Miss HEWINS: We have no home libraries, but for several years have had charge of a branch in a slum settlement. We began by letting all children of the street and neighborhood take books. We soon found that too many swarmed in, careless and unmanageable, and we now make it a very exclusive thing to belong to the library. The membership is limited to forty, and there are always several on the waiting list, and of those who came several years ago there are none who are taking books now, for as soon as we can we graduate them to the public library. All of the children who have a good record are allowed to take books from the public library, and if their record keeps good they may keep on or go back to the settlement. What Mr. Birtwell has said about visitors is exactly our experience. The children who came in several years ago are now our best workers.

Miss HALL: At the Brighton Branch of the Boston Public Library we have a club of boys and girls under sixteen years of age, called the Brighton Readers' Club, organized in 1900.

We proceed according to parliamentary rules, and hold formal meetings, with some interesting speaker from outside to address the club each month during the school year.

Magic lantern slides with views of foreign travel, readings from Seton Thompson's animal stories, and a talk on South America by a lady from Chili, have been some of the programs.

As a result, the children take a greater interest in the library. A direct outgrowth of the club has been recently noted. Twelve girls have collected fifty books, placed them in one of the girl's homes, and meet every Tuesday evening after school to read, talk over books, etc. They have numbered the books, pay dues of two cents a week to add to their collection,

and are now planning to have a fair to increase their present treasury fund of \$1.19.

This is a new phase of the home library, self-organized through direct stimulus from the Public Library.

Miss F. B. HAWLEY: Is there not difficulty in getting volunteer visitors, in that some people volunteer who are unfitted to do the work? And is it not difficult to refuse when people volunteer to do work for nothing? How are volunteers selected?

Mr. BIRTWELL: First of all be cautious about getting into trouble. Never advertise broadcast. I have been urged to, but have feared that newspaper advertisement would bring undesirable offers. If unsuitable people get enlisted, insistence on good work may eliminate them. If not, remember that the libraries are for the poor, not for the visitors, and do your duty.

A MEMBER: I have been in this work for the past ten years and our groups have always consisted of both boys and girls. We had originally ages from ten to fifteen years, and found the children agreed together very nicely. It takes some little tact to make a meeting pleasant for both boys and girls. I have thought it quite as important to train the children in good manners as in reading. One of the original boys is now a junior at Dartmouth College and when he comes home visits the group and makes it very interesting.

Miss HITCHLER: Do you ever follow up the visitor?

Miss SACKETT: Yes, indeed. That is an important part of the supervisors' work. I have many personal conversations with our visitors, as well as general monthly meetings, and every once in a while go to the different groups and participate in their good times. It is essential that a supervisor should thus know all the children and the manner in which each visitor is conducting the work intrusted to her.

A MEMBER: To what extent do you encourage games? We have found in Chicago that games take up a great deal of the time. When they have them the children do not care anything about the books.

Miss SACKETT: You cannot depend at first upon the children's interest in books. That interest develops gradually, much depending upon your own tact in presenting them. Af-

ternoons spent with books alone will soon cease to interest the children and you want the library hour to be one to which they look forward with happy anticipation. You must establish confidence in yourself—make them feel that you enjoy what they enjoy, and there is no better way than by heartily entering into the spirit of a good wholesome game. Having thus established yourself as one of themselves, their affection and trust gained, you can lead them gradually to other interests. Such games as "Twenty questions" not only develop the memory but arouse an interest in subjects which you can refer the children to the proper books to learn more about.

Mr. BIRTWELL: The oversight of the visitors is an extremely important point in the management of the libraries, and Pittsburgh is fortunate in having Miss Sackett's whole time devoted to home libraries. In Boston we now have 60 active libraries. It is our hope to engage a second paid general visitor and increase the libraries to 100, and then assign only 50 to each general visitor. Experience seems to indicate that one competent person can stand back of not more than 50 libraries; in some cases even less than that number. There is infinite detail in really successful work. We must try to strike deeper and deeper into the life of the children—to touch them in a greater variety of ways. More and more we are trying to get the visitors to come to us at our office and discuss individual children, their future, their situation, what may be done for them. We have a meeting of the volunteer visitors once a month, and once a year or so we gather the members of the libraries together and have a general entertainment. Every spring we have two flower sales, one at the North end and one at the South end a week later, and in the fall all children who can bring live flowers bought in the spring are invited to a little festival and collation.

The discussion was characterized by marked interest in the subject, by an intelligent appreciation of the chief difficulties in Home Library work, and by a readiness to share experiences which it is impossible to reproduce in a printed report. During a short intermission Miss Sackett's display of street literature was examined, the tentative fiction lists were distributed, and an opportunity was given to all who

did not care to remain through the Round Table discussion to withdraw from the room.
The

ROUND TABLE DISCUSSION ON CLASSIFICATION AND CATALOGING OF CHILDREN'S BOOKS

was opened by a communication from Mr. BRETT, who stated that the Cleveland Public Library and the Carnegie Library of Pittsburgh have planned to collaborate in printing cards for a dictionary catalog of juvenile books, with simplified subject headings, the cataloging being done in Cleveland and the printing in Pittsburgh. These libraries find it desirable to supply each of their branches with a catalog of this sort, and believe the plan of co-operation to be practical. It has been suggested that other libraries may be glad to secure sets of these cards. The greater part of the juvenile collection of the Cleveland Public Library has been very fully cataloged within the past two years, and considerable study has been given to the question of simplified subject headings. Library School rules are followed as to form. Subject fullness of names is given, and no imprint except the copyright date on the author card. A. L. A. subject headings have been used, except where it has seemed wise to simplify. Such variations have been adopted as: "Airships," "balloons," for "Aerial navigation;" "Drinks" for "Beverages," "Housekeeping" for "Domestic economy," "Manners" for "Etiquette," etc. Additional headings have been used, such as specific names for flowers, trees, birds, etc., names of holidays, names of common articles and of ethical qualities.

The aim has been to bring out all material which may be of service to children or teachers, and analyticals have been made very freely. In all cases where a simplified subject heading is used, the A. L. A. heading follows in parenthesis, and cross references are made.

Cost of the cards will depend partly on the subscriptions received, and will probably not be over one cent per card, provided 50 sets are subscribed for. The charge includes only the cost of the additional work required, for the two co-operating libraries bear all cost of composition and getting ready. Subject cards are not duplicates of author cards, which increases the cost somewhat.

The catalog will be enlarged by adding all

books contained in the Carnegie Library children's collection not already cataloged for the Cleveland library, and will be kept up to date by cataloging the important children's books of each year.

It is intended to prepare a list of 1,000 volumes which are considered valuable in the two co-operating libraries, and are believed to be in use and approved by most of the libraries in the country. Copies of this list, when ready, will be sent to all applying for them. Cards will be printed for books in the list first, and subscriptions will be received only for entire sets of the cards for these books. Subscriptions may be extended to include the cards for the entire collection, and all subsequent additions, at cost; but if the number of subscriptions drop off after the completion of the first lot of one thousand, the cost per card will be somewhat increased.

Applications for the list of books, or for sample cards, and all subscriptions for cards, should be addressed to Edwin H. Anderson, Librarian Carnegie Library, Pittsburgh Pa.

Samples of the cards were distributed.

G. M. JONES: I think it is a great mistake to adopt subject headings for a children's catalog different from the subject headings in the adult catalog. I do not especially champion the headings in the A. L. A., but think in the same library the same headings should be used for all departments. I have had no experience in children's rooms, but in theorizing upon the subject have thought the difficulty would be in changing from one subject to another. Children soon learn the heading to be looked for to find works on a special subject.

Miss TITCOMB: We have no special children's catalog, but use cards of a different color for children's books. The books for the youngest children are on yellow cards, and for children from 12 to 18 years on blue cards. The children like to pick out the colored cards and if they can find one on a book on meteorology there is not the slightest difficulty in their learning to use the catalog retaining the same subject headings. It has occurred to me that in printing the cards of Mr. Brett's catalog for use in libraries where they are to be used with the main catalog it might be a good scheme to print on a card of some distinctive color.

Miss OLCOTT: Mr. Jones' argument seems to me to be in favor of more simplified headings

for the adult catalog. If we simplify these our catalog will be more useful both for adults and for children. A children's catalog is more of an index than a catalog and so it is better not to use Latin words for the ordinary subjects children ask for.

Mr. ANDERSON: Colored cards will be a physical impossibility in our scheme. Of course the expense would be very much less if it was not that we are printing subject headings on the cards. It will not be necessary to write in subject headings.

Miss CLARA HUNT then gave a summary of her paper on the "Classification of children's story books," printed in *Library Journal*, February, 1902, which was followed by a brief discussion. The necessity for adjournment cut short the discussion, which it is hoped may be taken up more fully at a future session.

SECOND SESSION.

The second session of the Section was held in the Oceanside Hotel Casino, on the afternoon of Thursday, June 19. It was devoted to the subject of evaluation of children's books from three standpoints: from the point of view of the literary critic and the student of children's literature, in a paper by Mr. Charles Welsh; from the point of view of the children themselves, in Miss Hewins' report on a list of children's books annotated by the children's comments; and from the point of view of children's librarians, in Miss Eastman's report on the list of juvenile fiction.

CHARLES WELSH read a paper on

THE EVALUATION OF CHILDREN'S BOOKS FROM THE POINT OF VIEW OF THE HISTORY OF LITERATURE FOR CHILDREN.

(See p. 76.)

Miss CAROLINE M. HEWINS presented the

REPORT ON THE LIST OF CHILDREN'S BOOKS WITH CHILDREN'S ANNOTATIONS.

(See p. 79.)

In response to a call for a rising vote of those who would be sufficiently interested to send children's comments to Miss Hewins during the next six months, about 40 rose.

Mr. WELSH made a brief statement of his experience in England 25 years ago in endeavoring to secure spontaneous comments from boys

and girls with regard to the books they were reading. The experiment was based upon questionnaire which were sent to a number of English schools. Comparatively few of the answers accurately reflected the child's own impression. In Mr. Welsh's opinion written questions would always be unsuccessful. He considered the most valuable data was to be obtained from the verbal expression rendered offhand by the children when selecting their books.

Miss LINDA EASTMAN presented the

REPORT OF EDITOR OF CO-OPERATIVE LIST OF JUVENILE FICTION.

It was recommended at the meeting of the American Library Association last July that a co-operative list of juvenile literature be made by the children's librarians and others interested in the work with the children. The list was to represent the combined judgment of those who know the books both from actual reading and from use of them with the children, as to their literary merit, moral tone, and interest for children.

It was decided that it would be best to begin with the juvenile fiction, and as the opinions were all to be based on personal knowledge, to make up the first preliminary lists with those titles already best known to the largest number. With this in view, three sets of blanks were prepared, which read as follows:

RECOMMENDED.

The books listed below are among those which, from knowledge based on actual reading of them, as well as observation of children's reading, I should most unhesitatingly recommend for a small selected list of the best juvenile fiction.

Signature _____

Address _____

NOT RECOMMENDED.

Some of the books which should be excluded from a carefully selected list of juvenile fiction.

Signature _____

Address _____

DEBATABLE.

The following are books which seem to me to be of doubtful value, and about which I shall be glad to have the opinion of children's librarians in general.

Signature _____

Address _____

These blanks were sent out to about 175 libraries with the request that they be filled out by the children's librarian or whoever in the library was best informed on the children's books. An endeavor was made to reach those libraries most actively interested in this work; as no accurate data for making it complete could be found, the mailing list must necessarily have contained some omissions which it is hoped will be rectified in the continuation of the work. About 100 of the blanks were returned with lists, and in many cases where no lists were sent a regret at being unable to co-operate was accompanied by an expression of interest in the work.

The returns, when tabulated, showed nearly 1,000 titles. Of these about 200 were discarded, being non-fiction and adult fiction uninteresting to children. Many books recommended by some were considered doubtful or objectionable by others, and the lists, when reduced to those titles upon which there was substantial agreement of recommendation or disapproval yielded 277 titles recommended, and in the "not recommended" list 42 entries, eight of which were authors whose works were all included, the remainder being individual titles. These lists were printed and sent out for careful criticism to all who had made the first returns. On the first of June the final returns were tabulated, and the results of the recommendation after all books objected to were eliminated is given in section 1 of the printed list.*

There has been evident on the part of some contributors an extreme caution in the recommendations which, while counteracting any tendency toward carelessness on the part of others, has also limited their helpfulness. Many books were recommended as good books simply because they were not bad, because they contained nothing which could be objected to, while in fact they do not contain anything in particular of which to approve. This first list of 100 books I believe still contains some books whose interest is not great enough to warrant their being given a place in a small selected list of the best stories.

Opinions on the "not recommended" list were much more nearly unanimous.

* The printed list was distributed among those present at the meeting.

There were next selected from the debatable list those titles on which the majority of those who reported were agreed as to recommending or excluding, and these lists were sent out on May 29 preparatory to any discussion at this meeting. All remaining titles on the debatable list upon which reports had been at all general are included in the sections 4, 6, and 8.

As the list was to represent a consensus of opinion, the editor's work to this point has necessarily consisted entirely of collecting and submitting those opinions. In the course of the work, however, certain facts have become apparent which should now be formulated into statements.

First, and of utmost importance and promise in its bearing upon the project of an evaluated list of juvenile literature, is the very serious interest manifested by all concerned; meagre as are the results of this first year's work, the vital importance of putting good books into the hands of our children is so fully recognized that the obstacles in the way of more rapid progress on the work must be overcome.

Chief of these obstacles is the lack of any uniform standards of judgment on the part of those co-operating. As such standards can only be established by a comparison of opinions, the work of this year has of necessity been largely that of preliminary preparation. There are many books on which individual opinions will always differ hopelessly, and it is probable that the debatable list will remain a long one; but the lists on which all are agreed, which represent a consensus of opinion based on actual knowledge, — these lists, even though they be short, will furnish safe standards by which other books can be judged, and will be of the greatest help to the younger assistants who are specializing in the children's work. This function of the co-operative list, as the means of establishing uniform standards for the evaluation of the juvenile books, is, to the mind of the editor, by far its most important one. Good lists of juvenile books already exist, and the good judgment of the compilers of these lists must bear great weight in any co-operative work, but in the co-operative work the comparison of opinions should be helpful to others in forming their own opinion and establishing principles for their guidance. It is with this in mind that the recommendation

is made that the list submitted be held over in tentative form during the coming year, with a final revision in time for a report at the next annual meeting, and that some discussion be given here as to what, in reality, constitutes a good juvenile story, and what are the elements which should be considered in juvenile fiction, using the books in the list in illustration.

One other recommendation seems in place here. It will be some time before anything approaching an exhaustive evaluated list of juvenile fiction can be completed.

The new books are the ones which are most difficult to select. Cannot a practical plan be devised for co-operation in the evaluation of the current books? The strong arguments which have been brought forward during the year against the purchase of ephemeral fiction apply with even greater force to juvenile fiction: it would seem to be an easy matter to at least decide that no juvenile fiction should be duplicated for our libraries until it had been read and reported on somewhat generally by a reading committee of children's librarians. The need of such co-operative work is keenly felt by most of them, and there seems to be no serious obstacle in the way of its accomplishment.

It was *Voted*, That the report of the committee on the list of juvenile fiction as submitted by Mr. Dana at the first session, together with Miss Eastman's report, be accepted, and that the thanks and appreciation of the Children's Librarians' Section be extended to the committee and especially to Miss Eastman for the painstaking and arduous work expended in the preparation of this tentative list.

A committee of children's librarians consisting of Miss Hunt, Miss Power, and Mrs. Maltby was then appointed to continue the work upon the fiction list during the coming year. Mr. Dana recommended that the Library Department of the National Educational Association be informed of this work, as it was exactly the sort of undertaking to interest the school people of the country, and it might be possible to secure welcome support in its execution.

MISS OLCOTT: Did the committee decide upon the number of titles to be included in this list?

MISS EASTMAN: No: it would be a good thing for the incoming committee to decide upon the length of the list; it should be a short one.

Mr. WELLMAN: I should advise making the list with simple annotation, getting it up so that any library could buy it cheaply, keeping it fresh, up to date, and choosing good editions. It ought to be a great saving of time and expense in many libraries.

Mr. ELMENDORF: Lists of any kind seem to me almost worthless for children's use. They want the books themselves on open shelves. Lists are useful to teachers and librarians, but it is preferable for children to learn to use the card catalog.

The rest of the meeting was devoted to discussing the merits and defects of some of the books on the "debatable" list, which was generally conceded to be made up of more interesting books than those on the "approved" list. The "Rollo" books, the "Katy" books, the "Peterkin papers" were restored to favor. It was suggested that the children's librarians, like the children in making comments, may have been self-conscious in making up the estimates from which their list was compiled, although as it stands the list represents the opinion of many who are not children's librarians. Miss Hunt, on behalf of the committee, asked to have the lists checked up after thoughtful consideration and mailed to her, in order to give the committee a broader basis on which to continue their work during the coming year. In closing the discussion, the chairman called attention to the danger of allowing good books to drop out of lists through a lack of personal recommendation on the part of the children's librarian. Children need to be introduced to a great many books, and the introduction must be made by the children's librarian, who should be mindful of the needs as well as of the desires of the children.

At the close of the second session a business meeting of the active members of the Section was held.

BASIS OF SECTION MEMBERSHIP

was defined as follows:

Active members shall consist of children's librarians and those library assistants whose entire time is given to work with children in libraries and schools.

Associate members shall consist of: 1. Assistants, a part of whose time is given to work with children in libraries and schools. 2. Librarians and others who wish to identify themselves with the work of children's librarians.

READING FOR THE YOUNG.

A recommendation made by Mr. Fletcher in the report of the Publishing Board was brought to the attention of the Section. Mr. Fletcher stated that the Sargent list of "Reading for the young" was now out of print, and recommended that the work of preparing a new list be presented to the children's librarians.

It was *Voted*, That the Section undertake the preparation of such a list, and that the selection of the books be determined by a committee to be appointed by the chair and announced at her convenience. It was recommended that a strong effort be made to get a sufficient amount of work done on this list to make it available for use in the juvenile part of the "A. L. A. catalog" for 1904.

It was decided to refer all business arising in the formal sessions of the Section to meetings of the active members, in order to conserve time for the discussion of subjects noted on the program. The

COMMITTEE ON NOMINATIONS

reported the following names: chairman, Frances Jenkins Olcott; secretary, Alice D. Jordan. Miss Olcott declined to accept the nomination, on the score of the very exacting demands of her own work during the coming year. The committee presented for alternate Miss Mary E. Dousman, of Milwaukee. The officers were elected by unanimous vote.

The Section is now fairly organized by virtue of the special section registration effected at this meeting. Twenty active members and 120 associate members were registered.

It is highly important that all children's librarians should be registered in the Section as soon as possible, in order to increase the effectiveness of the section work. Names for membership may be sent to Miss Alice Jordan, Boston Public Library.

STATE LIBRARY COMMISSIONS ROUND TABLE.

A "ROUND TABLE" meeting for the discussion of the work of State Library Commissions was held in the parlor of the Hotel Hesperus on the evening of Thursday, June 19. Melvil Dewey acted as chairman, and after opening the meeting called upon JOHNSON BRIGHAM to speak on

THE CAMPAIGN OF EDUCATION BY THE STATE LIBRARY COMMISSIONS.

JOHNSON BRIGHAM: Having watched the trend of legislation and been associated with legislators in both the East and the West, I have come to the conclusion that legislators are the same everywhere: well disposed toward libraries, but not intensely in earnest in their support; willing to vote appropriations for library commission work — provided always that there is likely to be any money left, after appropriations are made for state fair pavilions, for new buildings and additions for penal and charitable institutions, for new public buildings, and the improvement and decoration of the old, and for the support of various other commissions, from those of inquiry into financial and social conditions down to those which regulate the barber's profession.

The campaign of education must be carried up from the kindergarten, through the schools and colleges, out among the masses into the farmers' institutes and granges, the labor unions, the practically religious organizations that are giving daily demonstration of the large amount of Christian work left undone by the churches, into the women's clubs — that yet unmeasured social force for good in our community life — and lastly — but far from least — into the state legislature — whence comes the means whereby commissions live and work and grow in their capacity for public service.

The chief obstacles in the way of success in legislation are lack of knowledge and consequent lack of interest, or almost equally disheartening, misdirected effort to serve.

The shortness of the average legislative career suggests to the earnest worker for results the necessity of a radical modification of the

general campaign when legislation is the end to be attained.

Like Grant at Donelson, the lobbyist for library legislation must move on the enemy's works at once, and the move should be on the weakest point in the defence. What is that weakest point? Fortunately for this outline of tactics, it is the same everywhere — the individual legislator's dependence on popularity at home, and consequent sensitiveness to local "influence."

The campaigner must not neglect the use of any of the usual means.

He must select the right man in the Senate, and in the House, to father his measure, and he would do well to select one of the two who will be satisfied with nothing more than results.

Our lobbyist must see that an early hearing is given his cause by the committee, or far better, by a joint meeting of the Senate and House committee to which his measure is referred, and the presentation of the case should be brief and pointed, and well backed up by a presentation of facts and conditions warranting the legislation prayed for. A few representative women and men as backing, with the best talker in the State Federation of Women's Clubs to deliver your peroration for you, are aids not to be disregarded.

But the real campaign is not there. One strong letter from an influential citizen causes the indifferent legislator to look around and make inquiries. A dozen urgent letters arouse interest. Forty or fifty letters will cause the once indifferent legislator to wonder how anybody can be indifferent to a cause so noble!

If doubt still remain as to success, there yet remain the visiting delegations. A series of cards sent in to the senator, or representative, followed by an earnest inquiry after the measure, with an incidental reference to the local importance of the bill and a direct appeal for increased activity, coupled with assurances of the gratitude with which everybody at home will regard his efforts, — all the purely legitimate means to the accomplishment of desirable ends are reasonably sure of success.

But the campaign of education when carried into legislation should take a wider range than an attack upon the public treasury. We should not be satisfied with a clever vote, nor with a vote prompted by desire to win popularity at home. Our best results will come when we can acquaint our legislators with the real quality and value of the work we are doing, and what it means to the state at large, and to their own community.

The CHAIRMAN: We will ask Miss Hoagland to speak to us on this subject.

Miss MERICA HOAGLAND: What I have to say seems to group itself naturally into the "Who, when, what" order.

Whom shall we educate in this campaign? First, begin with the individual. We have found in our state work that it is better to interest, first the individual in any given town and from this individual, go to a little larger circle and from that circle to a mass meeting of the people. How shall we educate the individual? This is a matter, of course, of entirely personal arrangement, for we can interest the individual in various ways. Do not wait for formal occasions. It has seemed to me that the best results come in a by-the-wayside talk. We may meet some one and ask "Have you a public library in your city, and if not, why not?" In that way we may start the interest of the individual; which will likely lead to correspondence and possibly to an invitation for the organizer or a member of the state commission to visit a particular locality. Working from that individual, we can soon work through a larger circle and then again through the mass meeting.

I think that three visits to a community desiring to be interested in the organization of public libraries, are quite necessary. These three visits may have to be compressed into one day. I think the following should be the order of the three talks that should be made: first, to the individual, then to the larger concourse of people, then to the citizens. Beginning with the individual, one may soon learn the local conditions, but we should not attempt any work in educating people until we have ascertained exactly what these are. The local conditions in one place may not be the same as in others. We have to fit the kind of education to be given to the need. What will be best for

a small country community will not answer, of course, for a larger city population.

Working out from the few into the mass is a very interesting process, and I think no better illustration can be given than in the matter of the town of Greensburg, Indiana, which was mentioned this morning in the list of gifts from Mr. Carnegie. The first visit was to render assistance to the librarian of a school library. There I talked to the superintendent of schools as to the desirability of a public library in that place. He expressed an interest in the matter, and the cause was further advanced by a visit to two or three of the interested citizens. Then I was asked to give advice concerning the laws of Indiana under which a library could be organized in that place. That first visit I counted the visit to the individual. Then came the visit which was to be made to the larger group, and to the mass. In the meantime Mr. Carnegie generously donated \$15,000 to Greensburg. The mayor's meeting and the meeting which had been called by the women's clubs were merged into one and I expounded the library laws as best I could. Finally the council threw the responsibility of establishing a library in that place upon the people, and by popular election the matter was to be decided. Then the library committee telephoned into the state commission's office and asked me to come and talk to the people of Greensburg as to the desirability and value of a public library. That done, the election was carried.

When shall we educate? At opportune times. I have found that the pressing of the matter of the value of a library at inconvenient times has worked a very disastrous result to the project. You go into the office of a busy man and find him engaged in such a manner that he cannot possibly pay attention to you, and it is not a satisfactory visit either to you or to him. It has seemed to me that the evening is the better time to arouse interest. It finds people more at their leisure; they are through with their day's occupations; their evening meal has been finished, and they are ready for what may be presented. It is not, however, always possible or desirable to arrange an evening meeting. The Farmer's Institutes are the very best sort of places under "when." In the Farmer's Institutes we can interest the farmers and the rural districts in the matter of

travelling libraries — and the travelling libraries are only a make-shift toward the establishment of more permanent libraries. Through the Teacher's Institutes very good results may be obtained, and also at the State Teachers' Associations. Talks to the students in colleges and in the normal schools, addresses to the women's clubs, in local or state meetings, — all of these are agencies through which we can arouse and interest the public.

Of *what* shall this education consist? Why does the state educate its children? Because their ignorance would put the state in jeopardy. That, it seems to me, was the keynote of the discussion introduced by Dr. Canfield last evening, and I believe it should be the basis of what we have to say in this matter of the education of the public in regard to public libraries. They are a part of the educational system of our state. We must lay that down as an underlying principle, else I think the library system as a system will surely fail. I think it has been the cause of failure in preceding movements of many of our states that libraries have not been placed upon educational bases.

This education must also carry with it some indication of what our state library commissions and our state library associations are doing for the people of the several states. I find in going through our state that there are many of the communities not even aware that we have a Public Library Commission or how long we have had one, or for what the Public Library Commission was created.

Then, in telling what the organization and reorganization of public libraries really means, emphasis must be placed on library training. That is one of the points that we must bring forward if we would educate the people to the highest appreciation of a public library. In the past all that has been thought necessary has been to have a custodian in charge of the public library. To deal out books over a counter has been the one function for which the librarian or custodian was appointed, but now through our regular library schools and through our summer library training schools we must show to the people what that training means. I believe that not until our librarians can so relate the libraries to their respective communities that they can see the value of them can we attain the best end and enlist the interest of the people.

As to the results, it seems to me that we are all too anxious for the results. I believe that our work well done should rest just there. I believe the results are the responsibility of the others. The very anxiety which sometimes comes to workers in this general field of library labor I think hampers their future usefulness and wears them out. I believe that, having done the best we can with this work, the responsibility for the results should not be ours, but if we would educate the people ten years from now, let us begin now.

The CHAIRMAN: The topic is now open for discussion.

F. A. HUTCHINS: I recognize there are differences in conditions, but I think we very often cheapen library work by arguing too much for it. You know the story of a little boy who went to school and returned in a disgusted frame of mind. They asked him what he had learned and he said, "The teacher taught me what I always knew before." If you want people to work for you and with you in philanthropic work, assume their interest. That is often the quickest way to get it. In this matter of getting libraries for small communities I find too little said about interesting business men. I would rather spend my time with the one man who influences a hundred men than to keep running round after the hundred. I have stopped going first to address mass meetings in small communities. Let the mass meeting come later. Get your business men together. The business men do not come to the mass meetings; they leave it to the women. The women want to raise a library by ten-cent shows, and they frequently raise a ten-cent library. Get the business men together and say to them: "Such and such communities the same size as yours have good libraries. Those communities raised \$2,000 each; surely you have as much public spirit." I went once to a little community which was trying to raise \$100 and had asked me to help them. I went to see a business man, a banker, who said: "Oh, we have tried libraries; we have had a number of them; I have lost my interest; we raised \$100 for one." I said: "I don't wonder you lost your interest. I don't want that kind of a library." Finally he said: "If they want to raise \$100 I will give \$5." I told him: "Mr. Smith, there is a train that leaves here in half an hour. If you will give

\$100 I will stay, if you won't I will take that train." The result was that the business men raised \$1,900 and another man gave them \$6,000, just because they were so much interested. We cheapen library work by assuming that we need to argue its advantages in this day and generation, and we cheapen it by assuming that a good library in a community can be started by a little enthusiasm, a few old books, and almost no money.

JOHN THOMSON: I want to endorse Mr. Hutchins' remarks. You cannot do anything without finances. Do not ask for the minimum, but ask for large subscriptions. Take your hat in your hand and do not argue, but say: "This is a good thing. I know that you believe it is a good thing. Please help us," and I believe the work will prosper and prosper speedily.

MISS HOAGLAND: Do you not think it a very good thing to have systematic visits from the library commission? For instance, our State Superintendent of Public Instruction is supposed to visit all the ninety-two counties in Indiana in two years. If the Public Library Commission could cover the ground in the same way, there would be a sort of a campaign of education.

THE CHAIRMAN: I do not believe the work can ever be done satisfactorily in any other way. You cannot do by correspondence or by print what you can do by personal contact, and when the work is organized in any state it soon demands the travelling librarian even more than the travelling library, putting him into personal contact with those communities. We are following exactly the experience of the schools. The School Commissioner and the State Superintendent and the Institute Conductor—those classes of people must be duplicated for the libraries and they must systematically cover the whole state.

The chairman announced the appointment of

COMMITTEE ON NOMINATIONS

consisting of Mr. Hutchins, Miss Hoagland, and Miss Hewins.

Miss SHARP was called upon to speak on

SPECIAL LIBRARY TRAINING FOR STATE COMMISSION LIBRARY ORGANIZERS.

Miss SHARP: I can say nothing practical, because so far as the Illinois State Library

School is concerned we have as yet no state commission; but I believe that there is great need for special training in the schools. It seems to me that the New York State Library School is peculiarly fitted to give those special courses.

Miss AHERN: I would like to ask for a little information as to just what such a course as that would cover. It seems to me that the personal element is so large a factor with the people who are going to take up organizing work that I do not quite see how you are going to teach the art of successful organizing in your library school. How would you go about training organizers for a library commission?

THE CHAIRMAN: First, catch your hare. Get only those who have executive qualifications and take up with them all the questions of inspection, preparation of reports and returns, supervision of lists of books, help in regard to buildings, stimulation of interest, raising of funds, etc. Instead of studying cataloging and classification, study the work that has to be done by inspectors and commissions. The advantage in Albany is, of course, that our students can be studying our state system in actual operation.

We should discourage any one taking up the course who did not give some evidence of special fitness. Otherwise the requirements are those which are usually required for admission to the school—graduation from a college recognized as maintaining a high standard. We take that as a basis. In some cases we should be more inclined to encourage a man who had had successful educational experience or had done executive work elsewhere. His greater maturity and experience would be of advantage in that case.

Mr. BRIGHAM: An important feature of this work would be the study of library architecture. Most of our architects have had confronting them the last year or two the fact that there is something more needed for library purposes than simply the drawing of a pretty building. The library schools should train people so that they can instruct architects in the proper working of libraries and can intelligently insist on having things right instead of having things wrong. Some of Mr. Carnegie's gifts to our state have been neutralized in part by the failure of architects to

appreciate that the interior arrangements are the things needed.

Miss FRANCES B. HAWLEY: In the case of one who has not had some actual experience in library work, would not the trustees of libraries to be organized feel that they were being experimented upon, if their organizer was simply a person of college education and special training without any actual experience, without having tried certain methods in certain places and found them unsuccessful, and other methods in other places and found them successful?

Miss AHERN: I do not believe you ought to take college graduates for that course; it ought to be limited to people who have tested in the actual field of work not only their own ability, but the wants and wishes of the people. If there is any criticism to be made on the library school people it is that they do not know people as well as they know books. If they are to deal with people primarily they ought to have a wider knowledge of human nature than the college graduate possesses, even a Ph. D. with a library school diploma in his hand. I think you would do well not to let that kind of people go into that work until they have had some actual experience in actual library work.

The CHAIRMAN: Go back to your school parallel again. If a man has taken a course for a superintendent's position he does not expect to go out as a superintendent at once. He expects to teach for a time. If you take a college education as the general basis, then a library school course of two years, then from two to five years of successful experience in a library, you will get good material for this special course for supervisory work.

Let us now take up the general subject of the education of librarians, assistants, and trustees by round tables, institutes, etc. We all understand the work of the library schools and of the summer schools. Now it is a serious problem for those of us who are engaged in the state library work to what extent we are to encourage the formation of library schools. There is need for more workers than can be supplied by the well equipped schools.

We cannot get enough people who will take the full college course and full library school training to do all the work that is to be done in our libraries. We must either have it done

by people who have no training, or else by those who can take only superficial training. We constantly receive propositions to establish small schools or training classes at a good many points, but at no single place is there any provision for a faculty. Now, to what extent shall we encourage the formation of weak schools because we have no others? To go back to the school system again, is not a poor normal school or training class better than none at all?

Miss HOAGLAND: We have to meet the condition as we find it, not as we would have it. In the work in our own state we feel that we must raise the standard of librarianship in the small libraries, and that such training as we can give in the short course is better than no training at all.

The CHAIRMAN: Another question that we ought to consider is: Shall we multiply schools or shall we increase the numbers in the existing schools? My own impression is that we would get better results to concentrate on a few points and build up larger schools with better facilities, making them in every way stronger. But there is a certain amount of state prejudice. The same thing crops out in other ways. Let one state make a list of books and an adjoining state is prone to do that same work, and perhaps not do it half as well, so as to have their own list. There is a kind of state pride that prevents some states utilizing the work done by other states.

Miss AHERN: Why not ask for state normal schools for training librarians?

The CHAIRMAN: That is what we have in New York. The state library school is a state normal for librarians.

Miss AHERN: I mean branches of that in various localities.

The CHAIRMAN: Branches of the normal school?

Miss AHERN: Instead of two years in Albany, have one year in separate localities.

The CHAIRMAN: Do you mean to have it connected with the normal school or only on the same standing with the normal school?

Miss AHERN: On the same standing.

The CHAIRMAN: I think we all agree that we should keep the library movement distinct from the school movement, but this is a suggestion that the state establish in different parts of the state these normal library schools,

just as there are in this state eight or ten normal schools now, and we have thirteen in the state of New York. I do not believe that is wise. When transportation was so expensive you could do it, you could carry your school to the people; but now that travel is so cheap and so quick you can get great deal better results to concentrate—that is, you can more easily bring your students to the strong central school than to divide them up among many weak schools.

Miss HAZELTINE: I wish to say a word about the summer school last summer at Chautauqua. We tried the experiment of starting a summer school for six weeks, to carry out the idea that Miss Hoagland has already brought out, that the object is not to create new conditions, but to help those that already exist. My heart goes out to the librarian of the smaller library, because I am one myself, and I know all about the difficulties of the work in the small libraries, where one is away from other libraries, without any one in the town who has any inspiration or desire to help, where you must do all the technical work yourself, give out the books yourself, do the reference work yourself,—in fact, you must move the whole institution and introduce it to the town. There are many working in that way throughout New York State, as there are in every state in the Union.

We were much pleased with the result of the school last year. It was the first year that a summer school was conducted at Chautauqua. We thought that if twelve pupils came we would have a large school for the first year, but we had forty-one, representing twenty states. They came from Texas, Florida, Colorado, Idaho, Nebraska, and Montana, besides Massachusetts and Connecticut and New Jersey and Delaware and the South. We taught as much cataloging and classification as we could in the time given, and shelf listing and accession work and reference work as we could, and we gave as much help and inspiration to these pupils as we could. We had librarians come from a distance—Mr. Dewey, Mr. Peck, Mr. Elmendorf, and several others. Those forty-one pupils went home with a new inspiration. I have had letters from them all the year. The keynote of our school was not to take those who had never studied library work. Our requirement was a high school education or an equivalent, and some experi-

ence in library work, in order that the work could be established on a high basis at once. It may be interesting to you to know that one of the pupils was an attendant at the first American Library Association in 1876 and a subscriber to the first year of the *Library Journal*. I had a most appreciative letter from him a few weeks ago saying that besides carrying on the full work of a teacher in a school near Philadelphia he was also expected to be the librarian, and he had reclassified the library, had made an accession book and a shelf list, and he was engaged in making a card catalog.

That is the work we are endeavoring to do in the summer schools—to help those who cannot take the time to take a year's course or a two years' course, but can be aided by a six weeks' course to get an idea of what modern library work is and to get inspiration for the work. Possibly, as the years go by, we may have a second six weeks' course. Our clergyman at home, who is a rather noted minister, spent six or eight weeks last year at Cambridge studying in the summer school. He said he was in a small place and therefore he must have some inspiration from the professors in Harvard. If eminent divines can go to summer schools in this country or in Europe, why should not the librarians of the smaller libraries, who need help and inspiration, do the same?

Miss SHARP: I should like to call attention to a new feature in the work of the Wisconsin Summer School which seems to me admirable, and that is the giving of supplementary courses. They started with a general outline course, but this year the Wisconsin Summer School is to give a supplementary course on the special subject of public documents. The Iowa Summer School is to give a supplementary course on the special study of children's work. I know the purpose of those two summer schools is to continue this plan with the hope of bringing back their students so that none of them will be in danger of thinking that he or she has had a complete course in six weeks. It is to keep hold of the students and encourage them to read and study during the year, and then to come back each year for some special subject which will be given. It seems to me a decidedly new feature of the summer school work—one which leads me to believe in them very much more strongly than I used to.

Mr. EASTMAN: I wish Miss Hazeltine would tell us about the library institute she conducted at Olean.

Miss HAZELTINE: Where shall I begin—there is so much of it? In all the institutes held in the state we had two study sessions and one session for inspiration where we endeavored to reach the town people. At Olean, in the sessions of which I had the honor and pleasure of being the conductor, we met in the afternoon with an audience of about thirty-five, representing twenty small libraries in four western counties called the "benighted district" of New York State. We met in the reference room of the town library in the midst of books, so that was the first point in our favor,—we had the influence of books about us on the shelves. We carried out the program just as it was laid down, that the students might know what was expected of them. We began with laying down some principles as to the collection of books. It was astonishing to see how those people who had come together for the first time, not knowing each other, were willing, after an introductory talk, to ask questions, because things were said and principles laid down that had never entered their minds before. They had never thought that there was an underlying principle in the selection of books—that they need not select books from the advertisements they saw in the papers, or from what people said about them. They learned that there was a difference in editions, that they could buy fifty books with fifty dollars instead of twenty-five books, if they bought the cheaper editions. They thought they must order through a book agent,—none of them had any local bookstores,—but we showed them that they need not buy of every agent that came along. We discussed the technical construction of the accession book, which is required in every New York library that receives money. We gave them a new idea about the accession book, showing them that it is the basis of insurance. Most of them had their libraries in poorly constructed buildings, or in frame buildings in which there were various other institutions, such as a post-office or a grocery, and which would burn easily. We showed them that the accession book must be kept carefully in a safe or carried to another building, because if the library burned

the basis of insurance would be on the accession book. Then we went on to discuss the correct method of cataloging and classification, and the eagerness with which those people asked questions and the desire that they expressed to go home to carry out the ideas was remarkable. Then we had our little evening reception where they met one another and became better acquainted, and they left very eager to come again next year. We are invited to hold the institute in another town next year. We had in our audience one man with his wife who has started a library on his own ideas, because he feels his little town needs it. He shut up his shop to come to that institute and he brought his wife, who left her bread-making and sewing to come with him. They took notes on everything. Since then I have noticed in their local paper that they have been publishing lists of books that were suggested at the institute and have put them in the paper with some idea of classification. I have had visits from others who have come to our library to get other ideas. Just the few results that we have had in the five weeks since that institute closed have been most encouraging to us. It was a great thing for those people who have been working in small, isolated communities, needing sympathy and friendly help, to know that there were people in the world who would help them, who were interested in the same work they were doing. It was not so much the technical instruction that they received, although we hope that was a benefit to them, but it was the friendly, helpful, sympathetic touch.

There are four representatives of the Chautauqua library school in attendance at this meeting of the A. L. A.

Miss HEWINS: We had a very interesting one day's teaching recently. We heard a little while ago from the Springfield library that one of Miss James' assistants at Wilkesbarre was going to Springfield to give two or three days' instruction in mending library books. We engaged her to stop in Hartford for two days, and then we sent out an invitation to the Connecticut librarians to come to Hartford to learn about new methods of pasting and mending. About forty came and they had a most interesting and profitable day.

The chairman introduced the subject of

REDUCED POSTAL RATES FOR LIBRARY BOOKS.

The CHAIRMAN: In our commission work we feel the need of having the same privileges of sending books through the mail at the same rate that is allowed newspapers. Senator Lodge is warmly interested in this matter and Judge Lawrence has also introduced it into the House. President Roosevelt has also expressed a warm interest in it. If we will work together we can get that privilege. We ought all of us, when the matter comes up at the next session of Congress, to write to our Senator or Representative and show him that we are thinking about it and that we want that privilege, especially those of us in the state commissions. If every state commission would act officially this measure would certainly go through.

Has any one anything to say on this postal question? I think it would be a wise thing if this meeting would pass a vote asking the Council to ask Congress to pass a law giving us this privilege.

Mr. BRIGHAM: We cannot do much until we convert the leading men in the A. L. A.

The CHAIRMAN: Do you think that because one or two or three men object to a thing we ought to go without it?

Mr. BRIGHAM: No, but my feeling is that even if we were all of one accord in this matter and a man of as great prominence as Dr. Billings says, "I do not think we ought to ask for it," it is unfortunately the fact that one such man can neutralize our action by his negative position, especially if he is supposed to be interested and is giving reluctant testimony.

The CHAIRMAN: I assume that any one interested in public library work is in favor of having this facility for distributing books. It is simply the question whether or not books, belonging to public libraries and recognized as such, may be allowed the same privilege as the newspapers are in the way of a low rate of postage. The objections are chiefly based on theories that are not consistent with the facts. These books will be circulated within a small radius. If they were going to be sent from here to San Francisco it would be expensive, but except in rare cases the people that want

them will send for them to the nearest point. But even supposing there were a loss — in Canada and Australia and in other countries there is a provision for sending such books through the mail without any charge. How many of those present think we ought to have this privilege?

A show of hands was taken, which proved unanimous in the affirmative.

W. E. HENRY: Do I understand that the bill providing for these rates is now before Congress.

The CHAIRMAN: Yes.

Mr. HENRY: I would like to make one suggestion. The thing that is left for everybody to do is never done. If some one will keep track of that bill and, when the time comes for action upon it, send a circular letter all over the United States asking all librarians who believe in it to write to their congressmen, urging its special support and assigning the reasons for that, I believe it will be passed.

The CHAIRMAN: It is not competent for this body to promulgate anything as coming from the A. L. A. But it is perfectly proper to instruct our secretary to notify members when that bill is to be acted upon and to ask the Council of the Association to give it their support.

Mr. HENRY: I move that those who register as members of this section should ask the secretary to inform them when the proper time comes for action on this matter. *Voted.*

The CHAIRMAN: Now shall we request the Council to pass a resolution endorsing the opinion of the State Library Commission Section that pound postal rates should be granted on library books?

The motion was made, seconded, and carried.

The report of the

COMMITTEE ON NOMINATIONS

was presented, submitting the names of Mr. Dewey as chairman and Miss Gratia Countryman as secretary for the ensuing year. The report was accepted and the officers unanimously elected. The meeting then adjourned.

WORK OF STATE LIBRARY ASSOCIATIONS: ROUND TABLE MEETING.

A "ROUND TABLE" meeting devoted to the consideration of the work of State Library Associations was held in the New Magnolia Hotel, Magnolia, Mass., on the evening of Wednesday, June 18. The meeting was conducted by Miss Beatrice Winsor, chairman, and was called to order at 8.30 p.m. The chairman introduced Melvil Dewey, to whom had been assigned the subject

THE FUNCTIONS OF A STATE LIBRARY ASSOCIATION.

MR. DEWEY: When in New York omnibuses first went on the streets, it was a great improvement. Street cars were a great improvement on omnibuses. Then came elevated railways and cable and trolley cars. Now the city is torn to pieces and honeycombed with tunnels, preparing for still more rapid transit. The work of a state library association just now is very like that of the subway in New York City. We are taking on new functions and a new conception of what library work is.

A state library association works in both directions. We had the International Library Conference in 1876; we had another in London at the time of the Queen's jubilee in 1897. We have these great national A. L. A. meetings. We have also interstate meetings — that at Atlantic City brought together delegates from half a dozen states; library week at Lake Placid drew prominent workers from fifteen states and two provinces. There will be another interstate group soon near Chicago and Wisconsin, and there will be still another in the South. We thus have these interstate, national, and international meetings above the state library association, of which this is distinctly the time. Almost every state has and will continue to have one. I am president this year of the State Library Commissions Section, and we have a full program and are doing active work, but the state library commission is merely a temporary expedient, a scaffolding to bridge us over to our permanent organization of state library departments similar to the state school departments.

In 1805, in New York City, was organized the Public School Society. It worked to establish public schools till 1853, curiously the very year that the first convention of librarians in the world was held. That year the Public School Society stopt its work and turned over its property of \$600,000 to the public, because the time had come for the public to carry on this work for itself. Like this, the state library commission is to bridge us over to our final organization, but the state library association is a permanent institution.

The library movement is duplicating nearly or quite every one of the great movements that developed the American system of public schools. The great work of the Library Association, with its different agencies, is to educate the public — individuals, communities, and legislatures — to understand that libraries are just as essential as schools, that they are costly, that they must have large state appropriations and liberal local support.

I remember at the first A. L. A. meeting in Philadelphia, when one of the most prominent proprietary librarians objected to free public libraries, I said, "You might just as well object to free public schools." He replied, "I do object. The state has no right to tax me to educate the children of my neighbor." I answered, "We rest the case there. The library stands on exactly the same plane." The American public have decided for the free public school and they are supporting it each year with greater and greater generosity. There is nothing for which taxes are paid so willingly and so liberally; nothing would so quickly create a revolution as to take away from the public the free public school.

This library movement started as the school movement started, with the voluntary association of workers who gave their time and money to educate the public to the point of taking up the public service as a public charge.

The state library association stands in the middle. Above it are interstate and national and international meetings. Below it, in its own state, we follow the same lines with the

schools. They have not only state but sectional conferences, and teachers from various counties or from neighboring towns come together to compare notes and to help each other on. After the state library association similarly come sectional, county, or more local clubs; then the individual library; then home and house libraries, thus going not only to the community with the public library, but into summer hotel, factory, farm house, and other small centers away from library privileges. Librarians are recognizing more and more the function, growing stronger every year, of guidance not alone in consulting books in the library or in borrowing books and carrying them home, but in selecting books for those who wish to buy them for themselves and make a personal library.

The state association, a voluntary union of the most active and earnest librarians, will therefore be a permanent institution, but whenever a state has its organized library department, just as it has its school department, the work of the state library commission will be merged into that. The work of the state library ought to be under a state board called trustees of the state library, or what you will; but a single body in charge of all library interests in the state. That carries with it another grave responsibility of the state association, and one of the greatest problems with which we have to deal: training competent librarians. The public school system amounted to little, till, by persistent effort of the association, and the development of state departments, of institutes, and of various other agencies, teachers were trained to their work. We are recognizing that more and more in the library field. We are still in a rudimentary stage in respect to this. The number of people who can come to library schools for two full years of professional training is very small, compared with the number that must work in libraries.

Our plan in New York is to supplement the two years' course with summer courses. We have promised for some time a correspondence course, and expect soon to begin it. It will not be as good as personal contact, but a great deal better than no guidance, and in the last few years the capacity for usefulness in correspondence teaching has been shown to be very great. Schools like the International Correspondence School in Scranton, started

merely as a business venture, have grown to immense proportions and have done a great deal of practical service; they mingle with education that fatal element of commercialism which will be eliminated as soon as the public understands its needs in this respect. Beyond that, there is the new work of this year, which Dr. Canfield will tell us about,—the Library Institutes, which have been very promising. I think we must go a step further than the institute and go to the scattered libraries with what I call round tables. We must reach not a dozen counties, but merely a few adjoining towns. Wherever we can get a dozen librarians or their assistants together, an inspector or two, trained especially for that work, should meet them for a day or two and rouse their interest and enthusiasm, answering their questions. Very likely they will be interested enough in the round table to go to the next institute, and the interest there may lead them to take the correspondence work and then they may go to the summer school for six weeks and some may later take the full two years' course. A variation that will be new to many of you we are discussing in our faculty, and I think we shall adopt, to give our summer course hereafter in rotation, or sequence. We will take six weeks one year for nothing but cataloging and classification under our best teachers and with all our facilities. The next year we will take bibliography and reference work and give six weeks of solid work to that subject. The third year we will give six weeks to general library administration, omitting classification, reference work, etc. So, in three consecutive years, we shall rapidly cover the whole field.

We have also in connection with our great Chautauqua Institution a general library school of six weeks that covers the whole field in the usual way. Our hope is that those who cannot get the full two years' training will go to Chautauqua first for six weeks and get a birdseye view of the whole subject. They will thus become acquainted with our teachers and they will keep in correspondence with them and read and study under their direction for a year. The next year some will take one of our three rotation courses and become more closely acquainted and read and study on those lines. The third and fourth years they can take the other courses, and thus in four years the librarian who can get away from home only six

weeks out of each year will secure, first a birds-eye view, and then, in our three courses, with reading and study in the meantime and with correspondence with our teachers, he will be able really materially to increase his efficiency.

Thus, in a nutshell, I outline the work of the state library association as a permanent educational force. Whatever organization may come, we must always have a voluntary association in each state of those specially interested in library work who shall co-operate with the interstate, national, and international associations above it and with the sectional and local and individual libraries on the other side, that will stand constantly within that state as an advisory council, that will study all the while the wants of that section of the library field and to the extent of its abilities help to carry on this great work to which we have given our lives.

THE CHAIRMAN: Mr. Dewey has so ably outlined the functions of the state library association that we must all feel that the state associations are going to do a work that the A. L. A. can no longer do. It cannot do the things it has done in the past on account of its increasing size, and the smaller libraries are certainly going to gain more from state meetings than they can from a large meeting like this, which cannot treat of technical matters and go into details in the way that the small associations can.

ANDERSON H. HOPKINS: It is a source of peculiar gratification to me to hear what Mr. Dewey has just said, because less than six weeks ago the Illinois State Library Association did exactly what Mr. Dewey said was the right thing to do, and it was done with considerable fear and trembling. The state of Illinois has been without a library commission. The state library association has made vain efforts for six years to get one, and at last it determined to be one itself, and it is now a state library commission without legislation. At its last meeting it revised its constitution, following as closely as it could the constitution of the A. L. A., and elected a council that it might thereby gain continuity of policy. Provision was also made to incorporate under the laws of the state so that it could hold property. It is now ready to get the property, and means to get it as soon as it can and begin the work of a state library commission.

Miss CECELIA LAMBERT spoke on

HOW CAN A STATE LIBRARY ASSOCIATION BEST AROUSE INTEREST IN TOWNS AND VILLAGES WHICH ARE TOTALLY WITHOUT LIBRARY FACILITIES?

In New Jersey, to our discredit, we have between fifty and sixty places entirely without library facilities, of over one thousand population, and New Jersey is a prosperous state with a surplus of \$2,000,000 in the treasury.

We are safe in saying that most of these places, and those in other states as well, have reached that stage in their development where they are conscious, at least, that the public library is a good thing to have. State associations, then, have never had a more encouraging outlook for their work. It is true that the treasuries of these organizations are in a state of chronic emptiness, but with some time, an organized plan of campaign, and a great deal of energy, money is not the item of greatest importance after all.

The libraries which have come into existence in the small towns under my own observation are due, without exception, to the enterprise and unselfish efforts of some one determined person. It is with the individual then that associations can accomplish their most effective work.

How is this one interested person to become known to the association? In our state the library commission employs this method: a communication has been sent to the principal of the public school of each town where there is no library asking for the names of citizens of good standing who would take an active interest in the establishment of a free public library under municipal control. A copy of the data obtained will be turned over to the secretary of our state library association. The correspondence which has been opened up in this way reveals many interesting and pathetic facts. From one place came the following sorrowful letter: "My father gave a library to this town and kept it stocked with books. When he died there was no more money, but I kept the rooms opened and gave my services without charge until the circulation dwindled away into nothing and now the library is dead too. Can your association do anything for us?"

Another writes: "We are very poor—the

two beer saloons on opposite corners of the main street have all the money there is in this town. What can anybody do under these circumstances?" And the saloon with its open fire, easy chairs, and yellow journals is indeed a formidable force in opposition to the work which we are trying to do.

When we answer the cry of the heathen we do not send a box of Bibles, much good and cheerful advice, and a cordial and pressing invitation to attend our meetings. We send a competent person to take hold of the difficulties and overcome them. Until state associations use these same methods in *their* missionary work they will not have helped the small towns and villages in the best and most direct way, for I venture to say that one such visit will accomplish more than many meetings.

This leads up to the question "Whom shall the state associations send?" and the answer is not so easy; but where there is a will there's a way, and perhaps we may find it at this meeting. At any rate, we are very clear in our minds as to the kind of missionary whom we should send. This should be an attractive, capable, tactful, and business-like person. An almost equally important point is advertising. When a business man makes a business venture he puts aside a certain sum, and not a small one, for advertising. If we want every city, town, and village in the state to know what we are for, and what we are doing, we must tell them and keep on telling them. Every well organized body has a press committee. Library associations may have them, but I have never heard of one.

Library associations can make the best possible use of the "A. L. A. tracts." They are just what the newly interested citizen or inexperienced board of trustees needs.

Library enthusiasm is, happily, the kind that is very catching, and every time the association has a meeting the state should be suffused with it. If only these meetings were not such strenuous affairs! I thoroughly sympathize with the indignant little woman from an out-of-the-way place, who said: "I didn't get up at five o'clock this morning and travel for hours to listen to papers on fifteenth century bookbindings. I want to know how to run a library." And if she had not an opportunity for getting the information for which she came the meeting was just that much of a failure.

If we are to arouse the interest of towns and villages without libraries, let us extend a cordial invitation to all, that they may be inspired with the earnestness and enthusiasm which characterizes the library profession.

Miss IDA F. FARRAR read a paper on

HOW SHOULD THE PROGRAM FOR A STATE LIBRARY ASSOCIATION MEETING BE MADE UP TO BE OF THE MOST USE TO THE LIBRARIANS OF SMALL LIBRARIES?

The small library, as used in this connection, contains anywhere from 200 volumes or less to 10,000 or more. In spite of the increasing number of graduates from library schools, those in charge of the smallest libraries, with salaries varying from \$5 to \$100 a year, are and will continue to be untrained people. They need then three things which the meetings of a state library association can give them: inspiration, a conception of what they may accomplish with the means at hand, and practical help in matters of detail. These we will consider in our study of the make up of the program. To rightly understand this we must go back to the program maker, who, for the sake of convenience, we will assume is the secretary and a woman. She will usually have the advice of the executive committee along general lines, but the following of details and often the suggesting of subjects will fall upon her shoulders. The secretary consequently will be chosen not only because of her executive ability, but because she is sympathetic and tactful. She will make a study of the small library and its possibilities and try to put herself in the place of every librarian she meets, from the busy housekeeper who has to answer a request for a book when her cooking is at a critical point or the baby is just falling asleep, to the trained librarian of 10,000 volumes, housed in a beautiful memorial building. Both of these people are types in every group of small libraries.

The program maker will, either through correspondence or personal visits, — the latter are preferable, — make herself acquainted with library problems in the town where the next meeting is to be held. As these are likely to be the problems of other towns, she will arrange for the discussion of at least one of them. For example: Spruceland needs a reading room: the librarian and the minister are

keenly alive to the need; the next meeting of the club is to be held there; the tactful secretary sees the opportunity to bring the matter before the people. Another town of about the same size *has* a reading room: the librarian there can tell how it was established and how it is maintained; another can discuss the relative merits of periodicals; another the matter of discipline; the minister may speak of the value of a reading room in the community as a moral power, and all this is planned for an hour in the afternoon when townspeople can be present, the librarian having previously advertised the meeting. It is quite possible that a reading room will be established in Spruceland as the result of this meeting.

The program maker will not only visit the place of meeting, but surrounding towns, for every state meeting must be to some extent a sectional meeting, since distance and irregularity of trains will seldom permit attendance from all parts of the state. If the secretary is the kind of person I have described she will not begrudge a part of her vacation for these trips. She will not only come into close touch with people engaged in library work, but will also visit ministers, teachers, and school superintendents, and will seldom meet with any difficulty in enlisting their services. She will keep a list of these people and whenever a meeting is held in their vicinity will invite them to be present and speak.

As to the program itself: once a year, at least, probably at the annual meeting if the attendance is largest then, should come an inspiring address. Some minister who is known always to be bright and helpful will give it and, with a little explanation as to what is wanted, will choose his own subject and treat it as he likes. He will impress his audience, those both in and out of the profession, with the utmost respect for its high calling.

The librarian of a small country library recently wrote the president of a club saying: "We have \$100 a year to expend for books: I have notices of 12,000 books sent me yearly, all of which are said to be invaluable to any library; how am I to choose?" Here is a chance for the library club to help, for it is a problem which comes to all its members. They may all be invited to contribute to a list of 100 of the best books of the year to be discussed at the mid-winter meeting, the time when there is the

greatest output of books and when libraries are purchasing. This list may be annotated and printed just before the meeting in some local paper, and reprints made so that each person present shall have a copy. This book talk may be a yearly feature.

The other subjects should be so far as possible along lines which members of the club have suggested. These suggestions may come in answer to a call on the program or as the result of the personal observations of the secretary or president in their visits.

Avoid fine technicalities of detail: the school graduate has no need of them, the busy house-keeper will only be bewildered by them. A discussion of the classification of music, for instance, which had a perfectly legitimate place on the recent program of a club composed for the most part of large libraries, would be utterly out of place on the program of a club composed of small country libraries. The comparing of notes as to a simple plan of classification, the repairing of books, the making of a book, the best methods of binding — these are all practical topics for any library and hence for the small one. Leave plenty of time for discussion. If the subject of the "Relation between the school and the library," which is such a favorite one, is on the program it will be worth while to devote half or even the whole of one session to it. Ask the school superintendent of that group of towns to close the schools for a half day and be present and lead the discussion from the standpoint of the school. The teachers will all be present, and if any have made a point of interesting the children in books be sure that they tell how they did it. If the secretary does not know of the work of the teachers in question let her invite one from another locality whose work she does know. A librarian will open the discussion from his standpoint. Some of the older pupils in the school will be invited, and some one who understands children will speak to them on "What we may discover in books." A teacher who attended such a meeting recently said, "If school institutes were as interesting as this library institute has been I should not dread them so."

Suppose the subject of the "Relation between the Sunday-school library and the public library" be suggested. The secretary will write to a number of towns asking questions as

to the condition of the two and the practicability of their working in common. Prominent Sunday-school workers will be invited to be present and one of their number asked to lead the discussion from that side, the librarian of a public library from her viewpoint, and as a result of the vigorous discussion which will follow, a union of the forces of both libraries will be brought about in many towns.

The program-maker has seen how much more good may be accomplished by the library in every town by the distribution of books through branches. She asks a librarian who has met with success in this matter to come to the next meeting and tell how she did it. Letters are sent out two weeks before the date set asking questions like these:

Have you any branch libraries?

Who takes care of them?

How many books do you send?

How often do you exchange them?

What is the nature of the community to which you send them?

Do the people appreciate them?

Will you not take part in the discussion of branch libraries appointed for the next meeting of the club, telling such facts as these questions call for and any other interesting ones in your experience?

This will insure discussion and be likely to result in the establishment of branch libraries.

As to the *personnel* of the program: reference has already been made to securing the services of ministers and teachers. Trustees need to be interested and sometimes to meet with a change of heart. They are likely to be prominent men and women in the town and ready speakers. Plan subjects sometimes with especial reference to them, such as "How trustees may help or hinder." Get hold of the shy people, such as the librarians of small libraries are liable to be. Find the lines in which they have achieved some success and ask them to talk or write along these lines. If they are too timid to do that, ask them to take some part in a discussion, taking care to tell them they will not be formally called upon.

A word as to the division of time in the arrangement of a program. A morning and an afternoon session of about two hours each is a comfortable division. Ten or fifteen minutes in the morning before the session opens gives people an opportunity to greet each other. If

there must be an address of welcome let it be short — not a rehearsal of the history of the town and the library since the beginning. A strong speaker at the beginning and another strong one at the end seems to give a sense of firmness. It has been proved over and over again that the life of a meeting such as we are considering is in the discussion, well conducted of course, the getting hold of theories and experiences of a number of people. Hence too many subjects should not be introduced. A new secretary is liable to be worried for fear that the material will not hold out. She needs to learn that too many courses spoil the digestion, that plenty of good wholesome food of only two or three kinds is good for the mind in the case in point as well as for the body.

An hour and a half is usually long enough for dinner and sociability and a visit to the library, which should always be arranged for. Visits to outside objects of interest, such as mills, are usually distracting, take valuable time, and are made more out of a feeling of obligation to those entertaining than from any real desire to see the place in question. Plan to close early enough to gather up the impressions of the day. That is the time to *begin* to find out whether the program has really been of use or not, and if a few words of criticism are borne to her ears the program-maker is not discouraged, but adds them to her "Notes gathered from experience." She learns to study people, conditions, time, and place, but experience is her best teacher, for

"Experience joined with common sense
To mortals is a providence."

Dr. J. H. CANFIELD spoke on

THE BENEFITS OF LIBRARY INSTITUTES.

Dr. CANFIELD: It will be quite as well to put this matter in a concrete form as to undertake to speak of it in an abstract way. Therefore I will speak of the library institutes as organized and carried forward by the State Association of New York during the last year, properly during the last spring.

A year ago the Library Association of the State of New York withdrew, in a certain sense, from the state. That is, it ceased its wanderings in the state, wanderings which had been led or misled for several years under the guise of doing missionary work. It did that which

every similar state organization, I think, will find it desirable to do — established itself at a fixed point and as nearly as possible at a fixed date, so that every one interested in the work of the state association came to know just where it was to meet and when it was to meet. Having done that, it felt that it ought to make some compensation to the state for the relief from the wanderings, and so it took upon itself the organization of library institutes within the limits of New York.

The first result of that effort naturally appeared within the state association itself—the reflex action of the determination to do something instead of simply to talk. It is a very helpful thing to set one to a definite task. It gives one something to do, to accomplish; and accomplishment is a thing which interests most men and women who have good red blood in their veins. In a definite task men and women find a new thought and a new impulse.

It is not too much to say that new life came to the state association in New York from the very moment it undertook in a definite way a task of this kind. It found itself quickened by a new thought and a new impulse. I even count it as one of the most beneficial results of the State Library Institutes that they have put before the state association this definite task in this definite way.

The state was divided into ten library districts; excluding Buffalo at one end and Greater New York at the other, each of these being large enough and old enough to care for itself and for the immediately adjacent country. For each of these ten districts a secretary was appointed — some one willing to co-operate in the library work of that district, some one who would give time to the study of library work in that district, some one who would undertake to awaken new interest in library work in that district; above all, some one who would be responsible for the library institute. Suggestions and advice were sent out to these secretaries, and with their help a great deal has been accomplished. This secured the co-operation of at least eight or ten responsible, interested, and intelligent people in the library work of the state.

The state association found that this work was going to be something of a burden financially, and was to draw heavily upon the time of some of its members, but the state associa-

tion very wisely felt that it was in no danger of being pauperized or impoverished by meeting any such drafts whatever. It is almost impossible to conceive of any one's getting money into his pocketbook until he opens the mouth of his pocketbook so wide that some will fall out. He who gives is generally he who receives. That is a divine law, and it is a human law, and a natural law as well. So we have found ourselves gaining in strength, we have found the year remarkable for the inspiration which has come back to the state association directly from the institutes. That is the first result.

Now, these institutes were organized somewhat as follows: We could not hope to hold prolonged institutes, covering three or four days. The librarians could not get leave from their libraries for three or four days. The institute had to be carefully planned in order that the librarians could attend. When possible it was placed toward the last of the week so that teachers could come on their weekly holiday. We hoped that school directors would close their schools for half a day in order that teachers might be present, and some did this. Perhaps we will reach that more generally next year. Two instructional sessions were provided and one session — we didn't know exactly what to call it, and somebody suggested that we call it an "inspirational session," and we let it go at that. The "inspirational session" was always held in the evening, when we could secure the attendance of the public. The institute covered one night only, and that night was so chosen as to be as little burdensome as possible to all concerned. Into the instructional session we brought the advice and the practical active co-operation of some of the best known librarians and library workers of the state. If possible, we found a director within the district, because that meant less expense and less demand upon time. The state librarian was very helpful to us. The state inspector was present at every meeting, I think, officially and personally; and when he is present in both capacities you may know that he is a power indeed.

We brought to these meetings the simplest form of instruction, suggestion, and advice as to what may be done in and for and with a small library. We knew that if we reached people helpfully at all we were going to reach

those who could not attend such a meeting as this, or at least who do not attend it. It is proper to say they could not attend it, for it is beyond their purses and beyond the time that they are able to give. It is all very pleasant for us to come together in these great meetings. They are full of inspiration and uplift to us; we go home feeling a new pride in our profession, and we draw upon each other very heavily, and we are full to overflowing with new thoughts and with new life. But not everybody can take a trip to Magnolia or Placid. The institute is planned to give to those who cannot be here, who cannot get anything better than the institute, to get at least that.

The first benefit of the institute directly to those who participated came through the definite instruction, and suggestions that were offered. The second benefit was along the line of question and answer. It was perfectly surprising, the readiness with which those who were present took part in what we would ordinarily call discussion. I have always believed that in meetings like our own, discussion is worth more than papers. A paper ought to be simply the fuse with which we light the explosives, with which we touch off the cannon. The effectiveness ought to come in the discussion that follows the explosion. The discussions in the institutes were remarkably interesting because the questions went right to the point. They covered practical work; they were from those who evidently asked them because they wished to know; they were not asked in a captious way or a critical way or simply to take up time, but they were asked because there was somebody present who didn't know this particular thing and desired to know. It was worth a great deal to have present those who had had experience in the larger libraries and in the larger towns, and who knew ways and means; it was worth much to bring them face to face for two or three hours in each of those sessions with those who were longing for that contact and longing for the opportunity to ask the question which was most immediately pressing upon them for an immediate answer in their daily work. The discussions, if they may be called discussions, — the questions and answers, — were peculiarly valuable and peculiarly helpful.

That was the second benefit which came directly to those who participated. The third

benefit seems to have been the fact that these workers who had been alone so long came in contact with the personality of those who were experienced and successful workers of repute in the larger libraries. There is nothing, after all, equal to coming into actual contact with the flesh and blood of a worker along the same line that you are working, one whom you know has met with success and who can impress you immediately with the reason for that success in his or her personality. I think that those who were so fortunate as to come into those institutes will long remember and will remember with gratitude — if their letters and their words mean anything — the opportunities thus given them by the state association to meet personally for some considerable time those of whom they had heard and those whose work elsewhere had been so successful.

There was a fourth benefit, and I am not sure but that in a certain way it was as great as any. I am now speaking of simply what we did in New York, but the same work is not only desirable everywhere, but it must be done everywhere. I am not speaking of it as exceptional at all; I am only going over the ground so that if it is an old story to you it may appear possibly with a new face, or if it is a new story it will be helpful because it is a definite thing that has been tried. The fourth benefit was this, that in those evening meetings we brought together the citizens of the various communities where we went who were interested or who might become interested in library work. We had an address from one well-known library worker, and then from some one in the locality, if it was possible to secure some one, — and I think it was always possible to do that. I do not now remember a single meeting in which there was not active participation on the part of the residents. And there we had the opportunity to drive home that one thought that every librarian must take up and first con until he or she knows it word for word, *verbatim et punctuatum et spelleratim*, and everything else from start to finish, — that one thought which was referred to by Mr. Dewey, — that the libraries are being built up and are to be built up on precisely the same conditions, upon precisely the same principles of public taxation and public expenditure, and according to precisely the same general methods, that the public schools have been

built up. It is very hard indeed to find to-day one-tenth enough librarians who can defend the library tax and who can say why it is proper that the tax should be levied. It is an exceedingly difficult matter to find people who can answer the objections that are sometimes made, or when objections are not made, the demands that are sometimes made under that system of taxation. Now we have built up the schools on the principle that a public tax is levied because the public wants something and not because the individual tax-payer wants something. That is something we ought not to forget. We have built up the schools upon the same general principle of taxation that we have levied all other taxes and built up all other public institutions and done all other public work. When we levy a tax for a road we do not expect to reimburse the man who pays the tax by the use of the road in proportion to the amount of the tax that he pays. A great many cripples and bed-ridden people pay the road tax who are never on the road; hundreds of men pay a road tax who only walk beside it and have never any occasion to drive over it under any circumstances whatever. We levy all other taxes in precisely the same way. We never for a moment think of re-distributing the tax, sending it back to the taxpayers individually in proportion to the amount which each one pays. When it comes to the public schools, we levy the tax in the same way. We tax the men who have no children, we tax the men who have many children, we tax the man who has but one child. It doesn't make a particle of difference. We levy the tax, not for the benefit of the man who has children, nor do we levy it for the benefit of his children directly, but we levy it for the benefit of the community. What the community is to receive, the communal interest, the common interest, is to determine how that tax is to be expended. We have gone a long way along that line in school matters and we are on reasonably safe ground to-day. There are a few grumblers; there are a few men who do not yet understand that in all the appeals, both to the people and to the courts, no method of taxation and no one tax has been so unanimously and so enthusiastically and so triumphantly maintained as the tax for public education. There are a few people yet who do not quite understand it, but just as soon as they

undertake to encounter it from the standpoint of an obstructionist, they understand it very well indeed, and they never come up to that battle a second time! There has never yet been a question raised and taken to the courts for decision regarding which the courts have so unanimously held together on one line, and that the line of a steady advancement and a steady recognition of the public interest and the public welfare, as the question of taxation for public education, for free schools.

The library must be put upon precisely the same basis as that, and that is the song we have been singing all winter long throughout New York. That is the story we have been telling, and it is the story we must tell, each one of us, over and over again, — to ourselves first, as I said, — until we know it by heart, and then to our respective communities. When you consider the matter from that standpoint, you simplify the work of the library directors and of the librarians and you remove a large number of obstacles and clear the way for advancement. The man who pays a school tax to-day does not dare to say that because he pays the tax he wants his daughter taught dancing and he proposes to have her taught dancing. He does not dare to say, "I pay my school tax, and I don't care anything about reading, writing, and arithmetic, but I want my daughter taught dancing." But the man who pays his library tax will tell you that he "wants what he wants" and that he supports the public library in order that he may get the books he wants to read; and there are a great many people — some very good people — some of them even librarians — who have fallen into the habit of saying that they rather think the librarian must do just that thing — he must get him just what he wants. No, he is not obliged to do anything of the sort, any more than you are obliged to pay taxes for schools in which to teach dancing to the girls. You are not obliged even to do that which may be useful. Here is a tax levied in behalf of the district schools, and there is a family which says, "We want our girls taught cooking, domestic science, domestic economy." Now, domestic economy and domestic science and cooking are all well enough in their way, and it is perfectly proper that they should be taught. There is sad need of their being taught, for that matter; but it rarely occurs to any one

that you must meet that demand when it is made upon the district school. Why? Because the directors of the school, the state authorities which have charge of educational matters, the superintendent of the schools, the teachers in the school, have determined otherwise, and that settles it. The day is surely coming when there will be just as clear an understanding that it is the duty of library directors and of librarians and their assistants, and of state supervision wherever we are intelligent enough to get it, to determine what shall be bought and what shall be put upon the shelves and how the public demand may be most wisely met. We will never reach that point until we see clearly that this whole question of taxation for the public library is to be dealt with precisely as any other tax question is to be dealt with.

It is incumbent upon us, therefore, it is absolutely necessary in self-defence, that we tell in that story and tell it that way. We must insist that the public library is a part of the general system of education, that it is not something that is going to be established in a haphazard way; it is not the scheme of a few designing people; it is not a hobby a few persons may ride to their own benefit; it is not something that is demanded by a segment of society, but it is a part of the general scheme of education which is made absolutely essential to preserve democratic equality and republican institutions in a land like our own. Only as we so regard it shall we be safe in pressing its claims, or shall we be successful in pressing its claims, and when we so regard it we shall be both safe and successful.

Those are the four benefits, then, which we believe that we are to realize in connection with library institutes. Those institutes are very much like the first institutes held for instructors in the public schools. I was very glad when Mr. Dewey said that we are following along in the steps of the public school system, though thirty or forty or fifty years behind. I remember hearing an officer in the United States army, of high rank, say, in the city of San Francisco a few years ago, that in the year 1845, while he was living in the central part of New York, as a boy he was soundly thrashed by his father because he refused to attend the public school; and he said, "I took my medicine, because I told my father that he

might thrash me as much as he pleased, but I had too much self-respect to go to the paupers' school and the beggars' school of the community." That was in central New York as late as 1845, if he told the truth, and I think he did. It is certainly true that only within a half century have we begun to understand what a mighty power there is in the public school. The public library is treading close upon its heels, following the same road. We believe, therefore, that library institutes, in the retroactive effect upon the state association itself, in their stimulus to do better work and more definite work, in the definite instruction that is offered, in the opportunity for each of the minor librarians to detail by questions her own grievances and her own difficulties, and to find from experienced hands relief in explanation and suggestion and encouragement, in the meetings which are held for the public and in which the public unites, and in the stimulus which comes to the entire community because of this thought of the public library as part of the system of public education, — we believe that library institutes not only pay, in the largest sense of the word, but are absolutely essential everywhere to the most rapid and the most sure advancement of all library interests and library work.

The CHAIRMAN: Before we enter upon the discussion of the papers I should like to say that I tried very hard to get one of our western friends to talk upon the difficulties connected with the library institute. Dr. Canfield has inspiringly presented the benefits of library institutes. Now I am sure there must be some difficulties. I had so short a time, however, in which to prepare this program that I was unable to procure a speaker on that phase of the topic. Is there not some one here who will take up the other side of the library institute problem? Perhaps Mr. Dana will tell us something about the difficulties.

J. C. DANA: You ask for a few words on the difficulties in the way of library institutes. I will suggest some that occurred to me this morning when I heard the discussions on home libraries in the Children's Librarians' Section. That discussion was, naturally, concerning our work for people whom it is, so we assume, our function to teach — for people who are our inferiors in knowledge. This, in large measure, is also the function of the library institute.

That is, the work we are entering upon in this line of institutes is a work that at once puts us into the position of the superior, of the teacher, of the better man of the two. Now that is a very dangerous position in which to be placed. I wish to call your attention for a moment to three things that we should look out for in this work, and especially, it seems to me, in the attempt through library institutes to promote our ideas, to carry out our educational theories in small communities. The three things are perhaps well suggested by the words "condescension," "resentment," and "conscious virtue." The condescension, if it exists at all, is on our part. I am sure that we do not in the least intend to have it; I am sure also, that, without intent, many and many a time we acquire the habit before we know it. The habit of condescension will grow on us, and that rapidly, if we do not take the greatest care, and in institute work, as in other like fields, it is absolutely fatal to success.

Resentment is something which may arise in those who are taught, in those whom we wish to improve. I could not help thinking this morning, as I heard of the gracious and well-meaning visitors to the "lower" parts of the city, to library groups, to home libraries, and to social settlements, that there is very great danger here of the development of a condescension on the part of the benefactors, and of a corresponding state of resentment on the part of the benefited. I do not believe I am wrong in uttering just a word of warning in regard to those two things.

The third of the feelings I mentioned is, perhaps, not exactly in line with this evening's discussion; but as I have started in on the line of difficulties I will venture to go a step further. This third difficulty is the danger there is of arousing among the people whom you set out to improve a sense of conscious virtue. You will notice that the people who attend, for example, library groups and use home libraries, who read good books under your direction and with your guiding care, as soon as they have done these things begin to feel that they have done the right thing. There is apt then to arise in them the feeling of duty done. Now the feeling of "duty done," while very comforting, is apt to be accompanied by a feeling of conscious virtue, which is one of the most insidious and dangerous of all emotions. These

people feel that they are better than they were before, and that therefore they are entitled to something from you; that they are entitled to something from the world. They are apt to get the idea that virtue has some other reward than its own, that it is virtue alone that helps this world, that it is moral conduct, pure and simple, which is entitled to some reward, while fact is that it is virtue plus utility that is entitled to some reward. Let me beg of you, then, in doing any work in the line of library institutes, in going out into the world as missionaries, to avoid in every case, with the greatest possible care, any feeling of condescension on your part, lest you arouse on the part of those for whom you work resentment among the proud, and conscious virtue among the *unco guid*.

Just another word along another line. But first, you may not know, all of you, that the story Miss Farrar told of the things that a state library association can do is really a story of things that have been done. They have been carried out during the past two years in Western Massachusetts, and with the greatest success. We have seen there in recent years a swiftly-growing interest in the very things Dr. Canfield has so charmingly put before us.

We lend a few books, and we encourage people to read a little; but the newspapers in this country are the powers that are encouraging the people in this country to read a great deal. We of to-day have had newspapers, as we now understand the word, for one generation. The mind of man cannot conceive what it is going to mean, in one or two generations from now, for the people of that time to have had behind them, not one generation with the newspaper-reading habit, but two or three. The newspaper is one of the very great factors in modern life. What it is doing for us nobody knows. Nobody knows what the habit of reading is doing for this and other civilized countries. We cannot begin to imagine what its effects are to be, and the daily press is one of the most powerful instruments in society to-day. I remember, some six or seven years ago, I brought before the Association a suggestion, and urged it as well as I could, that we as an association establish a bureau of publicity and promotion, which should, through the newspapers, let the people know what the library idea is. It was not done then—it has not yet

been done. A publisher told me to-day that in conversation with some of the leading publishers of the country he had discovered that almost to a man they held librarians in small esteem. They considered our work of protest against the raising of prices of books to be of very slight consequence. That is partly because we are not much in the newspapers. We are not much in the newspapers partly, of course, because we are not of sufficient consequence to be there. Now my idea of six or seven years ago I think was a good one. You can produce results that shall also be causes. We could have put ourselves more in the newspapers than we have, and to-day we would, because of that studied publicity, be there more than we now are. I mention this simply to point the suggestion I wish to make about state library associations, which is, that they use the newspapers more than they do. I have had a very good illustration of the value of this suggestion. For four years I lived beside the *Springfield Republican*, which is the newspaper of western Massachusetts, the chief local news gatherer and news disseminator of that whole community. The *Republican* was a friend of the Springfield library and of every other library within the radius of its influence. Day in and day out, and week in and week out, and year in and year out it never failed us when we went to it for assistance in spreading the ideas that we wished carried through that community. The constant reiteration in the *Springfield Republican* of the things that we wanted said was far more helpful than was all the work that all the library workers in western Massachusetts could do. In fact, we frankly confessed that we had well-nigh gained our ends if we arranged for a meeting, carried through our program, and printed an abstract thereof in our friend the newspaper, even if our meeting in itself seemed almost a failure.

The CHAIRMAN: Will Miss Underhill, of the Iliion Public Library, tell us something of the institute work at Iliion, New York?

Miss UNDERHILL: The institute at Iliion we regard as a fairly successful one. Out of the 80 libraries listed for the district which we had prepared, there were only 25 which could be properly called free public libraries and of those 25, 16 were represented by the librarian or an assistant or by the trustees. The schools in Iliion were closed for a part of the session of

the institute and the teachers came, together with the superintendent of schools, who took an active part in the discussion. We also had superintendents of schools from two other places near by. One point was found very practical, and that was that several of the larger libraries made exhibits of books that were stamped and pasted, dating machines and devices of that sort, sample accession books, sample order sheets, etc., and it seemed that the librarians in attendance got more help from these than from almost anything else. As a result of the meeting an arrangement was made with two librarians from little libraries, that they should spend two or three days in our library in October for help and for practical work.

H. W. FISON: I would like to ask for discussion on Miss Farrar's paper. The greater part of this meeting has been spent in discussing library institutes and state library associations, but I think there are a large number of librarians here in charge of smaller libraries who feel that this question of the usefulness of state library associations is of vital interest to them. How can the state library association meeting be made more helpful to the small library?

Miss HAINES: The officers of the state associations might send a circular to the librarians of the state, requesting practical suggestions, asking them to name topics they are personally interested in. That was done in the New York Library Club. A circular was sent to all the members and suggestions were received, I believe, of about twenty-five different topics, only four or five of which had been presented before. I don't know whether the topics were ever all brought up; but they were sent in very generally by members.

GEORGE STOCKWELL: Miss Farrar did not mention the fact that she has a card catalog containing the name of every library in western Massachusetts. She has kept in very close touch with those libraries. In correspondence with them she has learned the different problems confronting them, and what they would like to have discussed at the meetings. She files these letters, so she knows the condition of each library in her section, what they want, what they are doing, and what they ought to do. Then, when she comes to draw up her program for the meeting, she looks over the card catalog

and the file of letters and draws her subjects from them, taking especially the section where the meeting is to be held. I want to emphasize what Miss Farrar said about personal visits. In our institute work the programs which were arranged through personal visits were much more successful than those arranged otherwise.

Mr. FISON: I understood that Miss Farrar spoke of what the ideal library association should do. I did not know of any state library association doing the work she described. My experience has been, in the state library association meetings I have attended, that most of the subjects discussed have been entirely above the small library. We do not care anything about the classification of art or music in a library of less than ten thousand volumes. What we want are practical suggestions that will help us in our daily work, and the average small library does not have a corps of assistants so that one or two or more can go to the library meeting. I hope if this discussion ever comes up again, that the state library associations will bear in mind that the majority of the libraries in any state are small. There are very few really large libraries in any one state. Let us have more material for the smaller libraries to work on. I came here on purpose to hold up the single-handed man, being one myself, and I think we need more help. We need a great deal of help, because, as a rule, we are not close enough to other libraries to receive the enthusiasm and the help that other libraries can get from one another and from large libraries. That is the reason why I should like to hear what other librarians of the smaller libraries have to say in regard to the benefit they have received from the state library association meetings.

Mr. DEWEY: I would like to make two or three suggestions. One is that the librarians of the district be asked to send to the association officers a statement of their difficulties; another, that there be a question box at the meeting. But the most important one of all is like the old rule for cooking a hare: "First, catch your hare." First, get your conductor. I think the greatest danger in the library institute, possibly, is in assuming that because instruction is a good thing, and institutes are a good thing, you have only to say, "Go to, now; conduct an institute," and it will be done. There are very few people who can conduct a

teachers' institute or a library institute successfully. The moral is that in every state which is going to take up the library institute work, people must be found who have a gift for it, and who have been trained for it, so that at least one person can be able to carry it on. I look forward to the development of a class of institute conductors in library work, just as in schools, who will give practically their whole time to this work.

The CHAIRMAN: Pardon me, but Mr. Fison does not feel that library institutes and state library association meetings are the same thing. Are you putting forward the proposition that they are both the same — that a library institute is exactly the same thing as a state library association?

Mr. DEWEY: Oh, no. But if state library associations are to give instruction there must be some trained teacher, and I say that instruction cannot be given successfully unless you have some one who is especially trained for the work. And I think this work of the institute has got to be graded. If we repeat the institutes in New York this year and bring the same people together, they do not want to go over the same ground. Those are the two points I want to make — the selection of a conductor and the grading of the work.

W. R. EASTMAN: The persons who have the responsibility for the preparation of the program of a state association meeting should take especial pains to put themselves in the place of the smaller librarians, so as to understand and sympathize with their work. We are very apt in these large meetings to get into the habit of dealing only with the large libraries, because there are always a certain number of those who represent the large libraries who have the leisure and the means to attend, and little by little they come to dominate our conferences. Now, the members of the program committee need conscientiously to put themselves in the place of smaller librarians, and with some such local index as has been referred to try to acquaint themselves with the actual conditions of the libraries.

Mr. DANA: I will tell Mr. Fison what is the matter. In the first place, he expects too much of the state library association meeting. Now, the state library association meeting held for one day, with perhaps a couple of sessions, can be of very little help to anybody — the

meeting itself, that is; and if any people from small libraries attend expecting to get much information, much instruction, that will be of immediate practical help, then I believe they are mistaken. But Mr. Fison should bear in mind that the benefit of the state library association meeting will be considerable to him if he will take a hand in the meeting. If he does not find the meetings of his state library association profitable he should say so. Many librarians of small libraries would have rendered a great service to the meetings of their state library associations if they had said that before now. Many of these state meetings, to my knowledge, are dreary things. They talk about subjects that have nothing whatever to do with the practical life of the librarian. Mr. Fison is quite right, but he should have objected before now, and he should have stated his objections plainly. He should make his objections to the officers of the association, and if he cannot reach them, let him get up in the meeting and say so. Then let him take hold

himself and work along the line that he thinks would be of advantage, and out of the work that he does do himself he will get benefit.

Now, my statement that the actual meeting of the state library association is of very little importance does not mean that the state library association itself is of no importance or that the meeting as a factor in the library work of the state is of small importance.

The library association should be a factor of very great importance in the life of the state. I regret to say that some of them are not. But they can be, and it is our business to make them so. There is one thing we cannot realize too clearly, and that is that the work done between members by correspondence, by publication in newspapers of items about libraries, by the interchange of notes and inquiries, either directly or through the medium of the secretary and officers of the association, is of the greatest importance.

Adjourned.

TRANSACTIONS OF COUNCIL AND EXECUTIVE BOARD.

MEETINGS of the Council of the American Library Association were held in connection with the Magnolia conference, on June 16, 18, 19, 20, in all four sessions being held. There were also short meetings of the executive board on June 16 and 20. Of the twenty-five members of the Council twenty-two were present, as follows: Mary E. Ahern, E. H. Anderson, C. W. Andrews, J. S. Billings, W. H. Brett, Johnson Brigham, F. M. Crunden, C. A. Cutter, Electra C. Doren, W. I. Fletcher, W. E. Foster, C. H. Gould, Caroline M. Hewins, F. P. Hill, J. K. Hosmer, Hannah P. James, W. C. Lane, Herbert Putnam, Katherine L. Sharp, C. C. Soule, John Thomson, J. L. Whitney. The members of the executive board served as ex-officio members and officers of the Council. They included the president, Dr. J. S. Billings; ex-president, Henry J. Carr; 1st vice-president, Dr. J. K. Hosmer; 2d vice-president, Electra C. Doren; secretary, F. W. Faxon; recorder, Helen E. Haines; treasurer, Gardner M. Jones.

PROCEEDINGS OF COUNCIL..

Place of meeting. Invitations for the 1903 meeting of the American Library Association were received from California; Nashville, Tenn.; Memphis, Tenn.; Brevard, N. C.; Helena, Mont. An invitation to meet in St. Louis in 1904 was also presented, and it was *Voted*, That in making selection for the 1903 meeting place, it should be borne in mind that there is an invitation from St. Louis for 1904.

Regarding 1903 meeting, formal motions were made and carried that the Association should not meet in California or in Montana. It was finally *Voted*, That the executive board be instructed to select between some place in Tennessee, Mackinac, and Niagara Falls for next meeting, and also select the time at which it shall be held.

Acceptance of Carnegie gift. It was *Voted*, That Mr. Andrew Carnegie's gift of one hundred thousand dollars, offered through the president of the American Library Association, be accepted, subject to the conditions of

the donor, namely, that it be kept as a special fund, the income of which shall be applied to the preparation and publication of such reading lists, indexes, and other bibliographical and library aids, as would be specially useful in the circulating libraries of this country.

It was *Voted*, That the amount thus given be designated as The Carnegie Fund, and be placed in charge of the trustees of the Endowment Fund, whose treasurer is authorized to receive the gift on behalf of the Association.

Nominations. It was *Voted*, That a committee of ex-presidents present be requested to present nominations for the ensuing year, to be reported to the Council. This committee reported at a later session and the nominations submitted were adopted, with the provision that the ticket include also names sent in in nominations signed by five members of the Association.

Method of nominations. It was *Voted*, That a committee of the Council be appointed by the chair to consider the principles and methods upon which nominations to the Council should be based, and to report to the Council its findings for deliberate discussion. This committee was later appointed as follows: C. W. Andrews, Herbert Putnam, F. M. Crunden, Miss M. E. Ahern, Miss H. P. James.

Committee on Relations with Book Trade. The resolutions appended to the Report of the Committee on Relations with the Book-trade, as presented to the general Association, were referred to the Council for consideration, as was the resolution on the same subject later offered in the Association by Mr. Dana. The matter was fully discussed at a special meeting of the Council, and the following resolutions were passed and later submitted to and adopted by the Association:

Whereas, The system of net prices maintained by the American Publishers' Association has resulted in an unexpectedly large increase in the price of books to libraries; and

Whereas, That increase has worked great hardship upon libraries in limiting their purchase of current books, diminishing their power of meeting the demands of the public, and narrowing their influence and opportunities as educational institutions; and

Whereas, The interests of the library and the bookseller should be closely allied;

Resolved, That the American Library Association urges the American Publishers' Association to make such arrangements that libraries may secure an increased discount over the present allowance on net books, and may not be unduly restricted in dealing with book-sellers.

A committee consisting of five active librarians was appointed to confer with the Publishers' Association on the lines of the foregoing resolution, as follows: W. T. Peoples, H. L. Elmendorf, John Thomson, H. C. Wellman, H. J. Carr.

Reduced postal rates on library books. The following resolution was presented to the Council on behalf of the Round Table Meeting on State Library Commissions:

Voted, That the Council of the American Library Association be requested to use its influence to secure the passage of the bill now pending before Congress, which provides for the transmission of library books through the mails at pound rates.

After discussion, it was *Voted*, That the Council endorses the measures now before Congress to secure transmission of books to and from libraries at reduced rates.

It was *Voted*, That the present Committee on Reduced Postal and Express Rates be discontinued and a new committee be appointed by the incoming executive board.

State Library Commissions Section. On request of officers of the Round Table Meeting on State Library Commissions, it was *Voted*, That the State Library Commissions Round Table meeting be created a section of the Association.

A. L. A. State Library Section. The advisability of discontinuing the State Library Section of the Association was discussed. It was pointed out that that section had practically ceased to exist within the last few years, its place being taken by the National Association of State Librarians, which was a separate and independent organization. At the same time the section remained on the Association's records, and each year there arose the question of its representation on the program. It was felt that closer relations with the National Association of State Librarians were desirable either as a section or an affiliated organization, and that the State Library Section might well be discontinued or regularly merged in the

former body. It was later reported that a committee had been appointed by the National Association of State Librarians to consider the question of relations with the A. L. A. and to report at the next meeting of the National Association of State Librarians.

Affiliation with Federation of Women's Clubs. In response to request presented last year by members of Round Table Meeting on State Library Associations and work of women's clubs, that an alliance be effected between the A. L. A. and the Federation of Women's Clubs, it was *Voted*, That the matter be referred to a committee to confer and report to Council. The committee was later appointed as follows: F. M. Crunden, Miss L. E. Stearns, Miss M. W. Freeman.

Resolutions on Public Documents. The resolutions presented in the report of the Committee on Public Documents were approved and endorsed. (See report of committee, p. 96.)

Library Training. The recommendations contained in the report of the Committee on Library Training, that the committee be set a definite task by the Association, and granted an appropriation for carrying out its work (see report of committee, p. 136), were referred to the executive board.

Library Handbook for Normal Schools. The recommendation of the Committee on Co-operation with the National Educational Association, that a library handbook for the use of normal schools be prepared in connection with the National Educational Association, was referred to the Publishing Board.

Checklist for Registration of Voters. It was *Voted*, That the checklist of members be employed to check voters in election of officers.

Change in Program. It was *Voted*, That the Program Committee be requested, if in its judgment it found desirable, to so change program arrangement as to bring up Mr. Hastings' paper on distribution of catalog

cards from Library of Congress, in connection with the report of Committee on Administration.

Reporting Sections. It was *Voted*, That the Executive Board be authorized to employ a stenographer to report proceedings of section meetings at this conference, as may be found desirable.

Index to Proceedings. It was *Voted*, That an index to the proceedings of the Magnolia Conference be prepared and published.

TRANSACTIONS OF EXECUTIVE BOARD.

Carnegie resolutions. It was *Voted*, That the resolutions passed by the Association regarding the Carnegie gift be engrossed on parchment and forwarded to Mr. Carnegie with a letter from the president.

Reporting Sections. It was *Voted*, That the recorder be authorized to employ a stenographer to report section meetings at this conference, after consultation with officers of sections.

Non-library membership. It was *Voted*, That the list presented by the treasurer of persons not engaged in library work be accepted and the persons named admitted to membership in the Association.

Appointments to committees, etc. Publishing Board: W. I. Fletcher (re-appointed); Hiller C. Wellman (succeeding R. R. Bowker, resigned).

Finance Committee: continued (J. L. Whitney, C. K. Bolton, G. T. Little).

Public Documents Committee: R. P. Falkner, chairman, with power to add two members.

Next Meeting of Executive Board. It was *Voted*, That the next meeting of the executive board be held in connection with the library meeting at Lake Placid, in September, and that the secretary send in advance to members minutes of matters to be considered.

THE SOCIAL SIDE OF THE BOSTON AND MAGNOLIA MEETING, AND THE POST-CONFERENCE EXCURSIONS.

FOR the record of the Boston and Magnolia meeting precedent must be set aside, and the chronicles of social incident and of post-conference excursions must be merged into one narrative. This is because both were in fact so mingled that it is not easy to separate them, and their record must be based upon reports sent in from varied sources, as no one or two persons could possibly "know of their own knowledge" all that was done and seen on this largest of A. L. A. conferences.

The present meeting was the first held in Massachusetts for twenty-three years, and the Old Bay State—for so long the centre and model of library development—gave a welcome overflowing with hospitality and kindness. The first formal session, held at the Boston Public Library on Saturday morning, June 14, served mainly to bring people together for announcements and invitations, and to give a foretaste of the welcome that awaited them. Guides were in attendance to show the visitors over the library building, and the workings of each department were courteously explained *ad infinitum* by those in charge. The great series of Abbey pictures, so recently completed, proved the magnet to a constantly moving and changing throng, and indeed throughout the three Boston days the Public Library was the headquarters of information and of interest. Saturday, Sunday, and Monday were, according to the program, assigned for visiting the principal libraries of Boston and Cambridge, for excursions and sightseeing. It is impossible to do more than note a few of the delightful incidents of those three days. At Cambridge the visitors were received at the Public Library by Mr. Gifford and his staff and were conducted through the building, where special interest was roused by the collection of books and manuscripts by Cambridge authors. The Harvard Library, with its many treasures, the Fogg Art Gallery, the Harvard Museum, and various campus buildings were inspected, and a centre of attraction was found in Phillips Brooks house, where Mrs. Eliot and several

ladies of the faculty served tea for the library visitors. On Sunday a small party visited Brook Farm under the guidance of Mr. Lindsay Swift, and at the invitation of Miss Caroline Hewins, and on their return were entertained at the delightful home of Mrs. Hewins and her daughters; others visited the Boston Art Museum; and indeed the places of interest in Boston and the suburbs and nearby cities were overrun by eager and interested librarians. Many of the delegates were entertained by friends, or by the local hosts, and from one party of assistants comes a special tribute to the hospitality of the Massachusetts Library Club, which provided for their guests delightfully comfortable quarters, delegated one of the ladies of the guest committee to act as hostess at every meal, and gave many thoughtful and delicate little attentions that were as much appreciated as they were unexpected.

On Monday morning a trip about Boston and its suburbs on the electric cars had been arranged and was taken by a large number. The start was made from the Public Library at ten o'clock and the trip lasted until twelve. It was followed by a harbor excursion to the Boston Light, and return, arranged through the kindness of the mayor, for which the city boat *J. Putnam Bradlee* had been chartered. So large was the attendance, however, that a second boat had also to be pressed into service. The afternoon was cloudy, but there was a fine view of the harbor, and the trip was greatly enjoyed. A few of those present had attended the first Boston meeting in 1879, and recalled the delightful harbor trip then taken, and the luncheon given at Deer Island, while others were reminded of the like trip to Deer Island taken in connection with the A. L. A. meeting of 1890. This was the last of the pre-conference excursions, and it was followed by general scrambles for baggage and railway tickets, and an exodus for Magnolia, where the three hotels were found in possession of a goodly number of early arrivals, who had already explored the beauties of rocky shores and woodland by-ways.

At Magnolia, despite the rush and nervous strain of a busy convention of over one thousand persons, with its general sessions, special sections, committee meetings, and "round tables," there was, nevertheless, a strong element of outdoor recreation and social enjoyment. It could hardly be otherwise in a "summer resort" meeting, such as this, set in one of the most beautiful regions of the New England coast, and held during a week of perfect June weather. The consideration of problems of bibliography and of administration, and the discussion of such crucial questions as capitalization or the relative dangers of Henty and Ballantyne as food for infant minds, were lightened by rambles to Rafe's Chasm or to the cliffs near Norman's Woe, by boating or sailing parties, and by long drives to Gloucester, to Rockport, to Manchester, and other of the delightful nearby resorts. Moonlight had been considerably provided by the Local Committee, and the moon, the rocks, and the ocean twice furnished the setting for a general midnight chorus of college songs. One of the pleasantest incidents of the meeting was the delightful reception and afternoon tea given for the Association by the Misses Loring at their estate "Burnside," Pride's Crossing, while the Beverly Historical Society, the Manchester Public Library, and the Magnolia Public Library also extended a hospitable welcome to all librarians during the conference. There were reunions of library school alumni, meetings of state library associations and clubs, many of which combined some social feature, as a drive, or a luncheon, with their business routine. On three evenings dancing was in order, and indeed the program throughout succeeded to an unusual degree in alternating business and pleasure.

Saturday, June 22, was for most of the members the last day at Magnolia, and the beginning of post-conference activities. It rained steadily and heavily, but bad weather could not dampen the ardor of the library pilgrims, and a large party made a special trip to Salem, where their welcome at the Public Library and at Essex Institute was as cordial as the elements were unfriendly. The return was made to Boston, again the general headquarters, whence members scattered at their convenience, north, south, or west.

The post-conference plans this year were, in

several respects, a contrast to former meetings. Two special trips had been planned, one to the White Mountains on the plan of the Appalachian Club jaunts, the other to Bar Harbor by steamer along the Maine coast. The former was given up, owing to the small number desiring it; the other was taken by a party of only forty-seven. The remainder of the one thousand and eighteen seem for the most part to have scattered themselves over the surface of New England, some staying in Boston for the week of Harvard commencement festivities, many returning to their homes by way of New York, and others spending a few days for further visits to New England libraries and historic scenes. A party of about thirty gave up Monday, June 24, to a visit to Lexington and Concord, under the guidance of Mr. Virgin and Mr. Crosby, of the local committee. At Lexington they were welcomed by Miss Kirkland, Rev. Mr. Staples, and Rev. Mr. Crosby, and under their escort visited the library, housed in the city hall, where many interesting Revolutionary relics were displayed. Among the points of special interest were Buckman's Tavern, the old bell tower, from which rang out the call to arms on the morning of Paul Revere's warning, and the famous Clarke-Hancock house, rich in old-time furniture and historical relics. At Concord, Miss Whitney and Miss Kelly, of the Public Library, were guides and hostesses in one, and a delightful drive was taken to the Emerson, Alcott, and Hawthorne homes, to Sleepy Hollow Cemetery, and to the battlefield, ending with a visit to the pleasant library.

The Bar Harbor party came into existence on the afternoon of Saturday the 22d, when two score and seven "dem'd damp, moist" bodies boarded the *City of Bangor* for the all night run to Rockland. The little boat started out bravely in the storm, and her passengers sought their berths at an early hour, hoping and praying that the morrow might dawn bright and fair. But alas! for their hopes, the storm had only increased its fury. The same damp party, more disconsolate and forlorn, climbed over the gangway to the steamer *Mt. Desert* at Rockland, early on Sunday. Breakfast for those "so disposed" was found on the dock, or in the stuffy cabin, and little groups were formed on the wet deck, with the vain hope that the sea breeze and fresh air might revive

their flagging spirits. But the storm was a really violent one, and as soon as the pitching and lurching began, one by one most of the pilgrims disappeared, and were not visible again until anchor was dropped in Bar Harbor at three o'clock in the afternoon. Only the tried sailors of the party remained, and to the unfortunates who longed only for dry land were given later glowing accounts of the fury of the storm and the magnificence of the surf as it dashed upon the cliffs and the many reefs along the coast.

The boat was scheduled to reach Bar Harbor before noon, but it could make but little headway against the storm, and it was a hungry and weary crowd that alighted in the pouring rain and trailed up to the Newport House on Sunday afternoon. The bright, low, broad room of the office, with its cheerful log fire glowing on the hearth, had at once a reviving effect, and after a good dinner and a short rest every one was restored to a peaceful and cheerful frame of mind.

The days that followed were glorious halcyon days and fully paid for all the discomforts of the journey. Monday dawned bright and fair. At ten o'clock all started on the ocean drive which carried them along the edge of the cliffs. They alighted at Newport Cove to watch the surf at Schooner Head; they scrambled down the rocks and peeped in Anemone Cave; they wandered out to the edge of Otter Cliffs; and drove home around the other side of Newport Mountain, making a complete circuit. Looking back to Otter Cliffs from the gorge between Newport and Green Mountains, the view was most magnificent, with the glimpse of the ocean in the distance and Otter Creek winding its way through the meadows in the valley.

At three in the afternoon a mountain party of ten was organized to climb Newport Mountain, driving to the foot of the mountain where the carriages awaited them on their return. At various points stops were made to enjoy each view and cameras were busy all the way. The higher they climbed the more islands appeared in view. From the topmost point could be seen the five Porcupines, Bar Island, with the tide receding from the bar, and the islands on the other side of Mt. Desert. A mighty gale was blowing and the lee side of a big rock was sought to survey the harbor.

Meanwhile other parties had been formed.

One group enjoyed a sail up Frenchman's Bay to the coaling station, with a fine view of the Ovens and Cathedral Rock. Another made an expedition on the ferry boat *Pemaquid* to the Bluffs, returning home on the *Sappho*. Stops were made at Sorrento, Hancock Point, and Sullivan. In the evening the shore walk was resorted to, to enjoy the brilliant sunset and afterglow, and at half-past nine the moon arose to find groups still lingering on the rocks.

On Tuesday morning two parties set out separately to climb Green Mountain and one of these met with a series of thrilling experiences. They started at half-past eight in the morning and returned in scattered numbers wet, ragged, and scratched, from three until half-past four in the afternoon. They had climbed the mountain by the path and had then attempted to find a new trail on the other side, with results which can be appreciated only by the seasoned climber. After wading, scrambling, and stumbling for what seemed weary miles they came out at the back of a farm-house, and were able to reach civilization once more. While some climbed, others enjoyed a drive to the Ovens. Unhappily the tide was coming in and the Ovens and Cathedral Rock could be viewed only by hanging over the edge of the precipice, but this added zest to the game. The ferry-boat trip proved again popular in the afternoon and others rambled along the shore walk or yielded to the attractions of the village shops.

Wednesday found all reluctant to leave this beautiful haven of mountain and sea and woodland. Until the last call for an early dinner they sat on the piazza feasting their eyes on the glorious blue sky with its soft fleecy clouds forming a background for the pines of the islands. A slight spattering of rain tried to discourage those who were to brave the voyage home; but all eyes were on the clouds, which gave every indication of fair weather. Nothing can ever surpass that sail down through the islands. The sky and clouds could not have been more perfect. The islands, which had shown only little patches of green through the mist and rain on the previous Sunday, now stood in bold relief against the sky. One group gathered beside the pilot house, which commanded a fine view of the passing scenery. Nothing could induce them to leave the spot, neither cold, nor wind, nor even the alluring sound of the supper bell. They preferred to

wait until Rockland should be reached and then eat a fragmentary meal, perched on the high stools of the restaurant on the dock. Happily the boat was a few hours late and they had the pleasure of seeing the sun set behind the mountains before they reached Rockland. The beautiful afterglow did not die away until the Bangor boat pulled out; and then the moon rose in a perfect night of brilliant stars. Morning found them steaming energetically into Boston Harbor, with rain coming down in torrents and the steamer

rolling about on the waves. Thus, as the post-conference began, so it adjourned, in the pouring, drenching rain; but no amount of mist or moisture can dull the memory of those perfect Bar Harbor days, or of that glorious panorama that was unfolded as the Maine coast was passed and left behind on the homeward journey. To the thoughtfulness and foresight of their conductor, Mr. Jones, to which the pleasure of the trip was so largely due, the Bar Harbor pilgrims owe a debt of cordial thanks, gladly registered, and paid in all sincerity.

OFFICERS AND COMMITTEES

SERVING IN 1901-2 AND DURING BOSTON AND MAGNOLIA CONFERENCE.

President: John Shaw Billings, New York Public Library.

First vice-president: James K. Hosmer, Minneapolis Public Library.

Second vice-president: Electra C. Doren, Dayton Public Library.

Secretary: Frederick W. Faxon, Boston Book Co.

Treasurer: Gardner M. Jones, Salem Public Library.

Recorder: Helen E. Haines, *Library Journal*, New York.

Registrar: Nina E. Browne, A. L. A. Publishing Board, Boston.

Trustees of the Endowment Fund: John M. Glenn, Baltimore, Md.; George W. Williams, Salem, Mass.; Charles C. Soule, Boston, Mass.

A. L. A. Council: * Mary E. Ahern, E. H. Anderson, C. W. Andrews, J. S. Billings, R. R. Bowker, W. H. Brett, Johnson Brigham, F. M. Crunden, C. A. Cutter, Electra C. Doren, W. I. Fletcher, W. E. Foster, C. H. Gould, Caroline M. Hewins, F. P. Hill, J. K. Hosmer, Hannah P. James, W. C. Lane, J. N. Larned, Herbert Putnam, E. C. Richardson, Katharine L. Sharp, C. C. Soule, John Thomson, H. M. Utley, J. L. Whitney.

Executive Board: President, ex-president (H. J. Carr), vice-presidents, secretary, treasurer, recorder.

Publishing Board: Chairman, W. I. Fletcher, W. C. Lane, Melvil Dewey, C. C. Soule, R. R. Bowker.

STANDING COMMITTEES.

Finance: James L. Whitney, Boston Public Library; Charles K. Bolton, Boston Athenæum, Boston; George T. Little, Bowdoin College Library, Brunswick, Me.

Library Administration: Hiller C. Wellman, Springfield City Library; W. R. Eastman, New York State Library; N. D. C. Hodges, Cincinnati Public Library.

Public Documents: Roland P. Falkner, Library of Congress; Adelaide R. Hasse, New York Public Library; W. E. Henry, Indiana State Library; Johnson Brigham, Iowa State Library; Worthington C. Ford, Boston Public Library.

Foreign Documents: C. H. Gould, McGill University Library, Montreal; C. W. Andrews, The John Crerar Library, Chicago; L. B. Gilmore, Detroit Public Library; James Bain, Jr., Toronto Public Library; Worthington C. Ford, Boston Public Library.

Co-operation with Library Department of National Educational Association: John C. Dana, Newark Free Public Library; Melvil Dewey, New York State Library, Albany; F. A. Hutchins, Wisconsin Free Library Commission, Madison; J. H. Canfield, Columbia University Library; Isabel Ely Lord, Bryn Mawr College Library.

SPECIAL COMMITTEES.

A. L. A. Exhibit at Louisiana Purchase Exposition: Melvil Dewey, F. M. Crunden, J. C. Dana, E. H. Anderson, Mary W. Plummer.

Gifts and Bequests: Reporter, George Watson Cole.

Handbook of American Libraries: F. J. Teggart, T. L. Montgomery, C. W. Andrews.

International Co-operation: E. C. Richardson, R. R. Bowker, S. H. Ranck, Mary W. Plummer, Cyrus Adler.

Library Training: A. E. Bostwick, Susan Randall, S. S. Green, W. H. Brett, J. I. Wyer.

* Includes, in addition, members of executive board.

Relations of Libraries to the Book Trade: W. T. Peoples, H. L. Elmendorf, Millard W. Palmer, Tessa L. Kelso, John Thomson.
Title-pages to Periodicals: W. I. Fletcher, Ernst Lemcke, A. E. Bostwick.

SECTIONS AND SECTION OFFICERS.

College and Reference Section: Chairman, A. S. Root; secretary, W. M. Smith.

State Library Section: Chairman, W. E. Henry; secretary, Maude Thayer.
Trustees' Section: Chairman, D. P. Corey; secretary, T. L. Montgomery.
Catalog Section: Chairman, J. C. M. Hanson; secretary, Mary E. Hawley.
Children's Librarians' Section: Chairman, Annie C. Moore; secretary, Mary E. Dousman.

ATTENDANCE REGISTER.

“METALLIC *versus* WOODEN FURNISHINGS”

is the title of an attractive little Brochure lately issued by us. We shall be pleased to put it into the hands of Librarians or Trustees interested in the **best** fittings for library buildings.

The growth in these lines has been so rapid that many officials are not yet conversant with their merits, but the question of Complete Furnishings for any modern library will not have been exhausted without an examination of these fixtures.

The very large demand for them for Commercial uses has indicated clearly their adaptability to library requirements ; an indication substantiated by the increasing call for them for this purpose.

Our **Steel Card Index Drawers** are a prominent feature of this line, among whose merits may be mentioned—Durability, Incombustibility, Freedom from Vermin and Cleanliness.

Copies of our “Complete Library Catalogue” or “Library Plans” also sent on application.

Art Metal Construction Co.,

Ten Branch Offices.

JAMESTOWN, N. Y.

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET NEW YORK.

~~BENJAMIN FRANKLIN STEVENS.~~

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,

4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Book-sellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders or by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Subscriptions to Foreign Periodicals.

LIBRARIANS and others are requested to note the following prices of Annual Subscriptions to English Periodicals, which include postage from our New York Agency. The service will be found most punctual and reliable.

Academy, \$3.75; *Analyst*, \$2.56; *Annals of Botany*, \$7.67; *Annals and Magazine of Natural History*, \$8.75; *Antiquary*, \$1.70; *Architect*, \$5.25; *Army and Navy Gazette*, \$7.12; *Art Journal*, \$4.75; *The Artist*, \$3.25; *Athenæum*, \$3.70; *Badminton Magazine*, \$3.40; *Banker's Magazine*, \$5.48; *Black and White* (incl. Christmas), \$7.67; *Blackwood's Magazine*, \$7.50; *Bookman*, \$1.85; *Brain*, \$3.50; *British Journal of Photography*, \$2.70; *British Medical Journal*, \$8.00; *British Weekly*, \$2.16; *Builder*, \$5.50; *Building News*, \$5.30; *Cassell's Magazine*, \$1.95; *Chamber's Journal*, \$2.00; *Chatterbox*, \$0.85; *Chemical News*, \$4.50; *Christian*, \$1.80; *Christian World*, \$1.75; *Church Times*, \$1.75; *Classical Review*, \$3.30; *Connoisseur*, \$3.53; *Contemporary Review*, \$6.75; *Cornhill Magazine*, \$3.25; *Country Life Illustrated*, \$8.22; *Cyclist*, \$2.00; *Daily Telegraph*, \$10.80; *Economist*, \$9.50; *Edinburgh Review*, \$5.75; *Electrician*, \$7.31; *Engineer*, \$8.76; *Engineering*, \$8.76; *English Historical Review*, \$5.00; *Expositor*, \$3.00; *Field*, \$8.60; *Fortnightly Review*, \$7.50; *Garden*, \$3.96; *Genealogical Magazine*, \$3.25; *Genealogist*, \$2.50; *Gentleman's Magazine* (incl. All the above prices are for thick paper copies, and further particulars as to above or any other periodicals will be gladly given.

B. F. STEVENS & BROWN, 4 Trafalgar Square, Charing Cross, London, W. C.

New York Agency, 45 William Street.

REMINISCENCES OF EX-GOV. BOUTWELL

Sixty Years in Public Affairs

No man has been more intimately connected with the great political events of the last half century than George S. Boutwell. In his book, with its rich fund of incident and anecdote, we have history told on the personal side.

2 vols. boxed. Net, \$5.00; postpaid, \$5.26

Asiatic Russia

By Prof. George Frederick Wright

In his travels through the little known parts of Siberia this trained observer and scientist collected much of great scientific and political value. The book is profusely illustrated with unique photographs.

Net, \$7.50; postpaid, \$7.76.

Myra of the Pines

A Novel of Today

By Herman K. Vile

The author of "The Last of the Knickerbockers" and "The Inn of the Silver Moon" has written a new and charming romance of modern life.

\$1.50

A Prince of Good Fellows

By Robert Barr

Adventures grave and gay of James V. of Scotland, who had a sprightly habit of wandering about his realm incognito. Illustrated by E. J. Sullivan.

\$1.50

Forest Neighbors

By W. D. Hulbert

Biographies of the shyest creatures of wood and stream, written with the intimate personal touch of a man who has been a friend instead of a hunter of them. Handsomely illustrated.

Net, \$1.50; postpaid, \$1.66

Next to the Ground

Chronicles of a Countryside

By Martha McCulloch-Williams

A genuine nature book telling of the life of woodland and farm with wonderful insight and captivating charm.

Net, \$1.20; postpaid, \$1.32

McClure, Phillips & Co., New York

New Books of Lasting Value

NOW to take up some books that are coming next fall. The Dent edition of **WILLIAM HAZLITT'S** works will be the first complete collection of this author's literary, political, dramatic, and miscellaneous writings. Twelve volumes will make up the series, and the American edition will be limited to 350 sets. **DANTE AND HIS TIMES**, by Karl Federn, is a distinguished work by a prominent Dante scholar. **MUTUAL AID: A FACTOR IN EVOLUTION**, by Prince Kropotkin, is a scholarly treatise by the eminent sociologist on a question of profound interest to all thinking men. The only adequate translation of Count Tolstoy's **IVAN ILYITCH** is that by Mrs. Garnett, whose admirable work seems to make Tolstoy as completely a native of our language as of his own. In **ASTRONOMY FOR EVERYBODY**, Prof. Simon Newcomb makes an important contribution to the growing literature of science popularly treated without any loss of intrinsic value. **LETTERS FROM EGYPT** is a new edition of the charming correspondence of Lady Duff Gordon from a country that was almost unknown to civilization when she traveled through it. A book of unusual interest, dealing with one of the foremost figures in history, is **JEANNE D'ARC**, being a transcription of the original verbatim reports of the ecclesiastical court which tried the Maid of Orleans, with introduction by T. Douglas Murray. More modern history is found in the **LETTERS OF DANIEL WEBSTER**, collected by C. H. Van Tyne, and including much correspondence with the most noted men of the great orator's day. **FICTIONAL RAMBLES IN AND ABOUT BOSTON**, by Frances Weston Carruth, is a series of illustrated sketches of those parts of Boston which have served as the background for novels laid in that city. An absolutely unique picture of Indian life is **INDIAN BOYHOOD**, by Charles A. Eastman, who is a full-blooded Sioux, having passed his own boyhood amid the scenes which he describes. People who have read Cyrus Townsend Brady's **AMERICAN FIGHTS AND FIGHTERS** and **COLONIAL FIGHTS AND FIGHTERS** will anticipate the third of the series, **BORDER FIGHTS AND FIGHTERS**.

Among the lighter books we shall bring out are Booth Tarkington's new novel, **THE TWO VANREVELS**; **GABRIEL TOLLIVER**, by Joel Chandler Harris; the **EMMY LOU** stories by George Madden Martin; **THOROUGHBREDS**, by W. A. Fraser; **THE HOLE IN THE WALL**, by Arthur Morrison; and a collection of children's verse, **GOLDEN NUMBERS**, compiled by two persons well fitted to make such choice, Kate Douglas Wiggin and Nora G. Smith.

McClure, Phillips & Co., New York

THIS WILL INTEREST YOU
IF YOU ARE A LIBRARIAN

THE HAMMOND TYPEWRITER

THE LEADING TYPEWRITER OF THE WORLD

The Librarian's Typewriter Par Excellence

Used almost exclusively by prominent libraries in the United States and Europe.
The only machine that meets all the requirements of library card indexing.

For
Card
Indexing

Takes the Index Card flat, holds it flat, prints it flat, and delivers it flat, and this without attachments of any sort.

Has a special library type, and, furthermore, prints in any language, style of type, or color of ink on same machine.

Paper of any width may be inserted, cards of any size.

To its conceded perfections—

PERFECT ALIGNMENT, UNIFORM IMPRESSION, ETC.—

The HAMMOND now adds A CROWNING GLORY

The Best Manifold, whether Quality or Quantity is Desired

THE HAMMOND TYPEWRITER COMPANY

References permitted to first-class Libraries.

Special terms for large orders.

1856—1901.

We Say It, and with some emphasis because true, that **THE RAPID GUIDE** is the best and most economical Library Guide in the world. It is substantially made of pressed cardboard with metal projection in which a removable label is used. It thus provides for the exchange of one heading or title for another. **THE RAPID GUIDE** is practically indestructible, although very light in weight. There is no pasting, no breaking down, no wearing out, no rough edges. It is compact, economical, and was designed for the special requirements of the Library. It so far excels other known guides as to leave no room for comparison.

We shall gladly forward a sample of **THE RAPID GUIDE** to any Librarian making the request.

HENRY MALKAN,

Library Department.

TO LIBRARIANS:

Some important facts well worth remembering when you are about placing orders are that we carry in stock a large assortment of subscription books which we sell at sweeping reduction from publishers' prices. Discounts varying from 25 per cent. to 60 per cent., and what's more to the point we will gladly take back any book or set of books which do not give perfect satisfaction and come fully up to expectations. This we believe to be one of the most generous offers ever made by a bookseller, and gives conclusive proof of the faith we have in our prices and the books we sell; the offer is all the more striking when you consider the fact that it applies to subscription books, which are not generally carried in stock by the trade, and even when ordered very seldom furnished, the usual reply to such orders being, "sold by subscription only," "cannot furnish," "can furnish only at list price," etc., etc., as well as to current trade books. Another fact which we wish to impress upon your memory is that we furnish any book that may be in print, a great many out-of-print books, and almost any book that ever was printed, if given a reasonable amount of time to hunt it up. There are still a few librarians who seem to think that because we have not been in business for 50 years or so that we cannot fill orders as well as the longer established houses, and to all such we say, send us a trial order and you will become one of the large number of librarians who are our enthusiastic supporters, or correspond with us and we will send a formidable array of names of the most prominent librarians who will gladly vouch for what we say. Having correspondents in the various book centres of Europe, we are in a position to obtain, and consequently to furnish Books at the lowest prices. Books for libraries imported free of duty.

THE LIBRARY JOURNAL

VOL. 27

AUGUST, 1902

No. 8

IN June, 1879, the American Library Association met in Boston with an attendance of 162; in June, 1902, the Boston and Magnolia meeting brought together 1,018 persons from the same association, whose total membership just previous to the conference had been recorded as 1,265. The largest attendance ever reached before this was 500, at Chautauqua in 1898, so that 1902 has set a record far in advance of all previous years. This second Boston meeting, while representing thirty-one states and Canada, was largely drawn from the New England states, so long the centre of library development, Massachusetts alone having 450 delegates registered to her credit. In other points than attendance the meeting was notable. Its setting in one of the most beautiful of the New England coast resorts lightened the strain of convention activities, and gave opportunity for rest and amusement. The program, though inevitably overweighted, was both practical and interesting, and every general session, section, and round table meeting was crowded to the point of discomfort. Dr. Billings' wise and witty address, President Eliot's eloquent exposition of library problems of the near future, and Mr. Page's brilliant address on current literature from the publishers' standpoint, would have been noteworthy and delightful under any circumstances; and discussion was spontaneous and unrestricted to a degree unusual in recent years. The volume of Proceedings, already in the hands of the readers of the JOURNAL, is tangible evidence of the quality and quantity of the material presented.

ANDREW CARNEGIE'S endowment gift of \$100,000 to the Publishing Board of the Association was, of course, the great event of the meeting. Its announcement, deftly made in the course of the president's address, came as a complete surprise, although for a year or two suggestions for securing Carnegie aid for the publishing work of the Association have been more or less in the air. The gift was directly due to the good offices of Dr. Billings, whose term as president of the Association will be

memorable for this great service to the libraries of the country. The Carnegie endowment, while intended for the preparation and publication of bibliographies and library aids, is not likely, for the present at least, to result in any new bibliographical undertaking; rather it will go to strengthen and develop the work already in progress by the Publishing Board — such as the Portrait index, and the continuation of the "evaluation" work exemplified in the recent "Guide to the literature of American history." The publication of this handsome volume, the product of Mr. Iles' generosity and enthusiasm in the cause of "appraisal," was carried through in time for its presentation at the Magnolia meeting. It is reviewed elsewhere, but in expressing here the appreciation that all must feel for Mr. Carnegie's great gift, it is but fitting to recognize again the untiring services rendered by Mr. Iles in a field which Mr. Carnegie's generosity will undoubtedly do much to develop.

BIBLIOGRAPHY was a subject much in evidence at Magnolia. The possibility of a bibliographical department for the proposed Carnegie Institution at Washington, and the projected formation of a national bibliographical society, were the main points upon which the discussions were based. They led to no definite conclusions, but were interesting as evidence of the growing desire for organized bibliographical work. The weakness in most plans for national and international bibliography is that practical conditions are lost sight of in the enthusiasm of theory. Theoretically, it is easy to conceive a great organization or chain of organizations, with international and local branches all working together to record and classify the literature of the world; practically, there are to be considered such details as administration and equipment, the securing, handling, and disposal of the necessary material, and, most important of all, the question of cost in proportion to the value of the work done. As Dr. Billings pointed out, any institution taking up such an enterprise would

want to see first a guarantee of results for the outlay required; and only those who have given laborious days to some small venture in bibliography know how heavy is the outlay of time and work required to produce even meagre results. Effective planning for any general bibliographical enterprise must be based upon the selection of definite lines of work, agreement upon a standard of quality, and a careful first consideration of its working value to users of books.

THE great size of the Magnolia meeting called forth many "odorous comparisons" between the library conferences of the present day and those of the good old times, a dozen years ago. There are obvious disadvantages in any convention of one thousand persons. The pressure upon business sessions, the holding of simultaneous meetings, and like measures, inevitable where such varied interests must find representation, are oppressive or disturbing to many; the scattering of delegates in different hotels is a serious inconvenience; while the very size of the gathering detracts from its effectiveness as a working body. But it must be remembered that there is another side to all this. If formerly the meetings were pleasanter to a few, they are now useful to many more; if in the old days a single enterprise like Poole's index brought forth the united efforts of the whole Association, at the present time there are on hand through sections and committees half a dozen different enterprises — co-operative indexing of periodicals, selected lists of children's books, a handbook of American libraries, a manual for libraries of normal schools — any one of which would have been twenty years ago a task for the whole Association. Inevitably, with the amazing development of libraries and the corresponding increase in library workers, the national association has developed from a small body of workers in a limited field to a great organization capable of diffusing a wider influence and directing more varied activities than ever before. With the development of these capabilities it is also inevitable that much of the personal and elementary work formerly within its scope must be carried on through state associations and smaller meetings.

Communications.

THE CHEAP LIBRARY POST MOVEMENT.

THE recent national movement at Magnolia, Mass., was much the largest ever held, the attendance being reported at over 1,000. At one of the most crowded sessions of the week both sides of the library post question were presented, and it was plainly stated that the president and several influential members had strongly opposed it on the theory that the state should not do for people what they might do for themselves, and that it was not right for tax-payers of one community to furnish books which were mailed to readers in other states. In answer it was made clear that every argument advanced against the library post applied equally to public libraries, and that of all people who should be expected most warmly to support the new movement, the national library association should be first, as its purpose was to secure "the best reading for the largest number at the least cost," and no intelligent person questioned that in order to do this it was necessary to utilize cheap postage and rural free delivery. The desire was expressed to know how the audience felt, and every person was requested to indicate his attitude by a show of hands. The vote for pound rate postage for public library books was so nearly unanimous that if there were among the perhaps ten per cent. who did not vote for the measure, any who were opposed to it, not one had the courage to show his hand when the negative was called for. A vote was immediately passed instructing the chairman and secretary to submit the facts and the votes to the Council at its final meeting, with the earnest request that the movement should be officially supported by the American Library Association. This was done, and after a presentation of the objections, in which the opponents had every opportunity to bring up all the arguments they could against it, the resolution to give the movement cordial official support was carried with only two or three dissenting votes. Thus the official support of the organized librarians of the country is assured for this beneficent measure.

MELVIL DEWEY.

CITY REPORTS FOR DISTRIBUTION.

THE Cleveland Public Library has received from the city clerk duplicate copies of the city reports for the years 1898, 1899, and 1900. These will be sent free to any libraries who care to receive them, and will pay the express charges or postage. The weight of the three volumes is fourteen pounds.

PUBLIC LIBRARY, }
Cleveland, O. }

THE MEANING OF THE PUBLIC LIBRARY IN A CITY'S LIFE: ADDRESS AT DEDICATION OF THE TRENTON PUBLIC LIBRARY.*

BY JOHN COTTON DANA, *Librarian Newark (N.J.) Free Public Library.*

YOU would like me to tell you, as far as I can in a few moments, what you are going to do with your new library building. Pardon me if in my prophesies I overestimate your powers. I doubt if I can overestimate your good intentions. Perhaps you must also pardon me for letting my prophesies wait upon my wishes.

This building is to be managed in the broadest spirit of hospitality. It is to be as gracious, kindly, and sympathetic in its atmosphere as each one of you would like to make his own home.

Cities and towns are now for the first time, and chiefly in this country, erecting altars to the gods of good fellowship, joy, and learning. These altars are our public libraries. We had long before our buildings of city and state, our halls of legislation, our courts of justice. But these all speak more or less of wrong-doing, of justice and injustice, of repression. Most of them touch close on partisanship and bitterness of feeling. We have had, since many centuries, in all our cities, the many meeting places of religious sects — our chapels, churches, and cathedrals. They stand for so much that is good, but they have not brought together the communities in which they are placed. A church is not always the centre of the best life of all who live within the shadow of its spire.

For several generations we have been building temples to the gods of learning and good citizenship — our schools. And they have come nearer to bringing together for the highest purpose the best impulses of all of us than have any other institutions. But they are not yet, as we hope some day they will be, for both old and young. Then they speak of discipline, of master and pupil, instead only of pure and simple fellowship in studies.

And so, as I have said, we are for the first time in all history, building, in our public libraries, temples of happiness and wisdom

common to us all. No other institution which society has brought forth is so wide in its scope; so universal in its appeal; so near to every one of us; so inviting to both young and old; so fit to teach, without arrogance, the ignorant and, without faltering, the wisest.

Your public library is to be the centre of all the activities among you that make for social efficiency. It is to do more to bind you into one civic whole, and to develop further among you the feeling that you are citizens of no mean city, than any other institution you have yet established or than we can as yet conceive.

You will lend from it many novels. I believe in them. They are destined to play a large part in our life in the next few decades. A few hundred thousand read them now; in a few years millions will read them. We are expressing ourselves through them; in them we are putting our history, our hopes, our ideals. Many of your people, confined by nature and circumstance to narrow and laborious lives, will get from their novels, here distributed, refreshment, inspiration, wider views, an admirable discontent. But you will choose your novels with care. There are enough of the best to fill all needs. Here lies much of your work; but, remember this, not all of your work, not the best of your work.

Your clergy will find here the best books in the fields of theology, biblical criticism, and religion, and these books will help them to keep from their thoughts all narrowness and hardness of doctrine.

Your professional men, your men of affairs, will not incline to use their library. But you will make your shelves so inviting that not a few will find it impossible to resist the temptation to step aside from the beaten track of the day's routine and the morning paper into some by-path of literature, science, or art.

Public libraries have not been very successful in their attempts to persuade workingmen, mechanics, artisans, to give over the sinful habit of not using their books. Perhaps it is

* Address delivered at Trenton, N.J., June 9, 1902.

impossible to establish the reading habit in those adults who get physically weary every day. Perhaps here you must wait for the new generation to come on with the habit ready formed, and formed largely through the influence of this institution. But you will not fail to give the opportunity. This is a city of doers of things, of men who can better their work, their positions, and so their city, by gaining from books and journals a better knowledge of their trade or craft. This library will invite them and make it easy for them to get that knowledge.

And you will make their library appeal to them in other ways than through books alone. We boast of our organizing skill. We owe much, very much, of our success in manufacture and trade to our skill in uniting man to man, and men to men, in great organizations working to one common end. Much of this skill is due to a constant practice which goes with our social life. We are daily taught to co-operate. It would be difficult to find the citizen, no matter how humble his station, who does not belong to several organized bodies, who does not get from those bodies practice in working in harmony with others to effect some wished-for end. Churches, church societies, fraternal orders, social clubs, labor organizations — their name is legion. They are one of our best schools for citizenship. They help us to pick out our leaders; they teach those leaders the art of management; they teach the rank and file the profits of co-operation. And especially strong is this form of social life among the skilled craftsmen. And so, having here the books to which you wish to attract these men, and having here a room well fitted for their meetings, you will encourage them to gather here for all the purposes that you can plainly say are non-political, are not anti-social, are educational. There is always a little barrier between the brain-worker and the hand-worker. It should be slight. It should not lead to misunderstandings. If the hand-workers discover that this is their building and that here they have a meeting ground common with them to all their fellow-citizens, this will do much to promote good understanding and mutual good will. Of course with this use of your library will go such lectures and exhibitions under the library's management as experience shows will produce good results.

I was for many years in that land of women's clubs and women voters — Colorado. I learned there what woman can do by organized effort for the broadening of her own life, for the betterment of her own city. Many public libraries owe their existence to women's efforts. They are every library's good friends. Your books and rooms will, then, be made helpful in every possible way to the women and their enterprises.

Charitable and reform and educational associations of all kinds flourish amazingly in all our cities. They are of value to those who take part in them, they grow not infrequently into institutions of great influence. They will find in this building a hearty welcome, and will help to spread and strengthen the influence of your books.

With the growth of local pride among us, organizations for the improvement of the city will increase in number and grow in strength. These the library will especially try to foster. If this is the focal point of all those movements which make for a cleaner, a more beautiful, a more attractive city, a city in which it is better worth one's while to pass one's days — then is it peculiarly the centre of work of this kind. With books and photographs and lectures and other tools, you will do much to foster such a habit of self-glorification as leads to clearer vision of the improvements your city needs and a stronger determination to secure them.

To bring thorough work into better esteem; to make a little more dignified the plain, honest work of our hands; to increase the interest in his day's labor taken by the artisan; to spread a knowledge and appreciation of good design; these, as I like to understand them, are the objects of the arts-and-crafts movement, now so widespread. To a manufacturing community this movement will be of especial value. It will lead to more and better trade and technical schools, to more practical and more effective work in drawing and art study in the public schools. It is part of a wonderful renaissance of art now taking place in this country which is most interesting and most encouraging. Of such a movement here your library will be one of the natural centres. In its beginnings, especially, your resources here will be of the greatest help. Out of the union

of those interested in this field—architects, artists, artist-artisans, patrons of art—will grow in time the museum of art and handicraft which every manufacturing city like your own greatly needs.

Science and history will come in for your attention. Societies already in existence among you will find here help in books and other material, rooms for their gatherings, quarters for storing their collections, until that happy time when you have, as you should, a museum of science and a home for local historical material, both carefully adapted to work with young people in co-operation with your schools.

Have I gone too far afield? I am sure not. All these things which I look forward to as part of the work which you will find your library with its beautiful home can do, have already been done, or are in the process of doing somewhere in this country to-day. If elsewhere, why not here? If elsewhere a little, why not here more? I am not offering you an impossible ideal. I am simply outlining what experience has already proved to be the modern American free public library's proper functions. Yours is the pleasure of seeing your library take up its proper work, act its good part in your city's higher life.

THE SCOPE OF AN AMERICAN BIBLIOGRAPHICAL SOCIETY.*

BY AZARIAH S. ROOT, *Librarian Oberlin College.*

THE phraseology of the title gives ample room for any kind of a discussion. It would be easy to rise into the realm of the ideally desirable, and, soaring aloft with visions of government assistance and unlimited membership fees, from that lofty point to view the landscape o'er and set forth in glowing colors the possibilities of such a society. I prefer, however, to keep firm on the ground of solid probability. I wish, therefore, to discuss the more prosaic questions: What should be the general ideal of such an organization? What constituency is there in America for such a society? What relation will it sustain to the Bibliographical Society of Chicago and to the A. L. A.? What are some of the tasks which it might immediately undertake to accomplish?

The word "bibliography" has come to have in the English language two distinct and definite meanings. The earlier use of the word, according to Murray,† is that which gives to the word its more general meaning: "Bibliography—the systematic description and history of books, their authorship, printing,

publication, editions, etc." For this meaning of the word the year 1814 is cited as the earliest date, and it is in this sense in current use to-day. It has also, however, come to have an entirely different meaning, as when we speak of the "bibliography of Dickens," or the "bibliography of trusts," meaning here—I quote again from Murray—"a list of books of a particular author, printer, or company, or all of those dealing with any particular theme." For this later meaning no earlier citation is found in the dictionary than the year 1869, so that its use is really co-incident with the beginnings of the modern library movement.

Now which of these two definitions expresses the thought of those who are advocates of an American Bibliographical Society? I cannot speak for them, but it seems to me certain that a national bibliographical society can only hope to succeed by taking the broader and more inclusive of these two definitions as its ideal. The preparation of guides for readers, even when these are extended to the dimensions of Larned's valuable bibliography of American history, would not attract the various interests which should be brought together in a national bibliographical society. The average man,—perhaps I might even say the average librarian,—while he readily makes use of such aids as are furnished him, is not easily induced to give them thought and financial support in their preparatory stages. The experience of the

* At the Magnolia Conference of the American Library Association the Bibliographical Society of Chicago held a special meeting, devoted to the consideration of a possible national bibliographical association for the United States. The addresses of Mr. Root and Mr. Thomson, here given in full, were followed by a general discussion, which is summarized elsewhere. (*See p. 774.*)

† "New English dictionary on historical principles."

A. L. A. Publishing Board prior to the raising of an endowment fund furnishes convincing proof of the truth of this proposition. Moreover, it would probably be found exceedingly difficult, on the one hand, to interest the scholars of the country, who ought to be brought into the membership of such an organization, in merely popular compilations; while, on the other hand, librarians could hardly be expected to retain interest in an organization which prepared only elaborate bibliographies of little use to the constituencies which those librarians serve. I shall at a later point in this paper urge that the preparation of such popular aids be carried on by the librarians, either in connection with the Publishing Board, or through the long contemplated Bibliographical Section of the A. L. A. Suffice it here to say that I regard it as essential for the success of a national organization that it take for its field the very broadest possible idea of bibliography. The book, manuscript or printed, with its external qualities—paper, ink; type, form, and binding; in all its relations—historical, literary, or practical; and through all of its experiences—ownership, condemnation, partial destruction, enhanced value, etc.,—this should be the subject which, in any or all of its phases, should interest such an organization.

Having set forth, all too briefly, the ideal which should be held by such a society, I ask, in the next place, who are likely to become members of an organization having such an aim?

First. An organization having such aims would secure, I believe, a considerable number of supporters in the ranks of the library profession. It does not seem to me probable that any large percentage of the members of the American Library Association are likely to be interested in such an organization. On this point we have some very practical evidence. About the time of the Waukesha convention, last year, announcement was made that the Publishing Board of the A. L. A. would undertake the publishing of a card index to current bibliographical periodicals if sufficient subscriptions could be secured to warrant the same. After waiting some nine months I wrote to the secretary of the board to inquire as to the fate of this proposal, and learned that at that time only 14 subscriptions had been received. Since

that time the proposals have been renewed, and I trust that the necessary 25 subscribers are pledged to the support of the enterprise. But it is apparent from this attempt to bring out for the libraries of the country, as an aid for serious bibliographical work, a card index to the articles of the current journals in the field, that there is no very general demand among the librarians of the country for helps to aid in undertaking this grade of work. An American bibliographical society, therefore, which should take into account only the interests of librarians, would certainly fail if it confined itself to serious scholarly work. There are, however, among the libraries of the country a good many who are increasingly likely to be interested in this class of work.

There are, in the first place, in all the great libraries of the country, such as the Library of Congress, the New York Public Library, the Boston Public Library, and the John Crerar and Newberry in Chicago, one or two persons at least in each staff who are attracted by the wealth of material at their hand towards investigation and scholarly discussion. All these might be expected, I believe, to become members of a national organization. The next accessions are likely to come from the university and college libraries of the country. Many of these, as for example, Harvard, Columbia, and Johns Hopkins, have already developed among their staff men who have made distinguished contributions in the field of bibliography. Scarcely any work in America has exceeded in value that of the Harvard University Library in its "Bibliographical contributions," of which some fifty numbers have already been published. In the smaller university and college libraries the librarian at least, if not other members of the staff, is likely to have time and interest to work upon the literary treasures in his keeping, and from such study is likely to result genuine bibliographical work.

In addition to these classes of librarians there will probably be found among the public libraries of what I may venture to call the second grade, a considerable number who will support the enterprise by becoming members, and who may possibly be induced from time to time to contribute something to the publications of the society.

The second general class of persons from

whom such a society might hope to draw membership is what I will venture to designate as the student class of America, including under this head university and college professors, professional bibliographers, and private investigators. As the publications of the American Historical Association and of the Modern Language Association have already made manifest, there is always in every department of special study a small number of teachers or students with marked bibliographical tastes. The present tendency in this line, especially in history, is very marked, and there is likely to be an increasingly large number of young men in the various departments of study who will be interested in bibliographical work. These men are not sufficiently numerous in the organizations in their respective fields to organize and maintain a bibliographical section which will be in a position to publish; nor, on the other hand, would they be attracted by such a section in the American Library Association, for they would feel, in accordance with the natural attitude of scholars towards any popular movement, that any section of such a general organization as the A. L. A. would be interested primarily in work of a popular nature. But they could be interested, I believe, and brought together in an association national in its scope and taking the largest possible view of the field of bibliography. With the support of such men it is probable that the association would be supplied from the start with material sufficient for its purpose; so that, instead of having a lack of material of such high quality as it would wish to send out under its name, it could from the start equal in the worth of its publications other national bibliographical associations.

But both classes which I have hitherto mentioned—the librarians who might be interested in serious work in bibliography, and the scholars who might be so much interested in the bibliographical side of their work as to be brought into connection with a national bibliographical society—both of these classes together, I say, would not, in my judgment, furnish a constituency of sufficient numbers to properly support such an organization as is under discussion. A third class must be attracted and brought into membership if this association is to be large enough to do credita-

ble work. I refer to the class which I will designate as the amateurs in bibliography: the collectors and book-hunters and rich book-lovers who do not themselves, except in rare cases, seriously undertake bibliographical work, but who are interested in books as an avocation, or who have money to purchase rare books and therefore have a certain interest in the subject. This class is rapidly increasing in the United States, and no one should rejoice more than the librarian because of this fact, for it is one of the happy results of collecting that, although its immediate effect is to make it difficult for a library to purchase at reasonable prices the books which it so much needs, still, ultimately, the collector who has gathered rare treasures is quite as likely to bestow them upon a library as to leave them to be disposed of at auction for the benefit of his estate.

To attract this class of membership into the society, however, its publications must give evidence of large resources, be provided with plenty of fac-similes, printed on deckle-edged paper, and all that sort of thing. With the inclusion of this class of persons, however, it ought to be possible within two years' time for a national society to get a membership of, say, five hundred. If, with a membership of this size, it should, modelling its action upon that of the American Association for the Advancement of Science, make some arrangement with a periodical like the *Bibliographer* by which every member of the society received the *Bibliographer* in addition to the publications of the society, it would then be in a position to attract a large number of libraries to its membership and so still further swell its lists.

In some such way as this, and from some such classes of constituents, must a national bibliographical society find its support, and by successful planning to attract these various elements it may hope to flourish and become one of the influential organizations of the country.

It may not be out of place for me to say a word here concerning the proposition to have the Bibliographical Society of Chicago expand itself by the adoption of a new title into a national bibliographical society of the United States. No doubt it can thus expand itself, and I was at first thought inclined to regard this as the natural way of development. I am not yet wholly clear as to what is the wisest

policy, but there has seemed to me to be one objection to such a course. And this is the somewhat suspicious attitude of the East towards any culture, or any organization representing culture, which has its origin west of the Alleghany mountains. It is possible that the assumption by our organization of a national title would give us the name without giving us the reality. If there be any danger of this it would seem better for this society to unite with representative librarians, scholars, and book-lovers in calling a meeting for the organization of a national society at such place and time as would make sure that at the very start no such prejudice could exist.

Meeting as we do in connection with the annual meeting of the American Library Association, it may be well to add a word as to the possibility of securing the desired end by organizing a Bibliographical Section of the A. L. A. rather than an independent organization. I have already expressed my own conviction that only a limited number of the librarians of the country are likely to become members of any organization whose aim is other than a purely practical one. It has also been pointed out that it would be more difficult, if not well-nigh impossible, to bring the scholars of the country into membership in a section of a popular organization like the A. L. A. The membership lists of the National Educational Association afford convincing proof of this general proposition. There are, it is true, many able college men connected with that powerful and influential popular organization, and yet how few in proportion to the great number of college officers and college teachers! And how largely those found in the membership of the N. E. A. represent the executive rather than the scholarly side of the college! Doubtless it is a pity that this should be so, but it is a fact, and those who would advocate the formation of a national bibliographical society must take account of facts. But this situation need not discourage us. It seems to me that, even should an American Bibliographical Society be organized, there would still be a place for a Bibliographical Section of the American Library Association, for the two aims seem to me quite distinct. The aim of the national society would be the enlargement of knowledge in the general field by the preparation and publication

of papers and the resulting discussions, and committee work. The work of the Bibliographical Section of the A. L. A. would be, on the other hand, the preparation and publication of subject reading lists, subject bibliographies, and works of bibliographical co-operation among libraries along popular bibliographical lines. These two kinds of work do not in the least conflict with each other, and could more wisely be carried on by two organizations than by one. Moreover, they appeal to two different classes of persons. The bibliographies, using the word in the narrower sense, are of chief interest to the public libraries and to the persons whose object is purely practical. The investigations of the national society would appeal more to those of scholarly tastes, and the aim of its publications would not be so directly practical, but would partake more of the work of research and of contributions to knowledge. It would be exceedingly difficult so to organize a council in a body appealing for its support to both these constituencies as to preserve an even balance, and the result would probably be that one or the other element would presently lose its interest and drop out of the organization. It seems to me wiser, therefore, to recognize this difference in aim and interest from the very start, and appeal through the Bibliographical Section of the A. L. A. to those who are interested in bibliography as a practical aid, and through the American Bibliographical Society to those who are interested in bibliography as a serious study.

I come now to the fourth question. What should an American Bibliographical Society attempt? Here there is room for an infinite difference of opinion. I would make but a suggestion or two.

First: It should attempt work in various lines such as will attract and keep the interest of the various classes of its constituents which I have indicated. There should be work of the scholar's type for the scholar, collations of Americana and other rare books for the collector, and work in the line of evaluated bibliographical helps of the more scholarly sort for the classes of librarians likely to be interested in such an organization.

Second: I trust such an organization will not be unmindful of the opportunities, as yet undeveloped, in American bibliography. Un-

til we see the first volume we cannot tell with what painstaking energy Mr. Charles Evans has wrought out his proposed bibliography of books published in America from 1637-1820, but it is perfectly safe to say in advance that the book will not be a complete list. A committee of the national society might be able to interest the librarians of the country to make a careful examination of the materials in their libraries with a view to supplementing this list and eventually to secure the publication of a final definitive list for the period mentioned.

A third want which seems to me especially pressing is a supplement to Petzholtz's "*Bibliotheca bibliographica*," which should contain a list of the bibliographies, general, national, and special, from the time of Petzholtz to the present day — a list which should be not merely a selected list, of which there are one or two already in existence, but absolutely complete, and which should contain such scholarly and exact estimates of the titles mentioned as are to be found in Petzholtz himself. With the specialization of thought which is now going on in every department, only a national society which could secure the assistance of scholars in each branch of science could produce such a work; but if produced along the general lines laid down by Petzholtz, it would be one of the

most valuable bibliographical works of the twentieth century.

A history of printing in America is a great desideratum. The history by Thomas, which is still the best in the field, is nearly one hundred years old, and its latest revision has been published more than twenty-five years. Never entirely satisfactory, even in its revision, it should give place to a work more worthy of our time. To produce a satisfactory history of printing in America involves the co-operation of all the classes which I have indicated as desirable members of a national bibliographical society.

Many other lines suggest themselves, but as the actual work to be taken up will depend ultimately upon the membership and the attitude of the governing body of the organization, I refrain from further enumeration. I have tried to show the ideal of bibliography which should animate a national organization, that there is a constituency which only a national organization can bring together, that the work to be done in bibliography is ample to occupy both a national bibliographical society and a bibliographical section of the A. L. A., and have hinted at some tasks which lie immediately at hand. The question immediately before us is, "Shall such a society be organized?"

A SUGGESTED PLAN FOR AN AMERICAN BIBLIOGRAPHICAL SOCIETY.

By JOHN THOMSON, *Librarian Free Library of Philadelphia*.

At the last A. L. A. meeting I submitted a few suggestions as to what measures in my judgment seemed likely to foster the formation of a national bibliographical society. These suggestions were kindly received, and the matter was referred to a committee of the Bibliographical Society of Chicago, to report at a similar meeting to be held in connection with the 1902 meeting of the Association. I am now deputed to offer a few remarks on "a plan for an American bibliographical society with local branches."

The suggestions made during the course of the past year have indicated, so far as I know, a nearly unanimous desire on the part of those who have expressed an opinion, to make the Bibliographical Society of Chicago a national

association rather than a society of any one or more place or places. On duly weighing the suggestions made, two important points seem to be raised. According to the views of a minority, it is wished to see the society made a wing or department of the American Library Association. It has also been made plain that in the judgment of a larger number of persons, to whose opinions we are generally willing to give weight, the society ought to be made an independent organization.

The best results will probably be obtained if a course of action is adopted which will take the best thoughts from each of these suggestions and work them out to a logical conclusion, adopting neither in toto, but welding the two suggestions into one so as to preserve the

best results from each. I would, therefore, suggest that the society be made a national association, having headquarters at Washington. I suggest selecting Washington, because it is the city of the Library of Congress which must in due course of time become the national library of America, just as the British Museum is the national library of England, and the Bibliothèque Nationale is the centre of library life in France. The duties to be accomplished at the headquarters would be to suggest work to the branches or cognate institutions affiliated with this national association, and to gather together the reports and papers of all the branches, so that when collected they may be printed in an annual report to be entitled the Transactions of the American Bibliographical Society. The staff at headquarters would have to comprise a managing director and such colleagues as should be from time to time found necessary to attend to different departments. Who would be willing or have the necessary time to devote to this important task would be a serious problem, but that some person working in one or other of the great literary institutions of Washington could be found is hardly to be doubted. The management should be, I think, entrusted to the managing director, without any boards or committees, but he should be empowered to gather around himself, as necessity should dictate, subordinate directors to take charge of particular departments. Every person undertaking any work in this society should be absolutely responsible for that which he undertakes.

In this way, each person undertaking a duty would be bound to attend to the work he promised to perform, and would not be able to shift the responsibility from himself to some one else on the ground that he was only a member of some committee, and thought that the others were doing the work. The remaining and, of course, the most important part of the work would be that the managing director should enlist the interest of some one or more persons in each of the great cities where great libraries and great collections of books exist, to undertake bibliographical work according to the possibilities of the special location, but always with a special view to blending the whole work together in the annual report and

other publications of the society. These separate branches, or whatever might be the title finally decided on in the various cities other than that in which the headquarters shall be stationed, would have, if I may so suggest, a subordinate or similar constitution, and some one managing sub-director who should search out and find others willing to co-operate in bringing about the best results for bibliographical work in these separate localities. The meetings of the branches would necessarily be frequent; probably not less than eight meetings in a year ought to be held by each branch, but it probably would be better to restrict the meetings of the national society to one in each year. Personally, I feel that it had better be an independent organization, but application could be made to the American Library Association to have this work recognized by the A. L. A. The annual meeting of the American Bibliographical Society could be held at the time and in the place agreed upon as the location for the A. L. A. meeting.

I have purposely avoided going into any details, as it is my desire to submit this simply as a broad outline of a plan, and to enable others to offer suggestions and if possible to evolve a suitable organization. The value of such a society will be great to libraries and library workers. I would recommend that a small committee of three be appointed to draft rules and regulations for the government of such an institution, and to devise a plan for raising the necessary funds for carrying out the same, and that the power to act and organize the American Bibliographical Society with local branches be entrusted to that committee, it being recorded as the opinion of this meeting that all the steps taken during the current year should be tentative only, with a view to reconsideration and better adaptation of the ends to the means at the next meeting of the A. L. A., and that the committee confer with proper authorities of the A. L. A. on the subject, by which time at least the scheme ought to have been partially developed, and those interested in the matter may be able to say what steps should be taken to better and further the important objects which seem to attach to the suggestion of such a society as we have been considering during the past one or two years.

BOOK EXHIBITS AT THE PUBLIC
LIBRARY OF PLAINFIELD, N. J.

OWING to a special bequest, the Plainfield Public Library has for a library of its size an unusually good working collection of books on science and useful arts. Though frequent attention has been called to these in the local papers, the use made of them was not as large as their value should warrant. Both for this reason and because our peculiar condition of an unfortunately located library makes necessary new ways of keeping the library before the public, it was deemed advisable to adopt a more striking way of bringing these books to the attention of those for whose use they are chiefly intended. It was, therefore, decided to try the experiment of a series of monthly exhibits, and as Saturday and Sunday afternoons seemed the times most likely to suit the convenience of the majority, the third Saturday afternoon and evening and the following Sunday afternoon were fixed upon.

Having no suitable place for this work, we appropriated the large alcove in the reading room. In this were gathered all our available tables, on which were displayed as attractively as possible the books chosen for exhibition. These were grouped by subjects and labelled; those having colored plates or effective drawings were displayed lying open. Lists of exhibited books were posted on the bulletin board, and when the subject was one which lent itself to illustration all available material was displayed on the walls and on the bulletin board, every effort being made to render the exhibit as attractive and popular as the subject would allow.

As a large number of the books are technical in character, it was soon apparent that the value of the exhibit would be greatly increased if the books could be shown by persons who had made a special study of the subjects. Local specialists were secured with little difficulty, and not only did their expert knowledge add much of value and attractiveness, but they themselves became more interested in the library and made a number of suggestions as to desirable books in their respective lines, thus rendering material assistance in the rounding out of collections. So attractive did this feature become that where the subject needed no specialist, friends of the library were asked to assist in displaying books. Owing to the limitations of the place, any formal talk upon the

books was out of the question, it had in all cases to be individual and conversational, but I am not sure that it was any the less practical for this seeming disadvantage. The success of these exhibits was very largely due to this outside aid, and I might say here for the encouragement of those undertaking a similar experiment, but who hesitate to ask busy professional people to give up so much time, that in all cases I found them not only very willing, but glad to co-operate with us in our efforts to bring the books to the people. Care was, of course, taken to have at least two persons for each subject, so that the same one should not have to serve on successive days.

That the exhibits should be duly advertised, the interest of local papers was enlisted, notices were posted in the library and in factories, were read in the men's meetings of the Y. M. C. A. on the previous Sunday, and were given out at the schools. When the subject was sufficiently limited to allow it, postal invitations were sent to those likely to be interested.

The subjects of these successive exhibits were: Carpentry, Electrical engineering, Mechanical engineering, Miscellaneous trades and crafts, Domestic architecture and home decoration, The home (including books on domestic economy and cookery, home nursing, care of children, and home kindergarten books), Nature.

Especially attractive in the Carpentry exhibit were the sheets from Hough's "Woods." These were suspended across the windows, and as the light shone through them, bringing out the beautiful grains of the woods, from a short distance the effect was, in many cases, curiously like that of tiny impressionist landscapes. For the second exhibit an electrician lent specimens of electrical apparatus, and the electric light company, large blue-prints of electrical machinery. For the third and fourth, we had no illustrative matter, though in the third we were greatly aided by a Stevens Institute graduate who by his thorough knowledge of machinery made a number of points clear to visiting mechanics. The fifth was particularly effective in the display of plates upon the walls. These were taken from the *American Architect* and the *Builder* for the architectural side, while persons to whom interior decoration appealed found much to interest them in the large folio plates from "L'art décoratif moderne," "Meubles de style moderne," Rowe's "French wood-carving," etc. We were also particularly fortunate in the architects and wood carvers who assisted. Appealing as it did to a larger number, this exhibit was numerically better attended than any except the last, and owing to the abundance of illustrative material it was one of the most effective. The sixth was on the Home and was intended for women. The books on

hygiene and home nursing were in charge of a trained nurse, and such of our kindergarten books as were calculated to interest mothers were presided over by two of our best kindergartners. The enthusiasm of these three young women was contagious, and several young mothers took down the names of the books which were recommended to them. That the library should own cook books seemed a source of surprise to many, though the wisdom of this none who saw the interested groups of women about the cookery table would question.

The Nature exhibit was given in April, and, closing the series, was in point of interest and numbers the most successful. The available space in the reading room proving quite too small, the exhibit was held in the art gallery. At the staircase landing were displayed general works on the subject, such as the writings of Thoreau, Torrey, Burroughs, etc., together with books on methods of nature study, those forming an introduction to the whole subject. Leading off from this landing at the right is the main hall, in the centre of which stand the six large cases containing the recently acquired collection of lepidoptera. This formed, naturally, the centre of attraction, particularly as a local collector was present, whose explanations were so interesting that she always had a little group of attentive listeners about her. The books on moths and butterflies were displayed in one corner, the three remaining corners containing the books on flowers, trees, and animal stories, while in the alcove a representative of Doubleday, Page & Co., explained and illustrated the three color process. This process is so much employed in the illustration of nature books that this feature seemed not inappropriate, and certainly added much interest to the exhibit. The books on birds were shown in an adjoining room by themselves. In order to make space for the large number of plates, drawings, etc., many of which were lent us by New York publishing houses, a number of oil paintings were removed, and against this burlap background the pictures showed very effectively. In order to make the exhibit more permanently useful, short popular lists, containing not more than six books each, had been prepared and duplicated for distribution. At this, as at all the exhibits, the librarian made a point of meeting all strangers, and as many others as possible, finding out their special interest and seeing that they were shown the books on their subjects.

It is easy to see now wherein such a series could be made more effective, and in arranging for another my experience would lead me to plan the whole series from the beginning, to advertise farther in advance, to have in all cases outside aid for exhibiting books, and to provide for distribution short lists of best books on each subject.

The exhibit is unquestionably a very effective means of popularization, though not the inexpensive method it has been sometimes represented to be, for while the incidental expenses are hardly worth considering, a very large item of expense will be found to be that of the time necessary for preparation. It seems to me that we are only justified in this outlay by the conviction that our end can best be furthered in this way, and having made this decision, this end should be kept clearly in view, that our efforts may not lack unity, and our energies be scattered in ways which not only have no direct relation to our real purpose, but which by obscuring this purpose tend to defeat rather than further it. To give an exhibit which merely attracts a large number of people may, under some circumstances, be justifiable, if, for instance, the librarian cannot find enough to do otherwise, which is hardly supposable. But even then, would not better results be obtained by the expenditure of more time in planning these and bringing them in line with other efforts?

Exhibit work is experimental in character, and in all such experiments we must examine results as a guide for determining further lines of work. While experience has taught us that the public learns but slowly, and that for one's own peace of mind it is better not to anticipate very large results from any one outlay of effort, we should at least be able to point to something attained. One direct outcome was the offer immediately following the exhibits of the practically permanent loan of a valuable collection of local birds. Another result was the slight increase of .012 per cent. over last year in the departments in which exhibits were given, which was not so bad when it is remembered that most of the subjects were not popular in character, and hence appealed to but a limited number. Statistics are at best very fallible with their half truths, and though we naturally turn first to them, I am inclined to think that the real results in this as in other divisions of our work are those which are intangible, though readily admitting that they are not so satisfactory when a skeptical board of trustees is to be convinced, nor are they so useful in arousing the envy of our fellow-librarians.

If one is not of too hopeful a disposition, and can discriminate between the pleasant commendations which one's library friends make, and the expressions and other manifestations of real interest shown by the public at large, careful observation I believe to be as legitimate and quite as valuable a test as statistics. By this test I found that the exhibits were attended in increasingly large numbers, that among those who came were many who had previously used the library but little or not at all, that local papers showed toward the later exhibits a greater eagerness to advertise

and report them, even calling editorial notice to them, that the necessary preliminary examination of the books by the exhibitor served the double purpose of giving him a more real interest in the library and in revealing the relative weakness of departments, and finally that there is distinctly observable a deeper and more widespread interest in the affairs of the library as well as better appreciation of its importance. If these results are not all that might be hoped for, they have at least justified the expenditure of time and labor involved.

EMMA LOUISE ADAMS,
Librarian.

"THE AGE OF SUCCESS" IN LIBRARY WORK.

AN interesting statistical study of success, contributed to the July *Popular Science Monthly* by Professor Edwin Grant Dexter, bears directly on the question of library education and employment. Professor Dexter's tables show that in several respects a group of artistic employments is differentiated quite clearly from one of professional employments, the former including the stage, literature, music, etc., and the latter, the law, medicine, etc. This first appears in the writer's diagram illustrating the proportion, in various occupations, of those who achieve success in youth, by which he means before forty years of age. A large proportion of members of the artistic occupations seem to achieve success early in life, while few of those in the professional occupations do so. This Professor Dexter accounts for by the fact that success in the former class depends on "nature" and in the latter on "nurture." But there are a few occupations that we should ordinarily class as professional, which range themselves in this respect with the artistic class. These are: scientific work, education, and librarianship, and Professor Dexter notes that these may be "included in a class in which the period of preparation is extended, but for which work of a high order might be expected immediately on its completion and positions of some prominence aspired to from the start."

This is evidently interesting to us as librarians. Accepting Professor Dexter's standard of success, it is a matter of statistics that twenty-five per cent. of the 371 librarians considered achieved it before the age of forty; while only about three per cent. of his business men, five per cent. of the clergymen, five per cent. of the financiers, and about the same proportion of soldiers and sailors were successful at as early an age.

I had occasion recently to point out that there was no apparent reason why a person who entered library work should expect to progress in it faster than he would in the church, the law, or medicine; or at any rate that conditions were tending in that direction. Professor Dexter's investigation would seem to show that this is not yet true. At present the librarian stands with the teacher as a person who has a good chance of attracting public attention early in life. How far Professor Dexter's explanation of this is a real one, it is hard to say. Does the more extended period of preparation include that of the library school? Professor Dexter's data give us no information on this point. It is pretty safe to say, however, that the average period of preparation for librarianship is still less than that for medicine, and that if proportionately more librarians and teachers than physicians reach early note, this is due to some other cause than a more thorough preparatory course. For one thing, it is easier to be notable as a librarian or a teacher than as a physician. The semi-public nature of the position keeps its holder before the public eye. Then again, the number of librarians selected by Professor Dexter (371) is nearly as large as the number of physicians (547), whereas the actual numbers in the latter occupation must be vastly greater. The inclusion of so many more librarians proportionately must have made it necessary to take more of the younger ones, which would of course affect the age percentage. This element, of course, runs through and affects Professor Dexter's whole investigation.

It must be remembered that there are librarians and librarians; some are educators, some are students, some are administrators. Most are all three, the proportion of the different elements varying in different cases. But the librarians of the greater institutions are coming more and more to be administrators first of all; and as administrators they must eventually tend more to fall into line with Professor Dexter's "business men," of whom only three per cent. are noted before they are forty, rather than with his "educators," of whom twenty-five per cent. reach this distinction.

Professor Dexter's diagram showing the degree of education in various occupations is also interesting to us. The proportion of college graduates among Professor Dexter's "successful" librarians is fifty-six per cent. larger than that among successful clergymen, which is fifty-two per cent. Thirty per cent. have taken some post-graduate degree.

No matter what fault we may find with Professor Dexter's foundation, the structure that he has erected on it is interesting, and it certainly gives us no cause to be ashamed of librarianship.

ARTHUR E. BOSTWICK.

THE LIBRARY OF PATNA, INDIA.

From article on "The Islamic libraries," by Khuda Buksh, in Nineteenth Century, July.

I HOPE I shall not be deemed guilty of want of modesty if I describe the library which I have given to the city of Patna. It is not vanity, but the desire of bringing it to the notice of the orientalist in Europe that impels me to mention it. Though the library is now under the control of the government of India, and though every possible precaution which wisdom or foresight can dictate is taken to assure its safety and permanence, still the library is incomplete without a printing press. Let us hope that ere long we shall possess a press to multiply the copies of valuable works and so bring them within the reach of the reading public.

The idea of founding a public library long floated before the vision of my father. The greater portion of his income he spent in the collection of manuscripts, which numbered 1,400 at the time of his death in July, 1876.

On his death he entrusted these manuscripts to me, and asked me to convert his library into a public library for the use of the community, whenever I should find myself in a position to do so. I inherited to the fullest extent my father's passion for collecting books, and since his death I have been making large additions to it. In 1891 the library was offered to the public. It then contained nearly 7,000 manuscripts. The number of manuscripts now is over 8,000. The collection of English books, though not very large, is indeed respectable, including nearly all the most important literary and scientific works.

The library, further, possesses select manuscripts which formerly belonged to great orientalist like De Sacy, Sir Gore Ouseley, and Mr. Blochmann of the Calcutta Madressah, and many indeed with notes in the handwriting of these men.

I have spoken of the destruction to which libraries in Moslem countries were constantly liable during the periods of political excitement. In addition to the oft-recurring internal dissensions, the ravages of the Moguls and the fanaticism of the Christians obliterated countless books.

Owing to these misfortunes productions of Mohammedan writers from the second to the seventh century of the Hegira have become exceedingly rare. The Mohammedan books now extant are chiefly the writings of the authors who flourished from the middle of the seventh to the end of the eleventh century of the Hegira.

I have succeeded in securing some manuscripts of earlier dates which treat of astronomy, surgery, metaphysics, and mixed mathematics. Many of the manuscripts are written

by the most famous scribes, and are most exquisitely done.

In the first volume of the catalog which I have published, I have dealt at length with these manuscripts. If time and health permit me, I shall soon bring out the second volume of the catalog of the library.

The work of Zahravi on surgery is a manuscript which requires particular attention. This copy bears 584 A. H. as the date of execution. In this manuscript the pictures of the surgical instruments are carefully drawn and the marvellous similarity which some of the instruments bear to those which are supposed to be of modern invention tempts us to believe that the Moslems of Spain were not entirely unfamiliar with them.

There is another old manuscript which may be worth our while to mention here. It is the work of Dioscorides on medicinal plants, which was translated by the Arabs during the caliphate of Haroon-al-Rashid. This manuscript is of great historic interest. It is the very manuscript which was once deposited in the charitable dispensary established by Jaluddin Shirwan Shah in Shiraz, some six hundred years ago. The Moslems made this book the basis of their future inquiries on medicinal plants, and the library possesses the most important and authoritative works written by the Moslems on the subject. Further, this library possesses a very old manuscript of the treatises of Thabit ibn Kurra and some of the writing of Nasiruddin Ferabi and Abdur Rahim Bairuni.

There are moreover manuscripts which used to belong to the emperors of Delhi; for instance, the poetical works of Mirza Kamran, brother of Humayun, written by Mohamed Ishaq Shabi, was with the emperors of Delhi from Akbar to Mohamed Shah. This manuscript bears the signatures of Jehangir and Shah Jehan.

Of poetical works the library possesses over four hundred manuscripts; some of them are sumptuously illuminated and magnificently bound in the oriental style.

The Mohammedan works on religion, viz., the Hadis (tradition), the Fiqh (law), the Osool (jurisprudence), and Tafsir (commentary on the Koran), are many in number, bearing the signatures of the best authors, such as Subki, Zahabi, Ibn Hagar, and others. The collection of historical works is worthy of notice: "History of India," written by various Moslem writers, and also the biographies of the emperors of the Mogul dynasty, constitute the most important portion of this collection.

These are rare books, and unless care is taken for their preservation they are likely to be all but extinct after the lapse of half a century. The library would indeed fulfil its mission if an arrangement were made to edit and publish them.

REPRODUCTIONS OF BODLEIAN TREASURES.

THE Bodleian Library sends out "A first list of photographic reproductions to be purchased at or from the Bodleian Library." These reproductions cover silver print interior and exterior views of the library, photographic facsimiles of Caxtons and other rare impressions, notable palæographical collotypes, and collotypes of rare bindings, interesting portraits and other relics. Their issue is a new enterprise on the part of the library, and its continuance depends largely on the amount of support received. For the palæographical collotypes especially an appeal is made for the support of other libraries, as there is no chance of the demand for them from the general public being sufficient to cover the cost of a negative and even twenty copies. These palæographical collotypes are on selected paper of uniform large folio size. As they are prepared only for palæographers and scholars, they are not accompanied by transcripts for beginners in the study of MSS., but each one has adequate annotation, embodying the results of careful original examination. If sufficient support is received for the undertaking, it is intended to include in this series of reproductions all the MSS. of palæographical importance contained in the Bodleian, of which only a very small proportion has ever been reproduced in any form. The librarian in his announcement adds: "One marked feature of the reproductions from MSS. may be specially noted. When a MS. written by more than one contemporaneous scribe is facsimiled, it is a common practice to exemplify only one of the hands. In the Bodleian series an attempt will be made to represent every such hand which can be clearly distinguished. Whether the result is practical agreement or marked difference, it cannot fail to be instructive, at least as regards the characteristics of the particular *scriptorium* in which the MS. was produced. And, in those cases in which the hand of a single scribe gradually alters so much that the end of the MS. seems to have been written by another person, specimens of his earlier and later style will be given." If practicable, it is hoped to include in the series collotype specimens of bindings employed in different monasteries, as well as of pages illustrating their writing, ornamentation, shelf marks, and inscriptions of ownership.

The reproductions listed in this first announcement are priced at from two shillings to sixpence each (excluding postage). There is an interesting series of collotypes of Shelley relics, including a miniature and a portrait, and the copy of Sophocles found with Shelley when his body was recovered, of which "the edges are supposed to bear the imprint of his thumb, incrustured with brine." Among the palæographical items are three pages of St.

Margaret's Gospel-book (Britain, 11th century), and pages from the *Actus Apostolorum* (8th century, St. Mildred's Abbey, Isle of Thanet), while other collotypes include several examples of embroidered satin bindings, the dying declaration of the Duke of Monmouth, and an abbreviated signature of Shakespeare.

None of the reproductions will be given away, or exchanged for similar publications issued by other libraries, but it is hoped that enough libraries will purchase them to ensure the development of this interesting undertaking.

EFFORTS TOWARD A NATIONAL BIBLIOGRAPHY IN RUSSIA.

M. de Wylie, in *Bulletin de l'Institut International de Bibliographie*, fasc. 4-6.

IN 1895 there was held at St. Petersburg an exposition and a congress representing the national typographical arts. This was the first attempt of the sort, and it succeeded brilliantly. The congress formulated certain desiderata, among which was the organization of a permanent society for the study of the actual conditions of the printing industry in Russia and the promotion of their development. This was the genesis of the Russian Society of the Book Arts. It was not, however, until four years later that it saw the day. Begun under more than modest conditions, practically without funds, the enterprise had to struggle with indifference, almost with hostility. However, thanks to the devotion of those interested (all the work done being gratuitous), and to the cordial relations of its members, the Society was able in a short time to accomplish unhopedor results. To-day it holds an important position, its salutary influence extending even to the provinces. It has a branch at Moscow, and another is in process of formation at Warsaw. Its headquarters are at St. Petersburg, 20 rue de Zwenigorod.

Without dwelling upon the other branches of activity of the Society, I will pause upon the most important of its creations—the Statistico-Bibliographical Commission.

To labor with any success for the development of national bibliography, it is necessary, first, to secure an exact presentation of its actual state. It was with this purpose that the commission was instituted. Its program is as follows:

1. The registry of all Russian establishments which deal with the book, such as libraries, book stores, editorial offices, publishing houses, printing offices, type foundries, paper and printing-press factories, binderies, etc. This registration is accompanied by full statistics upon the output, number and sex of employees, number and kind of machines, salaries, expenses, etc.

2. The recording of all the information

secured upon a card catalog, systematically arranged, topographically and alphabetically, so that reference to the statistics may be facilitated.

3. The formation at the headquarters of the Society of a library, a permanent exhibit, and a special museum, all fully accessible to the public.

4. Finally, as the most effective means of collecting these facts, it was thought necessary to prepare and publish a periodical catalog, as complete as possible, of all works printed in Russia since 1899.

According to approximate statistics, there appear annually in Russia an average of from 20,000 to 24,000 works in 28 different languages. These figures do not include periodicals in general, nor works in the Finnish and Swedish languages.

The preparation of this catalog was undertaken by M. de Sabanine, and it was a work bristling with difficulties, due to the embryonic condition of bibliography in Russia. The first half volume (works in the Russian language appearing the first half of 1899) has been published, the second half volume (works in languages other than Russian for the same period) is in process of printing.

A special difficulty at once presented itself to M. de Sabanine: Where secure the necessary data? What record might be relied upon for the authenticity and the fulness of its list of publications? In the lack of bibliographical material the choice fell upon the *Official Monitor*, the only journal publishing weekly lists of current literature, lists which are transmitted from the Committee of Censors and, consequently, should apparently be complete. The titles were therefore cut from the *Monitor* and pasted upon cards, which were arranged in two lists, one for authors, the other according to a provisional classification devised by M. de Sabanine. An index supplemented these two catalogs.

Such a publication was a first attempt in Russia, and it was received with general approbation. But the commission cherished no illusions regarding it. Experience had shown the defects of the work and the inconvenience of the general plan adopted. It was decided that important changes should be made in the edition for the following year.

The errors and gaps noted in the work are, for the most part, caused by the absence from the national literature of any complete bibliography. Booksellers publish their catalogs rarely, and those that are issued are defective. The book trade, besides, disregards publications that are not commercial in their character. The press rarely gives bibliographical lists. Some special periodicals deal with the subject, it is true, but there is no way of verifying their

facts. It would seem that the great libraries of the state, enjoying the privilege of legal deposit, might furnish the desired information, but every one knows the tardiness and irregularity of such deposits. Beside, the deposit of required copies is made through the Committee of Censors, which obviously can deal only with the publications which it has passed upon. This institution, however, is less concerned with the number than with the character of the works it registers, and it never handles a large number of publications, such as state documents, publications of academies and universities, society reports, etc.

In view of these circumstances the Statistico-Bibliographical Commission, believing that a complete national bibliographical record can be secured only with the aid of the government, entered, through its president, into negotiations upon the subject with the Imperial Academy of Sciences. As the result of a memorial presented Nov. 4, 1900, the Academy, in full session, authorized the appointment of a joint committee, under the presidency of its permanent secretary. On this committee the Academy is represented by five members: the Imperial Library, the Library of the Academy of Science, the Minister of the Interior, the Committee of Censors, the Holy Synod, the Bibliological Society, has each a delegate; the Society of the Book Arts has three delegates — its president, Count J. Tolstoy, vice-president, M. de Sabanine, and M. de Wylie, the president of the Statistico-Bibliographical Commission.

The purpose of this joint committee is to secure an exact and accurate system for the record of contemporary national bibliography. The committee has not concluded its labors. It has, however, settled upon several preliminary details. It has now undertaken to secure the establishment by legal authority of a permanent bibliographical bureau at St. Petersburg, attached to the Ministry of Public Instruction, and devoted to the preparation and publication of a "periodical repertory" of Russian literature. The bureau should have its headquarters at the Imperial Library and should represent the same interests that are included in the joint committee. Its annual expenses are estimated at 10,000 roubles, to be granted from the funds of the Ministry of Public Instruction.

It is not possible to predict whether this plan will meet with the approval of the ministry; but it is none the less gratifying to observe the general movement that is taking place in Russia, and to see a state organization as authoritative as the Academy of Sciences in fraternal association with a private enterprise for the preservation of the intellectual interests of the country.

PRINTED CATALOG CARDS FOR CHILDREN'S BOOKS.

THE following statement was presented at the session of the Children's Librarians' Section at Magnolia, by Mr. W. H. Brett, of the Cleveland Public Library, on behalf of the Carnegie Library of Pittsburgh and the Cleveland Public Library:

These libraries have planned to collaborate in printing cards for a dictionary catalog of juvenile books with simplified subject headings, the cataloging being done in Cleveland and the printing in Pittsburgh. These libraries find it desirable to supply each of their branches with such a catalog, and believe the plan of co-operation to be a practical one.

It has been suggested that while these cards are being printed, some other libraries may be glad of the opportunity to secure sets also.

With the exception of the juvenile fiction, which is not yet finished, the juvenile collection in the Cleveland public library has been very fully cataloged within the past two years. Considerable study had been given to the question of simplified subject headings for some time preparatory to beginning the work, and notes taken of subjects as asked for by the children.

Library school rules are followed as to form. Subject fulness of names is given and no imprint except the copyright date on the author card. A. L. A. subject headings are used except where it has seemed wise to simplify. The following are some of the variations:

A. L. A. CHILDREN'S CATALOG.

Aerial navigation.	Airships, balloons.
Beverages.	Drinks.
Confectionery.	Candy.
Conjuring.	Magic.
Domestic economy.	Housekeeping.
Ethics.	Conduct.
Etiquette.	Manners.
Labor.	Work.
Meteorology.	Weather.
Textile fabrics.	Cloth.

Many additional headings have also been used, such as specific names of flowers, trees, birds, insects, animals; names of all holidays; names of common articles, such as baskets, bats, brooms; the ethical qualities — boasting, bravery, honesty, honor, etc. The fiction subject headings have not yet been fully worked out, but will include country headings, historical events, school stories, adventures, Indians, sea stories, and others.

The aim has been to bring out all material which may be of service to children or teachers, and analyticals have therefore been made very freely. In all cases where the simplified subject heading is used, the A. L. A. heading follows in parentheses, and cross references are made. The cards will probably be like the sample shown at the meeting, with space for the call number to be written in. Copies of

these sample cards may be had by addressing Mr. Anderson at the Carnegie Library.

The cost will depend partly on the number of subscriptions received, and will probably not be over one cent a card, provided fifty sets are subscribed for. The charge will, however, include only the cost of the additional work required, as the two co-operating libraries bear all cost of composition and making ready. It will be noticed that the subject cards are not duplicates of the author cards, and this increases the cost.

The catalog will be enlarged by adding all books contained in the Carnegie Library children's collection not already cataloged for the Cleveland Library, and it will be kept up to date by cataloging the important children's books of each year.

It is proposed to prepare a list of one thousand volumes which are considered valuable in the two co-operating libraries. It is believed that such a list will be composed largely of books which are in use and are approved in most of the libraries in the country. Copies of this list, as soon as it is ready, will be sent to all applying for them.

Cards will be printed for the books in this list first, and subscriptions will be received only for entire sets of the cards for these books. Subscriptions may be extended to include the cards for the entire collection, and all subsequent additions at cost; but it should be borne in mind that if the number of subscriptions drops off after the completion of the first lot of one thousand, the cost per card will be somewhat increased.

All applications for the list of books, or for sample cards, and all subscriptions for cards should be addressed to Edwin H. Anderson, Librarian Carnegie Library, Pittsburgh, Pa.

In presenting this statement Mr. Brett emphasized the fact that the arrangement to print the cards for their own use had been definitely made by the Pittsburgh and Cleveland libraries. He further called attention to the fact that the Carnegie Library has its own printing plant, and is therefore able to offer to other libraries the cards at the bare cost of additional press work and stock without any charges for composition. The cataloging is so well advanced that it will be possible to begin printing soon after the list of one thousand volumes is decided upon. It will be carried on as rapidly as the routine work of the two libraries will permit.

Those present at the session of the Children's Librarians Section showed cordial interest in the undertaking. If sufficient subscriptions for these cards are secured, it is hoped that this enterprise may be a saving of time and expense in many libraries. It should, if successful, make it possible for a library opening a children's department to secure the catalog cards at the same time the books are ordered.

APPOINTMENTS TO THE LIBRARY OF CONGRESS.

THE Librarian of Congress has made public the following recent appointments to the service, including those taking effect July 1, 1902:

Alexis V. Babine, California, \$1,500.
 Charles A. Barr, New York, \$1,200.
 John E. Bulmahn, Indiana, \$360.
 Mary B. Coffin, District of Columbia, \$360.
 William H. Cole, Colorado, \$1,200.
 Emily T. Earle, New York, \$720.
 Charlotte St. John Elliott, Tennessee, \$720.
 Lucy C. Daniels, Wisconsin, \$1,200.
 Jessica L. Farnum, New York, \$720.
 William S. Fuller, District of Columbia, \$360.
 Omar G. Gillett, Missouri, \$360.
 Philip S. Goulding, Vermont, \$900.
 James H. Graham, Texas, \$360.
 Hallie I. Herriott, Indiana, \$720.
 Bertha E. Hyatt, New York, \$900.
 Olive M. Jack, Nebraska, \$600.
 Evelyn B. Jones, New York, \$360.
 Theodore W. Koch, Pennsylvania, \$1,500.
 Olive C. Lathrop, Michigan, \$720.
 Walter H. Lee, District of Columbia, \$720.
 Charles G. Leonard, Maryland, \$1,200.
 Marian J. McCants, Tennessee, \$600.
 Mary Moffatt, Indiana, \$360.
 Anna Perry, South Carolina, \$360.
 Helen L. Plummer, Colorado, \$720.
 Harold W. Porch, New Jersey, \$360.
 Anna M. Priest, Pennsylvania, \$360.
 Alfred F. W. Schmidt, California, \$1,200.
 Wilhelm B. Schultz, Virginia, \$720.
 Mildred D. Searle, Colorado, \$360.
 Helen Sharpless, Pennsylvania, \$720.
 Eliza J. Skinner, West Virginia, \$1,200.
 Cora E. Smith, Massachusetts, \$800.
 Stephen C. Stuntz, Wisconsin, \$1,200.
 Earl G. Swem, Iowa, \$1,200.
 Jessie H. Thomas, New York, \$900.
 Helen M. Thompson, Maryland, \$900.
 Harvey W. Tuttle, Ohio, \$900.
 Clara E. A. von Tangen, District of Columbia, \$600.
 Sallie F. Waller, Alabama, \$720.
 Willard O. Waters, Illinois, \$900.

Regarding these appointments and the possibility of future vacancies, as well as the principles on which selection to the Library of Congress force are based, Mr. Putnam has made the following statement:

The list includes (1) employees recently confirmed after probationary service; (2) appointments to certain positions that have recently become vacant through resignation or death; (3) appointments to certain positions

in the Copyright Office, which, though carried by the appropriations act for the year beginning July 1, were made "immediately available," and so became effective in April last, and (4) appointments to positions carried by that act, but effective only on July 1. These latter positions were all in the Catalogue Division.

The appropriations act provided in all for but thirty-three positions, nine in the Copyright Office and twenty-four in the Catalogue Division. For these there were considered (a) persons in the regular service in lower grades whose claims to promotion customarily take precedence of consideration of applications from outside of the force; (b) persons who had been previously in the employ of the library for special or temporary work, and who had demonstrated their fitness for our particular work, and (c) applications from without. When it came to these, about 1,600 applications were considered.

The above list includes forty-one persons. A few other positions besides the above have been arranged for, but the appointees will not take office until the fall. Their names will be given in a subsequent list.

There are no further appointments to be made or arranged for, and there is no encouraging prospect for the hundreds of applicants whose applications are still on file. Among them are scores of persons who would be useful to the library; scores, in fact, who have had special training for our work. These have not been "rejected" as disqualified. The question was not of rejection but of selection.

What we have done was to select out of the 1,800, two-score persons whose experience and apparent capacity offered a presumption of fitness for our work. These have been or are to be put at work for a probationary period of from three to six months. This period is, in a sense, an examination. At the end of it they discontinue unless their fitness has then been proven.

The chance for further appointments in the near future is very meagre. The catalog force, to which there have been the largest additions during the past two years, has now reached a normal, and an endeavor will be made to keep the general service within the present general limits. The business of the Copyright Office is increasing at about the rate of 10 per cent. a year, and will require each year some slight addition to the force there.

It will be noticed that of the new positions filled some carry salaries as low as \$30 per month. Some of the appointees who have accepted these low salaries have done so not in admission that their services are worth no more, but only that they may get an opportunity to show qualifications for a higher salary later.

THE FREE PUBLIC LIBRARY OF
TRENTON, N. J.

THE history of the library movement in the city of Trenton dates back to the years of Benjamin Franklin.

One of the directors of the Junto Club Library, founded by Franklin, was Dr. Thomas Cadwalader, who resided for seven years in Trenton. He returned to Philadelphia in 1750, and before his removal gave £500 for the establishment of a public library in Trenton. The library continued to flourish during the colonial period until December, 1776, when it was destroyed by the British. In 1797 the Trenton Library was reorganized under the title of Trenton Library Company, consisting of about sixty proprietors or shareholders. In 1804 a printed catalog was issued indicating a collection of 700 volumes. In 1855 the books were transferred to the Trenton Library Association, which had been organized in 1852. This association flourished for a time, but ultimately its books and those of the library company passed into the custody of the Y. M. C. A., which had also a library. In 1879 these three collections were delivered into the care of the W. C. T. U., which in 1899 had on its shelves about 6,000 volumes issued to the public on the payment of a small fee.

In May, 1900, the board of trustees of the Free Public Library of the City of Trenton was appointed and immediately entered upon its duties. In August of the same year a site was purchased and the erection of the new building begun. The collection of books held by the W. C. T. U. was purchased and the organization of the library with all its details of book purchases, cataloging, etc., was taken up in earnest. When the plans of the library were formed the stack system was adopted, but further consideration modified the system, and the reference room has now been equipped with open shelves to accommodate 1,500 volumes, and a children's room with open shelves for 1,200 volumes is a later compromise.

The number of volumes now accessioned is 21,000, and the collection, fully classified (D. C. system) and cataloged, is growing steadily. The library is well equipped with modern appliances without having adopted all the novelties evolved during the late years. The demands of the public on the library, the efficiency of the resources already at our disposition are yet to be ascertained, and the problems will be dealt with as they arise; the necessity of further alterations and of deviations from the old order of things is perhaps awaiting us, but it will have to be demonstrated.

The building is situated on Academy street, near the very centre of the city, and the total cost of building, including site and interior furnishings, amounts to \$115,000. The architect was Spencer Roberts, of Philadelphia. A spacious vestibule with marble floor and a wainscoting of Sienna marble leads into the main hall, from the rear of which ascends the marble stairway to the second floor. The main hall is twenty-one feet square. Opening on the sides wide entrances lead into the different rooms of the first floor. The floor of the main hall is of white marble and the pilasters of the arches and the front wall are done artificially in pavanazza marble. The pilasters will be copped in bronze and gold. The ceiling has a splendid cornice effect, and around the ceiling, about a foot from the walls, is a row of 80 incandescent electric lights.

The stairway leading from the rear of the main hall is of Italian marble, with bronze balustrades and mahogany hand rails, and runs up to a mezzanine floor or landing, whence there are two stairways, one on each side, to complete the ascent to the second story of the building. At the head of the first flight of stairs which lead to the rear wall of the building is a large stained glass window, with a smaller one on each side. These windows are in full view from the main hall, and the centre one contains a beautiful Italian landscape scene. The whole effect is highly artistic. On either side of the foot of the main stairway is an alcove leading back to a coat room and two toilet rooms.

Leading from the main hall on the right, as one enters, are archways to the main reading room and the reference room. The latter is in front and is 23.6 x 17 feet, with an alcove adjoining the vestibule. The reading room is 23.6 x 32 feet and extends to the rear wall. Both rooms have floors of quartered oak and are wainscoted with antique quartered oak. In the rear of the reading room is a large open fire-place eight feet wide and nine feet high in Ohio buff stone. On the left of the main entrance in front is another reading room, 26 x 21 feet, to be devoted to the use of children. Next to this is the delivery room, 26 x 13 feet, and immediately adjoining is the stack room. The stack room is 20 x 26 feet, and is in the rear of the floor space on the left of the main entrance. It extends upward through the second floor of the building, with three mezzanine floors that can be reached by a spiral stairway and also directly from the adjoining room on the second floor of the building. The arrangement of the stack room, constructed by A. W. & W. T. Westervelt, is such as to provide capacity for 40,000 volumes.

On the second floor of the building, on the easterly side, extending from the front to the rear, is a lecture room that can also be used for a reading room as the occasion demands. This room is 24 x 52 feet and has a raised platform in front. At the head of the stairways is a hall of the same size as the one on the lower floor. In the front of the hall and over the vestibule is the librarian's room, 21 x 9. From the librarian's room a door leads to the stage of the lecture room, and another leads to the trustees' room on the front of the westerly side of the building, and immediately back of the trustees' room and adjoining the stack room is the periodical and newspaper room. All of the rooms, with the exception of the trustees' room, are finished in antique quartered oak. The trustees' room is finished in mahogany, with an open fire-place of English red stone and mahogany. The delivery room is wainscoted almost to the ceiling. Throughout the decorations are most artistic, and the color schemes have been worked out with harmony and effectiveness.

The building is heated by steam throughout, with an excellent ventilation system. The basement of the building, besides supplying space for furnaces, etc., is utilized for storage purposes and also for working-rooms for some of the library staff.

ADAM J. STROHM, *Librarian*.

THE dedication exercises of the Trenton Free Public Library were held on the afternoon of June 9, and the building was opened for public inspection from 5 to 9 p.m. The formal presentation of the building to the city was to have been made by Ferdinand W. Roebeling, president of the board of trustees, but in his absence ex-Mayor Frank O. Briggs read Mr. Roebeling's address. Mayor Frank S. Katzenbach spoke briefly in acceptance, and addresses were delivered by John C. Dana, librarian of the Newark Free Public Library, Rev. Hamilton Schuyler, and Samuel H. Bullock, ex-president of the Trenton School Commission. Mr. Dana's remarks are given elsewhere. In Mr. Roebeling's address reference was made to the hoped-for use of the library's collection in aiding Trenton's industrial development. Special attention will be given to building up a technical collection, emphasizing especially such subjects as pottery, mechanics, chemistry, etc.; and also making the library a necessary adjunct to the art school of the city. At the conclusion of the addresses Rev. Morgan W. Cross presented a handsome American flag to the library, on behalf of Enterprise Council No. 6, of the Junior Order United American Mechanics.

WESTERN LIBRARY MEETING, MADISON, WIS., AUG. 28, 29, 30, 1902.

THE following announcement is issued regarding the general library meeting, to be held in Madison, Wis., August 28-30:

To Librarians, Trustees, and Friends of the Library Movement:

A meeting of librarians, trustees, and all others of the West and Middle West interested in library work will be held at the State Historical Library Building, at Madison, Wis., on Thursday, Friday, and Saturday, Aug. 28, 29, and 30, 1902.

The first session will be held on Thursday morning, August 28, at 9.30 o'clock. Miss Adelaide R. Hasse, chief of Public Documents Division, New York Public Library, will lead the discussion on the vexed question of "Public documents."

In the afternoon, at 2 o'clock, there will be a short business session of the Wisconsin Library Association.

The Historical Library building will be opened Thursday evening. All are invited to attend for a social hour.

On Friday morning Mr. Frank N. Doubleday, of Doubleday, Page & Co., will speak upon "The relation of the publisher to the public as it is largely affected by librarians." C. M. Roe, bookdealer, Chicago, Ill., will talk on "The bookseller and the librarian;" and Mrs. Mary Holland Kinkaid, Milwaukee, will present "The book review—its worth and worthlessness." Each of these topics will be followed by discussion.

Friday evening, at 6 o'clock, there will be a lake excursion with picnic supper.

Saturday morning, August 30, will be devoted to the subject of "Library architecture." Many architects will be in attendance and an exhibit of library plans will be made. Patton & Miller, Chicago, will lead the discussion from the architects' point of view. George B. Ferry, of Ferry & Clas, Milwaukee, the architects of the State Historical Library building, will speak on "The library beautiful." Librarians in attendance will discuss the subject from their standpoint.

On Monday morning, September 1, the officers of the various state library commissions will meet to discuss their problems and outline work for the coming year.

Madison affords a delightful place for rest and recreation, with its beautiful lakes and drives. The student of library affairs will be interested in the great collection of the State Historical Society, the University Library, City Library, with its attractive children's room, the offices of the State Library Commission, Grimm's bindery, Democrat Printing and Library Supply Company, etc., etc.

Application has been made to the Western

Passenger Association for a fare-and-a-third rate which will be granted if 100 or more persons are in attendance. When securing ticket, obtain a certificate from the agent over each line travelled, and hand these certificates to the secretary immediately upon arrival. Should the attendance warrant, a fare of one-third will be granted for the return trip. We would advise that inquiries be made of the local ticket agent to ascertain if any reduced tourist rates are in effect that would be available at this time to reach Chicago, Milwaukee, or Wauke-sha—near-by points. Secure receipts when purchasing such tickets.

Board at hotels and private houses may be obtained at reasonable rates by addressing the secretary, *in advance of the meeting*, if possible, stating what accommodation is desired.

Further information will be gladly furnished by Miss L. E. Stearns, Secretary, Madison, Wis.

(Signed)

H. M. UTLEY, Michigan.

A. H. HOPKINS, Illinois.

W. E. HENRY, Indiana.

W. H. BRETT, Ohio.

ALICE S. TYLER, Iowa.

GRATIA A. COUNTRYMAN, Minnesota.

EDNA D. BULLOCK, Nebraska.

F. M. CRUNDEN, Missouri.

J. L. KING, Kansas.

F. A. HUTCHINS, Wisconsin.

TRUSTEES' SECTION, FRIDAY, AUGUST 29,
1902, 2.00 P.M.

The Trustees' Section will meet at the State Historical Library building on Friday, August 29, at 2 o'clock. The session will be open to librarians and all others interested. It is hoped that many trustees will avail themselves of this opportunity to meet and discuss questions of vital interest in library organization, administration, and management. Additional burdens and duties are being constantly forced upon wide-awake trustees, and a proper solution of many vexing problems can best be brought about by mutual interchange of ideas and experience.

"The relation of the city government to boards of library trustees" and its complementary subject will be discussed. "The local, untrained applicant vs. trained service" is another topic for consideration. "Principles of book selection by book committees" and other problems with which trustees have to deal, such as "The establishment of branches, stations, and the extension of library privileges to rural communities," will be presented by those having had experience in dealing with such matters.

The call for the Trustees' Section meeting is signed by nine trustees, each from a different state.

"LIBRARY WEEK" AT LAKE PLACID.

Now that the annual conference of the A. L. A. at Magnolia is so successfully over, it is time to call attention to "Library Week," the annual meeting of the New York Library Association.

Two years ago the association adopted a definite stated time, the last full calendar week in September each year (September 20-29), and a permanent place, the Lake Placid Club in the Adirondacks, for its annual meetings. The last two meetings have been very profitable and particularly pleasant—and this year's meeting, as the club seems more delightful than ever and the program promises to be even more interesting and profitable than former ones, seems likely to be an event not to miss.

The reports of the branches of work authorized last year—on library institutes, on library publicity, and on small reading lists—promise points for animated discussion. A round table session on detail work in small libraries conducted by the president, which those who saw her work in this line at the institutes insist on having; a session on children and literature opened by a new voice and from an unusual aspect; and some other things too much in embryo to discuss, will make up a program of interest and profit.

Special emphasis is laid upon the work of small libraries and upon discussion rather than longer papers. The meeting is likely to bring together—as has been the case each year—an attendance from beyond the borders of the state; and it should be especially useful to library workers in more limited fields and smaller towns, whose problems are now less considered in the national association meeting.

The New York Association welcomes all library workers, trustees, librarians, and assistants from all states, not New Yorkers only. Both place and time are so beautiful that this meeting should be remembered in planning vacations. The expense is not great. The club rates are \$10.50 a week for meals and from 50 cents to \$3 a day for room, whether occupied by one or two, the price of rooms being determined by size and location. Every room in the club is comfortable and wholesome.

It is expected that the New York Central will follow its two-years-old precedent and grant a rate of one fare for the round trip on the main line and all its branches. Further notices and circulars will be issued nearer to the time of meeting.

Write to Asa O. Gallup, Lake Placid Club, Morningside, Essex County, N. Y., about rooms. Write to Mrs. H. L. Elmendorf, 319 Norwood avenue, Buffalo, N. Y., about membership.

THERESA H. ELMENDORF.

BIBLIOGRAPHICAL SOCIETY OF CHICAGO.

A MEETING of the Bibliographical Society of Chicago was held at Magnolia, Mass., in connection with the annual meeting of the American Library Association, on the afternoon of Wednesday, June 18. The meeting was opened by Mr. Josephson, who was elected temporary chairman, and appointed C. W. Perley temporary secretary.

Addresses on "The scope of an American Bibliographical Society" and "A plan for an American Bibliographical Society" were delivered by Azariah S. Root and John Thomson respectively, which are printed elsewhere.

Mr. Bisbee advocated measures to secure the support of the Carnegie Institution. Mr. Nelson urged that the work of the proposed society could be better done as an affiliated society than by treating it as a section of the A. L. A. Mr. Roden thought that the broad scope of the committee proposed by Mr. Thomson rendered further discussion unnecessary.

Dr. Billings speaking as a trustee of the Carnegie Institution stated that, in his opinion, the Institution could not be looked to for any support as yet. It would want to know very thoroughly the capabilities of the proposed director, what he had done; also how much the cost would be; would want to have *results* first. No established institution would undertake to support such a bibliographical society otherwise. A new donor must be looked for.

The report of the special committee (W. Stetson Merrill, Clarence W. Perley, James W. Thompson) appointed to consider the matter of a national society was submitted as follows:

"As some time has elapsed since the appointment of this committee, and as there may be some persons present who were not at the Waukesha meeting, it seems proper to state that at that meeting, held on July 4th of last year, a committee was appointed to report upon the advisability of forming a national society of bibliography, either by enlarging the scope of the present society, or along other lines to be considered. This committee consists of three members, Wm. Stetson Merrill, of the Newberry Library; James W. Thompson, of the University of Chicago; and C. W. Perley, of the John Crerar Library.

"The committee decided at a meeting held in Chicago some weeks after the conference to endorse the opinion of Mr. C. W. Andrews as expressed by him at the Waukesha meeting, viz.: that 'the Chicago society go on a year or so longer, and issue a couple of creditable publications, thereby proving its reason for existence, and drawing more non-resident members to its ranks. At the moment when these outnumber the resident members it would be in order to change the name and organization of the society, and enlarge plans and field of work.'

"A circular letter was prepared and sent out to all members of the society, and to nearly as many more persons interested in bibliographical work; the circular was accompanied by a 'return postal card' on which correspondents were requested to express their opinion of the committee's plan, and to add any comments that seemed called for.

"The returns received from 87 correspondents indicate a very decided approval of the notion of a national society; even those opposed — seven, including two members — favor a national bibliographical movement, but think it can be conducted better through the A. L. A. Twenty expressly approve of a national society; of these, seven are members. Fifty-one favor the plan of the committee; of these, twenty-one are members. Nine are non-committal, including three members.

"Turning now to the question of immediate organization or prior increase in our non-resident membership, five have expressed themselves distinctly in favor of forming a national society at once, while sixty-seven think the national body should come as an expansion of the present society. This gives a proportion of 77 per cent. to 5½ per cent. against immediate organization.

"The matter of local societies or branches was submitted to our correspondents by the committee, and nine expressed approval.

"The question of organization, whether the national society shall be a federation of local societies or 'lodges,' or a central body with branches, may well be left for consideration when our non-resident membership list shall give indication of the relative bibliographic strength of the several sections of the country.

"The proposition that national bibliographic enterprises should be left to the A. L. A. was not originally contemplated by the committee, who received the first suggestion to that effect from among the latest replies to circulars addressed to non-members.

"The proposal, if it is to be entertained at all, seems to call for a joint discussion on the part of the two present organizations concerned, and as such to fall outside the scope of this committee's present inquiry.

"The committee, then, report to the society that their judgment as to a national bibliographical society, as stated above, has been supported by a large majority of members and other bibliographers addressed, and the committee submit it thus reinforced to the society."

A general discussion followed, and in accordance with Mr. Thomson's recommendation the following resolution was passed:

"*Resolved*, That a committee of three be appointed by the chair to draft rules and regulations for the government of the American Bibliographical Society, and to devise a plan for raising the necessary funds for carrying out the same; and that the power to act and organize such a bibliographical society with local

branches be entrusted to that committee, it being deliberately recorded that all steps taken during the current year shall be tentative only, with a view to the reconsideration and better adaptation of the ends to the means at the next meeting of the A. L. A., and that the committee confer with the proper authorities of the A. L. A. and the Bibliographical Society of Chicago to bring about accomplishment of this project."

The meeting then adjourned.

American Library Association.

President: Dr. James K. Hosmer, Public Library, Minneapolis, Minn.

Secretary: Frederick W. Faxon, 108 Glenway street, Dorchester, Mass.

Treasurer: Gardner M. Jones, Public Library, Salem, Mass.

A. L. A. PUBLISHING BOARD.

INFORMATION WANTED ON LIBRARY BUILDINGS.

The A. L. A. Publishing Board wishes to print a supplement to its recent tract on "Library buildings," containing typical plans of libraries which conform to the most approved modern ideas. In order to get together a sufficient variety of the best plans from which to select, it asks librarians in all parts of the country who personally know of library buildings which have proved to be practically satisfactory from the working point of view, to send exterior and floor plans of such buildings with brief statement of size, cost, capacity, and architect to W. R. Eastman, State Library, Albany, N. Y., for the use of the Board.

Examples of the following classes are specially desired:

1. Small village library.
2. Town library, 10,000-20,000 v.
3. City library, 20,000-100,000 v.
4. College library of not over 100,000 v.

Only about 12 plans can be used in the tract, but librarians who will respond to this call will serve the library cause by giving to the Board material for selection which cannot otherwise be obtained.

FULL SET OF PRINTED PERIODICAL CARDS FOR SALE.

The Library of the University of Leipzig has notified the Board that it desires to discontinue its subscription to the periodical cards, and is prepared to part with the full set of cards already received if any purchaser wishes to take them. Negotiations in regard to price should be opened directly with the librarian of the University of Leipzig. The Publishing Board has continued up to the present to print the cards which belong to this set, so that any one who buys the cards from the University of Leip-

zig can get the continuation from the Publishing Board. No other complete set of the cards is now obtainable so far as the officers of the Board are informed, and this is as good an opportunity as will occur to secure a set complete from the beginning.

State Library Commissions.

MARYLAND STATE LIBRARY COMMISSION.

On July 24 the governor appointed the members of the State Library Commission, created by the last Legislature. Three members of the commission are provided for in the act, viz.: the state librarian (Mrs. Anne Burton Jeffers), superintendent of public instruction (M. Bates Stephens), and librarian of Enoch Pratt Free Library (Bernard C. Steiner). The others, appointed by the governor for a two-years term, are Mrs. John M. Carter, Mount Washington; Thomas B. Mackail, Baltimore; Mrs. Charlotte Newell, Tome Institute, Port Deposit; W. Scott Roberts, Centerville. The commission is "to give advice to all free libraries and public school libraries in the state and to aid in establishing new libraries or improving those already established;" also to "organize and conduct traveling libraries throughout the state, and, in addition to the books given to or bought by the commission for this purpose, they may use such miscellaneous books from the state library as may be designated by the state library committee." An appropriation of \$1,000 is granted for necessary expenses.

WISCONSIN FREE LIBRARY COMMISSION: F. A. Hutchins, secretary, Madison, Wis.

At the annual meeting of the commission, held on June 7, Mr. Hutchins reported that since June 1, 1901, 12 new free libraries had been established in Wisconsin, 19 new library buildings had been begun, \$402,000 had been given for library purposes, and plans for the summer library school at Madison had been largely developed. There are now 105 free libraries in Wisconsin.

The 12 new free libraries established during the year were at Elkhorn, Stoughton, Sun Prairie, Prairie du Sac, Dodgeville, West Bend, Plymouth, Seymour, Wausaukee, Galesville, Pepin, and Columbus. The libraries of Madison, Neenah, and Portage have been reorganized during the year.

Of the \$402,000 given to libraries during the year, \$287,000 came from Andrew Carnegie and \$115,000 from Wisconsin citizens. In addition to these sums, \$1,500 was given to the state commission for the establishment of travelling libraries. The 19 new library buildings now in course of construction in various parts of the state range in cost from \$10,000 to \$75,000.

State Library Associations.

KEYSTONE STATE LIBRARY ASSOCIATION.

President: Edwin H. Anderson, Carnegie Library, Pittsburgh, Pa.

Secretary-Treasurer: Robert P. Bliss, Crozer Theological Seminary, Chester, Pa.

The second annual meeting of the Keystone State Library Association will be held in October, somewhere in the Pennsylvania mountains. The details will be announced in the September number of the *LIBRARY JOURNAL*. The two subjects to be taken up at the meeting are travelling libraries and library institutes. Mr. F. A. Hutchins will make an address, and conduct a round table on the first, and Mrs. S. C. Fairchild will do the same for the second. Mr. F. M. Crunden will also speak, and there will be one session to discuss the differentiation of fiction. The meeting will be on Friday and Saturday, with an opportunity to stay on for Sunday.

MASSACHUSETTS LIBRARY CLUB.

President: Otto Fleischner, Boston Public Library.

Secretary: T. Franklin Currier, Harvard College Library.

Treasurer: Theodosia Macurdy, Boston Public Library.

The annual meeting of the Massachusetts Library Club was held at Magnolia, June 18.

The following officers were elected for the coming year: *President*, Otto Fleischner, assistant librarian Boston Public Library; *vice-presidents*, D. P. Corey, trustee Malden Public Library, Mabel Temple, librarian North Adams Public Library; *secretary*, T. Franklin Currier, Harvard College Library; *treasurer*, Theodosia Macurdy, Boston Public Library; *recorder*, Nina E. Browne, *secretary* A. L. A. Publishing Board.

Proposed amendments to the constitution, tending to the closer connection between the state club and the local clubs, were discussed but not adopted. The matter was referred to the executive committee with the presidents and secretaries of the local clubs.

MINNESOTA LIBRARY ASSOCIATION.

President: Dr. Victor A. Nilsson, East Side Branch Library, Minneapolis.

Secretary: Miss Clara F. Baldwin, State Library Commission, Minneapolis.

Treasurer: Mrs. Marie Brick, Public Library, St. Cloud.

The tenth annual meeting of the Minnesota Library Association was held in Minneapolis in connection with the meetings of the Library Section of the N. E. A. The sessions of this section were held on Thursday and Friday afternoons in the reading-room of the University Library, and the first session of the

state association was held Friday a. m., July 11. In the absence of both the president and vice-president, Dr. W. W. Folwell, librarian of the University of Minnesota, presided. The meeting was opened with a talk on "The library profession," by Mrs. W. J. Southard, director of the Minnesota Summer School for Library Training. Mrs. Southard spoke of the necessity for training in library work, the advantages to be gained from the library schools, and of the various ways in which the small librarian may keep in touch with the development of the profession, but emphasized the fact that beyond education and training, character and tact were of most importance. Miss Emily H. Corson, of the Minnesota State Library Commission, read a very interesting paper on "The popular book," deploring the mad rush for the latest sensation, and suggesting various methods by which librarians could raise the standard of reading. A paper on "The publisher and the library," prepared by Miss Minnie McGraw, of the Mankato Public Library, was read by Dr. M. B. Wood, of the Mankato Library Board. The paper was a very good presentation of the net-price question in its relation to libraries. Discussion on these papers was deferred until the following morning, in order to allow time for the most important topic of the meeting, which was the subject of "Library legislation in Minnesota." Judge Daniel Fish, who is a director of the Minneapolis Public Library and a member of a state commission appointed to codify the laws of Minnesota, gave a very able, complete, and interesting presentation of the subject, giving the history of the library law from the beginning and showing its weak points and the need of revision. A number of library trustees were present at the meeting, and the discussion was led by Hon. C. F. Macdonald, St. Cloud; Hon. B. E. Darby, Owatonna; and Dr. M. B. Wood, Mankato, each considering some special feature of the law. After some general discussion, a committee on legislation was appointed to work in co-operation with the State Library Commission, with the purpose of introducing amendments at the next session of the Legislature, which will promote the best interests of library work in Minnesota.

Through the courtesy of the Minneapolis Public Library Board and the librarians of the city, an outing had been arranged for Friday evening. The party, including about fifty librarians and guests, went to Minnehaha Falls by trolley car, and after a brief visit to the falls, and a somewhat hasty walk down the charming glen, took the steamer for a trip down the river. Luncheon was served on the boat, and nature had added to an already beautiful scene the glories of a Minnesota sunset, which will long be remembered.

At the Saturday morning session, Mr. Warren Upham, secretary of the Minnesota His-

torical Society, gave a very valuable report on Minnesota state documents, telling of the importance of these publications to the public libraries of the state and stating how and where they might be obtained. Miss Jeannette Clarke, of the Winona Public Library, gave an interesting talk on "Printed finding lists," showing the very admirable class lists and brief bulletins which have been issued by the Winona Library. The round table was conducted by Miss Gratia Countryman, of the Minneapolis Public Library. The discussion was largely on the subjects of net prices and state documents, and a resolution was adopted, recommending that the office of state librarian should be made a non-political office. The presence of Mr. F. A. Hutchins, of the Wisconsin Library Commission, Miss M. E. Ahern, of Chicago, and Mr. Anderson H. Hopkins, of the John Crerar Library, and their interesting participation in the various discussions, added greatly to the interest of the meeting.

The following officers were elected:

President, Dr. Victor A. Nilsson, East Side Library, Minneapolis; vice-president, Mrs. Katherine M. Beals, St. Paul Public Library; secretary, Miss Clara F. Baldwin, librarian Minn. State Library Commission; treasurer, Mrs. Marie Brick, St. Cloud Public Library; executive committee, Miss Jeannette A. Clarke, Winona Free Public Library; Miss Lydia Poirier, Duluth Public Library, and the foregoing officers.

After a vote of thanks to the Minneapolis Library Board and the local committee for the entertainment of the preceding evening, the meeting adjourned.

CLARA F. BALDWIN, *Secretary*.

NEW HAMPSHIRE LIBRARY ASSOCIATION.

President: Miss Grace Blanchard, Public Library, Concord.

Secretary: H. W. Denio, State Library, Concord.

Treasurer: Miss B. I. Parker, Public Library, Dover.

From the parent stock of the national conference at Magnolia sprang little meetings of the state associations, and on Wednesday afternoon, June 18, one was held by the New Hampshire Library Association, in the parlor of the Oceanside.

Well-known librarians, who were New Hampshire boys, — notably Mr. H. J. Carr and Mr. F. P. Hill, — gave account of their juvenile borrowing from old New Hampshire libraries, entertaining reminiscences which made one think of what a minor Mrs. Partington calls them — "remissnesses."

Professor Bisbee, of Dartmouth College, Miss Garland, of Dover, and other library workers with whom the state is favored, spoke briefly as the speech went round the circle assembled.

All present at Magnolia having an old home feeling at the mention of New Hampshire were invited to attend the meeting, and several dropped in who have become summer residents of the Granite state.

The session did not aim to be instructive, but may deserve to go down to posterity like the woman whose epitaph said, "She was so pleasant."

TENNESSEE LIBRARY ASSOCIATION.

President: G. H. Baskette, Nashville.

Secretary-Treasurer: Miss Mary Hannah Johnson, Carnegie Library, Nashville.

As a result of active work and correspondence by the Nashville Library Club, a Tennessee Library Association was organized at a special meeting held in Nashville on May 29. Officers were elected as follows: President, G. H. Baskette, Nashville; 1st vice-president, Charles D. Johnston, Cossitt Library, Memphis; 2d vice-president, Mrs. Lula B. Epperson, Nashville; 3d vice-president, Miss Margaret Dunlap, Library Association, Chattanooga; secretary-treasurer, Miss Mary Hannah Johnson, Carnegie Library, Nashville; executive committee, Edwin Wiley, Miss Jennie E. Lauderdale, Mrs. W. D. Baird, Mr. Fisher. Meetings will be held on call of the executive board.

TEXAS STATE LIBRARY ASSOCIATION.

President: W. L. Prather, State University, Austin.

Secretary: Benjamin Wyche, State University, Austin.

Treasurer: A. C. Read, Public Library, El Paso.

The Texas State Library Association was organized at a meeting held at the State University, Austin, on June 9. At the organization meeting, Judge C. W. Raines, state librarian, was elected temporary chairman, and Benjamin Wyche secretary. The attendance of nearly fifty was representative of the leading cities of the state, and the meeting was both enthusiastic and energetic. A committee was appointed to draft a constitution and by-laws, and to nominate officers for the ensuing year. On report of the committee a formal organization was effected, and the following officers were elected: President, W. L. Prather, State University; 1st vice-president, Miss Rosa Leeper, Dallas Public Library; 2d vice-president, Mrs. J. C. Terrell, Fort Worth; secretary, Benjamin Wyche, State University Library; treasurer, A. C. Read, El Paso Public Library.

The program was devoted to consideration of the following subjects: library legislation in Texas, library organizations of the state, women's clubs and libraries, the library and the school, how to help the small library, state library commissions and travelling libra-

ries, library possibilities in Texas, plans for promoting the work in Texas—all bearing practically upon the main purpose of the meeting, and giving opportunity for useful discussion.

A committee was appointed to draft a bill for a state library commission and endeavor to secure its establishment by the Legislature.

At the close of the business sessions an informal reception was held, an exhibit of fine editions, art books, medals, and other objects of interest having been prepared for the occasion under the auspices of the library of the state university.

Library Clubs.

BAY PATH LIBRARY CLUB.

President: Miss M. Anna Tarbell, Brimfield, Mass.

Secretary: Miss Mary D. Thurston, Leicester, Mass.

Treasurer: Miss Eliza R. Hobbs, Brookfield, Mass.

The annual meeting of the Bay Path Library Club was held in the Central Baptist Church, Southbridge, on June 3.

The morning session opened with an address of welcome by Mr. F. E. Corbin, chairman of the board of trustees of the public library. Miss M. Anna Tarbell, president of the club, responded, and a brief business session ensued, in which the following officers were elected for the coming year: president, Miss M. Anna Tarbell, Brimfield; vice-presidents, Hon. D. H. Chamberlain, West Brookfield, Mr. O. F. Joslin, Oxford; secretary, Miss Mary D. Thurston, Leicester; treasurer, Miss Eliza R. Hobbs, Brookfield.

Miss Mary Medlicott, of the City Library, Springfield, opened a discussion on "How to make the library and its advantages known." She said, in part, that although of late years the library has come to be placed at the disposal of people of all classes, there is yet much to be done in the way of making its treasures known to the public.

This may be accomplished first by posting at the library lists of books—the most recent additions, those of local or current interest, children's lists, and others. These may be supplemented by picture bulletins, made by mounting on cardboard illustrations cut from magazines, publishers' catalogs, or worn-out books of travel, or they may be made of the inexpensive Perry and Brown pictures. Care must be taken in arranging these bulletins, that the pictures may not be placed haphazard, but grouped about some favorite author or place of historic interest.

The next step in advertising is to reach outside of the library by providing lists for the reader to carry home. Miss Medlicott showed

some of the typewritten and printed lists which are in use at the Springfield library, also some of the picture bulletins. The library can reach out too through the local papers, the literary clubs, the public schools, and in numberless ways that are always presenting themselves to the watchful librarian.

After dinner, which was served by the ladies of the church, the meeting was called to order at two o'clock, and the suggestion of the Massachusetts Library Club that the local clubs become sections of the larger organization, while retaining their own officers and management, was approved by the members.

"Common sense applied to library buildings" was the subject of a paper by W. I. Fletcher, of the Amherst College Library. Mr. Fletcher thinks that too many buildings sacrifice practicability to architectural beauty. They make magnificent monuments, but are entirely out of keeping with their purpose. Administration should be the fundamental consideration—the building should be fitted to it. The Forbes Library at Northampton he considers a model of fitness.

Mrs. J. C. F. Wheelock, of Southbridge, was the first speaker on "Co-operation between the public library and local organizations." She was followed by Mrs. W. D. Wilson, representing another literary club. Both spoke of the help that a trained librarian can give to club members, and in the general discussion following the idea was brought out that in co-operation lies the secret of success in all lines of progress.

MARY D. THURSTON, *Secretary.*

CAPE COD LIBRARY CLUB.

President: C. F. Swift, Yarmouth.

Secretary: Martha N. Soule, State Normal School, Hyannis.

A special meeting of the club was held at Chatham on June 4, with an attendance of about 30. It was an all day session, including a drive about the picturesque town and a visit to the lighthouse, dinner at the Hawes House, and a business session at the Eldredge Library. Miss Elizabeth Nye, of the Sturgis Library, Barnstable, was elected official representative of the club at the American Library Association at Magnolia. The recommendation that the club become a section of the Massachusetts Library Club was formally approved. Papers were read by Miss Soule and Miss Nye, and Rev. W. H. Mayhew and Heman A. Harding made addresses.

WESTERN MASSACHUSETTS LIBRARY CLUB.

President: F. G. Willcox, Public Library, Holyoke.

Secretary: Miss May Ashley, Greenfield.

Treasurer: Mrs. A. J. Hawks, Meekins Memorial Library, Williamsburg.

The fourth annual meeting of the Western Massachusetts Library Club was held June 6,

at Orange, with an attendance of about 60 people, representing nearly 20 different localities. Rev. L. A. Freeman, chairman of the Board of Trustees of the Orange Library, opened the morning session with a few words of welcome. He was followed by a sketch of the "Progress of the year in the libraries of Western Massachusetts," by George Stockwell, of Westfield, president of the club. Very material progress has been made in many ways. Conway has received the most important gift in the Marshall Field building. Granville has also built a library well adapted to its purpose, South Hadley and Hadley have buildings in prospect, and Southampton and Tyringham have started a movement in that direction. Several towns have received larger appropriations, and libraries already well established report the adoption of the two-book system, the removal of the age limit, improvements in the charging system, the establishment of branches, and other changes, all in the line of progress.

Miss Harriet B. Winsor, of the Springfield Library, gave the first paper on "How to bring the best books and the people together." She began by defining best books as not necessarily the best books so called, but the best books the people will read. The choice of these "best" books may be made from publishers' lists, from book reviews, from books sent up on approval by dealers, and from carefully annotated lists gotten out by librarians and special students, the latter of which is the most satisfactory method. She suggested a great many simple, practical ways of interesting the people in the books, such as getting ministers, doctors, and teachers to suggest as they have opportunity, making the room cheerful with plenty of light, plants, and very simple pictures, such as could be cut from magazines, mounted and changed often, bringing together in one place all the books about a man or an event prominent in the public eye. "In short, try to make your library as comfortable, clean, and attractive as you would wish your own home to be, and be yourself as cordial as you would wish to be in your own home. Always have an air of helpfulness and be sure and make the people think the library is all theirs and you are simply there to help make the most and best use of it."

A paper written by Rev. J. D. Reid, of Greenfield, and read by Miss Delia Nims, a trustee of the same library, opened the discussion on "How trustees may help or hinder." Mr. Reid showed that as the library belongs to the community, the trustees are bound to make the library serve the public interest. One of their especial duties is to provide a suitable librarian, upon whom shall rest the management of the library in detail. In his or her province belongs whatever requires expert or technical judgment, and the minutiae of routine administration. The best results may be looked for in an atmosphere of mutual appreci-

ation and co-operation. Where both parties make much of standing on their rights, and each views the other as his natural enemy, the interest of the library and of the reading public is sure to suffer. Like everything else of human interest, all this is a matter, not of machinery, but of personality. The main thing is to have the right kind of librarian and the right kind of trustees. An interesting discussion between trustees followed, one side maintaining with Mr. Reid that the right sort of librarian should be selected, and she be allowed to carry the general responsibility of the library; the other, that the trustees should hold themselves responsible.

W. I. Fletcher, of Amherst College, followed with a paper on "Libraries on wheels." He showed how well equipped our towns are with books, and well-chosen ones, and how often, even in the places where they should be considered the greatest boon, they stand on the shelves for months at a time unread. Not until the public library finds some way to adopt the idea of carrying the books to the people, if necessary buying fewer books and spending some of its money on this work, will it fulfil its function and make readers, as it should, of all the people. The last feature of the morning session was a talk on "Book repairing," by Miss Mary Medlicott, of the Springfield City Library, and a practical illustration of the talk by James A. Lowell, also of that library.

After dinner at the Mansion house, the afternoon session opened with business. An amendment making the retiring president and secretary members of the executive board was passed. It was voted to ask the Massachusetts Library Club that the Western Massachusetts Library Club be made a section of the Massachusetts club, and the following officers were elected for the ensuing year: President, F. G. Willcox, of Holyoke; vice-presidents, G. N. Kingsbury, of Westfield, Miss Julia Kavana, of Wendell; secretary, Miss May Ashley, of Greenfield; treasurer, Mrs. A. J. Hawks, of Williamsburg.

H. H. Ballard, librarian of the Berkshire Athenæum, Pittsfield, gave a brief talk on "How to furnish an up-to-date catalog to be used by patrons at their homes." He suggested two devices, one which might be called a cumulative finding list, printed on linotype and as each addition was made, the lines shifted so that an alphabetical arrangement was maintained. The second plan was to insert each new addition to bulletins on leaves, so that page 2, made up of A's, should be followed by supplementary page 2A, also made up of A's, although the two pages could not follow in strictly alphabetical order.

Rev. C. H. Hamlin, of Easthampton, gave the last address of the afternoon, taking as his subject "The new vocation of the librarian."

IDA F. FARRAR, *Secretary*.

Library Schools and Training Classes.

CHAUTAUQUA LIBRARY SCHOOL.

The following students began a six weeks' course of instruction at the Chautauqua Summer Library School on July 5:

- Avann, *Mrs.* Eleanor T., Albion, Mich.; M.A. Baldwin University, Berea, O., 1873; librarian Albion College Library.
- Ball, Rosa, Albion, Mich.; B.S. Albion College, 1896; assistant librarian Albion College Library.
- Chipman, Katherine A., Anderson, Ind.; librarian Public Library, Anderson, Ind.
- Cotton, Willia D., Marietta, O.; Ph.B. Marietta College, 1898; librarian Marietta Public Library.
- Fitzgibbon, Eleanor, Carnegie, Pa.; Pennsylvania College for Women, Pittsburgh, Pa., 1897.
- Gates, Sarah F., Canton, Pa.; Mount Holyoke College, 1890-92; librarian Canton Public Library.
- Gault, Edna M., West Middlesex, Pa.
- Hayman, Althea M., Middleport, O.; Marietta College, 1891-92.
- Horton, Jessie L., New Athens, O.; Franklin College, New Athens, O., 1890, 1900; librarian Franklin College Library.
- Lemen, Martha E., Dansville, N. Y.; Ingham University, Leroy, N. Y., 1889-91; Alma College, Mich., 1901-2.
- McKinney, Gertrude, Grove City, Pa.; M.A. Grove City College, 1898; librarian Carnegie Free Library, Grove City, Pa.
- Martin, Mary W., New York City; librarian Chautauqua Free Library.
- Morse, Miriam, Beaver, Pa.; B.A. Beaver College, 1900.
- Norman, Mabel E., Bradford, Pa.; substitute assistant Carnegie Public Library, Bradford, Pa.
- Reynolds, Georgia, Elkhart, Ind.; Oberlin College, 1892-94.
- Sawyer, *Mrs.* Harriet Price, Kent, O.; B.L. Oberlin College, 1890; apprentice Oberlin College Library.
- Sawyer, Mary, Boxford, Mass.; B.A. Mount Holyoke College, 1876.
- Silver, Lena, Cleveland, O., Normal School, Washington, D. C., 1883-84.
- Skinner, Jeanie B., Chambersburg, Pa.; B.A. Wilson College, 1897; librarian Wilson College Library.
- Stoddard, Florence L., East Brookfield, Mass.; Wellesley College, 1896-97.
- Tuckerman, Josephine, Jamestown, N. Y.; substitute assistant James Prendergast Free Library, Jamestown, N. Y.
- Walter, Alice E., Kennedy, O.; Glendale Female College, 1883-84; librarian Pleasant Ridge branch Cincinnati Public Library.

Woodcock, Mabel E., Canastota, N. Y.; assistant Canastota Public Library.

Special Students:

- Becker, Helena, Chicago, Ill.
- Underhill, Hannah L., Bath, N. Y.; librarian Davenport Library, Bath, N. Y.
- Wales, Caroline I., Toledo, O.; assistant Toledo Public Library.

The school, now holding its second annual session, is conducted under the general direction of Melvil Dewey. The resident director is Miss Mary E. Hazeltine, assisted by Miss M. E. Robbins, Miss Anna R. Phelps, and Miss A. R. Hazeltine, as instructors. Lectures have been given by Mr. Dewey, Mr. H. L. Elmendorf, Mr. W. R. Eastman, and Mr. A. L. Peck. The course is intended to help the librarians of small libraries, who have neither the time nor the money to spend on the more extended courses furnished by the various library schools.

DREXEL INSTITUTE LIBRARY SCHOOL.

The commencement exercises were held Monday, June 9. The following are the names of the graduates: Alice C. Atwood, Martha J. Conner, Ida J. Dacus, Frances E. Earhart, Emily M. Haynes, Charles E. Janvrin, Mrs. J. A. Jones, Kathrine McAlarney, Euphemia D. MacRitchie, Alice H. Newman, Bertha E. Rich, Jessie S. Sawyer, Alvena M. Surdam, Miriam B. Wharton, Bertha Wilder.

The graduates, accompanied by Miss Brown, started Tuesday, June 10, on a visit to the libraries of New York and Boston, afterwards attending the A. L. A. conference at Magnolia. A reunion of the graduates of the school was held during the conference.

On May 12 Mr. Cutter visited the school and spoke to the students on the subject of the Expansive classification. Miss Mary P. Farr gave an interesting account of her work of organizing the Johnson Public Library at Hackensack.

PERSONAL NOTES.

Miss Ida J. Dacus, class of '02, resumes her position as librarian of the Library of Winthrop College, Rock Hill, S. C.

Miss Alvena M. Surdam, class of '02, has been appointed head desk assistant, Public Library, Trenton, N. J.

Miss Harriet A. Mumford, class of '97, will organize the McCann Library of Morristown, Pa.

Miss Anna B. Day, class of '01, has been appointed librarian of the Connellsville (Pa.) Public Library.

Miss Emma C. Wells, class of '98, has been appointed cataloger in the Public Library of Paterson, N. J.

Miss Florence L. Drinker, class of '90, has been appointed assistant in the Public Library of Portland, Oregon.

Miss Beulah S. White, class of '00, has been appointed departmental librarian, University of Pennsylvania Library.

Miss Emily M. Haynes, class of '01, has resumed her position as librarian of the Joshua Hyde Library, Sturbridge, Mass.

ILLINOIS STATE LIBRARY SCHOOL.

THE YEAR'S WORK.

The year just closed has been a successful one in spite of many disadvantages due to overcrowding and division of classes on account of the great size of the junior class.

Sixteen students have presented theses for the degree of B. L. S. and a large senior class is assured for next year.

It is the policy of the school to have the members of the library school faculty engaged in practical library work. Thus it is that each member of the teaching force is at the head of a department in the university library. It is also desired to seek the co-operation of the university faculty in those lines of work in which they are specialists. During the past year members of the university faculty to the number of 19 have addressed the senior class on the bibliography of their respective subjects. These lectures, together with general lectures by prominent librarians from different parts of the country, the lectures of the annual inspection visit to Chicago libraries, and the lectures before the library club, bring the total up to 36 lectures which have been provided during the year to supplement or enrich the regular course.

During the past year 35 positions have been filled by graduates or former students of the school. The kind of positions filled is shown by the following list: librarians, 7; assistant librarians, 2; organizers, 4; catalogers, 6; assistant catalogers, 3; loan desk assistants, 2; assistants in summer school 1; revisers, 2; assistants, 7; substitutes, 1. These have been distributed among nine states, as follows: District of Columbia, 3; Illinois, 17; Iowa, 5; Kentucky, 1; Massachusetts, 1; New Jersey, 1; Ohio, 4; Texas, 1; Wisconsin, 2.

CANDIDATES FOR THE DEGREE OF B. L. S., JUNE, 1902.

Lillian Belle Arnold: Children's work in Champaign Public Library.

Adaline Maitland Baker: Departmental or group libraries.

Edith Clark, A.B. (University of Illinois), 1899: Partial bibliography of Niagara Falls.

Margaret Dunbar, B. L. (Monmouth College), 1896: List of books recommended for first purchase for a Normal School Library.

Mabel Louise Geiger: Study of Peoria Public Library.

Laura Russell Gibbs. (Bibliography presented in 1898.)

Edna Lucy Goss: Periodical literature in a library.

Marjorie Graves: Children's work in Champaign Public Library.

Harriet Emma Howe: Pedagogical library and museum of the University of Illinois.

Jennie Alice Hulce, Ph. M. (Hillsdale College), 1899: How to found a library in Hillsdale, Michigan.

Esther Anna Maxwell: Sunday School library, First Presbyterian church, Champaign.

Ada Patton: Plans for a public library in Paxton.

Arthur Bourne Smith, Ph. B. (Wesleyan university), 1900: Academic preparation for prospective library school students with outline courses of study.

Ellen Garfield Smith: Branch, delivery, and deposit stations.

Ida May Spaulding: Ten programs for a study club on Wisconsin history.

Lavinia Steele: Library commissions.

NEW YORK STATE LIBRARY SCHOOL.

REGISTER.

A "Register of the New York State Library School, Jan. 5, 1887-Dec. 31, 1901," is issued as Bulletin 73 (Library School 11) of the University of the State of New York. It gives a remarkable showing of what has been done, through this pioneer agency, for the development of trained librarianship. The register covers the first fifteen years of the school, and contains a complete list of the 363 matriculated students, with data for each as to residence, library school, college and library relations, attendance at and membership in library associations, and other professional activities. Summaries include a chronologic table of the most important events in the history of the school, positions filled, A. L. A. attendance, alumni lectures, etc. Of the 363 students recorded 287 are women. One hundred and eighteen were residents of New York, 234 from 23 other states, 3 from England, 2 from Nova Scotia, and 1 each from Australia, Germany, Holland, Norway, and Sweden. College degrees are held by 196, and 57 have taken partial college courses. In all, 87 colleges are represented, Wellesley leading with 27, followed by Smith with 22, Vassar 18, Cornell and Harvard 17 each, Mount Holyoke 13, Michigan 12, Nebraska 8, Chicago and Northwestern 7 each, Syracuse 6, Stanford 5, Alfred (N. Y.), Brown, Bryn Mawr, Oberlin, Radcliffe, and Yale 4 each; Adelbert, Bowdoin, Colgate, Rochester, Swarthmore, Wisconsin, and Women's College of Baltimore 3 each. The 62 other colleges include Dalhousie College (Halifax), Newnham College (Cambridge), Heidelberg University, and Kongelige Norske Frederiks Universitet, Kristiania.

During the 15 years the students have filled 409 positions in New York, 495 in 29 other

states, 28 in the District of Columbia, and 6 in 4 foreign countries, making a total of 938 positions. Of the total number of students 112 are not now in library work, 14 have died, 98 withdrawn, and 28 women have married.

The register of students is arranged chronologically by classes, names being given in alphabetical order. The only point for criticism is the system of abbreviations adopted, which is carried to a degree verging on the grotesque. This, and omission of capitals and periods, gives such entries as "clsr and ctgr Galesburg (Ill) p. l. F 99-Jl 00," "ref ln and ctgr Vassar col lib Jl 92-date; at ALA mtgs 92, 93, 97, 00, mem L S assn," which, closely packed in small type, have a paralyzing effect upon the ordinary brain.

NEW YORK STATE LIBRARY SCHOOL ASSOCIATION.

ANNUAL MEETING.

The ninth annual meeting of the New York State Library School Association was held during the A. L. A. conference at Magnolia, on Wednesday, June 18. Mr. Frank C. Patten, '88, president, was in the chair, and about a hundred members were present. After the usual minutes, reports, and business the president made a brief report of progress. He announced that the association had more than doubled in membership in the last year, counting now 195 on its rolls. He spoke also of the handbook of the association, to be published as soon as possible after the meeting. (This handbook is now printed and distributed.) He then reported that Mr. Clement W. Andrews, librarian of the John Crerar Library, was the unanimous choice of the executive board for the alumni lecture 1901-02, and that Mr. Andrews had accepted the invitation of the board. He delivered in June three lectures on the bibliography of science, and these will be printed and distributed to all members of the association. It was voted to continue the alumni lectureship.

Mr. Patten then introduced Miss Josephine A. Clark, '90, librarian of the U. S. Department of Agriculture, who spoke on the need of more specialization in library training. Miss Clark made a strong plea for especial preparation for such work as the cataloging of public documents, and suggested various ways in which this training could be given and used.

A motion was then made to make the Advisory Committee on the Library School a permanent committee. Such a committee was appointed for 1900-01, Miss E. E. Clarke, '89, being chairman, and it made a report of great value. The motion to establish such a committee as a regular part of the association work was unanimously carried. It was later announced that the executive board had appointed the following committee: Mr. E. H. Anderson, '92, to serve 1902-03; Mr. J. L. Harrison, '93,

to serve 1902-04; Miss C. M. Underhill, '89, to serve 1902-03. The committee chose Mr. Anderson as chairman.

The nominating committee made its report and the following officers for 1902-03 were elected: President, Miss C. M. Underhill, '89; 1st vice-president, Miss M. F. Williams, '99; 2d vice-president, Mr. W. F. Yust, '01; secretary-treasurer, Miss I. G. Lord, '97; executive board, the officers and Miss E. G. Thorne, '97; Miss M. E. Hawley, '93; and Mr. J. I. Wyer, '98.

The meeting then adjourned for social intercourse. After some time thus passed President Patten again called the meeting to order to say that Mrs. Fairchild and Mr. Dewey had come in and would speak to the association. He introduced Mrs. Fairchild, who spoke briefly on the need of time for meditation and true leisure, and on the great danger that this need may be neglected in the hurry and bustle of library work.

Mr. Patten then introduced Mr. Dewey, who supplemented Mrs. Fairchild's remarks by a plea for the keeping the physical nature in proper trim to do the highest kind of work.

After Mr. Dewey's speech the meeting was adjourned *sine die*.

HANDBOOK.

The handbook of the association (No. 1, 1902. 32 p. T.) is issued in a neat little pamphlet. The introduction gives a short sketch of the association since its organization at Lake Placid in 1894; and this is followed by constitution and officers, list of alumni lectureships, and a full list of members.

PRATT INSTITUTE LIBRARY SCHOOL.

ACCEPTED APPLICANTS FOR CLASS OF 1903.

Adams, Edith, Wellesley, Mass.; graduate Weston H. S.; graduate Wheaton Seminary.
Allen, Helen Chatson, South Westport, Mass.; graduate Bridgewater Normal School.
Austin, Henrietta Griffith, Orange, N. J.; graduate East Orange H. S.
Bethune, Edith Veronique, Toronto, Canada.
Bolton, Mary Veronica, Richfield Springs, N. Y.; graduate Richfield Springs H. S.
Churchill, George M., Elmwood, Mass.; graduate Boston University.
Claffin, Alta B., Cleveland, O.; graduate Toledo H. S.
Corning, Herbert L., Brooklyn, N. Y.; graduate Brooklyn Latin School; graduate Cornell Univ. Engineering School.
Fritz, Margaretta, Berlin, Germany; graduate Guild H. S., Wolfenbüttel, Germany.
Gleason, Caroline F., Lansing, Mich.; graduate Lansing H. S.; Univ. of Mich., 1892-93.
Jackson, Mrs. Arabella H., Westerleigh, S. C.; graduate Geneseo State Normal School.

Jonas, Katharine, Decatur, Ga.
 Lee, Mary Cornelia, Manhattan, Kan.; graduate Kansas Univ.
 McSurely, Ella, Oxford, O.; graduate Missouri Univ.
 Mann, Justine, Fays, N. D.; graduate Kansas City H. S. and St. Agnes School, Albany.
 Miller, Edith L., New York City; graduate DeLancey School, N. Y. City.
 Morris, Louise R., East Orange, N. J.; graduate East Orange H. S.
 Mulligan, Emily Hazel, Yonkers, N. Y.; graduate Yonkers H. S.
 Perry, Eva May, Monument Beach, Mass.; graduate Bowne H. S.
 Rathbone, Frances, Oakfield, N. Y.
 Stevens, Edward Francis, Brooklyn, N. Y.; graduate Colby College.
 Ward, Alveretta P., Columbus, O.; graduate Granville College.
 Williams, Lucia K., Indianapolis, Ind.; Heltemuth College, 1891-92.
 Wray, Elizabeth B., Yonkers, N. Y.; graduate Yonkers H. S.
 Wright, Ruth M., Avon, N. Y.; graduate Avon H. S.

GRADUATES' ASSOCIATION.

The meeting of the graduates of the Pratt Institute Library School, at the A. L. A. Conference, took a form different from the usual reception. An excursion to Gloucester, and a pleasant afternoon on the rocks there, made the event a very delightful one. There was a good attendance of graduates. Miss Hewins, of Hartford, was Miss Plummer's guest for the occasion.

PERSONAL NOTES.

Miss Caroline Burnite, class of 1894, has returned after a year abroad, during which she attended the library lectures of Dr. Dzratzko at the University of Göttingen and visited libraries in Germany and Italy.

Miss Charlotte Douglas Keith, class of '94, branch librarian of the Carnegie Library, Pittsburgh, was married June 19 to Rev. Shelton Bissell.

Miss Leslie Merritt, class of 1899 and 1900, has been appointed head cataloger at the Brookline (Mass.) Public Library.

LIBRARY TRAINING COURSE AT SIMMONS COLLEGE.

Simmons College, established in Boston, under charter of 1899, by the will of the late John Simmons, for the "instruction of women in such branches of art, science, and industry as may be serviceable in enabling them to acquire a livelihood," announces that a regular four-year course in library training will be begun in the year 1902-3. For that year the college departments will comprise Household economics, Secretarial work, Library training, and Science. The library course will include in addition to instruction in handwriting, cata-

logging, classification, and technical subjects, the study of English, French, German, physics, history, English literature and composition, and physical training. Beginning with the following year it is expected that an advanced technical course of one or more years will be offered for those who have had the necessary preparation. For the regular course at present the only entrance requirement is graduation from a well-equipped high school, or its equivalent. Further information may be had on application to the secretary of the college, 30 Huntington Avenue, Boston.

UNIVERSITY OF CALIFORNIA SUMMER SCHOOL.

The summer course in library training conducted under the auspices of the University of California — which is the first formal library school organized on the Pacific coast — was opened during the last week in June for its six weeks' session. The director is Miss Mary Floyd Williams, B. L. S., of the Mechanics' Institute Library, San Francisco. The number of students is limited to 22, but double that number of applications were received. Among the students are Miss Charlotte Baker, librarian of the College of Agricultural and Mechanic Arts at Mesilla Park, N. M.; Miss Mary L. Innes from the Public Library of Dillon, Mont.; Mrs. Almeda N. Jay, librarian of the Public Library, Grand Junction, Col.; Miss Esther Nelson from the University of Utah Library, Salt Lake; and Miss Clara Northrup, assistant in the Portland Public Library. The other 17 are from college and municipal libraries throughout California.

WISCONSIN SUMMER SCHOOL.

One of the officers of the Wisconsin Free Library Commission writes as follows regarding the summer library school now in session at the state university, under its auspices:

"We have one of the best summer library schools this year that we have ever had. Twenty-five students are taking the elementary course, 18 former students have returned for the supplementary work, which has been outlined with special reference to their individual problems and perplexities, and about 50 more are registered for Miss Hasse's public documents course. Librarians are coming from as far west as Washington and Colorado, and as far east as New York, for this course. The summer library school of Wisconsin is no longer an experiment; but its worth is substantiated through the good work done by those who have attended its sessions. No one is admitted who has not had actual library experience. We make a great deal of the social side of the school, having informal parties, evening talks, picnics, drives, etc., that the students may get acquainted and discuss their problems."

Reviews.

HANDBOOK of library organization; compiled by the library commissions of Minnesota, Iowa, and Wisconsin. April, 1902. Edited by the Minnesota Library Commission. Minneapolis, Minn. 79 p. O.

This contribution of the Minnesota Library Commission to the co-operative work of the several library commissions of northwest is one of the most practical and useful "library documents" of the year. It will be of service especially to those taking up the establishment or re-organization of small libraries. The topics dealt with cover Organization, Housing the books, The books, Administration, Library extension, Librarianship, Library supplies, these being treated from the point of view of the small popular library, active in children's work, and ranging in size from 500 to 2,000 volumes. There are illustrations of cards, card trays, Mr. Eastman's suggested plan for a small library building, lists of supplies, of library literature, and an abundance of concise practical hints.

THE LITERATURE OF AMERICAN HISTORY: a bibliographical guide in which the scope, character and comparative worth of books in selected lists are set forth in brief notes by critics of authority; edited for the American Library Association by J. N. Larned. (American Library Association annotated lists.) Boston. Published for the American Library Association by Houghton, Mifflin & Co., 1902. 9 + 588 p. O. net, \$6.

This dignified and imposing volume is the most important contribution to bibliographical literature that has been made in a long time. It is important intrinsically in its matter and quality, but still more as an example of co-operation in bibliographical work, and as an object lesson in the practical working out of the "evaluation" theory. "Appraisal," "evaluation," the principle of authoritative book selection, which Mr. George Iles sponsored and has championed for so long, is here presented in a form that commands thoughtful attention and must promote a more serious consideration of Mr. Iles' great project for the critical annotation of modern literature in all its branches.

The "Larned 'guide,'" as it is likely to be known, has been in preparation under the general direction of the A. L. A. Publishing Board for several years, and its plan and scope are, in the main, familiar to library

workers, so that they need only be outlined here. Briefly, the work carries out on a much larger scale the plan followed in the two preceding A. L. A. publications, "List of books for girls and women and their clubs," issued in 1895, and the "Bibliography of fine art," of 1897, and like them it has been made possible only through the generous financial aid and devoted services of Mr. Iles, who with characteristic modesty has not permitted his name to appear on the title-page. The volume represents four years of work and the services of some two-score contributors, in addition to those of Mr. Iles and Mr. Larned, the latter's work as editor being also given entirely as a labor of love. The carrying out of the scheme was undertaken in the spring of 1898, when Mr. Iles provided for its execution and continuation by a gift of \$10,000, which, however, represents only a part of his total contributions. The choice of Mr. Larned as general editor was especially happy, as his work on his own great compendium of "History for ready reference" gave him peculiar fitness for work in the field of historical bibliography. Under his direction a noteworthy corps of contributors was secured, nearly all men eminent in historical study and experienced in reviewing. The list of contributors is given in full on the title-page. It includes among others the names of Edward S. Bourne, Edward Channing, Davis R. Dewey, B. A. Hinsdale, Samuel Macauley Jackson, Herbert L. Osgood, Edwin E. Sparks, George M. Wrong, Gen. Jacob D. Cox, Samuel Adams Drake, Grace King, Paul Leicester Ford, W. E. Foster, J. K. Hosmer, William McLennan, R. G. Thwaites, Stephen B. Weeks, and George Parker Winship. To three contributors of special fitness three divisions of the work were assigned *in toto*. These were the late Paul Leicester Ford, to whom was confided the division dealing with "sources" of American history—archives, collections of documents, and like material; William McLennan, who has handled the Canadian division with painstaking care; and George Parker Winship, librarian of the John Carter Brown collection, who is responsible for the record of Spanish, Portuguese, and West Indian material. To other specialists were assigned the literature of their subjects, as church history to Dr. Jackson, education to the late B. A. Hinsdale, and so on.

In his brief "Introductory" Mr. Larned points out that the "Guide" is "intended to be neither an exhaustive bibliography of American history nor merely a selection of the best books in that department of literature, nor does it name merely curious books. The se-

lective aim in its preparation has been to embrace the books of every character, good, bad, and indifferent, concerning which it seems to be important that readers of various classes should be told what their merit or demerit is. This takes in text-books for school children as well as source books for historians and treatises for statesmen; and it includes a considerable class of popular writings from past generations which have disappeared from the bookstores, but which survive on the shelves of public libraries, where lingering echoes of an old undeserved reputation help to carry them into unwary hands." It is thus made clear that selection is based on practical reasoning, though there is ground for dissent from some of the principles set forth. In particular, it is an open question how far books should be included for the sole purpose of condemnation. Despite Mr. Larned's reasoning, it seems superfluous, and, indeed, undesirable to place on record in such a work books that are unworthy, inaccurate, or superseded. Inclusion in a work of this character might well be made the proof of a book's fitness. If it is not here it is because it was not worth noting, would be a fair rule to follow, for no work of this kind, if it be kept within practical limits, can include more than a small proportion of all the poor or unreliable literature, and at the same time be really a "guide" to books of the better sort.

The work is classed in six main divisions — Sources; America at large; the United States; the United States by sections; Canada; Spanish and Portuguese America and the West Indies. Each division has numerous sub-divisions, sometimes arranged by subject, in other cases chronologically. Thus, under "America at large" are the sub-divisions *General history*, with sub-classes Early government explorations and surveys, Later geological and geographical surveys, National surveys, state surveys, Miscellaneous geographical literature; *Archæology-Anthropology*, with its sub-classes Archæological studies, Aborigines; *European discovery and early exploration*, with sub-classes, General accounts and collections, Pre-Columbian discovery, Spanish and Portuguese discovery and early exploration, Other discoveries and early exploration. Under "United States" the divisions cover Historical periods, with chronological sub-classes, Comprehensive history, Constitutional and institutional history and exposition, Economic history, Educational history, Church history. The Canadian section presents first materials for history (cartography, bibliogra-

phy, documents, society transactions), followed by constitutional and institutional history, comprehensive histories, French régime, English régime, history of the several provinces, and educational history, while the Spanish-American section covers first general works and then regional divisions. Following the main divisions is an appendix contributed by Professor Channing, giving lists of books suggested for a school library, a town library, and a private working library. A list of publishers cited and a most detailed and thorough index, covering 110 pages, complete the work.

In all, at a general estimate, about 5,000 titles are recorded in the main divisions, with annotations varying in extent from two lines to fifty. Author entries are given, except for biographies, which appear under name of subject; and in the main titles are given with sufficient fulness and with bibliographical accuracy, place and date of publication, publisher, and number of volumes being indicated. Entries are numbered consecutively, and the index refers to section numbers instead of to paging. These entries run from 1 to 4145, but in many cases a single section number applies to a series of reports or collection of documents, so that the total of entries is in excess of the section number record.

The annotations call for a word of special comment, as they are the essential feature of the "appraisal" scheme. On the whole, only praise can be given to the skill, accuracy, and excellence embodied in these brief critical comments. Each annotation bears the initials of its contributor, or other indication of its source. In the main the annotations are admirable, compact, and lucid, setting forth simply the essential points of the work noted. It is unfortunate that a considerable number are drawn from reviews, written with another purpose, or from earlier works of reference, for, excellent as these often are, they are not in accord with the principle of special expert evaluation. It is most interesting to turn the pages and note the variety and wealth of the information presented and analyzed. No brief review can hope to indicate adequately its range and richness. Only a careful examination by those familiar with the great field of American historical literature, its pitfalls and its by-ways, can make clear how remarkable a task has here been accomplished in the classification, presentation, and analysis of this immense mass of material. Much, that as a rule is familiar only to the special student or scholar, is here set forth and made available, in the full record of the publications of histori-

cal societies and clubs, the Force tracts, the Hakluyt series, the archives, surveys, and official records, while the index gives clue to the most minute, curious, and elusive facts and details. One criticism here may be made in the form of a suggestion, that for rare volumes, older works, sets of scarce society serials, or like publications, it would be most desirable to indicate libraries or other institutions in which copies are available for public use. As the record now is, the student is directed to much material, but left in ignorance as to where he may consult it. To a certain degree this information could be supplied if such library should check on the page margins titles of works in its own collection: but this is an inadequate remedy. The inclusion of this data in later editions or future "guides" of this character would not be a serious undertaking and would be a most useful, and indeed essential, addition.

The work lends itself to a variety of uses — uses likely to increase and multiply as its scope becomes better known. It is of value in every library as a guide for the reader and to the librarian, and in the rounding out of the collection; its appendixes give valuable suggestions for the smallest library of town or club or school, or for the private book-buyer; and to all interested in American history, as serious workers or as "gentle readers," it is a veritable storehouse of interest and information. The volume is handsomely printed, with a broad clear page, similar in form, style, and binding to the familiar Poole and A. L. A. index volumes. It is intended that the "appraisal" here begun shall be continued by a supplementary series of annotations on the current and future literature of American history, edited by Mr. Philip P. Wells, librarian of the Yale Law School, and we understand that this continuation work is already well in hand, under the general direction of the Publishing Board.

It but remains to affirm the conviction that in this "Guide" the cause of "appraisal" has received a practical demonstration of utility and effectiveness that is likely to have important results. It was fitting that at its Magnolia conference the American Library Association should have put on record "its sense of the wisdom, persistence, and munificence" of Mr. Iles in planning and carrying through this notable enterprise. Time and use must, of course, test its value, but if their verdict goes to confirm this first judgment, the systematic "appraisal of literature," on a broad, general plan, is likely to be an organized bibliographical activity of the future.

STEINER, Bernard C., *ed.* Rev. Thomas Bray: his life and selected works relating to Maryland. (Maryland Historical Society, Fund publication, no. 37.) Baltimore, 1901. 252 p. 8°. pap. \$3.

This number, although it bears the date of 1901 as the year of publication, was not, as a matter of fact, issued until 1902 was several months old.

In 1896 Dr. Steiner published in the October number of the *American Historical Review* (2: 59-75) an extended article on "The American libraries of Rev. Thomas Bray." Of this article, reviewed in the *LIBRARY JOURNAL* of November of that year (21: 501), it was said: "Dr. Steiner has written a new chapter in the history of the public library movement in America." In the volume before us there are republished the pamphlets, etc., by Bray, on which the article in the *American Historical Review* was based. Some of these are now exceedingly rare. The library of the Maryland Historical Society contains by far the most complete collection of Bray's works to be found in the United States. For several of them the Society paid more than \$50 each, at the rate of almost \$3 per page. The republishing of these rare works on libraries, etc., will enable libraries to obtain at a moderate price the works relating to the first American library movement.

Preceding the works by Bray is "A short historical account of the life and designs of Thomas Bray, D.D." (p. 9-50), from an unpublished manuscript in the Bodleian Library, by the Rev. Richard Rawlinson. Rawlinson's life of Bray is the basis of an anonymous pamphlet, "Publick spirit, illustrated in the life and designs of the Reverend Thomas Bray."

Following the life of Bray are his works, p. 51-205, as follows: —

"An essay towards promoting all necessary and useful knowledge, both divine and human, in all parts of His Majesty's dominions, both at home and abroad." London, 1697.

"Apostolick charity, its nature and excellence consider'd in a discourse upon Dan. 12.3." London, 1698.

"The necessity of an early religion, being a sermon preached the 5th of May before the honourable Assembly of Maryland." Annapolis, 1700.

"Several circular letters to the clergy of Maryland, subsequent to their late visitation, to enforce such resolutions as were taken therein." London, 1701.

"A memorial representing the present state of religion on the continent of North-America." London, 1700.

"The present state of the Protestant religion in Maryland."

"A letter from Dr. Bray to such as have contributed towards the propagating Christian knowledge in the plantations."

"A memorial representing the present case of the church in Maryland with relation to its establishment by law."

"*Bibliotheca parochialis*: or, a scheme of such theological heads both general and particular, as are more peculiarly requisite to be well studied by every pastor of a parish. Together with a catalogue of books which may be read upon each of these points." Part I. London, 1697.

Following the works of Bray is an appendix, "An answer to a letter from Dr. Bray, directed to such as have contributed towards the propagating Christian knowledge in the plantations," by Joseph Wyeth (London, 1700), and "A list of His Majesty's council of Maryland, and the burghesses of the General Assembly of the said province." The notes by the editor include pages 235-252.

The works by Bray of special interest to librarians are the "Essay towards promoting all necessary and useful knowledge" and his "*Bibliotheca parochialis*." The latter was printed before the former and is frequently referred to in the Essay. These two pamphlets clearly show that Dr. Bray was two centuries in advance of his time. How modern his ideas were is best shown by a few quotations: "That within a Month after, the following Books to the value of Thirty Pound, be sent down into the subscribing Deanaries to such Places as from the Visitation shall be directed. And that they be made up in such Boxes, or Book-Presses, with Shelves in them, and Locks and Doors to 'em, as will serve both to preserve 'em in the Carriage down, and in the Place where they shall be deposited for the Publick Benefit. And being kept in such moveable Repositories, they can at any time be remov'd to any other part of the Deanary, as by the Vote of the Clergy at a Visitation shall be judged most convenient to have 'em lodg'd in; and that without the Charge of building any Room wherein to lay 'em up." This is the traveling library of to-day.

The whole scheme of libraries, their cost, the methods of raising funds for the purchase of books, and how they may be preserved, is carefully considered and worked out in detail. The latter — their preservation — is so interesting that we let Bray tell it in his own way:

"Thirdly, and now I am to show how the *Lending Libraries* particularly, may be preserved.

"How the *Parochial* may be secur'd from Loss or Imbezelment, is, I hope satisfactorily shewed in the Prefatory Epistle to the *Bibliotheca Parochialis*: But it being design'd that these *Lending Libraries* should travel abroad, it may seem that the Books will be in

danger to be soon lost by passing through so many hands: However, in order to their being fully secur'd, it may be provided by these following Methods; 1. That they be marked upon the Covers to what Deanary they belong. 2. That they be lock'd up in Book-Presses made on purpose to keep them in. 3. That they be deposited with the Rural Dean, or with the Minister or School-Master in some Market-Town, if near the Centre of the Deanary, that so they may with very little trouble be sent for any Market-day, and as easily return'd within a limited time: And it may be presum'd, that any Minister or School-Master, for the use of such a Library under his Key, will be willing to undertake the trouble to lend out the Books, and receive them in upon occasion. 4. That the Limitation of Time for keeping a borrowed Book be determined by the Reverend Subscribers at the Visitation, as a Month for a Folio, a Fortnight for a 4o. and a Week for an 8o. which will have this good Effect, that a Book will be read over with speed and care; which if one's own, might lye in a Study without being quickly or very carefully perused, upon presumption that being one's own it may at any time be read; and therefore this by the way may be considered as one Advantage of *Lending Libraries*. 5. That the Borrower having sent a Note desiring any Book, his Note be filed up, and his Name entered in a Book kept in the Library for that purpose, what Year, Month and Day he borrowed such a Book; and upon the Return of the Book, the Note be also return'd, and the Name of the Borrower cross'd out. 6. That a Register of the Books belonging to every Deanary, be given to the respective Bishops, and Arch-Deacons. 7. That each Library may be visited once a Year by the Arch-Deacon in Person, or by three of his Clergy deputed by him to see that the Books be not imbezeled or lost. And by these means I believe they will be very well preserved; for why? Their being Letter'd to what Deanary they belong, will prevent their being transferr'd into any Man's private keeping; or if they are, they'll be as readily discover'd and own'd, as any living Creature by its Ear-Mark; and the Arch-Deacon's Visitation will call 'em all in once a-year: And indeed so far am I from fearing that those Libraries will suffer any Diminution by loss of Books, that I believe that they will daily encrease; for the thing being once put on foot, the Clergy at every Visitation will be apt to continue some small Subscriptions to buy in the new pieces as they shall come forth; especially such as shall tend considerably to the improvement of any part of Christian Knowledge. And moreover, the Foundation being once laid, many Learned Persons amongst the Clergy, and others who have a Zeal for the Churches Good, will be

likely to leave at their Death, their own Libraries, as additions to these Lending Libraries proposed, and perhaps Legacies to buy Books.

"But to proceed, if now and then a Book should be lost, this ought no more to discourage our Design, than it should have hindered our Fore-Fathers from building of Parsonage-Houses for us, because sometimes they fall to decay; or from giving Tythes and Glebe for the Maintenance of the Clergy, because those do suffer daily diminutions by Modus's growing upon us through the importunity of some, and the more Violent Sacrilegious Invasions of the Churches Rights by others. Not to say, That there may be Provision made by Law to secure these Libraries, and to repair their Loss, as well as the other Dilapidations of the Church.

"And whereas it may be objected, that the Books will be so often Borrow'd, that it will be hard for any one to have the Book he wants. I am so far from being much concerned to answer it, that I heartily wish the great Use and frequent Borrowing of Books out of these Libraries, may make it a real Objection."

This pamphlet, the "Essay towards promoting all necessary and useful knowledge," from which the above quotations are taken, closes with a catalog of books designed to lay the foundation of lending libraries to be placed in all the market towns in England. References to Dr. Bray's high regard for libraries recur again and again in his other works.

Of the "Bibliotheca parochialis" Dr. Steiner reprints only the introduction and the "Proposals for the encouragement and promoting of religion and learning in the foreign plantations." From the Proposals the following quotations are taken: "3. That in Order to the Preservation of every such Library to succeeding Ages without Loss (as far as can be Humanly provided in any thing of that kind) there be made an exact Catalogue of the Books belonging to the Library of each Parish; and that every such Catalogue be fairly written in four Books of Vellum provided for that purpose: The first whereof to be left with the Lord Bishop of London for the time being; a second with his Commissary, or some chief Clergyman in every of those Plantations where such Libraries are provided; and a third to remain in the respective Libraries themselves: and a fourth to be deposited in the Vestry of each of the said Parishes.

"4. That the Commissary be obliged, at least once in three Years, Personally to make a Parochial Visitation; And then, besides the Charge of his Duty in other respects, that it be incumbent also upon him, particularly to Inspect the Parochial Libraries, and to see that none of the Books be Imbezell'd or Lost: And that the Church-Wardens of each Parish be also obliged, every Year, before the Visita-

tion, to inform themselves in what Condition the said Books are, and to Present accordingly at the Visitation.

"5. That for further Security to preserve them from Loss and Imbezelmment, and that they may be known where-ever they are found; in every Book, on the one side of the Cover, shall be Letter'd these Words, SUB AUSPICIIS WILLIELMI III. on the other side the Name of the Parish to which these Books do belong: EX. GR. E. BIBLIOTHECA DE MARY-TOWN: E. BIBLIOTHECA DE JAMES-TOWN, &c.

"6. That the Minister of each Parish, his Heirs and Administrators, may be obliged, by Virtue of an Act of Assembly provided and made for that purpose, to make good what Books shall be Imbezelled or Lost by his fault.

"Means of obtaining such Parochial Libraries.

"1. That Application be made to the Nobility, Clergy, and Gentry, for their Charitable Contributions to so Pious a Work; and especially that the Merchants and Traders to the Foreign Plantations be earnestly call'd upon, as Persons principally concern'd, to encourage this Design: It being most reasonable to expect, that in Gratitude to God, and the Inhabitants of those Plantations, the more plentifully they have reaped of their Temporal Things, the more liberally they should sow to them in Spiritual Things.

"2. That Application be also made to such Learned Authors as are now living, that they would bestow some of their own Books, which shall be judged useful to the Purposes aforesaid. Lastly, in Gratitude to the Benefactors towards this Pious Design, all those who shall Contribute any thing thereunto, shall have their Names and respective Sums; And the Authors shall have the number of Books given by 'em, transmitted to Posterity, by being Registered in Books kept for that purpose in each of the Libraries, and deposited in the Vestry of every Parish."

Bray was a man of great energy. He founded the Society for the Promotion of Christian Knowledge and the Society for the Propagation of the Gospel, and his missionary zeal was the cause of his efforts in behalf of libraries. In the two societies founded by Bray his influence is still at work, and has been continuous for two centuries. To what extent he influenced the library movement of the present day it is difficult to determine. There is reason to believe, however, that his library ideas were not wholly lost or forgotten (or even inoperative) during the century and a half preceding the modern public library movement.

The references to the notes for the "Bibliotheca parochialis" are somewhat confused, so that considerable annoyance is caused in referring to them. The numbers do not refer to the proper notes. There is no index.

Library Economy and History.

GENERAL.

DANA, John Cotton. Fiction in libraries. (In *N. Y. Times Saturday Review*, June 8.)

Mr. Dana's main point is that "the question is not one of close censorship or complete *laissez faire*, but a question of more or less supervision. I believe supervision has generally been insufficient in the selection of fiction." His review of the general arguments against close fiction selection and supervision is keen and practical, and his suggested remedy is an abundant supply of a few of the best novels of the past, and an unyielding discrimination against the current novels "which haunt our bookstalls and appeal to the majority."

How to Help Boys (3 Dexter Row, Charlestown, Boston) in its quarterly issue for July considers almost exclusively the subject "Boys' reading." Its contents include "Some recent studies of boys' tastes in reading," by W. B. Forbush; "Books and children," by Julian Hawthorne; "Boys' reading, from the publishers' standpoint," by D. C. Heath and Warren F. Gregory; "List of books for boys' reading," by Caroline M. Hewins; "Suggestions for a boy's own library," by Frances Jenkins Olcott, and other articles and notes that will be of interest to those concerned with library work for young people.

The Library for July contains an elaborate paper by A. W. Pollard, on "Two illustrated Italian Bibles," with many interesting facsimiles; the second instalment of G. F. Barwick's account of "Humphrey Wanley and the Harleian Library;" and the third section of Sketchley's review of "English book illustration of to-day," with bibliography appended. There are other shorter bibliographical contributions.

The Library Association Record for June is mainly devoted to a reprint of Augustus De Morgan's essay "On the difficulty of correct description of books," published in 1853. It will be remembered that this essay was recently reprinted in pamphlet form by the Bibliographical Society of Chicago. It is a curious coincidence that De Morgan's paper should have been chosen thus almost simultaneously by two different editors, and that each editor should be unaware that any other reprint had been or was to be undertaken.

The Nineteenth Century for July contains a most interesting account of "The Islamic libraries," by Khuda Buksh, late chief justice of Hyderabad, India, whose own remarkable private collection of Oriental literature now forms the public library of Patna, India. The brief description of that library given in this article is reprinted elsewhere. In his review of

the Islamic libraries, which is a series of incidents and allusions rather than a historical study, Khuda Buksh emphasizes the services to learning rendered by the followers of Islam. To Moslem Spain "Europe owes perhaps the largest debt, for it was Spain which handed the lamps of learning to the Aryans of the West when they were able to receive it." Many of the famous libraries of Caliphs and Moslem scholars are described, among them the royal library of the Fatemides of Cairo, with its 100,000 volumes, to which "the public of all classes were admitted and had permission to read or copy as they pleased, the works which the Caliph had sent to it from her own libraries."

LOCAL.

Alameda (Cal.) P. L. The cornerstone of the new Carnegie library building was laid with elaborate Masonic ceremonies on the afternoon of July 13.

Ashby, Mass., Campbell Memorial L. The handsome memorial library building, given to Ashby by Edwin Chapman, of Boston, was dedicated June 17. The building is classic in style, built of red pressed brick, 50 × 40 feet in dimensions. It is a story and a half in height, the centre of the roof being formed by a copper dome with glass lights, which rises over the delivery room. The delivery room is 16 × 10 feet, and opens from the entrance vestibule. The counter is of marble. On either side are the reading and art rooms, each 13 × 23. They are entered through marble archways and are furnished in birch. The stack room, at the rear, has eight large double stacks.

Belmont (Mass.) P. L. The handsome new library building, the gift of William G. J. and Esther C. Underwood, as a memorial to their son, was formally opened on June 18. Dedication exercises were held in the evening. The library stands on Pleasant street, completing the handsome square of public buildings in the centre of the town. It is the only library in the state to have a smoking-room.

Binghamton, N. Y. The proposition to accept Andrew Carnegie's offer of \$75,000 for a library building was carried at a special election held in June, by a majority vote of 498.

Bridgeport (Ct.) P. L. (21st rpt. — year ending June 1, 1902.) Added, 1,927; total, 38,140. Issued, home use, 149,216; ref. use, 22,696; new registration, 1,822; total registration, 17,260; receipts and expenses, \$27,921.28.

During the year alterations were completed whereby the library is enlarged to nearly twice its original size. These included a children's room, which has been generally appreciated. Unfortunately, in the face of enlargement requiring increased service, the library appropri-

ation was reduced \$2,000 — to an amount less than was received in 1895. Under the circumstances, and especially in view of "the recent very serious increase in the price of books," it will be "impossible to provide for the full use of all the improvements in the enlarged building."

Four free art exhibitions were held during the year, and there were delivered 27 free lectures to adults and 12 illustrated free lectures to children.

Brooklyn (N. Y.) P. L. A delivery station has been opened at 333 Bleecker street, to be known as the Ridgewood Station. The books, about 700 in number, were turned over to the city by the Ridgewood Household Club, which had been carrying on the library in connection with other philanthropic work for some months. The use of the room was also given by the club. The station differs from a branch only in the hours of opening, which are 12 a week instead of 76. Miss Margaret Gash, Pratt Institute, 1900, is in charge. The Astral Branch, which was turned over to the city on Sept. 15, 1901, by the Pratt Institute Free Library, was closed for nine days during the month of May that the room might be remodeled and refurnished, as an open-shelf library. This leaves the Schermerhorn street branch, formerly the Union for Christian work, the only one of the 19 branches with closed shelves. Of the 9 apprentices who completed their six-months term in April, 8 were certified to the Civil Service Commission for the eligible list of the library.

On the evening of June 3 the staff of the library gave a reception in honor of Mr. and Mrs. Frank P. Hill, to commemorate the first anniversary of Mr. Hill's taking office as chief librarian. The only guests were the directors and apprentices. There were 120 present.

The July circulation for home use, exclusive of traveling libraries, was 105,691 v., a gain over July, 1901, of about 27,000 v. The library has spent for books, from January to July inclusive, \$21,161.42.

A site for the new central building has been secured, at Franklin avenue opposite Hancock street. The property is 100 × 125 feet and adjoins the Unity Club. It was bought by direct purchase for \$24,000.

Charleston (S. C.) L. Soc. At the annual meeting of the society held June 10, the following statistics were presented: Added, 2,801; total cataloged, 16,202. Issued, home use, 34,973, of which 25,552 v. were fiction. New members, 47; total membership, 421. Receipts, \$1,895.02; expenses, \$1,871.66. The most notable gift of the year was a set of the Jesuit Relations, from ex-Mayor William A. Courtenay.

Chattanooga (Ga.) Carnegie L. The site at Georgia avenue and East Eighth street, reported favorably upon by the sites committee

of the library board, was accepted by the city council on June 3, when an ordinance was passed authorizing its purchase for \$15,500.

Chelsea (Mass.) P. L. (32d rpt. — year ending Dec. 31 1901.) Added, 561; total, 17,503. Issued, home use, 74,498; school use, 1,528. New registration, 674; total registration, 2,259.

A children's room was established during the year, and as a result many more juvenile books are now needed.

The year's circulation shows a decrease of 2,484 v. from the record of 1900. This is accounted for by a novel combination of reasons: "the tragic death of President McKinley, and the local smallpox scare."

Chicago, John Crerar L. (7th rpt., 1901.) The year was notable for the action taken toward securing a central site for a permanent building on the Lake Front Park. Plans for the building were based on an estimate furnished by the librarian of the amount of space likely to be required for the next forty or fifty years. "His report included shelf room for one million volumes, a reading room for 400 readers, a periodical reading room for 100 readers, other special reading and study rooms, and proportional provision for administration."

Accessions for the year were 11,320 (9,438 purchased); total, 76,432. Of 5,720 gifts only 1,882 were entered in the list of accessions. The total recorded use of books was 32,193, and there were 1,046 admissions to the stack. Number of visitors, 54,828. Expenses for the year were \$93,290.23 (administration, rent, etc., \$59,665.71; books, periodicals, and binding, \$31,410.71).

The first serious loss sustained by the library occurred on the evening of February 18, when a serious fire broke out in the bindery of Ringer & Hertzberg, binders for the library. The total loss to the library amounted to \$803.71, and included 177 volumes, 158 volumes of serials, 46 pamphlets and other material. The money loss was covered by insurance, but it has proved impossible to replace some of the volumes, so that breaks in sets have occurred, "which damage their value far more than the original cost of the missing volumes." This accident has emphasized the need of a fireproof building with quarters for a bindery.

Special attention is given to the Library of Congress printed catalog cards, to which the library has subscribed from the first.

In administrative details "an important change has been made in the treatment of serials. Only publications which do not appear in complete volumes, are of composite character, and are intended to continue publication indefinitely will be kept in the periodical alcove. All other serial publications will be considered as continuations and placed in charge of a special assistant."

The library has issued, as a 10-page pam-

phlet, with frontispiece portrait of Mr. Crerar, Mr. Andrews' account of "The John Crerar Library, 1894-1901," reprinted from Blanchard's "History of Chicago." This forms an attractive handbook of the library, including an historical sketch and a description of the collections.

Cincinnati (O.) P. L. (Rpt. — year ending June 30, 1901.) As this report appears a year after the close of the period it covers, much of the information recorded has already been noted in these columns. Added 14,233 v., 7,955 pm.; total, 215,558 v., 35,751 pm. Issued, home use, 689,544 (fict. 77.6%), of which 207,631 were drawn through the 40 delivery stations. Registration, 39,961. Receipts and expenses, \$98,404.02.

There is a good frontispiece of the main hall, numerous illustrations of other departments, and some interesting diagrams of variations in circulation. The report covers the first year's administration of Mr. Hodges, who was appointed librarian in May, 1900. His special efforts have been given to developing the facilities for open access, and bringing the library into closer relation with the public. A department for the blind has been established with the aid of a newly organized Cincinnati Library Society for the Blind. Traveling libraries have been sent out to the farming districts of the county, and to the city fire-engine houses and like places; a beginning in home library work has been made, and the children's department has been developed. The apprentice training system has been introduced, with a class of six members.

Cleveland (O.) P. L. (33d rpt. — year ending Dec. 31, 1901.) Added, 1,469; total, 171,592. Issued, home use, 809,515 (fict. 36.2%; juv. fict. 20.9%). Attendance, 441,164. New registration, 13,800; total cards in use, 59,861. Receipts, \$99,914.54.

A detailed and interesting report. The librarian's general review is followed by a more elaborate statement from the vice-librarian, Miss Eastman, which includes reports from heads of departments and branch libraries.

During the year the library was removed to the temporary main building which it will occupy until a permanent and more adequate structure can be erected. The removal, and the consequent closing of the main library for over four months, naturally largely reduced both the circulation and the accessions, but made it possible to carry forward much needed work in cataloging arrears, etc. An interesting plan adopted as an aid in the removal was the special issue, when desired, of five books upon each card, to be returned after the opening of the library. As a result of this, many borrowers were supplied with additional reading for the period that the library was

closed, and incidentally the number of books to be moved was much lessened.

Mr. Brett describes somewhat fully the arrangement of the new building, which has, however, been already noted in these columns. He points out that the building is still inadequate, and can in no way be regarded as taking the place of a substantial and permanent structure.

A department of stations has been created, under a stations librarian, for the administration of the increasing work done through these agencies. The organization of a separate children's department has also been effected, with Miss Effie Power as children's librarian. A special need is the appointment of a reference librarian for the main library collection, which now numbers over 30,000 v. More shelf-room for the newspaper collection is also badly needed.

"The needs of the library go far beyond these, and are much greater than can be met with the funds now available. It needs one million dollars to expend for buildings for a main library and branches, for which the funds now on hand would largely if not entirely provide sites. It needs as much more, that is, another million, as a book endowment fund, from the proceeds of which the more permanent and valuable collections may be built up. The library system so organized would require not less than \$150,000 annually to support it. These sums, large as they are, would not provide any more adequately for our library work than our public schools and colleges are provided for by public support and endowment."

Miss Eastman's report, with its numerous quotations from other members of the staff, deserves more attention than can be given it in a brief summary and will repay careful reading. The most significant thing about the report of the Cleveland Library, which applies also to the recent reports of other large libraries, is the evident tendency toward a more elaborate organization, the creation of various departments each under a chief or head, the development of branch or delivery systems, and the general increase in the machinery of administration.

Columbus, Ga. The city council on July 2 voted to accept Andrew Carnegie's offer of \$25,000 for a library building. The vote as first taken was 8 to 8, and the deciding ballot was cast by the mayor. The site will be purchased by public subscription.

Des Moines (Ia.) P. L. (10th rpt. — year ending Dec. 31, 1901.) Added, 2,937; total, 30,001. Issued home use, 141,031 (fict. 53.93%; juv. 28.59%); ref. use, 28,745. Receipts, \$15,865.82; expenses, \$13,811.

A capital report, well arranged and well printed. New features in the year's work have been the opening of a children's room, re-reg-

istration of borrowers, and the preparation of numerous subject catalogs for reference room use. The percentage of fiction issued was 3.76 less than in the year preceding. The duplicate "pay collection" "continues to be an aid in meeting the demand for popular new books." The revision of the catalog has been begun and is progressing slowly.

The opening of the children's department on March 28 "marked a consummation long desired by every one connected with library administration. The conditions under which the work is being done are still far from ideal, but even with all the existing disadvantages the room is a vast improvement."

The preparation of 44 reference bibliographies for the reference department (covering 2,937 cards) is described. These were made with direct relation to study work in the schools, in local clubs, and like demands, and they have proved extremely useful.

East St. Louis (Ill.) P. L. (Rpt. — year ending May 31, 1902.) Added, 1,770; total, 16,795. Issued, 52,359, of which 38,051 were issued at the main library, 8,942 through the delivery stations, and 2,401 through schools; reference issue, 2,957. Fiction issued, including juvenile, 84%. New registration, 1,271; cards in use, 2,140; expenses, \$7,298.02.

The year's circulation was accomplished without the loss of a single book, which is attributed to the operation of the Newark charging system recently adopted. Comparative tables of the issue, attendance, and class percentages show the years ending May 31, 1901 and 1902, to have been the most successful years in the library's history. In 1901 the per cent. of fiction issued was reduced from 88.50% in 1897 to 82.01% (including juvenile). "The problem of supplying the demand for the latest popular works was solved in part by the adoption of the 'duplicate' and 'seven-day' systems." Over 14% of the total home issue was through the five delivery stations now in operation. The total registration is over 7,000, and probably one-half of these are children who are "ardent patrons of the library whom neither adverse weather nor the library's remote situation from residence centres can deter." A notable effort in the direction of co-operation between school and library was the formation of a library club composed almost entirely of school teachers. During the year there were circulated through the pay envelopes of the largest employers of labor over 4,000 printed slips calling attention to the advantages of the library. A complete dictionary finding list of English prose fiction, adult and juvenile, has been prepared for publication. The list comprises nearly 10,000 entries, and it was necessary to make catalog cards for about 5,000 books included in it, as they had never been cataloged nor shelf-listed.

Iowa State L. (28th rpt. — two years ending June 30, 1901.) Added, 10,632; total (miscellaneous, law, traveling libs., and historical collections), 89,547.

The most important event in the two years covered was the consolidation of the various state library departments — previously separate organizations — into one institution under one general administration. The transfer of material effected under this reorganization revealed the great need of additional shelf-room. Mr. Brigham says: "This condition with which we are confronted emphasizes the supreme necessity of speedily completing the Historical Building, that the miscellaneous portion of the State Library, now temporarily occupying space needed by, and by law accorded to, the law, document, and traveling library departments, may be wholly removed to the Historical Building as directed by the last General Assembly, and that the already congested newspaper section of the historical department may be speedily relieved."

The work of the several departments is separately reported on. The traveling library work, it is found, "is becoming more and more dependent on the library commission for its development, and the library commission is finding it increasingly essential as a means to the principal end of its labors, namely, the founding and upbuilding of self-sustaining free public libraries." The transfer of this department to the direct care of the library commission is recommended.

Appended to the report is a full D. C. list of accessions, followed by a list of state and government documents and an author list.

Lexington (Ky.) Carnegie L. On June 15 a meeting of the Lexington Library Company was held and final action was taken transferring the property of the association to the newly-organized Carnegie Free Public Library. The purchase from the funds of the association of a site for the new building was also ratified. This action terminates the existence of the Lexington Library Company, but gives to the new free public library the nucleus of an excellent institution. The transfer is made on condition that all property and assets thus transferred shall be devoted to free public library purposes, and that "if at any time said public library should be abandoned and not maintained, that all of the property herein conveyed shall revert to the Lexington Library Company."

Ludlow (Vt.) Fletcher Memorial L. "The book of the Fletcher Memorial Library" has been issued in commemoration of the beautiful building given to Ludlow by Allen M. Fletcher. It is a tall octavo pamphlet of forty pages, beautifully printed on heavy tinted paper with fine portrait and many illustrations, and tied with white silk cord in a cover of rich brown.

It contains biographical sketches of Stoughton and Allen Fletcher, a description of the building, and an account of the dedication exercises, with the addresses delivered on that occasion.

McKeesport (Pa.) Carnegie L. The handsome Carnegie library building was dedicated on the afternoon of July 15, and in the evening a large musical and public reception was held. The building cost \$50,000 and is maintained by a yearly appropriation of \$3,000. Mr. Carnegie's offer was made and accepted in 1899. Miss Emily J. Kuhns is librarian.

The library now contains 3,000 v., costing \$2,500, which were the gift of Charles M. Schwab, president of the United States Steel Corporation, on condition that a like sum of \$2,500 be raised within three months by the citizens of McKeesport. Five hundred dollars of the sum required had been pledged in advance.

Mankato (Minn.) Carnegie L. The cornerstone of the Carnegie library building was laid on July 2, with Masonic ceremonies.

Massachusetts State L. (Rpt. year ending Sept. 30, 1901.) Added, 4,779 v., 4,416 pm. The expenses for books, periodicals, pamphlets, etc., were \$6,543.08; for binding, \$870.30.

The usual careful and useful list of additions for the year makes up the bulk of the report (p. 13-269).

Mosinee (Wis.) Joseph Dessert P. L. (3d rpt.—year ending Feb. 14, 1902.) Added, 246; total, 899. Issued, home use, 3,699 (fict. 2,860, incl. juv. fict.). New registration, 95; active borrowers, 250.

New Bedford (Mass.) P. L. (50th rpt., 1901.) Added, 3,680; total, 77,707. Issued, home use, 111,849 (fict. .767%). New cards issued 1,615. Expenses, \$17,353.11.

Mr. Tripp, the librarian, refers to the movement in many libraries to cut down purchases of fiction, but expresses his opinion that "if the people want fiction—and 75 % of them do—fiction they must have, till by judicious suggestion and advice something better is demanded."

New Britain (Ci.) Institute. (48th rpt.—year ending March 31, 1902.) Added, "over 3,000;" total not stated. Issued, home use, 128,561 (fict. 41%). Number borrowers, 4,700. Receipts and expenses, \$9,559.38.

The report is mainly devoted to a description of the beautiful new building in which the library was installed in May, 1901. The removal has been followed by increased work under far more pleasant and useful conditions.

New York City, Aguilar F. L. Soc. (13th rpt.—year ending Oct. 31, 1901.) Added, 11,278; total, 78,940. Issued, home use, 781,379, an increase of 109,271, of which about half is juvenile. Receipts, \$46,481.70; expenses, \$44,740.36.

"In no year since the foundation of the library has the work been so effective," says Dr. Leipziger, in presenting the report of the library committee. This seems borne out by the report of the librarian, who reviews briefly the work of each of the four libraries, the traveling library, and the cataloging department. The Fifth-street library was removed during the year to new and attractive quarters at Avenue C and 7th street, where it occupies three upper stories in a bank building. This library "is one of the pioneer children's libraries. Most of the children of the neighborhood have been coming to it since they were little children, and they now compose the majority of the adult readers." In the new quarters the separation of the children's department has attracted many more adult readers.

From the traveling library department 33,667 v. were sent to 23 schools and clubs, nine vacation playgrounds, and other places.

New York City, School libraries. At a meeting of the Board of Education on July 7 provision was made for appointment of a supervisor of school libraries at a salary of \$2,500 a year. Heretofore Dr. Henry M. Leipziger, supervisor of libraries and lectures, has had entire control of all the libraries connected with the Board of Education. By the change now made in the by-laws, he is now relieved of the charge of the libraries, and his title will be supervisor of lectures. He will also be relieved of half of the work he has been performing. Dr. Leipziger's salary was recently raised from \$5,000 to \$6,000 a year. The new office created is an important one, as the supervisor will have entire control of the school library system of Greater New York, which it is expected will be largely developed.

Oakland (Cal.) F. L. The new Carnegie building was dedicated on the evening of June 30, with elaborate exercises. The chief address was delivered by President Benjamin Ide Wheeler, of the University of California; and Charles S. Green, the librarian, read a dedicatory poem entitled "The fruit of the tree of knowledge."

The building cost \$50,000, the amount of Mr. Carnegie's gift; and in addition the purchase of the site and the equipment of the children's room were carried through by efforts of the members of the Ebell Society, the leading local women's club.

Parmelee L., Chicago. On June 24 a receiver was appointed for the Parmelee Library Company, a commercial concern which has been carrying on a system of circulating libraries for several years. Its liabilities are said to reach \$30,000. The company has been conducted for about 16 years, and is said to have about 125,000 books scattered in its various branches throughout the country, especially in the Middle West and South-west.

Pennsylvania State College, Centre Co. At the commencement exercises, held in June, it was announced that the board of trustees had taken the action necessary to secure Andrew Carnegie's offered donation of \$100,000 for a library building. Work on the building will begin during the summer.

Pittsburgh (Pa.) Carnegie L. (6th rpt. — year ending Jan. 31, 1902.) Added, 21,187; total, 138,278, of which 90,577 are in the central library. Issued, home use, 488,126, an increase of 12.18% over the previous year, with a decrease of nearly 3% in the issue of fiction (64.10%). New registration, 6,501; total registration, 42,182.

This report is an extremely interesting review of the activities of a great city library, admirably organized and equipped for the broadest kind of work. It covers in sequence the various departments, — catalog, circulation, reference, reading rooms, — branches, children's department, and printing department, and it will repay reading in full.

It is intended to issue during the year a complete printed classed catalog of the entire collection. This will probably make two volumes, of some 1,500 pages each. Its preparation has been simplified by the fact that all the composition for it has been accumulating for years, in the form of linotype slugs, saved after first being used for the card catalog and monthly bulletin. "If we print the proposed catalog we can melt down the standing metal and use it again and again, saving only the composition for future supplements. With the two complete dictionary card catalogs already provided for the public, and a classed catalog in book form, in which all the books on a given subject and related subjects are grouped together, we shall be prepared to offer unusual advantages not only to the general reader, but also to the special student."

As frontispiece to the report is given a large folding map of Pittsburgh, with indication of the library agencies, — central building, branches (5), deposit stations (2), school collections (45), home libraries (30), reading clubs (11). This may be studied to advantage as showing a carefully-developed scheme for the distribution of library facilities.

Special attention is given to the work of the children's department, which includes storytelling and reading circles, the supply of books in school and at summer playgrounds, the establishment of home libraries and reading clubs in tenement districts, and the conduct of the training school for children's librarians. One interesting point touched upon is the difficulty of selecting children's books. "Now that our book collections are older and the children have read much, the question of selection has become more complicated. There are children who claim to have read many, if not

all, of the books in the children's rooms; there are also children who have developed tastes which must be satisfied, yet guided. Moreover, when children are rapidly passing into the period of adolescence we have to meet an entirely new demand. They are wavering between the use of the children's room and the adult library, and at this stage we must lead them from children's books to the best of adult literature." To this end there have been selected and placed on the children's shelves "a collection of good books written for adults, but within the interest and comprehension of young people. These books are not kept separate, but are shelved with the juvenile volumes, so that the children who browse among them may come across them casually."

The library has issued a well-printed, illustrated manual, giving "Some information about the Carnegie Library," and prepared especially in view of the Pittsburgh meeting of the American Association for the Advancement of Science. The full description of the various departments and branches will be interesting and suggestive to librarians.

Providence (R. I.) P. L. (24th rpt. — year ending Dec. 31, 1901.) Added, 6,819; total, 99,520. Issued, home use, 120,604 (fict. 56 + %), a gain of 14,152 over the preceding year. New registration, 6,908; total cards in use, 16,079. Receipts, \$61,176.25; expenses, \$60,750.38.

Several changes have occurred during the year in the library force, and Mr. Foster points out that "one of the library's greatest needs is the establishment of a system of carefully graded examinations for admission to the library force, and also a training department in connection with the library."

There is evident a decrease in the circulation of fiction. In the children's department the amount of non-fiction issued is very marked, and in the main collections there is apparent "a steady gain in the proportional use of works in the 'arts and sciences' as compared with those in the 'historical classes.'"

A sub-station delivery system to schools and clubs has been put in operation, with excellent results.

"The reference work is developing and expanding to a degree not equalled by any other department," the special factors toward this end being the large supply of books on open shelves and the generous issue of shelf permits. "The annoying mutilations which made it necessary to place a lock on the door of the Map Room (admitting readers only on application to an attendant) are deeply to be regretted. This course is apparently unavoidable, so long as there is no separate attendant for this room. These mutilations have not, as yet, been traced to any one person, but it is supposed that all are the work of one hand."

Quincy (Ill.) P. L. At the annual meeting of the board, held in July, the directors elected as librarian Miss Margaret Ringier, for six years deputy librarian. The services of the librarian then in office, Miss Elizabeth Wales, were thus summarily dispensed with. The only notification Miss Wales received of the proposed action was conveyed in a letter sent to her just previous to the meeting by Dr. J. B. Shawgo, president of the board, which stated simply that "owing to financial reasons a majority of the board have decided not to employ you for the ensuing year, and by the request of the board you are hereby notified of the same in advance of the regular meeting." Miss Wales was absent on vacation at the time of the meeting, and the note of dismissal was sent, as explained by the vice-president, "to save her railroad fare in coming back." She had been given no previous intimation of the possible result of the annual meeting. Three members of the board were absent from the meeting, a quorum of five being present. The only reason given for the action taken is that the library's appropriation does not permit it to continue the librarian's salary at the rate previously paid. The excellence of Miss Wales' administration of the library seems to be generally admitted. According to the new organization effected at the meeting Miss Margaret Ringier was promoted to the post of librarian at a salary of \$50 per month, or \$25 less than was paid previously; Miss Leonora Wall was made deputy librarian at \$25. The janitor receives \$45, but \$5 less than the librarian, and the page \$20. The directors state that the saving of Miss Wales' salary of \$900 a year, despite the advance made in the other salaries, will give the board much more money for the purchase of books.

St. Paul (Minn.) P. L. (20th rpt. — year ending Dec. 31, 1901.) Added, 4,251; total, 54,550. Issued, home use, 172,855 (fict. 49.04%; juv. 25.98%). New registration, 5,096; cards in use, 11,211. Receipts, \$24,-462.80; expenses, \$20,779.79.

The home use shows a gain of 10,945 over the preceding year.

Swissvale, Pa. Mr. Carnegie's offer of \$25,-000 for a library building was accepted on July 8.

Syracuse (N. Y.) P. L. On June 6 the board adopted the following classification of library employees:

Class A, heads of departments, maximum pay \$75 a month.

Class B, assistants to heads of departments, maximum pay \$50 a month.

Class C, general helpers, maximum pay \$45 a month.

Class D, second grade helpers, maximum pay \$30 a month.

Tacoma (Wash.) P. L. In its April bulletin the library recorded a total of 12,906 v., being a gain of 4,340 during two years. During April there were 10,977 v. issued for home use. With this gain in circulation the issue of fiction has decreased 11 per cent.

Titusville, Pa. At a special election held June 30, it was voted to accept the offer of the Benson heirs for a free public library. The gift was conditional upon an annual city appropriation of \$2,000 for maintenance. The building will cost between \$25,000 and \$40,000. There was much adverse feeling against the acceptance of the offer, when first made, and even after it had been accepted by the council that body refused to grant an appropriation, and it was withdrawn by the donors. The recent election was held to secure final public decision.

Tyringham (Mass.) Town L. The cornerstone of the new library building was laid on June 29, when addresses were made by Richard Watson Gilder, R. S. Rudd, and Rev. Mr. Rowland. Among those present were Mrs. Edith Wharton, Mrs. Mary Hallock Foote, and Miss Anne Douglas Sedgwick. The library is being built by the town itself, the architect, H. Neill Wilson, gives his services, and the land is also a gift.

Washington (D. C.) P. L. The new Carnegie building will be opened to the public on October 1. It is expected that Mr. Carnegie will attend the opening exercises.

Wesleyan Univ. L., Middletown, Ct. During the year ending April 30 there were presented to the library 1,212 bound volumes and 5,618 pamphlets and periodicals. The largest single gift consisted of 418 bound volumes, 21 pamphlets, and 109 packages of clippings from the library of the late Rev. Joseph Pullman, class of '63, presented by his widow.

Wilmington (Del.) Institute F. L. By recent action of the board of education the course at the Wilmington High School has been so extended as to give hereafter preparation for admission to college. In celebration of this action the library prepared a general exhibit, including special bulletins showing college buildings and life, special lists of college stories, and the use of college pennants and emblems for decoration. Catalogs from nearly all the colleges of the East, and from all the larger universities, were arranged alphabetically on a shelf in the reading room, and many fine pictures of college buildings were displayed. The exhibit aroused very general interest among young people and older readers.

Worcester (Mass.) F. P. L. (42d rpt. — year ending Nov. 30, 1901.) Added, 5,819; total, 135,791, of which 25,471 are in the Green Library, 47,459 in the intermediate apartment, and 62,861 in the circulating department.

Issued, home use, 224,552; ref. use, 119,131; Sunday use, 2,513; holiday use, 890. To children under 15 years 39,692 v. were issued, an increase of 18,845 v. over the previous year.

This, however, does not represent the whole use of books by children, which Mr. Green gives at about 71,000 v. The total increase in the use of the library over the preceding year is given as 24,712. Through the eight delivery stations 14,644 v. were issued. New registration, 4,957; total registration, 38,666. Receipts, \$44,992.98; expenses, \$42,521.39.

Five exhibitions of photographs and other reproductions were held during the year. "A successful experiment has been tried this year in imparting, in an elementary way, bibliographical knowledge. The course of lessons was opened by Mr. E. Harlow Russell, the accomplished principal of the State Normal School in Worcester. Two hundred and fifty teachers and others came to the library building to listen to him as he handled a large number of books placed before him, and showed the audience the especial value of every book in aiding in the work of teaching. A second lesson, on books useful to persons interested in the study of botany, was given by Miss Helen A. Ball. She is thoroughly conversant with the literature of the subject, and gave a very admirable account of the merits and defects of works upon flowers and botany.

"The idea of the librarian in starting work of this kind was to bring together the best books in the library on some subject of immediate interest, and engage a speaker of large knowledge of the literature of the subject to talk about the value of the books, in themselves, and for special purposes. The results have been so good that preparations are making to continue the work the present year."

FOREIGN.

Rodleian L., Oxford. (Rpt., 1901.) The accessions for the year reached a total of 63,858 "printed and manuscript items," of which 45,577 were received under the copyright act and 11,180 were acquired by gift or exchange. It is estimated that the annual increase of the library equals about 17,000 octavo volumes. Among the most important manuscript additions were "the only known copy of the York Gradual, a large folio of the 15th cent., with the music in full;" an extraordinary Burmese volume, supposed to be about 70 years old, describing and illustrating the royal collection of elephants, many of which are in the most brilliant colors, "suggesting that the animals themselves had undergone the process of painting," and a singular Chinese manuscript consisting of portraits of Buddhist saints drawn on sacred fig leaves specially prepared.

The illness of the librarian is referred to with regret. The celebration of the tercentenary of Sir Thomas Bodley's foundation will take place on October 8 and 9.

Gifts and Bequests.

Chicago, Library bequests. By the will of the late Huntington W. Jackson, of Chicago, bequests of \$1,000 each were left to each of the following institutions among others: Chicago Art Institute, Chicago Bible Society, Chicago Society of Home Teaching and Free Library for the Blind, Chicago Historical Society, Chicago Literary Club, Field Columbian Museum, John Crerar Library. In each case the interest on the legacy is to be devoted to the purchase of books.

Utica (N. Y.) P. L. By the will of the late Dr. Anson Judd Upson the library receives a bequest of \$5,000, the income to be used for the purchase of books.

Carnegie library gifts.

Lawrence, Kan. June 20. \$25,000. Accepted July 7. The offer of a site, from Mrs. Charles P. Grosvenor, was also accepted.

Lorain, O. July 21. \$30,000.

Marion, O. July 12. \$25,000.

Montclair, N. J. July 20. \$10,000 additional, making a total of \$40,000.

Shelbyville, Ind. June 25. \$5,000 additional, making a total of \$20,000.

The following foreign gifts are reported:

Cork, Irel. Aug. 2. £50,000 for a free library building.

Eastbourne, Sussex, Eng. July 13. £10,000. A site has been given by the Duke of Devonshire.

Isle of Man. Mr. Hall Caine, who has recently been in correspondence with Mr. Carnegie regarding the establishment of libraries throughout the Isle of Man, has issued a statement to the Manx people, announcing that he has received from Mr. Carnegie "an important and most generous proposal." He adds, "As Mr. Carnegie's magnificent offer is, very properly, conditional on the active co-operation of our people and on the sympathy and support of our legislature, I shall ask for time to formulate a scheme such as may benefit not only my own town, Ramsey, for which my appeal was made, but Douglas, Peel, Castletown, and the whole of the island."

Lambeth, London, Eng. July 10. £12,500, for completion of the Lambeth library system.

Leicester, Eng. June 30. £12,000.

London, Eng. June 19. £15,000 for branch libraries in the borough of Poplar.

Merthyr Tydvil, South Wales. June 21. £6,000.

Partick, Scotland. June 20. £10,000.

Librarians.

BASSETT, Homer Franklin, for nearly thirty years librarian of the Bronson Library, Waterbury, Ct., died at his home in Waterbury on June 29. Mr. Bassett was born in Florida, Mass., Sept. 2, 1826. At an early age his parents removed to the Middle West, and he studied at Berea (O.) University and at Oberlin College. From 1837 to 1850 he resided at Rockport, O., and from 1850 to 1858 spent his winters teaching in Ohio and Connecticut, returning for the summer months to his farm at Rockport. In the spring of 1859 he opened a private school in Waterbury which was maintained for eight years. In 1872 he was appointed librarian of the Bronson Library, a post which he held until his resignation, because of age and ill-health, on March 1, 1901, when he was succeeded by Miss Helen Sperry. During his long term of service he won a high reputation as an entomologist, and published several works that are among the standard manuals on the subject. He served a year as town treasurer, and was for many years a member of the board of education. Mr. Bassett was married three times. He is survived by two daughters.

CLARKE, Miss Elizabeth Porter, reference librarian of the Evanston (Ill.) Public Library, has been appointed librarian of the Seymour Library, Auburn, N. Y., succeeding Miss Martha Bullard, resigned. Miss Clarke is a graduate of the Armour Institute Library School, class of '96. She has served on the staff of the Central Library of Syracuse, has organized several libraries, and since October, 1897, has had charge of the reference department and school work of the Evanston library.

ELROD, Miss Jennie, librarian of the Columbus (Ind.) City Library, has been appointed assistant state librarian, and entered upon her new duties at the State Library, Indianapolis, early in June. Miss Elrod is president of the Indiana State Library Association.

GRIFFIN, Miss Etta Josselyn, who is in charge of the reading room for the blind of the Library of Congress, has been granted leave of absence to attend the International Congress for the Amelioration of the Condition of the Blind, which meets in Brussels August 6-10. Miss Griffin sailed on June 21 and will return September 1, visiting while abroad the principal schools, libraries, and institutions for the blind. Her trip was made possible through the gift of a substantial sum from a few persons interested in Miss Griffin's work and desiring to aid in its development.

GOULDING, Philip S., New York State Library School, 1898-99, has been appointed assistant in the Catalogue Division of the Library of Congress.

GREEN, Samuel Swett. Mr. Green's interesting "Reminiscences of John Fiske," delivered before the American Antiquarian Society, Oct. 30, 1901, have been issued as a "separate" from the Proceedings of the Society.

HUMPHREY, Miss Gertrude P., Drexel Institute Library School, class of 1901, has been appointed librarian of the Lansing (Mich.) Public Library.

KEYES, Miss Virginia M., of the Drexel Institute Library School, class of 1900, has been appointed librarian of the Lancaster (Mass.) Public Library.

NASH, Herbert C., librarian of Leland Stanford University Library, died on June 7, in Pomona, Cal., where he had gone in the hope of regaining health. He had been absent from the library since last Christmas, and had visited many of the California health resorts, with the intention of going ultimately to Arizona. Mr. Nash was born in Nice, France, Aug. 25, 1857, of American parents. He was educated in France, and was from 1877 to 1881 American vice-consul at Nice. In 1880 he met Senator Stanford and became tutor of Leland Stanford, Jr., and later on became the private secretary first of Senator Stanford and then of Mrs. Stanford. He was appointed librarian of the university in 1896. He was secretary of the university board of trustees from 1886 until his death.

OWEN, Miss Anna, has been appointed librarian of the new Carnegie Library of Columbus, Ind., succeeding Miss Jennie Elrod, resigned.

SMITH, Miss Cornelia, has been elected librarian of the Warren (O.) Public Library, succeeding Miss Elizabeth Smith, resigned.

THOMPSON, Miss Helen M., of the New York State Library School, class of 1901, has been appointed cataloger in the library of the Department of Agriculture, Washington, D. C.

VAN BUREN, Miss Maude, of the Pratt Institute Library School, class of 1902, has been appointed librarian of the Owatonna (Minn.) Public Library.

Cataloging and Classification.

The BOSTON BOOK Co.'s *Bulletin of Bibliography* for July contains short article by J. I. Wyer on "Practical bibliography," setting forth the requirements of good bibliographical work; the conclusion of Miss Medlicott's annotated reading-list on Alfred the Great; and a further instalment of George Watson Cole's "Bermuda in periodical literature."

BRONSON (*Mich.*) F. P. L. Catalogue, 1901 [1902]. 72 p. O.

An author and title list in one alphabet, crude and elementary. "Les miserables" appears only under L, in title entry; such words as Report, History, etc., are used as title entries, and there are such entries as "Acme biography, various," and "Hill, C. T. Millenery, Theoretical and Practical," which leaves one doubtful whether it deals with bonnets or the millenium. The call number seems to be simply an accession number. The catalog was compiled by J. Frances Ruggles. It is prefaced by a "Prolegomenary," which states that "the present fine and comprehensive aggregation of tomes embraces carefully selected works in history, biography, science [etc.]. If any familiar title is missing it is likely owing to the work having fallen by the wayside after becoming disabled by constant usage."

The Co-operative Bulletin of Providence Libraries for June is entirely devoted (21 p.) to an alphabetic co-operative list of the periodicals currently received in 15 libraries of Providence and vicinity. These include the State and Y. M. C. A. libraries, and libraries of various associations, departments of Brown University, etc. There is indication of the library or libraries where each periodical listed may be consulted.

The FITCHBURG (*Mass.*) P. L. *Bulletin* for July prints a reference list on French artists, dealing with Bouguereau, Breton, Greuze, Baudry, Ingres, Meissonier, Poussin, and others.

The NEW YORK P. L. *Bulletin* for July contains lists of Jewish periodicals, works relating to the American Colonization Society, and literary annuals and gift books contained in the library. In the June number was printed a list of the Russian and other Slavonic periodicals received.

The SALEM (*Mass.*) P. L. *Bulletin* for June contains five special reading lists, covering Coronation, Westminster, Stories of animals, Bret Harte, Good books for boys and girls.

U. S. DEPARTMENT OF AGRICULTURE L. Library bulletin no. 40. Accessions to the department library, January-March, 1902. Washington, 1902. 67 p. O.

UNIVERSITY OF STATE OF N. Y. State L. Bulletin 74, Bibliography 34: A selection from the best books of 1901; with notes.

The annual annotated list of 250 books published in the United States during the preceding year, recommended for purchase by the libraries of the state. To aid in the choice for smaller libraries, collections of 20, 30, 50,

and 100 v. are indicated, to be bought if the purchase of the whole list is impracticable.

VICTORIA P. L., MUSEUMS, AND NATIONAL GALLERY. Catalogue of the Public Lending Library. Melbourne, 1902. 8 + 603 p. O.

A dictionary catalog, with D. C. notation. It includes much analytic work and full contents, entries for series and composite books. Under main country divisions, such as English poetry, English literature, etc., are given brief lists (without titles or call numbers) of the individual authors represented in the collection. Similar references to individual biographies are made under historical and like divisions. The catalog is neatly printed, and gives the impression of painstaking and intelligent work.

FULL NAMES.

The following are supplied by Catalogue Division, Library of Congress:

- Allen, Freeman Harlow, 1862- (Manual of arithmetic).
- Augsburg, De Resco Leo, 1859- (Augsburg's drawing books 1-3).
- Baker, George Henry, 1859- (Economic locomotive management. . .).
- Ballough, Charles Augustus, 1856- (Sibylline leaves).
- Bechtel, John Hendricks, 1841- (Proverbs. . .).
- Berkeley, William Nathaniel, 1868- (Laboratory work with mosquitoes).
- Biddison, Valeda Hull, 1861- (A brief course in psychology).
- Blackwood, Alexander Leslie, 1861- (Diseases of the lungs).
- Blanchard, Edgar Franklin, 1862- (The re-adjusted church. . .).
- Crayon, Joseph Percy, 1841- (Rockaway records of Morris county, N. J., families).
- Dawson, John James, 1855- (The voice of the boy).
- Donnelly, Francis Patrick, 1869- (Imitation and analysis; English exercises based on Irving's Sketch-book).
- Doyle, Sherman Hoadley, 1865- (Presbyterian home missions).
- Emerton, James Henry, 1847- (Common spiders of the United States).
- Fuller, Phoebe Waight, 1856- (Shadows cast before).
- Greene, James Gereau, 1863- (Analyzed New York decisions).
- Harris, William Henry, 1845- (The law governing the issuing, transfer and collection of municipal bonds).
- Hibschman, Harry Jacob, 1879- (The Shetek pioneers and the Indians).
- Hills, Aaron Merritt, 1848- (Life of President Charles G. Finney).

- Homans, James Edward, 1865- (Self propelled vehicles. . .).
- Jenkins, Charles Francis, 1865- (Guide to historic Germantown).
- Judson, Charles Francis, and Gittings, John Claxton (The artificial feeding of infants).
- Keller, Sarah (Kulp) ["Mrs. J. A. Keller"] (Pennsylvania German cook book).
- Ketler, Isaac Conrad, 1853- (The tragedy of Paotingfu. . .).
- La Seer, Elmer Jean, 1868- (The hand and its lines).
- Leahy, Walter Thomas, 1858- (Clarence Belmont. . .).
- Lowe, Albert Joseph, 1877- (The gas consumers instructor).
- McGowan, Francis Xavier, 1854- (Two series of Lenten sermons).
- McKay, Henry Jay 1874- (The poetical works of Henry J. McKay).
- McKinney, Alexander Harris, 1858- (The child for Christ).
- McLaughlin, Robert John, 1867- (Language notes for higher grammar grades).
- Perky, Henry D., 1844- (Wisdom vs. foolishness).
- Pickenpauh, Mrs. Laura Dering, 1831- (New-old southern cookery).
- Rapp, John Michael, 1862- (Geographical outline manual of North America).

Bibliography.

ASIATIC RUSSIA. Wright, George Frederick. Asiatic Russia. New York, McClure, Phillips & Co., 1902. 2 v. 22 + 290; 12 + 291; 637. il. 8°.

Volume 2 contains a 5-page bibliography.

BOERS. A list of the books and pamphlets on the Boer republics and the Boer war published in Germany; compiled by S. Pevschmann. (*In Börsenblatt*, July 17, 18, 1902.)

Pt. 1 contains 61 books published before the war; pt. 2, 198 books, published since the war began.

CANADIAN PUBLICATIONS. Lawrence J. Burpee, 351 Stewart street, Ottawa, Canada, announces that he has in preparation for the Royal Society of Canada a bibliography of Canadian publications issued during 1901. He will be glad to receive information, giving place of publication, publisher, and other full technical data, of books, pamphlets, magazine articles, or papers in society transactions by Canadians, published in 1901.

CHEMISTRY. The *Chemical News*, July 11, 1902 (86:13-15), prints the 20th annual report of the Committee on Indexing Chemi-

cal Literature, from advance proofs of the Proceedings of the American Association for the Advancement of Science, 1902. It notes the works published and gives notes of foreign bibliographies and works in progress.

CHURCH MUSIC. Dickinson, Edward. Music in the history of the western church, with an introduction on religious music among primitive and ancient peoples. New York, Charles Scribner's Sons, 1902. 9 + 426 p. 8°. The bibliography includes 85 titles.

COLE, George Watson. Compiling a bibliography: practical hints, with illustrative examples, concerning the collection, recording and arrangement of bibliographical materials. New York, The Library Journal, 1902. 2 + 20 + 4 p. O.

A reprint, with addition, of Mr. Cole's address before the Pratt Institute Library School, given in the LIBRARY JOURNAL for November and December, 1901. An especially interesting feature is the series of careful transcripts of actual records made in elaborate bibliographical work.

CRIME. Hall, Arthur Cleveland. Crime in its relation to social progress. New York, Macmillan Co., 1902. 8°. (Columbia Univ. studies in hist., economics and public law, v. 15.) net, \$3. \$3.50. Contains a 9-page bibliography.

DIBDIN, CHARLES. Dibdin, E. Rimbault. A bibliographical account of the works of Charles Dibdin, *continued*. (*In Notes and Queries*, May 31, 1902. p. 421-423.)

This installment deals with works published in the period 1782-1787.

EDUCATION. Wyer, James Ingersoll, and Lord, Isabel Ely, *comps*. Bibliography of education for 1901. (*In Educational Review*, June, 1902. 24: 61-64.)

The number of titles included is 319, as compared with 481 for 1900. The annotations are unusually well made, and the introduction is also of more than usual interest.

ENGLISH LITERATURE. Moody, William Vaughn, and Lovett, Robert Morss. A history of English literature. New York, Charles Scribner's Sons, 1902. 8 + 433 p. 12°.

The "reading guide," pages 383-411, is intended as a working bibliography, to serve

as a guide to a first-hand acquaintance with the authors treated in the volume.

FITZ GERALD, Edward. Prideaux, W. F. Notes for a bibliography of Edward Fitz Gerald. London, Frank Hollings, 1901. 11 + 88. 12°.

These bibliographical notes were first published in *Notes and Queries* during 1900. They are here arranged under the following chapters: "Separate works," "Posthumous works," and "Contributions to books and periodicals."

GAINE, Hugh. The journals of Hugh Gaine, printer; edited by Paul Leicester Ford. N. Y., Dodd, Mead & Co., 1902. 2 v. 12 + 240; 12 + 235. il. 8°.

The first volume is a biography and bibliography; volume 2, journals and letters. The issues of Hugh Gaine's press, 1752-1800, comprise pages 85-174 of the first volume. They form a most interesting part in the history of publishing in New York City during the eighteenth century. Mr. Ford's great bibliographic knowledge is evident on every page, in the annotations.

GRAESEL, Arnim. Handbuch der Bibliothekslehre. "Zweite, völlig umgearbeitete Auflage der Grundzüge der Bibliothekslehre, Neubearbeitung von Dr. Jul. Petzholdts Katechismus der Bibliothekslehre." Leipzig, J. J. Weber, 1902. 10 + 584 p. pl. facsim. 8°.

GREEK LITERATURE. Fowler, Harold N. A history of ancient Greek literature. (20th century text books.) New York, D. Appleton & Co., 1902. 10 + 501 p. 12°.

The bibliography of 18 pages is useful chiefly for the part relating to editions and translations.

HARTE, Bret. A brief sketch and a bibliography of Bret Harte. (*In The Book-lover*, v. 3, no. 3, Midsummer holiday number, New York, July-August, 1902.)

HUPP, Otto. Gutenbergs erste Drucke: ein weiterer Beitrag zur Geschichte der ältesten Druckwerke. Regensburg, G. J. Manz, 1902. 98 p. pl. 4°. 18m.

The INSTITUT INTERNATIONAL DE BIBLIOGRAPHIE has issued, up to the present time, five special manuals in which the Decimal classification is expanded and adapted to special subjects. These cover the physical sciences, bibliography in general, agricultural sciences, photographic sciences, and "Locomotion and

sports." Each manual, besides outlining the classification scheme, gives the general rules of the institute for the formation of a bibliographical "repertory." The *Bulletin* of the institute is now completed through its sixth volume (1901). The last number (fasc. 4-6) contains an outline of the classification of Locomotion and sports, articles on the organization of national institutes of bibliography, contemporary bibliography in Russia, the bibliographical handling of periodicals, and varied notes on bibliographical projects and publications.

LIBRARY OF CONGRESS, *Division of Bibliography*. List of references on reciprocity, books, articles in periodicals, Congressional documents; comp. under direction of A. P. C. Griffin, chief of Division of Bibliography. Washington, Government Printing Office, 1902. 38 p. l. O.

NAPOLEON I. Kircheisen, F. Bibliography of Napoleon. London, Sampson, Low, Marston & Co., 1902. 8°. 5s 6d.

According to the *Athenaeum* the work has been "tested at several difficult points and found accurate and complete so far as examination has gone. The book is recent and includes the work of Mr. Rose, though not that of Mr. Watson. The system of arrangement adopted, coupled with the system of the index, is not very clear or satisfactory. But there is nothing more difficult than to arrange the cross-references in a publication of this kind so as to suit all readers and users of a bibliography."

PRINTS. Whitman, Alfred. The print-collector's hand book. London, George Bell & Sons, 1902. 11 + 160 p. il. 8°.

Contains an 8-page bibliography, partly annotated.

VIRGINIA. Ballagh, James Curtis. A history of slavery in Virginia. (Johns Hopkins University studies in hist. and polit. science. Extra vol. 24.) Baltimore, Johns Hopkins Press, 1902. 8 + 160 p. 8°.

Contains a 6-page bibliography.

WESTMINSTER CONFESSION. Warfield, Benjamin B. The printing of the Westminster confession. iv: In modification. (*In Presbyterian and Reformed Review*, July, 1902, 13: 380-426.)

Most of the editions noted in this part of the bibliography of the Westminster confession are those of the Cumberland Presbyterian Church.

“METALLIC *versus* WOODEN FURNISHINGS”

is the title of an attractive little Brochure lately issued by us. We shall be pleased to put it into the hands of Librarians or Trustees interested in the **best** fittings for library buildings.

The growth in these lines has been so rapid that many officials are not yet conversant with their merits, but the question of Complete Furnishings for any modern library will not have been exhausted without an examination of these fixtures.

The very large demand for them for Commercial uses has indicated clearly their adaptability to library requirements ; an indication substantiated by the increasing call for them for this purpose.

Our **Steel Card Index Drawers** are a prominent feature of this line, among whose merits may be mentioned—Durability, Incombustibility, Freedom from Vermin and Cleanliness.

Copies of our “Complete Library Catalogue” or “Library Plans” also sent on application.

Art Metal Construction Co.,

Ten Branch Offices.

JAMESTOWN, N. Y.

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET NEW YORK.

~~BENJAMIN FRANKLIN STEVENS.~~

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents.

4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders or by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Subscriptions to Foreign Periodicals.

LIBRARIANS and others are requested to note the following prices of Annual Subscriptions to English Periodicals, which include postage from our New York Agency. The service will be found most punctual and reliable.

Academy, \$3.75; *Analyst*, \$2.56; *Annals of Botany*, \$7.67; *Annals and Magazine of Natural History*, \$8.75; *Antiquary*, \$1.70; *Architect*, \$5.25; *Army and Navy Gazette*, \$7.12; *Art Journal*, \$4.75; *The Artist*, \$3.25; *Atheneum*, \$3.70; *Badminton Magazine*, \$3.40; *Banker's Magazine*, \$5.48; *Black and White* (incl. "Improvement the Order of the Age"

For LIBRARY CATALOGUING and INDEXING

The Smith Premier Typewriter

*With CARD PLATEN
has been found invaluable*

MORE than 50% of the large libraries, using the typewriter for indexing, employ the Smith Premier. It does the work required in the most satisfactory manner and without any difficulty.

Used exclusively in such libraries as the Carnegie at Pittsburgh, the U. S. Patent Office Scientific, at Washington, and many others. Send for Free Catalogue.

THE SMITH PREMIER TYPEWRITER CO., Syracuse, N. Y., U. S. A.

Whitaker's Reference Catalogue.

We are now prepared to supply the "Reference Catalogue of Current English Literature," better known, perhaps, as "Whitaker's Reference List."

The work is arranged on the plan of "The Publishers' Trade List Annual," and contains recent lists of 179 of the more important English publishers. An index is prefixed to the lists containing 35,000 references to the books catalogued. It thus forms one of the most complete records of current English books accessible to the bookseller and librarian.

The work is in two volumes of about 5,000 pages, strongly bound in half leather. The price has been fixed at \$5.00 *net*.

As the copies received for the American market are limited, we need hardly remind intending subscribers of the wisdom of placing your order without delay.

THE PUBLISHERS' WEEKLY.

298 BROADWAY, (P. O. Box 943,)

NEW YORK.

Subscribers to the

Publishers' Trade List Annual for 1902

may be interested to know that the Catalogues volume is now being shipped. This volume contains the lists of 250 publishers, approximating 7000 pages. The price of this volume with an Index, in cloth binding, is \$5, and without the Index \$1.50, if subscribed and paid for before date of publication. After that the prices will be raised to \$7 for the indexed volume, and \$2 for the unindexed Catalogues volume.

The Index volume is expected to be ready about September 15. It will contain upwards of 140,000 references to books in print, by author, title, and subject catch-word.

The edition is printed from type and is limited to 1750 copies.

LIBRARY DEPARTMENT OF
HENRY MALKAN
 1 William Street, New York

We are supplying hundreds of libraries, some the largest in this country, with all of their books. This record in a few years has been attained by giving the lowest possible prices, which are often on many items from 10 to 25 per cent. lower than other houses, also by giving the best service and guaranteeing to furnish every book in print.

The question may reasonably be asked how we can sell so cheap; in answer we state that with our large outlet and buying for Cash we get a great many bargains, which we are perfectly willing to divide with our customers.

Here are a Few Sample Prices

Special Notice to Librarians.

British Catalogues of New and Old Books posted by every mail.

Books sent by Mail, Parcel, or as Heavy Consignments.

Advance Auction Catalogues of Rare Book Sales.

Newspapers, Scientific Serials and Periodicals supplied promptly by mail or otherwise.

Librarians who require Books from Great Britain are advised to lose no time in stocking their shelves.

British published Books are becoming daily scarcer, owing mainly to the enormous increase of Public Libraries, and the widely spreading demand for British published Books.

The following opinion was recently received from a correspondent:

"For some five or six and thirty years you have given us a service which in point of intelligence, accuracy and promptness could not in my opinion be surpassed. We have never had occasion to correct an account or to complain of delay. The various duties of collecting blue-books, pamphlets, continuations, rare books, etc., and of binding and shipping, have been discharged with energy, rapidity and economy. Your advice has always been sound and to our advantage; and I must add that my most cordial acknowledgment is due to you for your constant patience and courtesy in the tasks I have so often gratuitously imposed on you—in *re*, case of public men visiting London and requiring assistance and advice. Wishing you every success in your affairs."

EDW. G. ALLEN believes that he may fairly claim to be a Benefactor to the Intellectual Life of America, having, during his long experience of Library Work, shipped to American Libraries over two million Books, of course involving a very large expenditure of money.

1856—1902.

THE LIBRARY JOURNAL

VOL. 27.

SEPTEMBER, 1902.

No. 9

A FAVORITE exordium of modern library oratory is the contrast between the librarian of an earlier day and his successor of the present time—the dreamy custodian of dusty tomes (to use the orator's favorite characterization), contrasted with the energetic practical distributor of books to the people. This contrast is drawn again, but from the opposite point of view, by Mr. Gerald Stanley Lee, in a recent *Book Buyer*. The modern librarian, says Mr. Lee, lacks the indefinable qualities of the real librarian. He is too businesslike, too worldly-minded; his attitude toward his books lacks sensibility; "he seems to have decided that his mind (any librarian's mind) is a kind of pneumatic tube or carrier system for shoving Immortals at people." Mr. Lee's indictment is amusing; and it has a basis of sound sense that library workers, in the present insistence on methods and machinery, are apt to lose sight of. It is true that the days of the old-fashioned librarian are past; mustiness, inconvenience, solitude, for each of which Mr. Lee makes whimsical plea, are no longer necessary library attributes, and happily so. But it is true also that we are prone nowadays to overvalue the mechanics of library administration. "Love of books" is one of the time-worn recommendations of the incompetent assistant; it is none the less a prime qualification of the best library service. As Mr. Putnam pointed out at Magnolia, order, system, apparatus are necessary to the operation of the modern library; but we should give heed that in securing these we retain and foster those characteristics of knowledge and love of books that distinguished the old-fashioned librarian.

WITHIN the last few weeks Great Britain has received a generous proportion of Mr. Carnegie's favorite "investments." Over a score of towns and cities in the United Kingdom have been offered sums ranging from ten thousand to sixty thousand dollars and over for library buildings. The numerous

gifts to the various London districts are especially notable, as evidence of Mr. Carnegie's desire to see branch library systems developed for the larger cities. As usual, the gifts are conditional upon a guarantee of proper maintenance of the library by the town—in many cases upon the acceptance of the Library Acts—and the furnishing of a site; and in several cases towns that have heretofore refused to avail themselves of the Acts have adopted them in the hope of, and before applying for, a Carnegie gift. The gifts so far reported, scattered as they are through England, Scotland, Ireland and Wales, are likely to have a marked influence upon general library development in Great Britain, especially in the direction of professional training for library work. One of the English library periodicals has already presented the need of organized instruction of the sort, and has urged that Mr. Carnegie's gifts to individual libraries might be supplemented and made more effective by "the endowment of librarianship," in the form of a central institute, where all library and bibliographical interests should be represented, where librarians should be given thorough technical training, and where information and material on library subjects should be preserved and distributed to the public. Organization on such a scale as this is somewhat theoretical; but it is evident that the large increase in modern and attractive library buildings which Mr. Carnegie's gifts ensure will create administrative needs that only some system of professional training can satisfy.

THERE has been evident within the last few years a decided strengthening of what was recently termed the "progressive wing" of the catalog world, and a corresponding reaction against some of the minutiae of sign and symbol that have set library practice apart from conventional usage. This was shown at the meeting of the Catalog Section at Magnolia, by the votes in favor of capitalizing German

nouns and the names of historical events and epochs, and by the discussion on capitalization in general. It is also to be observed in the advance edition of the new "A. L. A. rules," just issued by the Library of Congress for the A. L. A. Publishing Board's advisory committee. This revision of the A. L. A. rules of 1883 was begun in the spring of 1901, when the introduction of printed catalog cards through the Library of Congress made necessary more uniformity in type, cards, and form of entry. At the same time it was hoped through this revision to bring existing codes into more harmony and give the A. L. A. rules more practical authority than they had heretofore possessed—a hope that has been already partly fulfilled, as the fourth edition of Cutter's rules is in substantial agreement with the committee's code. In the meantime this advance edition of the revised rules is submitted for criticism and suggestions. Especially is consideration called to the proposed treatment of government publications and issues of academies, which is a marked departure from previous American practice, while in various minor points, such as the use of centimeters for size designation instead of the letter symbol, the omission of forenames not used by the author, and like examples, the tendency toward a broader standpoint is apparent. Catalogers should give close attention to this revised code, and the comments and criticisms asked by the committee should be promptly forthcoming.

Communications.

ERRATA IN GIFTS AND BEQUESTS REPORT.

THE statement in the "Report on gifts and bequests" in the Proceedings of the American Library Association, 1902, p. 118, regarding gifts to Havana, is not wholly accurate. It there states that the sum of \$250,000 has been offered to the Public Library of Havana for the erection of a library building, and that the library has also received the gift of over 3000 volumes, only 300 of which are bound, from Señor Figarola-Cañeda. It is true that Mr. Carnegie has offered to the town council of Havana \$250,000 for a public library building. Regarding the gift of volumes, this was made not to the future Public Library, but to the National Library, established under my direction in Havana in October, 1901.

D. FIGAROLA-CANEDA, *Director.*

BIBLIOTECA NACIONAL, }
Havana, Cuba. }

COMMITTEE ON AMERICAN BIBLIOGRAPHICAL SOCIETY.

THROUGH an oversight the names of the members of the committee on an American bibliographical society were not printed in the proceedings of the Magnolia meeting of the Bibliographical Society of Chicago. The following gentlemen were appointed: Mr. John Thomson, Philadelphia, chairman; Mr. Wilberforce Eames, New York; Mr. William C. Lane, Cambridge.

AKSEL G. S. JOSEPHSON,
Chairman of Magnolia Meeting, Bibliographical Society of Chicago.

THE HIGHER MATHEMATICS OF BOOK EVALUATION.

BEFORE we reach satisfactory methods in library statistics and in book evaluation, some units of measurement will be necessary: our electric light current is charged by "watt-hours," the product of the number of watts by the hours they are used. The complete and accurate measurement of the effect of a book would require some such unit as "book-quality x hours-reading x reader's-condition"; each factor being compound as well, e.g., "reader's-condition" being affected by his receptivity at the time of reading, the usual permanence of his impressions, and the wisdom with which he acts on them. This is, of course, too delicate a test to be practicable. But such a unit as "hours-enjoyment" can be applied in comparing various classes of books; "enjoyment" being used for the reader's state of mind while reading, whether he agrees or disagrees. If "Hohenzollern" requires three hours for reading, its effectiveness is three "hours-enjoyment"; if "Making of an American" requires 15 hours, 15 "hours-enjoyment" is its value. And the same person reading both would have received pleasure in the ratio of 3 to 15; so that the effectiveness on this simple comparison of "Making of an American" is five times as great as that of "Hohenzollern," and the library has a right to reckon on this basis the work it has done in circulating these books an equal number of times. The "hours-enjoyment" of books can be accurately determined once for all by persons reading with "average" rapidity, and its value as a measure lies largely in its exactness and its independence of personal opinion. To be sure it takes no account of the intrinsic worth of a book's contents, nor of the fact that all of a book may not be read. But the library now regretfully reporting a circulation of 3000 volumes of fiction and 1000 non-fiction would more truly express its work if, on a basis of three "hours-enjoyment" to a novel and of 15 to a volume of non-fiction, it declared it had given 3 x 3000 or 9000 "hours-enjoyment" fiction and 15 x 1000 or 15,000 "hours-enjoyment" non-fiction.

DREW B. HALL.

THE MILLICENT LIBRARY, }
Fairhaven, Mass. }

THE VEXED QUESTION OF PUBLIC DOCUMENTS.*

BY ADELAIDE R. HASSE, *Chief of Document Department of New York Public Library.*

THE attitude of the average librarian to-day toward documents is that of the paleontologist toward structural zoology before the study of constructive anatomy had been formulated. The peculiarity of documents, as books, is their relation one to another. When we lose sight of this, and hold in one hand only a minute fragment of a complex whole, is it to be wondered at that we encounter puzzling obstacles?

There are then two alternatives for the librarian facing the question of public documents: either he must become a student of the constructive anatomy of civic administration, or he must be content to confine his use of documents, as fragments, to an exhibition of them, together with his other specimens of literature on his cabinet shelves. Perhaps if, when speaking of public documents, we did not lose sight so absolutely of the fact that documents are but an expression of government, government in the abstract (not only of the United States government) we might be in a position more readily to appreciate their significance. If we but remembered that organized governments such as ours is to-day have existed since 1789, and that the history of unorganized governments follows closely the inception of the family as a unit of society, and that so soon thereafter as the art of preserving records by graphic means was invented public documents came into existence, we would have an inkling of the immensity of the study of public documents. A royal Assyrian proclamation, inscribed on stone, is a public document; a Chinese ordinance passed thousands of years ago, providing for the establishment of the vast system of public roads of that country, is a public document; a Phœnician wax tablet containing a tariff schedule is a public document; Egyptian hieroglyphics decorating the walls of a tomb and representing a regal decree, make in effect, a public document.

Public documents exist wherever civic organization has taken place in a civilization

having invented the art of graphic expression. As in the nomenclature of other social developments so we have in that of public documents a reminder of their evolution. Notable are the Pipe Rolls of Great Britain, about the true origin of which there is a division of opinion, it being maintained on the one hand that these early finance reports were so called because the accounts on rolls, like a pipe or conduit, encompassed the income and outgo of the country's wealth; and on the other hand it is maintained that they received the name because the accounts were inscribed on huge skins and were rolled up when not in use, representing in contour a pipe. In France the repository of government archives is to-day called *Trésor des Chartes*, which was the name the old kings who lived in the saddle gave to the name of the coffer holding the royal seal and official parchments, and which they carried about with them from battle to battle.

Without going beyond the era of organic administration beginning in 1789, the complexity of the construction of the study of public documents may be illustrated by the fact that there are in existence to-day 35 federal publishing bodies other than that of the United States, and that there are 743 local publishing bodies other than the half hundred American commonwealths, and that there are 153 colonial publishing bodies other than the three American colonies, and of municipal publishing bodies the name is legion. The extent of the study may be further illustrated by the statement that each one of these 36 federal bodies, and 743 local bodies operates upon practically the same political basis. They are all agreed as to an organic act, which they publish and call a constitution, the result of the study of which is called constitutional history; they all promulgate certain decisions for the public welfare which they call laws, the result of the study of which is called the study of comparative legislation; they are all conducted by a representative body, the result of the study of whose deliberations is called parlia-

*Report of address, delivered at Western Library meeting, Madison, Wis., Aug. 28, 1902.

mentary history; to administer the provisions of the representative body, each of these 36 federal, 793 local and 156 colonial governments has instituted a relatively similar system of executive offices, the result of the study of which is called comparative administrative law.

A collection of public documents may then be either legal, and contain only the laws of one or more governments; or it may be parliamentary, and contain only the parliamentary proceedings of one or more governments; or it may be administrative, and contain only the executive reports of the administrative departments of one or more governments. An administrative collection again may be further subdivided, for it may be the purpose of its promoters to collect particularly the literature on the economic interests of the civic administration, or on the prudential interests, or on the protective interests. So there may be libraries which are strong in financial and commercial reports of one or more governments, libraries which are strong in insurance reports, education reports, reports on penal institutions of one or more governments, or libraries which are strong in reports on the preservation of public health, the improvement of public comfort, by the maintenance of good roads, good lighting, perfect sanitation, the establishment of parks, etc., of one or more governments. Looking then at the question of public documents as it is related to the work of the American librarian, I may be permitted here to make again the statement that we will continue to experience difficulty in the handling of these documents so long as our conception of their relation to government in general and the relation of any one document to the organization of the country publishing that document is not clear. It is not at all necessary, though it would be well, that we have an intimate knowledge of the intricacies of political administration; but a general understanding of the fundamental principles is necessary in order to handle documents satisfactorily.

The universal comment of librarians concerning documents is, "Here we have all this valuable material stowed away and no one can get at it. Every day brings us more. Of course, not knowing what it is, we must keep all that comes until we do find out what it is." And then the greatness and the glory of the

country is expatiated upon, because it overwhelms a great and glorious people with a wealth of valuable literature. Of course, theoretically, it is very fine to know that our country is so generous in the distribution of valuable literature that there is not a school child in the land that can not have a Smithsonian report so that it may write a composition on Indian mounds, etc. The idea of the provision for the diffusion of knowledge among its people by a government is very beautiful, but in this particular instance, viz.: the means by which this diffusion is brought about, there is quite another side to the question. Imagine a storehouse of books at the present moment more than twice as large as the Wisconsin Historical Society's library, and being augmented at the ratio of 500 per cent. every six years, imagine such a collection broken up every year among 540 libraries, which have in the first place no voice whether to take or leave, in the second place no choice whatever in what to take or leave, and which in the third place are left to defray the entire expense of the preparation, storing and care of this unsolicited gift, and you have a general picture of a government depository. At the time of the 56th congressional session, the distribution to depository libraries equalled 527 volumes a year to a library, eating up on an average 96 feet of shelving. The larger proportion of depository libraries are libraries of between 10,000 and 25,000 volumes, a large per cent. are libraries of under 5000 volumes, sacrificing 96 feet of shelving a congress. Has it ever occurred to a librarian of a library of say 2000 volumes, supported by the town say at \$900 or \$1000 a year, to question the propriety of asking the town to pay storage and service for material practically useless to that library? Has the solution never suggested itself to you? Have you never thought that if you were given the option of selection, the effect desired might be attained with far greater satisfaction? Have you ever questioned the reason of the present system of maintaining federal warehouses at local expense? Is the compensation for you adequate? All these are pertinent questions to the librarian and they touch the very heart and core of the so-called "vexed question."

To keep alive the present system of distribution the American government maintains to-day the largest printing plant in the world,

costing \$5,300,000 a year, the salaries alone amounting to \$3,750,000. The annual report of the Secretary of Agriculture for 1900 alone cost \$148,000; 1600 people were employed at a total amount of \$91,200; 500,000 copies were printed, requiring 3700 reams of 100-lb. book paper 24 x 38 inches; 590,000 lbs. of 48-lb. machine finish paper, 24 x 38 inches; 20 bbls. of flour, 3500 lbs. of glue, and 700 pkgs. of gold leaf, costing \$4000.*

The point is, does this enormous amount of money expended on the part of the federal government, together with the expenditure for maintenance on the part of the local warehouses, represent in all cases an expenditure wisely directed? You are not interested in documents, you are interested in a quantity of material foisted upon you, which is in your way, which you hesitate to return to its donor, about the unquenchable source of which you are very much in the dark, and it is your complacency in permitting yourself to remain in the dark on this subject that has now resulted in the "vexed question of public documents." It is not the large libraries, with facilities, who are perplexed by the problem, but it is the small library, with limited means, to whom this indiscriminate continuous donation is an embarrassment. The incongruity of a system that will give to a library of 300,000 volumes the same service that it gives to a library of 3000 volumes, is too evident to be commented upon. There is no relief for you unless you take the initiative step to bring about a change in the law which provides for uniform distribution based upon proportional representation. So long as you are content to rest under the operation of this law, so long will you continue to have with you the vexed question of public documents. There is no solution possible so long as the law as it stands to-day continues in operation. The service to libraries should be graded, suitable to the demands of the library, and should be based upon geographic relation. You observe I do not so much advocate retrenched distribution as rational distribution.

Second only to the method of distribution in causing annoyance to libraries is the method of "make up." As you know, the government issues two editions of its publications, the congressional or sheep, and the de-

partment, or cloth edition. Both of these editions are on the list sent to depositories, and this duplication embarrasses you with the question of whether to keep both editions intact, and so maintain a duplicate set of little used material, or whether to keep only one, and if only one, which one? This is not a question which ought to come to you at all. In only the rarest of cases are you called upon to readjust a set of private publications to meet conveniences of shelving. Documents, if issued for use by libraries, should be issued in customary library editions, and should be held subject to the demand of a library. I have not decided in my own mind whether I would recommend the abstraction from the sheep set of all reports other than committee reports, memorials, petitions, etc., printing them in a bureau edition, and distributing them in this form to depositories, and reserving the collected committee and other reports from general distribution, or whether it were best to continue a congressional edition as it is made up to-day, and depositing this in eight or ten of the largest libraries over the country, and distributing only the department and bureau reports to libraries. As a rule it is not the department and bureau reports that are as much in demand in a library where documents are used at all, as it is the current committee reports upon questions being now discussed in Congress. These it is which the college library and the larger public libraries want as soon as they can get them, and these it is which are served to them at the largest possible interval of time.

It is then the present system of distribution and the present system of makeup which are the real causes of your difficulty in handling public documents. If you are seriously inconvenienced, and find that you are struggling under a burden unjustly imposed upon you, you have several alternatives. You may ask to be relieved of all depository designation. In this case you would need to make application to your representative for all documents of which you want a copy, and you would stand a reasonably certain chance of getting as much as would be good for you; or, you might address a remonstrance against the imposition to your representative, asking him to refer it to the proper committee. It is possible that a number of such remonstrances might bring about a hearing on the question

*Annual report of Public Printer, 1900.

before the committee, and the determination of the distribution revert to the librarian. The Superintendent of Documents has at present no authority to issue documents to libraries generally on selection, and under the code you must take all or nothing. The matter of cataloging public documents, were the distribution and makeup simplified, would be attended with no more difficulty than is the cataloging of any corporation publication.

I do not want to give you the impression that I undervalue or underappreciate the public documents, for I do not. As a class of books, it is by far the most important in existence. Public documents are the record of the birth of history. All over the world for hundreds of years countries have been occupied in keeping these birth records, and a library of to-day having the means to collect a set of these birth records, would raise a monument more magnificent than any ever erected. Bancroft has very eloquently expressed himself on this subject when he says: "It is because God is visible in history that its office is the noblest except that of the poet.

. . . To him and to him alone history yields in dignity; for she not only watches the great encounters of life, but recalls what had vanished, and partaking of a bliss like that of creating, restores it to animate being. . . But history, as she reclines in the lap of eternity, sees the mind of humanity itself engaged in formative efforts, promulgating laws, organizing commonwealths, constructing sciences. . . Of all pursuits that require analysis, history therefore stands first."* But a public document in general, as reflecting this conception of history, and public documents as seen only from the point of view of the incumbent of a United States government depository, are two very different points of view. The mere fact that among American librarians the term "public documents" has come to signify only the publications of the United States federal government, is a commentary on the enormity of the incubus. For if you really regarded public documents as having the great value which you only assume they have, we would have a larger number of perfect files of state documents and of city

documents. A public document does not lose historic value merely because it is not a public document of the United States federal government, and I venture to say that those public libraries, supported by public taxation, which have a file of the town documents, or even an attempt at a record of what constitutes such a file, is a very small number indeed.

If you are really interested in public documents, in your library, and in your community, there is no one piece of work you could do which would further these interests more than the beginning at once of the collection of a file of your town documents. There is in a city no more appropriate place than its public library for such a collection, and no more worthy work for a public librarian to have accomplished than to be able to bequeath to a city a record of its official life. City officers are as a general thing very negligent about preserving files of office reports, but by constant inquiry at the city offices, rummaging in second-hand shops, dunning newspaper offices, making friends with the old inhabitants, you will set to work mysterious forces which presently will materialize in the beginnings of a collection of city documents. There are public library trustees who are prone to frown at first upon such a suggestion, but who, when the collection has been enriched by a gift or two, may be detected, when touring a visiting trustee over the library, saying to him, "Yes, and this little book belonged to Mr. Blank, who has lived here thirty years and who found it among his father's books. No one else here seems to remember having seen a copy. It is an original print of the first town charter. You see we have had it specially bound. Our librarian is much interested in developing this collection."

There is another argument in favor of local collection. It has been said that the study of comparative constitutional history has been superseded by the study of comparative administration. The staple sources, outside of fugitive pamphlets, are the newspapers and the documents. Newspapers are now being pretty generally preserved, and if a plea for documents can be made sufficiently convincing and repeated with sufficient frequency, it may be that librarians will in time come to realize the importance of collecting local material.

* Oration delivered at the semi-centennial celebration of the founding of the New York Historical Society, Nov. 20, 1854.

BOOK-INDEXES.

BY FLORENCE CRAGG, *New York Public Library.*

THERE are few writers on the subject of index-making, but to those who have written I am indebted for a few valuable suggestions which I have adopted in my own system of indexing. In order to set forth this plan clearly, I have thought it proper to state some different ideas of indexing and then to refer briefly to the system which might with advantage be accepted by all indexers of books, a system based on long experience of detailed and technical work.

Broadly used the word index means a guide, anything that shows or directs in any way, such as the arm of a guide post or the hand of a clock; applied to literature it may generally be understood to mean a list of entries representing more or less subject-matter, and indicating where it is to be found. To many minds this statement presents very varied ideas, to the librarian it means very generally the catalog, to the careless reader the table of contents of a book, to many others it represents a syllabus, digest, summary, register, calendar. These are all indexes, because in their own proper way they are guides to information, and this is the one purpose of an index. But the form of index to be considered here is that known as a book-index. This may be defined as an analysis of the topics, names of persons, places, etc., treated of or mentioned in a book or series of books, pointing out their exact position in the volume. In this form indexing is the art of discerning and expressing in brief the important point or points of a subject, and presenting these under representative headings arranged in alphabetical order.

The value of indexes was recognized in the earliest days, and it is extraordinary that the indexes of the present are so much on the level of those made centuries ago. It is surprising, too, in these days of eagerness and hurry, that publishers do not realize the value of really good indexes to the books they publish; many books are published without any indexes whatever, and the rest are apt to have indexes so defective that they mar the books entirely. It is, however, certain that the demand for indexes is in some small

degree increasing, and not only so, but there is call for better work.

An indexer has need of many high qualifications to enable him to thoroughly handle the work before him. He must first of all be accurate, not only in matters of figures, but in the true representation of the subject matter of the text; he must possess powers of analyzing, having strength of will to reject many a point that by an amateur would be inserted in the index; he must also be able to place his entries under the most likely headings and to look at the subject in hand from all points of view and eccentricities of mind. These qualities are developed in an indexer only by long perseverance in the practice of indexing.

The indexer of to-day has the task and the opportunity of transforming a system that has remained in rudimentary stage during years of progression. It is his duty to fight unflinchingly against many details in this method and endeavor to make his productions what they should ever be—clear, ready-of-reference, informing guides.

An index should be made throughout by one person, for indexing is an undertaking in which a number of persons cannot really and effectively work together. A good index may be produced by this method, but many can never acquire the thoroughness of one who has descended through all its grades and must therefore have a practical knowledge of each. It is almost essential to the uniformity of the index that the compiler of an index shall arrange and edit the same; many indexes in London are compiled in offices where there are many workers, each taking a part, but this method involves greater labor, and I am sure does not produce the best results. As to the question of detail in an index, this depends very largely on the matter in hand; for instance, in the indexing of a daily newspaper and a set of old historic records, there are two entirely different ends in view; in the first every detail of present day interest must be noted and every subject developed to its fullest extent; in the second we have events from which the spirit of great de-

tailed interest has passed; here one must have the faculty of rejecting from the index what is ephemeral while not missing a single point worthy of indexing. This distinction was brought very forcibly to my mind a few years ago when I had the privilege of assisting in compiling the index to the current debates of the British Parliament, and, at the same time, the index to the "Hansard debates" from the time of William IV. to about 1890; in the current debates to provide for the demands of the Members of Parliament, a very strict analysis was necessary, while in the "Hansard debates" the index, though indeed detailed, was not so minute.

Indexing is divided into three distinct parts—the first, compilation; the second, sorting and editing; the third, publication. Compilation is the most important part of the work, and means the actual making of the entries representing the analysis of the text. In starting out to index a book it is well to get a general knowledge of the whole before making a single entry; this is important as affecting the final uniformity of the index and also makes the task easier throughout to the compiler. Having obtained this knowledge of the whole the next step is to treat the matter in detail considering the subject in hand from all points of view and taking out the headings that are likely to be uppermost in the mind of the seeker. An index should never oblige a reader to stop and think under what heading the compiler has been led to register an entry, but every catchword in the text or out of it that in any way represents the subject or part of it must be taken out. Brevity is certainly a thing to be studied, but only after adequate representation has been made. The second thing to be done is to make entries of these headings, for no heading must ever be inserted without some word explaining the cause thereof; the details of the subject must be represented in such words as will convey the exact meaning of the text; it is a part of the work which needs great care and thought, in setting forth the subject in brief and suggestive form, bearing in mind that the index is only the key and not the actual information. There are many errors often made at this stage of the work resulting in total misrepresentation of the text, thus the oft-quoted instance—"Mr. Justice

Best said that he had a great mind to commit the man for trial," was indexed as "Best, Mr. Justice, his great mind."

The second stage, that of sorting and editing, is of great importance, as no index will be satisfactory, however well compiled, unless it be well arranged; first of all the cards must be sorted and then the whole revised, the indexer comparing critically the entries and different headings with a view to noting agreements or discrepancies. Alphabetical order has superseded the other forms of arrangements, but the numerical or book order of subdivision (or subheadings as properly termed), is still an evil that needs remedying, alphabetical order being the substitute for the present system. By commencing each subheading on a new line, the required detail among perhaps many others is found at once.

Old System.

Census, speeches on ninth, 443; bill for taking, 450; literature of, 461; defects in old system, 479; remedies, 490; mortality schedules, 500; ninth census completed, 619; social statistics, 625; amendt. of system, 714.

New System.

Census:
Bill for taking, 450.
Defective system, amendt., 479, 490, 714.
Literature of, 461.
Mortality schedules, 500.
Ninth census:
Completion, 619.
Speeches on, 443.
Social statistics, 625.

The publication stage is also of importance, as it includes the final revision of the index and the proof-correcting, particularly noting details of indentation and continued headings peculiar to the proof of an index. Headings should be printed in marked type, indentation being used as a sign of repetition of the same heading in preference to all other forms. Wheatley says: "There are few points in which a printer is more likely to go wrong than in the use of this repetition sign; it must only be used for headings exactly similar, the heading being repeated when the second entry differs from the first. Many indexes are full of the most perplexing instances of this detail, leading to great absurdities."

The following are capital illustrations of this error:

Fish, Hamilton.

—Stewing.

Lead, casting.

—Kindly Light.

United agency.

—States.

—Tube Company.

Needless to say that only a very slight mention has been made of the multifarious details contained in index-making, details of cross-referencing, condensation, arrangement, etc., details full of importance and interest to the ardent indexer, the strict attention to which decides finally the value of the index.

A lengthy account of these details would perchance be out of place here, and indeed their value is not evident to the one who merely reads of them, but—though often unconsciously—to those who use them, and to those who after careful study and perseverance are made perfect in the art of indexing.

SOME FADS AND FALLACIES IN LIBRARY WORK.*

BY ELLA F. CORWIN, *State Library, Lansing, Mich.*

TRAINED workers have done much for libraries, and the time has come when no others can hope to gain recognition where the best work is required. It should hardly be necessary to explain that by trained workers, I do not mean only those who have received their training in a library school, but also include those who have acquired their training, step by step, in a well-managed, thoroughly organized library, than which training there is no better. There is always danger, however, of going to extremes in the details of any work, and in the technicalities of library work this danger is hard to be avoided.

Perhaps nothing has done more toward bringing library work near to the dignity of a science than the admirable systems of cataloging and classifying now found in all up-to-date libraries. These represent the attempt to make available all of the resources of a library and to allow no material, even though it may seem insignificant, to be lost.

A carefully trained, intelligent cataloger, by the application of recognized rules, the help of the carefully worked-out system of subject headings, cross references, and analytics, may and does make the treasures of the library accessible to users to a surprising and delightful extent. And at the present stage of library development a general catalog is more useful on cards than it is in printed form. But the card catalog is too frequently a vehicle for the fads and fallacies of the cataloging extremist. *

The advanced cataloger in her over-zeal

is not satisfied with bringing into orderly and systematic grouping the contents of the library, but with the use of cards she adopts the plan of designating subjects by color schemes, and there are introduced into the catalog blue, buff, yellow and green cards in bewildering variety. Nor does she stop here; dots and spaces begin to have significance, and colored inks are brought into play. A mistake of two dots on top of each other when they should be side by side may have the awful result of transforming Jane into John, and woe to the uninitiated if he commit the blunder of calling a man an editor at a distance of one-half a centimeter instead of a whole one.

I have seen catalogs made by persons who seemed to have a dim idea of the system to be used, but who had completely lost sight of what the system was for, the result being a mere jumble of meaningless cards, representing useless effort and waste of time to such an extent as to be pitiful.

A thorough-going dictionary card catalog, especially for a good-sized library, must necessarily seem to the casual user a thing fearfully and wonderfully made. It behooves us, then, to put more meaning into it, and, if possible, to make it what we claim it is—a guide, or better, a *key* to the resources of the library, simple enough to be used by a child and complete enough to satisfy the most thorough student.

I have heard a seeming seeker after signs and symbols in the library field dubbed a "semi-colon woman," and the term seems to me a happy one. We need in our profession, perhaps more than in any other, people with

* Part of a paper read before the Michigan Library Association.

a broad outlook and a grasp on the larger meanings of the work. There should be no place for any others.

What is true of this tendency in cataloging is also true in classifying. No branch of library organization seems to give the worker more satisfaction than to see books of a kind, no matter how badly scattered, marshalled into line, side by side, by use of the Decimal Classification worked out by Mr. Dewey. But it would seem that even Mr. Dewey has gone classification mad when we try to work out his scheme for biography as given in the latest edition of the Decimal Classification. To be sure, it has the advantage that you are pretty sure to know the book thoroughly by the time you have found out where it belongs, and have learned, for instance, that the simple little story of a pious and earnest missionary named Smith cannot be allowed a quiet place with the other Smiths, but must be searched through to find whether he was a Methodist or Baptist, or of some other faith. After you have placed him satisfactorily, with the Presbyterians, perhaps, and he is carefully numbered 922.5, then you must begin all over again and find out whether he is English or Irish or American or what-not; and when your unassuming missionary is finally classified and put on the shelves, he will bear a legend something like this: 922.5415 S 642—and I have no doubt that if the shades of the departed are inspecting your work from the regions where they are at peace, this particular shade feels more important now than he ever did in the body.

Another feature which has received great attention in the discussion of library methods and which I think can safely be called a fad, is the picture bulletin. I thoroughly believe in the use of bulletins, and appreciate the great help and benefit they are to the patrons of a library, having found them an essential feature in my own work. But their improvement should be in the way of more intelligent and helpful work and not in an effort to attract attention after the manner of—and sometimes in not much better taste than—posters on bill boards.

The librarian of a small library which I once visited had heard a great deal at a recent library convention about pictures and picture bulletins, and being anxious to show

her patrons how she had profited by her attendance at the convention, had introduced with great pride into her library pictures of recent lecturers, singers, actors and others who had come or were to come to the town. The library looked like a barber shop in consequence.

In another library where picture bulletins are a special fad, I was so impressed with the beauty of the bulletins (and they *were* beautiful) that I completely forgot to look at the list of books, and after I had left the library could not tell one named on the list, which was much to my discredit, I admit, but I do not believe the object of the bulletin was in the least enhanced by the pictures. It is true that good pictures are educational, and when judiciously used in a library—or any where else—make for culture. But unfortunately all good librarians are not always good art critics, and in some libraries, especially children's rooms, the dignity and beauty of the surroundings are spoiled by atrocities of pictures, colored and otherwise, which have been collected and arranged by the librarian at infinite pains with most direful and inartistic effect.

I would eliminate from a library everything which detracts from the dignity of the place, everything which in the slightest degree makes one, child or adult, forget that it is a place of study, a place to gain knowledge and to add culture, which should have an atmosphere all its own. I would make the room attractive because of its beauty and dignity, the courtesy of the librarian and the staff and their genuine whole-souled desire to bring to the patrons in the easiest way all the stores it contains. If this is done it will not be necessary to give luncheons in your reading-room, nor to advertise by means of pictures or signs, nor to use any undignified device to make your library popular.

In these short notes I have only tried to point out a few of the dangers in our profession. We hear so much discussion and receive so much literature on the technicalities of the work that there is danger of our getting to a point where we shall come to think that a library exists only for the purpose of classifying and cataloging it.

Mere technicalities of library work are not hard to acquire, but a knowledge as to the best use of a library is hard to acquire, and

it is to this end that our best energy should be directed.

A librarian may have the best technical training it is possible to give, he may know all the mysteries of all the signs and symbols of the work, he may be well versed in the latest fads regarding pictures and travelling libraries, but let him be wanting in courtesy, sympathy, modesty, broadmindedness or good judgment, and he is an inevitable failure. On the other hand, let him possess these qualifications, and he will be quite sure to acquire what is needful of the others and make the best kind of a success of his work.

LIBRARY BUILDINGS IN THE UNITED STATES.

THE *American Architect and Building News* has printed an article of much interest to librarians in Sidney K. Greenslade's extended review of "Libraries in the United States." Mr. Greenslade's paper was prepared for the Royal Institute of British Architects, was read at the meeting of March 17, 1902, and was later printed in the *Journal* of the society. It is printed in serial form in the *American Architect*, the first instalment appearing in the issue of July 19, and the final one in the number for August 30. Mr. Greenslade does not discuss the subject in general terms, but describes carefully, though briefly, representative American buildings covering (1) Reference libraries; (2) University libraries; (3) Town libraries (in three divisions); (4) Branch libraries; (5) Small libraries. Among the buildings described are the Library of Congress, the New York Public Library, Wisconsin State Historical Society, Columbia University, University of Pennsylvania, New York University, the public libraries of Boston, Newark, Providence, Utica, Pawtucket, Fall River, Duluth, Tacoma, and the Carnegie libraries of Atlanta, Ga., Davenport, Ia., and East Orange, N. J. The New York Public Library is regarded as "perhaps the most important library now being erected in the States." The scheme adopted for it has resulted in "a magnificent working plan," and it is added, "If for one moment the plan of this library is compared with that of Boston it will be easily seen how rapidly the science of the librarian has developed. Of course, the Boston library was fine for its time. Both architects and librarian had to learn what was wanted. The library building as understood now in the United States, planned for its open shelf rooms, rooms arranged for free access to stack, and well-fitted children's rooms, is quite a recent development, and each year progress is made towards the creation of the ideal plan. Altogether," Mr. Greenslade says, "this seems nearly as per-

fect a library as is possible. The magnificent group of reading-rooms in the top floor, with the huge stack below; the very fine approach to these rooms from the main stairways from the first to the main floor, so arranged as not to return on themselves; the position of lending delivery-room—its very direct connection with the street and the stack, and its isolation; the arrangement of the children's room and periodical-room, with their separate stacks and easy access from the main entrance; the possibility of future extension of both main reading-room and stack-room easily assured without interfering with existing arrangements—are among the very many features that call for particular comment."

Among the other buildings described, the Boston Public Library, though recognized as architecturally of very high merit, is criticised for "the position of the fine reference reading-room in relation to the stack-room, the cramped position of the delivery-hall, and the unfortunate shape and position of the stack-room, necessitating the use of elaborate mechanical arrangements for carrying the books."

THE LONDON TIMES DISCUSSION ON APPRAISAL.

AN interesting discussion on the subject of "appraisal" of literature was opened in the *London Times* of July 25 by a communication from Dr. Emil Reich on "Mr. Carnegie and bibliography." Mr. Reich's thesis is the need of a great elective bibliography, as a guide to libraries in the selection of books and a factor in the organization of national education, and he suggests that Mr. Carnegie might well apply a generous fund to this purpose, as the most important supplement to his library benefactions. He says in part:

"Over 15,000 bibliographies have been published—useful, admirable bibliographies, many of them elective bibliographies. Elective and really authoritative bibliographies alone have practically not been published at all, except a few works of so unwieldy a size, so complicated a construction, restricted to publications of so limited a time, as to render them useless for any other than highly trained specialists.

"Such elective bibliographies could not have been published before. The competent compilation of such elective bibliographies entails more expense than even the foremost of publishing houses would care to risk. Scientific academies, on the other hand, cannot very well do more than publish complete, not elective, bibliographies meant for specialists."

Dr. Reich's scheme for "a system of organization which would ensure the utmost efficiency, regardless of mere traditional 'authority,' in the choice of books, and which might very well lead to a very speedy termination of the work, say in four to six months," is thus outlined:

"Leaving out fiction for the present, as a subject that is better dealt with separately, we shall here consider only the requirements for an elective bibliography of serious subjects of study made for the use of public libraries (not for specialists). And first of all, we may assume that the number of broad subjects read up in public libraries, even in such of 50,000 volumes, does not exceed 30. Each of these subjects shall be entrusted to three scholars; each of these scholars to draw up a list of 1500 such works on his subject as he has long known from personal study to be really good, helpful, solid works. Each list of 1500 works shall be 'graded,' so that the first 500 works shall be such as would do for a smaller public library, the next group of 500 works such as would be required for a larger public library, and the last group of 500 works for a very large public library.

"The works to be found mentioned in all the three lists of the three scholars entrusted with the bibliography of a certain subject would be considered as absolutely recommendable; as almost equally good, the works obtaining mention in two lists; while the works mentioned only in one list might be either submitted to the vote of two new scholars or kept back as alternatives.

"However, each of the three times thirty scholars would himself be controlled by being furnished with a complete and not merely elective bibliography of his subject at the hand of the central committee, which might very well be left to a few competent hands. Such a small central committee is, as every student of bibliography knows, quite able to point out all of the complete, if unsifted, bibliographies of any subject, and has thus, one might almost say, a mechanical means of controlling the three times thirty sifters, especially with regard to omissions.

"In that way, and in that way alone, would it be possible to arrive at lists of books the value of which had been examined by the personal study of competent men. Nor would it be in any way difficult to arrive at a list of the required three scholars for each subject without giving offence to any one or bowing inconsiderately to mere titles. The scholars that have a solid grasp over the literature of their subjects are well known to the student from their laudable habit of appending critical bibliographies to the several chapters of their work. There can be no doubt, for instance, that Mr. J. G. Fraser has, of all living folklorists, the greatest grasp over the great literature of his subject, let alone over the literature of Greek archæology. In adopting this strictly objective standard, the required three, or, if Mr. Carnegie prefers, five scholars for each subject might very well be reached with the almost complete certainty of having secured in them the most competent men. Once that list is made up the rest is a mere question of labor and expense."

Dr. Reich's suggestions are reviewed by

several correspondents in later issues of the *Times*. Practically all the comments are favorable, although a few recognize greater difficulties in the undertaking than Dr. Reich allows for. Among these is Dr. Garnett, who points out that "the foreseen difficulties of any undertaking are nothing to the unforeseen," but adds that he "has no doubt of its substantial practicability, provided that it is not marred by over-elaboration and that sufficient attention is paid to the requirements of the average man." Charles W. Sutton, the librarian of the Manchester Free Library, calls attention to Mr. Carnegie's endowment gift to the American Library Association, as indicating the initiation of an undertaking similar to that proposed by Dr. Reich. To this, Dr. Reich responds, in the *Times* for Aug. 22, stating that his proposal differs widely from the stated purpose of Mr. Carnegie's A. L. A. endowment. He says: "What I proposed was the endowment of a central committee and a number of experts, not with the 'income' of a fund limited to less than £800 per year but with a fund sufficiently large to cover the expenses of a definite great bibliographical and educational task in its inception, continuation and termination within a relatively very limited period of time." There is evident misconception of the use to be made of the A. L. A. endowment in his further remark that "Dr. Billings cannot with the small annual revenue at his disposal draw up reading lists remotely resembling such selective bibliographies as I submitted to the attention of Mr. Carnegie. All that Dr. Billings can do and all that he is doing is to draw up lists of what is practically current literature for the benefit of his readers." He adds: "My proposal excludes current literature proper, for evident reasons. There is no final judgment on contemporary literature. Leibniz ignored Newton's 'Principia,' and so did the Continent in general for a long time, and Schopenhauer's immortal work was nearly ignored for nearly a generation. The 'Carnegie-lists' I propose refer to the literature of the past, or roughly speaking to the period ending with the nineteenth century."

THE merely educated can scarcely ever be brought to believe that this world is an interesting place. When they look at a work of art, good or bad, they expect to be interested, but when they look at a newspaper advertisement or a group in the street, they do not, properly and literally speaking, expect to be interested. But to common and simple people this world is a work of art, though it is, like many great works of art, anonymous. They look to life for interest with the same kind of cheerful and uneradicable assurance with which we look for interest at a comedy for which we have paid money at the door.

G. K. Chesterton, in "The defendant."

WESTERN LIBRARY MEETING,
MADISON, WIS., AUGUST 28-30, 1902.

A MEETING of librarians, trustees and other friends of the library movement was held at the Historical Library building, at Madison, Wis., on August 28, 29 and 30, 1902. One hundred and fifty-four persons were registered, of whom 109 were from Wisconsin, 23 from Illinois, 5 from Iowa, 4 from New York, 3 from Minnesota, 2 from Nebraska, 2 from Kansas, 1 from North Dakota, 1 from Indiana, 1 from Ohio, 1 from Michigan, 1 from Pennsylvania, and 1 from Texas. Of this number there were 103 librarians and assistants, and 25 library trustees.

J. I. Wyer, of the Nebraska Library Commission, presided at the first session, which was opened with an address of welcome by F. A. Hutchins, of the Wisconsin Library Commission.

Miss Adelaide R. Hasse, chief of the Document Department of the New York Public Library, then led the discussion on "The vexed question of public documents." Miss Hasse's address is given elsewhere. (See p. 815.)

In the discussion that followed, Mr. Charles McCarthy, Madison, made a plea for the quicker publication and distribution of documents, much valuable material being a year behindhand. The chairman stated that the government index to public documents was always several months late. Miss Brooks, of the Carnegie Library, Pittsburgh, explained the method used in her library in cataloging the material, particular attention being paid to articles on glass, steel and other subjects of local interest. It was stated that the Library of Congress had the publication of catalog cards for documents under consideration. The Department of Agriculture already issues such cards. Miss Hasse advised accessioning, classifying and cataloging documents and scattering the books under the different subjects in the library. Mr. Hutchins called attention to the great waste incident to the present manner of publishing and distributing public documents, and moved that a committee of three be appointed, the chairman of the session to serve as a member, who, in conjunction with Miss Hasse, should consider the subject and report at the last session. The chair appointed F. A. Hutchins and A. H. Hopkins as his co-workers. Mr. Hutchins, upon request, was excused, and the name of Miss M. E. Ahern, editor of *Public Libraries*, was substituted. The secretary called for a rising vote of thanks to Miss Hasse for her able and instructive paper.

Thursday afternoon, the officers of the Wisconsin Free Library Commission kept "open house," giving the delegates opportunity to visit the fine new rooms in the Capitol. Visits were also made to the City Library, while many enjoyed a drive on the shore of Lake

Mendota. In the evening, the Historical Library building was thrown open for an enjoyable social hour tendered by the staff of the Historical and University libraries.

Anderson H. Hopkins, president of the Illinois Library Association, presided at the session on Friday morning. Those present listened with rare enjoyment to an informal talk by F. N. Doubleday, publisher, New York City, on "The relation of the publisher to the public as it is largely affected by librarians." This was one of the brightest talks ever listened to by Western librarians—indeed, so teeming with good things did the secretary find it that she herewith confesses her delinquency in taking notes, and her total inability to adequately reproduce the many bright points made. The woes of the publisher with his daily receipt of a barrel-and-a-half of manuscript were dwelt upon, humorously and again pathetically. The statement was made that it cost from \$5000 to \$10,000 a year to read such matter. The modern plan of selling subscription books for "\$1-a-month-for-the-rest-of-your-natural-life" found a warm champion. Advertising practices of publishers were dwelt upon as being a necessary factor in this competitive and commercial age, the speaker whimsically alluding to a desire for some means of telepathic communication through entire communities to the end that each and every citizen might be possessed of the desire to buy the latest book. In prophesying as to the work of the publisher of the future, Mr. Doubleday stated that there would be (a) a department devoted to the publication of magazines and periodicals; (b) an educational department, publishing better cyclopedias, etc., than those now compiled, and in addition conducting correspondence schools; (c) the publication of miscellaneous books; (d) a subscription department on a more extended system than that now in vogue. The publisher of the future will also, as sometimes happens now, (e) have books written for him on subjects of current interest by writers in his employ; and (f) he will place these books directly in the hands of the public on the principle of the shoe advertisement—"from calf to customer." In response to an inquiry, the speaker alluded to the recent attempt of his firm in publishing special library editions of popular books; and stated that the venture was meeting with but little encouragement from the librarians who had been demanding better bound books for years past! The speaker then presented the publisher's side of the recent "net" price controversy, showing the great cost involved in modern book-publishing.

Carrying out a suggestion made by Mr. Doubleday that librarians make suggestions to publishers of needs in the book world, Mr. Hutchins made a plea for better books in American biography—better lives of Lincoln, Washington, Marion, Kit Carson, Daniel

Boone, etc. A pledge from Albert Brandt, publisher, Trenton, N. J., was read by the secretary as follows: "Every book bearing my imprint shall be mentally and morally honest as to its subject matter and text, so far as lies within my power to have it so. Every book issued by me will be honestly made from honest, all-rag paper, free from wood-pulp and other adulterants. Every book that I publish will be sewed by hand, 'all-along,' in the old-fashioned way and 'opened' before shipping to ensure a stout and flexible back." The hope was fervently expressed that other publishers would see the error of their ways and do likewise.

The discussion was naturally followed by an address on "The bookseller and the librarian," by C. M. Roe, Chicago. Mr. Roe entered immediately into an explanation of the present difficulty by stating that it was a "haggling over prices," the pocketbook being more sensitive than any part of the actual anatomy. It would require many years yet, the speaker contended, to reimburse the bookseller for his losses of the past ten years. The organization of the American Publishers' Association and the American Booksellers' Association was defended as not being combinations for monopoly, but formed solely for conserving legitimate profits in a business which has been well-nigh ruined by indiscriminate price cutting. This form of combination or co-operation was said to be beneficent in its nature as it seeks to create and foster bookstores everywhere. The Publishers' and Booksellers' Associations exist not for their own corporate aggrandizement, but in order that each individual member, be he never so small, may have an equal chance to secure a reasonable profit. Three reasons contributed to the organization of the combination: first, the unfortunate custom of giving discounts to certain classes had been gradually extended until it included the entire book-buying public and increased from 10 per cent. to 25 per cent., and even 30 per cent., leaving the bookseller scarcely enough to pay expenses; second, the department stores had seized upon the popular books for advertising purposes, selling them for a few cents above cost, and often for cost or less, giving the public the impression that the regular bookseller was charging exorbitant prices and making enormous profits and so alienating the public from him; third, libraries were securing their books at about their cost, in some cases at cost, the bookseller losing his expenses. In May, 1901, the rule of the American Publishers' Association, that booksellers should allow librarians only 10 per cent. from the prices of all new "net" books went into effect. The librarians at once urged publishers to increase the discount to 25 per cent. The booksellers protested at this as it would make the library trade as unprofitable as it was before. To date, the Publishers' Association has taken no action in the

matter. Even with the help of the "net" price system during the past year, one of the largest book-supply houses has declared a dividend of but two per cent. The speaker did not agree with Mr. Dewey that the free public library will supplant the circulating library and the small bookstore, as well. The great increase of wealth and of general knowledge, he said, assures a steadily increasing body of readers who will make it possible and profitable for the private circulating library and the bookseller to exist along with the greatest possible number of public libraries. A little readjustment is necessary—a seeking of new methods, of cultivating our own special field rather than a loss of temper or a resort to frantic appeals and extreme statements.

The bookseller always has been and always should be the most logical and natural channel through which publishers distribute books to libraries. He has a training and facilities which make it advantageous to both publisher and librarian to have him act as intermediary. He is willing to spend time and money to look up books which he alone knows how to secure and to advise about the best of the many editions and binding and to risk a goodly sum of money in carrying a large stock of goods that publishers may be represented and that librarians may have opportunity for selection near at hand. But for all this he very naturally and justly wishes a fair compensation. This the old method would not give and the new will give only in scant measure. In view of these facts, then, would it not be well for librarians to desist from presenting further resolutions to the publishers, asking for larger discounts, and turn their attention rather to securing larger appropriations for the purchase of books? Of money there is a plenty and there should be little difficulty in securing enough to give an ample stock of books to every library in the land unless, indeed, public benefactors are more anxious to be represented by beautiful and striking library buildings which stand all day in the eyes of the people, rather than by the more obscure but in the end more powerful witnesses to their generosity which stand silent on the shelves within. The speaker concluded with the thought that he had faith enough in the common sense of librarians and booksellers generally to look forward to the day when both will be working harmoniously, each for the good of the other, and for the benefit of the greatest book-reading and book-buying public the world has ever known—the American people—whom they have the extreme good fortune and exalted privilege to serve.

The chairman then presented the librarians' side of the question, making a forceful argument for a lower discount to libraries. The discussion was carried on with the utmost courtesy and good feeling on both sides.

Mrs. Mary Holland Kinkaid, literary edi-

tor, Milwaukee, Wis., then presented the subject of "The book review—its worth and worthlessness." It seemed presumptuous, the speaker said, to speak to an assembly of librarians concerning the worth and worthlessness of book-reviewing. Librarians know more about the subject than any other class of persons in the world, and if a vote were taken there would probably be a unanimity of opinion on the general uselessness of what is nowadays called a review. In the matter of passing judgment on new publications, librarians have found it safe to go on the principle that if one wants a thing well done it is necessary to do it one's self. The librarian's evaluation of a book has a twofold worth, for he is compelled to judge of its influence upon that immense and constantly increasing body of persons commonly referred to as the "reading public." While the reviewer merely examines the book as an apothecary analyzes a new drug, the librarian is like a physician who must take account of its effect upon those to whom it is administered. Most of the ephemeral literature of the day is, to be sure, homeopathic; but in even the sugar-coated pills of fiction, dangerous or at least nauseating ingredients are to be found. Some wit has said that Americans are divided into two classes—those who make speeches and those who are preparing to make them; but it is nearer the truth to say that Americans are divided into two classes—those who write books and those who are preparing to write them. The prolific output of books—novels leading all other literary works in numbers—has changed the position of the reviewer. Once upon a time a reviewer was a personage of tremendous influence. A glance at any of our periodicals of 30 or 40 years ago shows how seriously the reviewers once regarded their profession and how patronizingly they treated those favored authors whom they condescended to notice. Until the latter half of the last century the book-reviewer was a personage whose dictum did much to make or unmake ambitious authors. His personality was clothed in mystery. He was a critic in the full meaning of the word. He analyzed the work of an author. It was with joy that he detected an anachronism or a trace of plagiarism. He did not skim over the pages of a new book. He took it home and burned midnight oil reading it. Before him, when he was really great, the publisher trembled. The review which appeared in a leading magazine or a weekly paper had something the same value that a scientist's opinion on a new consumption cure has nowadays. But the book-reviewer is no longer a *rara avis*. His species has become as numerous as that of the English sparrow. He is not confined to the weekly and monthly magazines; his is not now the privilege of carefully weighing what he says. In order to

keep up with the hundreds of books poured from the presses of the publishers, he must work unceasingly. He must have a place in the newspapers. It is this adaptation to the daily journals that has widened the fields of the reviewer and raised the question concerning the worth and worthlessness of his work.

It may have been in self-defence that many American publishers started literary magazines in which they could exploit the value of their own books and deal charitably with the books of other publishers who would return favor for favor. These literary magazines, owned by great publishing concerns, are to-day the best mirrors of contemporaneous literature. The worth of their reviews cannot be questioned, although if any fault is to be found with them, they are perhaps too lenient in judging the majority of the books, especially those that come from the presses of rival publishers. Professional etiquette naturally prevents the scathing condemnation of works that rival publishers have thought worth while to put upon the market. The reviews in these magazines have a special value in that they often, in interpreting a book, add to its real worth, since their writers bring to it scholarly appreciation and a peculiar clarity of vision. The eye trained to discover hidden beauties in fiction and poetry, philosophy in history and biography, and good in everything, detects talent and even genius where the ordinary person would be blind.

The book review columns in the daily papers have been set aside as a concession to the public. The multiplication of books and the increase of readers has so widened the interest in current literature that editors, who are, after all, very wise and far-seeing persons, have recognized that the up-to-date journal which gives a page each day of sporting events ought to be able to devote a column a day to books. The book column has proved so popular that most great newspapers have weekly literary supplements. To these the leading authors of the day contribute essays and critical articles. Thus gradually the book reviewer or literary editor of the daily paper has come to have almost as great an influence as the editors of the literary magazines.

The newspaper reviewer has much more space at his command than the magazine critic. He is supposed to know what will please the public, and the very nature of his work has compelled him to modify the old accepted style of review. For this reason it has become more and more the custom to avoid analysis and to tell the story. Newspaper readers care less about the author's style than they do about his plot. When they turn to the literary column they are pleased to know that Mr. Lariat Sombrero, the talented young western author who has recently settled in Chicago, has written a new novel

dealing with the breezy life of the prairies. They do not care to know whether Lariat Sombraero has improved his English. His split infinitives and his reckless use of shalls and wills disturb them not at all. They do not care whether he has grasped life truly and striven to interpret its meanings philosophically. What they want to know is whether the hero is a masterful young man who supplies incident for the pages of the book. They have a curiosity to find out whether the story ends happily. It used to be one of the unwritten laws of book reviewing that the story never should be spoiled for the possible reader. But nowadays the book reviewer in the daily papers frequently feels impelled to tell the whole plot to the end. His column is a feature. It must be made worth reading. While it may be a medium through which publishers can advertise their wares, above all things it must be made entertaining enough to hold the public interest. It has to compete with the tragedies and comedies of real life as recorded in the news columns. It has been charged that the book reviews in the newspapers are written with the main object of obtaining advertisements from the publishers, but the unjustness of this accusation must be generally acknowledged. The business office and the editorial department as a rule do not interfere. The book reviewer is given free rein. It is supposed that he will be trustworthy and conscientious. The fact that he points out the defects in a book does not deter the publisher from advertising in a newspaper that contains an unfavorable review. It must be remembered that the literary editor probably has praised nine books from each publisher where he has criticized one. As a rule publishers are satisfied if they have their share of notice. They are long suffering and patient. I have never known one of them to protest against a sarcastic or otherwise unkind book notice. The very nature of their business appears to fill them with an inexhaustible stock of hope.

This brings one to the question concerning the personality of the book reviewer. Is he conscientious and unbiased? As a rule, can his opinions be relied upon? Is he not likely to have strong preferences for certain lines of writing? May not his predilection for history and philosophy make him unfit to pass judgment on poetry and fiction? Does not the worth or worthlessness of his criticism depend too much upon the temperament? Those who happen to have had even a glimpse of the work of reviewing must know that a critic's lot is not a happy one. They know that the daily process of reading all sorts of books has the effect of wearing away many individual tastes. The reviewer devours books automatically, and withal so hastily that he has not time properly to taste them or to notice their distinct flavors.

It is to be expected that the book reviewer will be compelled to fight mental dyspepsia; but, fortunately, there are always plenty of books that act as tonics after the critic has been sated by inane fiction. As a rule it may be said that fear of this mental dyspepsia causes the majority of reviewers to be unduly kind to the literary works that pass through their hands.

Necessarily the author must be subjected to more or less injustice because of the reviewer's haste in reading books. The man whose work it is to scan the pages of new publications always has too much to do in these days when successful authors take two days off between books. Having read the title-page of a new book, he instantly classifies it under the head to which he thinks it belongs. He glances over the first chapter in order to obtain the locale of the tale and the names of the hero and heroine. When a book like "The story of Molly Mont Pelee" falls into his hands he gives it twice as much space as he has devoted to the last book of Herbert Spencer or the newest drama of Stephen Phillips. It is just here that the newspaper book-column becomes worthless from a literary point of view. It caters to an unworthy public. Its editor feels compelled to vie with the police reporter. The paragrapher who is always on the watch for something new upon which to turn a merry quip, falls upon Molly Mont Pelee and there is instantly a tremendous demand for her book. At this point librarians who are accustomed to distrust book reviews in general, and those in the daily papers in particular, step in to prohibit the circulation of the volume or to retire it to the quarantine department. As a result, Miss Molly Mont Pelee makes her fortune and the publisher rejoices over tremendous returns.

The most recent objection to the modern book reviewer was raised in one of the leading weekly publications. The discovery that the present cultivated generation is bored by "The autocrat of the breakfast table" led to the inquiry whether book reviewing, which is largely in the hands of men and women of mature age, really represents the cultivated sense of the time. It was pointed out that if any critic should canvass the opinions of a group of young college students, all of whom have come from reading parents, he would find that none cared for the Autocrat. Moreover, this failure of appreciation, it was declared, would extend to "My summer in a garden" and "The reveries of a bachelor." Is the average book reviewer too old to appreciate the point of view of young Americans? Is he behind the publisher in his understanding of what will appeal to the minds of young men and young women who are just from the universities. These questions seem too absurd to be considered. It is true that the humor of one generation appears flat, stale

and unprofitable to the next. It is true that with the changed conditions in American life there is a metamorphosis of literary ideas. Yet the middle-aged critic necessarily has the experience and discernment, the knowledge and discrimination that fit him to pass judgment upon new writers.

Another question often asked is whether the imprint of a publishing house famous for the high quality of its books does not influence the critic to praise mediocre writing. But even the wisest publishers will be found nodding nowadays, and every firm is likely now and then to bring out one or two books that are not up to its highest standard. It must be acknowledged that to a certain extent the reviewer is swayed by the publisher's name, but long experience has shown that American critics are quick to recognize excellence wherever it is found. . . .

The reviewer is, of course, the coadjutor of the advertiser. The department of promotion in every publishing firm approves of the book reviewer. Even when his work is not scholarly or worthy, the literary critic of the daily newspaper at least calls attention to new books. He awakens interest among a class of persons not reached by the distinctly literary journals or even by the monthly magazines. He has therefore a great responsibility. His opportunity for doing good is tremendous. It is his privilege to introduce the new books to the public. The advertiser keeps the public from forgetting them. The advertising methods of publishers have come in for quite as much criticism as the reviewing methods of literary critics.

Although it is easy to laugh at the megaphone system of crying literary wares, no thinking person can deny that it has produced good results. The newspaper reviews and advertisements buried among police items and department store announcements have awakened interest among thousands of persons who otherwise would not know when a new poet sings his first song or when a sincere student of life writes a great novel. The newspaper reviews lead to the reading of literary magazines. They inspire a curiosity to become familiar with the works that are exploited in the public prints.

Figures show that the vogue of the book review is on the increase and that the reviewers continue to multiply. Because nothing is perfect in this world, the book review that is in every way worthy may not be common, but there is not a month that does not bring to the public some essay of rare value. In this day good writing is so common that it passes almost unnoticed. But the time has gone by when Americans can be easily led by the opinions of any dictator. This is seen in the decadence of the editorial and even in the loss of a certain arbitrary influence that preachers used to wield. For this reason the book review is read nowadays more for the

news about the latest publications than for the guidance it may afford. In the case of literature that is really good, the book review does splendid service in bringing it before the public. Novels are likely to be read simply because they are novels, but poetry, philosophy, and history are not sought with the same avidity as the story that promises to introduce readers to an unreal world. A paragraph from the pen of some master mind, quoted in the course of a perfunctory review, may awaken a desire to become familiar with the work of power. Verses taken at random from the book of a poet may win for the unknown singer a wide following. Lines culled here and there from the pages of an essay may make thousands think. These possibilities lead to the belief that even though the book review may be only a book notice, even though it may be a careless synopsis of a careful author's work, even though it may be often unjust and frequently unworthy, it is an agent of modern education. Since this is true, its worth overbalances its worthlessness to such an extent that it must be accepted as a permanent feature of modern journalism. In the future it may improve. Indeed there may come a time when every library school has a department for the training of book reviewers, but until that period arrives, it is necessary to be to the faults of the review "a little blind and to its virtues wondrous kind."

Upon the conclusion of Mrs. Kinkaid's paper, the chairman thanked those who had taken part in the morning session for their helpful addresses.

At the Trustees' Section on Friday afternoon, F. A. Hutchins, presided, in the absence of Thomas M. Kearney. F. J. Finucane, trustee, Antigo, Wis., opened a discussion with a talk on "The relation of the library board to the city government." The three points of contact, he stated were (1) in the appointment of the library board, (2) the city's support and (3) the report made to the city council. The speaker then took up the first point and made a plea for the appointment of those only who were willing to work. With shirks he had no patience and drones should not be tolerated. Adequate support of the library should be given as a necessary part of civic life. The annual report to the council should be made full and complete; nothing as to the library's workings should be concealed. The library should be run on business principles, thus winning the respect of the city authorities and taxpayers. W. J. Stevens, trustee, Marquette, Mich., then told of his board's method of doing away with the drones—seeing to it that they were not reappointed. The chairman of the afternoon advocated the appointment of one or two politicians who knew how to reach men and to carry things through councils, etc. The discussion was followed by a talk by Miss

Merica Hoagland, organizer, Indiana State Library Commission, on "Library training—its demands and remuneration." This was a strong presentation of the duties and responsibilities of librarianship. The educational demands of the age were emphasized, and the importance of securing the best help possible in libraries—the great centers of public education—was dwelt upon. The modern librarian "should combine the womanliness of a Ruth and the patience of a Job with the wisdom of Minerva." At this stage of library development it is absurd to appoint the daughter of a politician or a broken-down teacher or a soldier's widow who needs financial aid. One can afford to perform these acts of charity in a private business, but the speaker believed that it was downright robbery to appoint an inefficient librarian who daily defrauds the people from that effectual service which it is their right to have. The question of remuneration is a serious one. The librarian of the small library should receive at least that paid a local High School teacher. For a library having an annual income of \$5000, the librarian should receive from \$75 to \$100 a month, the children's librarian \$45 to \$60, and the second assistant from \$20 to \$30. In the matter of salaries, we must remember that we are working in a transition period, and must deal patiently and intelligently with the situation, striving only to raise the standard of librarians in their respective positions and to fill vacancies as they occur with librarians of recognized fitness and ability.

G. L. Ridsdale, president of the board of trustees of the Marinette (Wis.) Public Library, gave a humorous account of his library "before" and "after" employing a trained librarian, paying a deserved tribute to the work of Miss Julia E. Elliott, now in charge.

Miss Mary Williams, librarian, Neenah, Wis., gave a bright little talk on "The principles of book selection." Miss Williams cited the advice given in the "Co-operative handbook on library organization" as being wise to follow. The best committee on book selection, she stated, was a committee of "one," thus ensuring against fluctuating likes and dislikes of larger numbers. The lack of money was a boon in one direction, as it made possible the selection of only the best for purchase. The committee should bear in mind the wishes and needs of the whole community and not of the cultured few.

Miss Emily Turner, librarian, Oshkosh, told of "The establishment of branches and stations" in larger towns, as filling a need that can be supplied in no other way. The speaker told of the establishment of two stations in her city which were patronized by children who had never visited the central library. "We have a saloon right on our corner," said a child, "and don't need to go

over to the part of the town where the library is."

P. V. Lawson, president of the Winnebago County Travelling Library Board, made a plea for the extension of library privileges to farmers. He stated that 80 per cent. of the libraries of Wisconsin allow farmers to draw books freely, and hoped that the plan would be universally adopted.

Friday evening, a steamer trip was tendered the visitors by the Madison Democrat Printing Company, which was thoroughly enjoyed. Later, an impromptu social hour was spent by some of the members at the Summer Library School house, where a number of the delegates unexpectedly made the acquaintance of "Sir Hinkum Feather Duster" and his numerous train of followers. Music and dancing closed the evening's pleasures.

Saturday morning, Normand S. Patton, architect, Chicago, Ill., opened the session by a talk on the "Essentials of library architecture." The speaker stated that his experience with library trustees led him to believe that a popular vote would give as the first essential that the library must be beautiful, an ornament to the town. In making an analysis of the practical requirements of the library architecture, there is a broad subdivision into two parts: first, the building must serve the convenience and comfort of the public; second, it must facilitate efficient and economical administration. Probably 90 per cent. of the failures in buildings rest in the provisions for administration to 10 per cent. in the arrangements for the public. The cause of this will be apparent upon a moment's reflection. An architect who begins for the first time the planning of a library is apt to imagine that he has himself a sufficient knowledge of the requirements and has little need of advice or special study. He says to himself: "Am I not a patron of the public library? and do I not know the various purposes which it is to serve? I will make the main entrance lead to a spacious delivery room, which shall be the focus of the interior and be surmounted by a domed ceiling. The delivery counter should be opposite the entrance, and back of this the book cases. Next I will have one or two stairways to the second floor, which can be grouped with the entrance hall. Then come the reading and reference rooms. These must, above all things, be quiet, and will most appropriately be placed in the wings where there will be added advantage of abundant light." All these and many other details will occur to the architect, who will proceed to lay out a plan combining convenience and comfort for the public with architectural beauty, and the plan will be successful in these particulars, because the architect being himself one of the public, is qualified to know the public wants.

When the architect has arranged the pub-

lic rooms, he turns his attention to the needs of the librarian and lays out a librarian's room convenient to the public and the book stacks, and finally, congratulating himself that he knows enough to add a cataloging room, considers the work done.

Mr. Patton had drawn a plan, typical of many, for a small library, containing a long narrow stack and other bad features, which he proceeded to criticise. The architect of such a design, he stated, should have imagined himself to be the librarian. Then he would have discovered that there could be no supervision of the reading room or children's room from the desk, thus necessitating placing special attendants in these rooms and increasing the cost of administration beyond the ability of the community. The first essential should be supervision. In these days of an almost universal open-shelf system, provision must be made to bring the book shelves or stack under the eye of the librarian as well.

Supervision of the reading and reference rooms may be obtained by broad lights of glass, but in the smaller libraries it is better to consider the whole floor as one great room, separate portions of which are set apart for special purposes. There need be no division between delivery and stack rooms when the public may pass freely from one to the other. The reading rooms should be shielded from the noise of those passing in and out to return and draw books; but a partial enclosure is sufficient for this purpose. There are reasons for giving the children a separate space, but such discipline should be maintained that the doors need not be shut.

The most perfect supervision of the stack room may be obtained by the radiating stack, which makes every aisle visible from the desk. A very short use of the "free access" system will develop the necessity of modifying the delivery desk. This can no longer be a counter with the librarian behind it, for the public comes from the stack room and attacks the librarian from the rear. The librarian needs a fortification on all sides, hence the circular or octagonal counter.

Taking up the subdivisions of the floor space—in smaller buildings the reference books may be placed in wall cases in the reading room. In larger libraries a separate room should be provided.

The children's room, a modern invention, must now be considered an essential. When the maintenance fund is small this room must be on the main floor. If there be a high basement the children may be accommodated there, with a direct entrance from the street, and there must be a special attendant in charge.

There is a marked tendency among librarians to do their work where they are accessible to the public and can oversee the

work of their assistants. Hence the librarian's room is to be considered not as a work room so much as a place for occasional conferences. This gives the architect more liberty in the planning of this room.

The cataloging is more likely to be done within the delivery counter, or wherever an assistant is required for supervision, and, therefore, the cataloging room may be omitted in smaller libraries, or the librarian's room used for cataloging. However, it is a convenience, almost amounting to a necessity, to have a general utility room connecting with the reading room and stack room. This may be cataloging room, or reference room, or special study, or seminar room. Whatever it may be called, it will serve a variety of purposes.

As a more practical illustration of the essentials of a library plan than can be given by any description, Mr. Patton had prepared a suggestive diagram of a library to cost from twenty-five to fifty thousand dollars. The simplicity of the arrangement is partly because of the small appropriation, but simplicity rather than complexity should characterize even the largest buildings.

Upon the conclusion of Mr. Patton's talk, the speaker was subjected to a fusillade of questions from all sides, his suggestion that the children's room might be placed in the basement bringing forth much caustic criticism. "Give the children the best room in the house" was a suggestion that was loudly applauded. The plan of arranging the books around the walls before the introduction of any stack, as exemplified in the drawings of John Lawrence Mauran, St. Louis, for the new Racine building, met with much favor. This plan has many unique features, the small collection of books—about 8,000 volumes—to be housed in a \$50,000 brick and terra cotta building admitting of wide latitude of arrangement. The plans for the new Marinette, Wis., library were drawn upon the blackboard and criticised most vigorously. A letter was read from a librarian calling attention to many faults in a building now under construction as showing lack of attention to details in library administration by architects. There was no place to store so much as a bottle of ink or a book awaiting repairs, except in an empty room in the basement. No part of the delivery desk was enclosed, no cupboard, no cash drawer—a three-cent fine presumably being taken down to the basement and locked in an enormous vault, with double doors and a combination lock; no book-lift, and the unpacking room in the basement on the opposite side of the librarian's office; a public toilet room next to the entrance and directly facing the delivery desk; the shelves in the children's room over six feet high; the top of the delivery desk of marble, etc., etc.

H. P. Bird, of Wausaukee, Wis., drew the plan of a "social hall," which he has presented to his home town. Wausaukee is a typical lumber town in the northern part of Wisconsin, the population of which is composed very largely of "lumber jacks," who work in the woods and neighboring sawmills. The "lumber jack" does not like to be considered an object of charity, and so a lunch room or lounging room has been provided on the first floor of the "social hall," where, for a few cents, he may purchase coffee and sandwiches or a meal in the dining room. On the floor above the lunch room there is a library of over 1000 volumes and a reading room with the latest papers and periodicals. This is kept open from seven o'clock in the morning until eleven o'clock at night, seven days in the week. A place is provided and stationery furnished for those who wish to write letters. In the basement a bowling alley is being installed and other amusement features. Mr. Bird's talk aroused great interest among the delegates who realized that the social life of communities is being almost wholly neglected by modern libraries and might be made a valuable adjunct in winning the interest of the workingmen, who, when all is said and done, do not patronize public libraries.

Upon the conclusion of the discussion, the Committee on Public Documents made the following report:

"To the Western Library Meeting

"Your committee on government documents respectfully submits the following report, prepared in consultation with Miss A. R. Hasse.

"The following is suggested as a form for letter to be addressed by libraries to Congressmen:

Hon. _____
_____ from _____

Washington, D. C.

MY DEAR SIR:

At the Western Library Meeting, held at Madison, Wis., Aug. 28-30, 1902, and attended by representatives from 13 states of Iowa, Illinois, Wisconsin, Kansas, Nebraska, Minnesota, Indiana, Michigan, North Dakota, New York, Pennsylvania and Texas, the following report of a special committee on United States Documents was adopted, and is forwarded to you with the urgent petition that you do earnestly try to get a hearing on the matters treated therein before the Committee on Library to the end that suitable legislation may be framed and enacted which shall correct any existing wasteful and unnecessary distribution of public documents, and which shall render more prompt and effective the printing and distribution of the indexes designed to make the contents of our government documents widely known and easily available.

1. *Graduated distribution to designated depositories.* Your committee recommends a graduated distribution of government documents to designated depositories, regulated in some degrees by the size of the depository library so that only the largest libraries and those so desiring, shall receive both cloth and sheep bound copies of documents issued in both forms.

Many of the smaller depository libraries would be glad to be relieved of the burden of shelving and caring for these second copies, and in many cases the smallest libraries would be glad to discontinue entirely certain titles for which they have little or no use.

Under present conditions every depository library, great and small, must receive every one of the five or six hundred volumes sent out annually, many of them in duplicate, or as a sole alternative promising any sort of relief, must relinquish its depository privilege and trust to the uncertain service by local Congressman.

Any such re-classification of depository libraries as recommended above, should of course be made only after consulting all libraries affected.

2. *Privilege of selection by non-depository libraries.* Your committee recommends that non-depository libraries which now can get documents only by constantly importuning local Congressmen or the various departmental bureaus, be permitted under proper limitations, to select certain titles most useful to them and which shall thereafter be sent to them regularly.

It is further suggested that this privilege of selection be extended to include single, occasional documents of special value and interest which may from time to time be placed in the hands of the Superintendent of Documents for distribution.

3. *Larger edition of monthly catalog.* Your committee urges the monthly catalog of public documents which under the present law may now be supplied only to depository libraries, be issued in sufficient number to supply all libraries asking for it. Many libraries learn of the publication of valuable material only by chance or too late to profit most by it, but would be able if receiving the monthly catalog to follow current publications.

4. *Prompter issue of monthly catalog.* Your committee requests that the monthly catalog be issued more promptly than now. It is now from three to four months behind, appearing six or eight weeks after the British monthly catalog reaches this country.

"In conclusion, your committee heartily commends the efforts which are being made constantly by the Superintendent of Documents to make our government publications of the largest possible usefulness, and desires to mention specially the new cumulative index in the monthly catalog; the greater promptness in the issue of sheep bound volumes and the increased efficiency in mailing and regular receipt. We desire also to commend the legislation embodied in Senate File 4261, which failed to become a law at the last Congress, and to bespeak the efforts of all congressmen in securing passage of a similar law at the coming session.

J. I. WYER, *Chairman,*
MARY EILEEN AHERN,
A. H. HOPKINS."

The chairman of the committee made the further recommendation that the report herewith given be submitted for criticism to L. C. Ferrell, Superintendent of Documents, Washington, and to Roland P. Falkner, Chief of Division of Documents, Library of Congress. It was moved and carried that the report with recommendations be adopted and the committee continued with power to act.

After a vote of thanks to all who had contributed in any way to make the sessions of profit and pleasure, the meeting adjourned.

L. E. STEARNS, *Secretary.*

LIBRARY DEPARTMENT OF THE NATIONAL EDUCATIONAL ASSOCIATION.

THE Library Department of the National Educational Association met for its first session this year in the general reading room of the library of the University of Minnesota at 2.30 p.m. on Thursday, July 10. The assembly contained many representatives of the Minnesota Library Association, which had taken advantage of the occasion to hold its tenth annual meeting at the same time, and had included the two sessions of the Library Department in its program. This increased the attendance not a little and brought into the audience a number of persons more deeply interested in library work than has been usual at meetings of the Department.

Because of the unavoidable absence from Minneapolis of Dr. J. H. Canfield, the president of the Department, and the tardy appearance of R. P. Halleck, the vice-president of the Department, the meeting was not called to order promptly. After some delay the chair was taken by Miss M. E. Ahern, the secretary of the Department, and the regular program as announced was begun.

Schubert's "The night" was sung by the Minneapolis Ladies' Quartette, after which the secretary, acting as chairman, made a number of announcements and read a pleasant letter from Dr. Canfield expressing his regret at his inability to be present, and explaining that this was caused by the fact that his university had named him to be its official representative at two international educational assemblies to be held in two European capitals.

After all the miscellaneous business had been completed and the program was well under way, Vice-president Halleck made his appearance and assumed the chair.

The first set paper was read by W. A. Millis, Superintendent of Schools, Crawfordsville, Ind., who took for his subject "The library as an educator," and presented what was certainly a careful and thoughtful consideration of the subject. A real effort had been made to treat the subject in a fashion to give it value to the listeners. In his attempt Mr. Millis was very successful, but it was clearly evident that his contribution was that of one who had not experience in library work.

"Libraries and schools, a two-faced question," was the title of an address given by Miss Emma Fordyce, teacher of English, High School, Cedar Rapids, Iowa, who followed Mr. Millis. Her treatment of the question was very bright and attractive. In it she rang the changes from grave to gay, and from the ludicrous to the pathetic.

Next in order came greetings from the American Library Association, by Anderson

H. Hopkins, assistant librarian of the John Crerar Library, Chicago. He said:

"It has been several months since I was named to be the official representative of the American Library Association at this meeting. If it had been known at that time what would be the action of the American Library Association at its election less than a month ago, you might have been spared this infliction, and I some natural embarrassment at the situation in which I find myself. Three weeks ago in general conference assembled, Dr. James K. Hosmer, librarian of the Minneapolis Public Library, was elected president, and Dr. James H. Canfield, librarian of Columbia University Library and President of the Department of the National Educational Association, was elected first vice-president. Surely my services as official representative cannot be sorely needed under such circumstances; but I had in good faith engaged to act, and here I am in good faith acting.

"I bring you greeting, joyous, earnest and real. It is no empty word I bring. Spontaneity is the keynote, and its harmony with that same tonic of all that is best in our educational world is perfect and complete.

"Three weeks ago in Boston, and at that beautiful spot beside the sea, named for its choicest plant, Magnolia, were gathered a thousand earnest men and women. They are the patrons, I fear it might almost be said the devotees, of the printed book. Their cry was Educate! educate! educate! And their query was How? how? how? To-day are gathered here, shall I say, eight thousand earnest men and women, and as their united voices reach my ear, I hear them intone the same cry: Educate! educate! educate! followed by the same earnest query: How? how? how? To the voice of this throng I would fain join mine. But when the cry has sounded and resounded, followed by its persistent query, I would add another question: Why? why? Why are we not working together? Is not our quest the same? Are we not seeking the same light? Why do we stagger on alone? Why do we not join hands to support each the other?

"Would that I might answer this last query in a straightforward manner without offence, but that may not be. The utmost that I can hope to do is to suggest one or two possible causes for the slowness in growth of this co-operation between teacher and librarian, a joining of forces and of interests which, on the face of things, is so much to be desired. We know that each is busy with the details and small perplexities of his own particular office. Let me submit that a prime fault is that he is over-busy with these and fails to look about him, thus breeding an insularity that reminds one too much of Lowell's characterization of a certain condescension in foreigners.

"It must not be forgotten that truth is many-sided. It is well sometimes to establish one's seat so close to truth itself that the human eye can see but one of its infinitude of faces; but it must be remembered that before the whole truth can be seen, the human soul must recede as facet after facet comes into view until the magic of infinity is reached, the sign is changed, and new glories greet the eye on the other side.

"We are too prone to be so bound up in our callings that we overlook the others, that we forget there are many other callings as important as our own, and that some of them are of quite as great force educationally and for the betterment of the world as ours. But as I conceive it, there are not many that might be united to better advantage than ours. And now why does not this union come about more rapidly? Let me say—not in the way of fault-finding or recrimination or reproach, but merely as pointing out—that it is more your fault than ours that our union is not closer. The organization of your institution is much older, more complete and more powerful than is that of ours. Indeed, while it is correct to say that the public school is an organized educational force, it is not correct to make the same statement concerning the public library. It is not organized at all as an educational force except by that voluntary association which is so great a thing indeed; but it is not sufficient. We now have before us the curious sight of two great educational movements in action. Yours the stronger, serves directly the individual through a small number of years. Ours, the weaker, serves directly the individual through almost the whole of his life period. The weaker stands facing the stronger at this moment with outstretched hands and ready will. The stronger looks impassively on. If this seems abstract to you let me cite a concrete instance. There are many departments in the National Educational Association, and among them is one called the Library Department. There are librarians not engaged in the profession of teaching who attend its sessions and transact much of its business. There are many sections in the American Library Association. These sections are to the American Library Association what the Departments are to the National Educational Association, but among them no Teachers' Section is to be found. And in my experience as a member of the American Library Association, I do not remember to have met at its meetings any teachers who were not engaged in library work professionally. By what initiative was the Library Department of the National Educational Association inaugurated? By that of teachers, or of librarians? If a teachers' section of the American Library Association comes into existence, by whose activities will it be created,

that of teachers, or of librarians? And if it does not come into existence, why not?

"In a state which shall not be named, but which has a large and elaborately organized teachers' association and also a smaller and perhaps less elaborately organized library association, an attempt was made some years ago to organize a library section in the teachers' association. I cannot, and do not wish to recount the circumstances. It will be sufficient to say that the attempt all but failed because of the insistence by the larger association that the smaller should sink and lose its identity in the formation of a section of the larger. The section was formed, but it has never yet drawn the breath of life.

"These are melancholy things. I do not like to say them, and do not say them because of any liking or disliking, but because I believe they ought to be said—and said to you.

"In a brief talk with Dr. G. Stanley Hall, at the meeting of the Department of Superintendence in Chicago last winter, in reply to my question about the possibility of a closer organic relation between schools and libraries, he stated it as his opinion that such a relation ought to exist, but that no one yet seemed to have suggested an effective plan. But a plan seems lying already at hand waiting to be used. The school has a well developed organization through its central bureaus beginning with the Bureau of Education at the seat of federal government and extending down to the community through these successive steps: the state superintendent of public instruction, the county superintendent, the township trustee, the district school teacher. These are linked together, forming a fairly compact organization. Now the public library is following the same historic road in its development, and the signs are already clear in the sky heralding the approach of the first two of these central bureaus. Are we—you and I—to sleep the time away and let these two educational forces parallel each other with separate organizations for the same purpose, or shall we join hands and stand together?

"The people are ready and willing for these economic combinations in the educational world as well as in the realm of commerce.

"Consider for a moment the clumsy processes through which we must go to produce a printed page from the spoken words. Think for a moment of the strength which has been expended in this Association in the hope that a simplified English spelling may be secured; and then remember that only a single short step remains to be taken by some patient mechanical genius, and with a little time all this difficulty melts away like the mist of early dawn. Let me make more clear what I mean. We have long had certain symbols by which is translated to the eye the thought that is translated to the ear by

the spoken word. We have now machines in plenty by which the spoken word is received, translated into, and recorded in symbols natural to it but to which our eyes are unaccustomed. There remains but a single step, namely, to discover the selective principle whereby the one symbol is mechanically translated into the other symbol and the problem is solved. When this mechanical step has been taken, as it will be, the writer may sit at his desk and dictate his thought to the machine—not a human machine—at his side and behold it faithfully reproduce in type his blunders as well as his accuracies. Then—and not till then—will our spelling become simplified and our speech no longer slovenly.

"If this great change may be wrought by one so short step in the mechanical world, what may be wrought in the educational world by the longer steps that lie squarely before us in our pathway. The world is waiting, waiting! Shall we doze the time away? Or shall we join hands and take the forward step together?"

This closed the set program for the afternoon. Dr. J. K. Hosmer, president of the American Library Association, was present, and in response to a hearty call for a word he arose, and in a brief speech supplemented the greeting which had been given and expressed his gratification at what had been said.

After some general discussion by others present the secretary made further announcements and the Department adjourned to two p.m. the next day.

At the beginning of the Friday afternoon session there was again some delay through the absence of the vice-president, and finally the secretary again took the chair and went forward with the business.

By motion a committee on nominations was appointed, with J. I. Wyer, librarian of the University of Nebraska, as chairman. This committee was instructed to report before the close of the session.

The first address of the afternoon was by J. M. Greenwood, Superintendent of Schools, Kansas City, Mo., on "What may the school properly demand of the library?" and was interesting in a general way; but it has to be confessed that however satisfactory it may have been to the teachers present the librarians failed to hear the concrete answer to the question for which they had been hoping.

The second and last paper on the program was by Miss Agnes Robertson, Superintendent of Schools, Cherokee, Iowa. Her subject was "School libraries in the rural districts," and was listened to with earnest interest, but unfortunately was not distinctly heard. This was in no small measure due to the fact that the acoustic qualities of the room were not good. As before stated, the

meetings of the Department were held in the general reading room of the library of the university. As a matter of course the room was not designed for the purpose to which it was assigned on this occasion—because of the very unusual demand then being made for places of meeting.

The committee on nominations reported unanimously in favor of continuing the present officers for another year in their respective positions. This provoked a protest from the secretary, but her objections were overborne after a time. She did not yield, however, without having sounded an earnest warning to the effect that it is high time that the Department should justify its existence by a higher type of activity than has hitherto been manifest.

The report of the committee on nominations was then accepted and the nominees were declared elected. After some further announcements the meeting of the Department was declared adjourned.

The library workers present had been invited by the Minnesota Library Association on behalf of the trustees of the Minneapolis Public Library to enjoy a boat ride and picnic supper on the river. The invitation was most joyously accepted by a goodly number, and a delightful evening is stamped upon the memory of all who were there.

THE DOCUMENT CHECK LISTS OF THE NEW YORK PUBLIC LIBRARY.*

For the past three years the New York Public Library has been printing in its monthly *Bulletin* lists of parts of its collection of public documents. The first list dealt with the documents of the First and Second Congresses of the United States, and appeared in the *Bulletin* for November, 1899. The long list of "works relating to the State of New York," begun in the number for May, 1900, contained many entries of provincial, state, and other documents; and later lists have recorded the documents relating to the New York boundaries, other state boundaries, and municipal and institutional documents of New York and Brooklyn. The *Bulletin* for December, 1901, contained a check list of foreign government documents on finance contained in the library; and this is supplemented in the current (August) issue by three lists of American public documents dealing with finance—federal, state, and municipal—covering 40 pages. This is a notable contribution

* Check list of American federal documents relating to finance in the New York Public Library; Check list of United States state documents . . . relating to finance; Check list of American municipal official documents relating to finance. (In New York Public Library *Bulletin*, August, 1902. 6:8, p. 287-327.)

to the bibliography of public documents, especially in its illustration of practical methods of arrangement and form of entry for material that is full of perplexities and variations. Like the previous lists, it is the work of Miss Adelaide R. Hasse, chief of the Document Department.

The check list of federal documents, which is given first place, deals only with collections or compilations of government documents relating to finance and with serial documents, as annual, quarterly or monthly reports. It is prefaced by explanatory references to the various official public document indexes and catalogs that give clue to separate reports and to material included in the bound sets of Congressional collected documents. The Continental Congress is represented by two entries; then follow documents of the Federal Congress, covering first collected works with subclasses, as Currency and revenue, Internal revenue, Loans, Tariff; then serial periodical reports, classed under the officer, bureau or division issuing same. Careful annotations give record of the establishment or historical development of each office or bureau, and register changes or special characteristics of the various issues. The information given in these annotations is of much value, forming often an historical summary of the office in question. The list of state documents is alphabetic by states, documents being recorded in two classes, as Periodical and Non-periodical. Entries are given in chronological order; and there are frequent annotations. For the municipal documents alphabetic order by cities is followed, and naturally there is no division of reports.

The methods of entry adopted for the list will repay study on the part of catalogers. The variations of form found in document material are indeed legion. There are gaps in series, constant changes of title, additions or omissions in text, and manifold perplexities of numbering; but Miss Hasse has managed to give varying data in the most compact way. For reports continuously numbered with no change in fiscal year, inclusive numbers are bracketed in title and inclusive dates are given; changes of fiscal year are indicated in dates and in brief notes; for changes in title the current title is bracketed, and all changes are collated in successive title entries, following the German custom. This method also elucidates successive changes in title, numbering, and date. Many of the entries are analytical, referring to reports bound up in collections of city documents and like annual volumes. The methods worked out are clear and effective, and the list sets an excellent model for like work elsewhere. While these lists record only material to be found in a single library, and are mainly intended as a means of indicating and filling gaps in that library's collection, their publication is a bibliographical service of no small value.

NOTES ON SPANISH BIBLIOGRAPHY.

AN interesting sketch of Spanish bibliography and librarianship, by Konrad Haebler, forms the opening paper in the recent volume "Sammlung bibliothekswissenschaftlicher Arbeiten," edited by Dr. Karl Dziatzko. In this paper Dr. Haebler deals exclusively with the records of current Spanish literature. Of this there appears to be no one complete record, and it is doubtful whether even the periodicals that attempt to keep track of recent Spanish literature succeed in giving a complete bibliography. There is the *Boletín de la librería española*, published for nearly thirty years by the publishing house of Mariano Murillo. It is a monthly publication and does not claim to give the title of any book that has not been sent to the editor. But it records most of the issues of the Madrid publishers and of those of the Castilian provinces in general. Especially is scientific literature well represented, and the entries are quite full, giving title, publisher, size and price. But of the publications of the provincial book trade, even of that of Barcelona, the second largest literary center of Spain, it gives no information. This is the case also with *Bibliografía española*, which was first issued in 1901 as the organ of the newly founded association of booksellers. The members of the association are mostly Madrid firms, and the *Bibliografía* lists as yet mainly Madrid publications. Catalonia and Barcelona are not at all represented. This province, however, has its own bibliographical journal in *Revista bibliográfica catalana*, published since 1901 by the publishing firm *L'Avenç* (Progress) in Barcelona. This *Revista* is more than a mere list of current publications, it is a real bibliographical journal, and its first number contained among other material a complete list of all periodicals and newspapers that are or have been issued in the Catalan tongue, with editor and duration of publication.

Besides these trade periodicals there are a few literary and scientific periodicals that give lists of recent literature: among these Dr. Haebler mentions especially *Revista crítica de historia y literatura españolas, portuguesas y hispano-americanas*, edited for many years by Professor Rafael Altamira. Since his removal to Oviedo, however, some years ago, the character of the *Revista* has deteriorated considerably. Two French publications devoted to Spanish literature are also mentioned: *Revue hispanique* (Paris), and *Bulletin hispanique* (Toulouse).

One of the greatest difficulties in the way of a complete record of current Spanish literature is the fact that so many of the most important scientific works, and nearly always the works of unknown authors, whether in science or belles lettres, are published by the authors and are not regularly in the trade.

Besides these notes on current Spanish

bibliography, Dr. Haebler gives some information as to the situation of librarians. In the latter part of the '70's the *Cuerpo facultativo de bibliotecas, archivos y museos* was founded, combining under the authority of the department of educational affairs all the institutions of the above mentioned character and their personnel. The *Cuerpo* regulates appointments, promotions and salaries, and has instituted special examinations, to be taken not only by new aspirants, but also by such of the old appointees as may choose to do so. Most of the younger men particularly did take these examinations, and those who did not were sooner or later superseded. Thus, the library service soon came to consist nearly exclusively of young men, but the salaries remain exceedingly low, and the assistants in the lower grades cannot live on their salaries, but earn additional income as teachers, journalists, etc. Quite often a library in a provincial town has for librarian a local booklover, who might not need the additional slight income, but accepts the office on account of his interest in bibliographical matters; he is usually interested in some one branch of literature, and favors that one to the exclusion of the others. It even happens that the book-collector uses the treasures intrusted to his care to enrich his own library.

AKSEL G. S. JOSEPHSON.

THE IOWA MASONIC LIBRARY.

THE average stranger visiting Cedar Rapids, Iowa, is unprepared to learn that it contains an institution which has no counterpart in the world. This institution bears the name of The Iowa Masonic Library and is the only known Masonic library possessing a permanent structure erected for this specific purpose. It is the conception of one man, who gave it his ardent labors for half a century, and was permitted to see it enter upon its wide career of usefulness.

In that multitude of men who as pioneers have laid the foundations of the west, perhaps the record of none shines with brighter light than that of Theodore S. Parvin. Born in New Jersey, in 1817, a college and law school graduate in Ohio, going to Iowa as secretary to Territorial Governor Lucas, influential in securing a congressional appropriation of \$5000 for the library of the embryo state, becoming its first librarian, for a score of years filling various legal offices of distinction, for a term of years occupying two or more chairs in the state university, and for the last 58 years of his life secretary of the Grand Lodge of Iowa Masons, his deepest sympathies and untiring efforts were given to the intellectual and moral upbuilding of his adopted state. But these words are anticipatory, for it is his life as a Mason with which we are now chiefly concerned.

It was in the early forties that young Parvin, imbued with a desire for the increase of his own and others' knowledge of the history and workings of the craft of Masonry, conceived the idea of establishing a library representing this special purpose. Its life began in a collection from personal friends of five dollars in 1844, which was spent on Masonic literature. The idea expanded in the founder's mind; it became clear to him that generous provision must be made. The following year at the annual meeting of the Grand Lodge, Mr. Parvin brought up the subject of establishing a Masonic library, when his persistence was recognized by the appropriation of the munificent sum of five dollars. A beginning had been made; a foundation laid.

Space forbids me to dwell in detail upon the labors of the ensuing two score years. Mr. Parvin through the awakened assistance of friends, and by unwearied correspondence, gathered his treasures from all parts of the world, till the time came in 1883 when the Grand Lodge of Iowa, surprised at the richness of the collection, voted \$20,000 for a building fund. This sum, supplemented by a gift of a building lot and the sum of \$10,000 from the citizens of Cedar Rapids—in generous competition with other cities of the state—furnished the home of this library. Into this new and beautiful building were moved the accumulations of 40 years. The larger part of the building, strictly fire-proof, was designed and is used for the library and museum, while the front portion is devoted to a reception room, tastefully decorated, and offices and safety vaults for the grand master and grand secretary.

Designed, primarily, for the benefit of the Masonic order, the breadth of the founder's plans included the enlightenment of the neighborhood, the state, the country and the world. In the museum department the collection, beginning with a few Masonic curios, has grown till it now embraces a great number of Masonic medals, commandery badges, autograph letters of prominent Masons, many portraits, old and rare engravings, Indian relics, and many thousands of minerals, geological and archaeological specimens, all gifts from Masonic and other friends.

In the library, eight large cases are devoted to the Iowa department. Besides the store of county histories, directories, reports, programs and catalogs, here are copies of every volume thus far obtainable written upon Iowa or by Iowa authors. The general department contains a varied collection of works of art, architecture, mythology, Egypt, Bible and oriental lands, Crusades, Templary and chivalry, and is rich in old works on the forms and religious ceremonies of different ages.

In the basement are rooms, originally designed for storage, occupied by the reference department, with over 5000 volumes. Here are the files of Iowa and Eastern newspapers, complete sets of all the leading American

periodicals, partial sets of many English ones, modern works of reference in art, biography, history, and literature. These are in constant use by the townspeople, and students in Cornell college and the state university, 15 and 25 miles distant.

The semi-Masonic department is particularly strong in its collection of reports and publications issued by the various fraternal societies of this country and the world; this includes the proceedings of over 100 national bodies—all in fact that are known. There are also numerous works bearing on the early secret societies of the Revolution, army and navy, clubs and club life, and volumes pertaining to the history of the Nestorians, Dervishes, Druids, Thugs, Assassins, the English and the Dutch and Flemish guilds of the Middle Ages.

Naturally the Masonic department surpasses all others in size, rarity, and richness. From all over the world come nearly four score Masonic periodicals, their past issues being represented by 2500 bound volumes. The volumes of the proceedings of grand lodges, chapters, commanderies and other Masonic bodies constitute a library in themselves. There is also a large collection of newspaper clippings, sermons and pamphlets. English, French, German and even Central India (translated) Masonic writings are in evidence. Among the many rare sets and volumes, are the "Bower's collection" illustrative of the history of Freemasonry in France, Germany, and England; and the "Original constitution of Freemasonry," printed in London, in 1722, from a manuscript 500 years old.

The library is sustained by an annual per capita tax of 10 c. levied by the Grand Lodge of Iowa upon the nearly 30,000 members under their jurisdiction. After providing for current expenses, about a third of this appropriation is available for library use. One of the pressing needs is of a complete catalog of the museum, and of the nearly 5000 pamphlets and 20,000 volumes of the library. Still more urgent is the need of enlarged space; the building, supposed in 1884 to be ample for three score years' use, is filled to repletion in less than a third of that time. Fortunately the necessity of enlargement can be met by the purchase of adjoining lots and the building of an annex. It is proposed to raise \$50,000 for this and other needs, and Mr. Newton R. Parvin, long-time deputy and the present grand secretary and librarian, upon whom the mantle of his father seems to have fallen, is energetically engaged in this special work.

The best remains to be told. This enterprise of humble beginnings has in its half century of life become the helper of Eastern Iowa, and, in its distinctive specialty, has taken a leading position in the world. Quite unknown to libraries in general is the fact that

its owners are glad to share its peculiar wealth with all who would use it. Masonic though it may be, a hearty welcome awaits every visitor. With the exception of a few volumes, every book upon the shelves may be freely used. Already the library is a Mecca to the student of the esoteric. In addition, its volumes are freely loaned to individuals, libraries, and lodges in any part of the United States, on the simple conditions of assured safety and assumed expense. Occasionally insurance is required when some rare works are forwarded. This plan of liberal loaning has been pursued for years and thus far not a book has been lost. W. P. KIMBALL.

American Library Association.

President: Dr. J. K. Hosmer, Public Library, Minneapolis, Minn.

Secretary: F. W. Faxon, 108 Glenway st., Dorchester, Mass.

Treasurer: G. M. Jones, Public Library, Salem, Mass.

PROCEEDINGS, 1902.

The volume of Proceedings of the Boston and Magnolia Conference was issued and mailed to members the first week in September. It is larger than any previous issue, covering 277 pages, and including a special index. Copies remaining may be secured at \$1 each on application to the A. L. A. Publishing Board, 10½ Beacon street, Boston.

REPORT OF TRUSTEES' SECTION MEETING.

In accordance with a vote passed at the meeting of the Trustees' Section, held in connection with the Boston and Magnolia Conference, the proceedings of that section, as given in the volume of Conference proceedings, will be reprinted in pamphlet form for distribution among library trustees. The edition of the reprint is limited, and librarians who do not receive it, and who desire to bring it to the attention of their trustees, should make application for it to the A. L. A. Publishing Board, 10½ Beacon street, Boston.

A. L. A. COMMITTEE ON RELATIONS WITH THE BOOK TRADE.

This committee held a special meeting at the office of the chairman, in the New York Mercantile Library, on Saturday, Sept. 6. There was a full attendance, and the situation regarding the discount granted to libraries by the American Publishers' Association was fully discussed. While no report for publication has been made, it may be said that the committee is hopeful of securing more satisfactory arrangements. The committee consists of W. T. Peoples, chairman; Henry J. Carr, Henry L. Elmendorf, John Thomson, Hiller C. Wellman.

State Library Commissions.

MARYLAND. STATE LIBRARY COMMISSIONS.

At the 1902 meeting of the Maryland General Assembly two library commission bills were passed, chapter 247 and chapter 367 of the Laws of Maryland, 1902.

The commission noted in the *LIBRARY JOURNAL* of August (p. 775) is the one created under chapter 247. This commission is popularly known as the travelling library commission, as it is to organize and conduct travelling libraries throughout the state as soon as practicable. The commission created under chapter 367 is often referred to as a public library commission. It repeals and reenacts with amendments the bill passed in 1898, known as the Bomberger bill. The last sentence of the next to the last section of this bill limits its application to only nine of the 23 counties of the state. The bill places the control of public libraries established under it virtually in the hands of the county commissioners. It is designed especially for the establishment of county libraries. The bill also provides for the creation of a library commission of five members to give advice and counsel relative to free libraries. A sum not exceeding \$1000 annually is appropriated for clerical assistance. The members of this commission are T. J. C. Williams, Baltimore; Edward W. Mealey, Hagerstown; John G. Mills, Cambridge, and D. F. McMullen, of Allegany county, with one vacancy. This commission organized at Hagerstown, on Aug. 21, by the election of Mr. Edward W. Mealey as president, and Miss Mary L. Titcomb, of the Washington County Free Library, Hagerstown, as secretary. The secretary is not, however, a member of the commission. The *Baltimore Sun* of July 29 and Aug. 24 contained editorials on the work of these two commissions.

The commission under chapter 247 organized in Baltimore on Aug. 28 by the election of M. Bates Stephens, president, and Bernard C. Steiner, secretary. This commission proposes to expend nearly all the money it receives from the state in establishing travelling libraries.

WISCONSIN FREE LIBRARY COMMISSION: F. A. Hutchins, secretary, Madison.

On Saturday afternoon, Aug. 30, the representatives of the state library commissions of Nebraska, Minnesota, Iowa, Indiana, Wisconsin and the Illinois Library Association, held an informal meeting at the office of the Wisconsin library commission. A. H. Hopkins, president of the Illinois Library Association, explained the plan proposed by his association to do work in lieu of a commission, the idea being to secure funds to employ a secretary who should devote his entire time to the work. Lines of co-operative work other than those now carried on were informally discussed and taken under advisement.

State Library Associations.

CALIFORNIA LIBRARY ASSOCIATION.

President: Charles E. Greene, Carnegie Library, Oakland.

Secretary: R. E. Cowan, 829 Mission st., San Francisco.

Treasurer: F. B. Graves, Public Library, Alameda.

The regular quarterly meeting of the association was held at the Carnegie Library of Oakland, on Aug. 1. The subjects presented were: "Net prices of books," by Melvin G. Dodge, of Leland Stanford University Library; "Library influence," by W. R. Davis; and "The distribution of catalog cards by the Library of Congress," by Miss Florence B. Whittier.

KEYSTONE STATE LIBRARY ASSOCIATION.

President: Edwin H. Anderson, Carnegie Library, Pittsburgh, Pa.

Secretary-Treasurer: Robert P. Bliss, Crozier Theological Seminary, Chester, Pa.

The 2d annual meeting of the association will be held in Williamsport, Oct. 17 and 18.

MICHIGAN LIBRARY ASSOCIATION.

President: H. M. Utley, Public Library, Detroit.

Secretary: Mrs. M. C. Upleger, Mt. Clemens.

Treasurer: Mrs. M. F. Jewell, Public Library, Adrian.

The 12th annual meeting of the association will be held in Detroit, Oct. 11 and 12.

NEBRASKA LIBRARY ASSOCIATION.

President: Miss Edith Tobitt, Public Library, Omaha.

Secretary: Miss Clara Mullikin, Public Library, Lincoln.

Treasurer: Miss Margaret O'Brien, Public Library, Omaha.

The annual meeting of the association will be held in Omaha, Oct. 16 and 17.

TEXAS STATE LIBRARY ASSOCIATION.

President: W. L. Prather, University of Texas, Austin.

Secretary: Benjamin Wyche, University of Texas Library, Austin.

Treasurer: A. C. Read, Public Library, El Paso.

The *University Record*, published by the University of Texas, gives in its July number a report of the recent organization meeting of the Texas State Library Association, by the secretary. Mr. Wyche adds:

"In addition to the various plans of which the record of this meeting is but suggestive, it is apparent that the accomplishment of the following specific objects will receive the best efforts of the association.

- (1) A state library commission.
- (2) The establishment of a system of free travelling libraries.
- (3) The enlargement and proper recognition of the state library.

(4) The gathering and distributing of library information by a committee from the association, serving until a library commission is secured."

WISCONSIN LIBRARY ASSOCIATION.

President: P. V. Lawson, Menasha Public Library.

Secretary: Miss Emily Turner, Public Library, Oshkosh.

Treasurer: Miss Ellen D. Biscoe, Public Library, Eau Claire.

A business meeting of the Wisconsin Library Association was held on Thursday, Aug. 29. The foregoing officers were elected, with Miss Julia E. Elliott, of the Marinette Public Library, as vice-president.

Library Schools and Training Classes.

DREXEL INSTITUTE LIBRARY SCHOOL.

Miss Emily M. Haynes, class of '02, has been appointed librarian of the Worcester Polytechnic Institute.

Miss Louise Hunt, class of '01, passed the Civil Service examination, and has been appointed to a position in the Office of the Superintendent of Documents.

Miss Alice Cary Atwood, class of '02, has been engaged as cataloger at the Arnold Arboretum.

The name of Miss Mary B. Snyder should have been included in the list of graduates printed in August L. J.

UNIVERSITY OF CALIFORNIA SUMMER SCHOOL OF LIBRARY SCIENCE.

The summer sessions of the University of California are attracting, year by year, an increasing number of students and professors who assemble from all over the country to find in the beautiful location of the university and the mild climate of Berkeley an ideal place for summer work and recreation. Under these favorable auspices was given the first course in technical instruction ever offered to the librarians of the Pacific coast; and the 23 members of the library school, although closely occupied in their work-room (the large, attractive art gallery of the university library), gained much in enthusiasm and general educational impulses from their contact with the six weeks' life of this summer university that enrolled over 800 students among its various courses of study.

The library work was modeled as closely as possible upon that given at the summer session of the New York State Library School, and the entire time of the director and an assistant, Miss Florence B. Whittier (N. Y. State Library School, class of 1902), was devoted to the instruction in cataloging, classification and other special and general subjects of library economy, while an exceedingly valuable course in reference and bibliography was

given by Mr. Rowell, librarian of the university. The program announced in all 72 lectures, delivered chiefly by the faculty of the library school, although members of local library and educational circles exhibited cordial practical interest in the school by consenting to give lectures on various themes connected with the work of the class.

A paper on classification was given by Mr. Dodge, librarian of the Leland Stanford Jr. University library; Mr. F. J. Eggart, librarian of the Mechanics' Institute, San Francisco, gave an able appreciation of the work of the ancient and mediæval pioneers in the profession; Mr. George T. Clark, librarian of the San Francisco Free Public Library, spoke from long experience and with much practical advice on the selection of books, and Mr. C. S. Greene, librarian of the Oakland Free Public Library, gave two lectures on library legislation, embodying the results of careful study of the history of other states, and a thorough sifting of local California statutes. Mr. W. P. Kimball told of library conditions in the smaller cities and towns of the state, with which he has a wide acquaintance, and Miss Patch, of the California Federation of Woman's Clubs, described the progressive work now being done by that organization for the maintenance of traveling libraries, and the creation of library interests in every community reached by the federation.

The faculty of other departments of the university summer session were well represented on the library school program. Professor K. C. Babcock, of the history department of the University of California, gave an instructive talk on the use of public documents; Professor Josiah Royce, of Harvard, explained President Eliot's proposition as to the housing of dead books, but maintained stoutly that no book ever outlived its usefulness and merited the oblivion of a charnel-stack. Recollections of experiences in the library of the University of Michigan formed the interesting theme of Professor F. N. Scott, and Professor H. Morse Stephens gave library reminiscences as student or librarian in England, France and the United States. Professor Stephens also gave careful attention to the suggestion that the Extension Department of the University of California, now under his charge, might, at no distant day, conduct library institutes as a part of its regular instruction.

The same friendly spirit greeted the class on the occasion of every visit to neighboring libraries, and one of the pleasantest episodes of the session was the hospitality extended to the school by Mr. Clark and his staff, and the delightful luncheon served by them in the San Francisco Free Public Library. The California Library Association hastened its mid-summer meeting to fall within the dates of the school and made the students particularly welcome, at that time, to the beautiful new Carnegie building of the Oakland Free Public Library.

To every opportunity thus offered the stu-

dents responded with enthusiasm, devoting generally their entire vacations to the confining exactions of lectures and laboratory work, and sometimes paying their own substitutes when vacations were too short and trustees unwilling to extend them. They made many inquiries as to the probability of the course being repeated, and several expressed the hope that alternate courses of elementary and advanced library science might become a permanent feature of the summer session of the University of California.

List of Students.

- *Jean Dawson Bird, asst. Fresno (Cal.) Free Library.
Charlotte A. Baker, librarian A. and M. A. College of New Mexico, Mesilla, N. M.
 - *Mary Barmby, librarian San Jose (Cal.) Free Public Library.
Sarah Everett Bedinger, librarian Beale Memorial Library, Bakersfield, Cal.
Florence Elizabeth Browne, asst. Oakland (Cal.) Free Public Library.
 - *Shirley Mansfield Charles, asst. Leland Stanford jr. University.
Bradbury Cilley, president Board of Library Trustees, Covina, Cal.
 - *William Edgar Clark, librarian San Francisco Y. M. C. A.
 - *Anna Creaner, asst. Stockton (Cal.) Free Public Library.
 - *Edith Putnam Dart, ex-apprentice Mechanics' Institute Library, San Francisco.
 - *Mrs. Mary Dranga Graebe, asst. Leland Stanford jr. University Library.
 - *Mary Anne Hadden, librarian Palo Alto (Cal.) Public Library.
 - *Martha Elizabeth Haven, asst. Leland Stanford jr. University Library.
 - *Mary Lyle Inness, librarian Dillon (Mont.) Public Library.
Mrs. Almeda N. Jay, librarian Grand Junction (Col.) Public Library.
Elizabeth Kelley, asst. San Jose (Cal.) Free Public Library.
 - *Helen Lathrop, asst. Leland Stanford jr. University Library.
 - *Hattie M. Mann, asst. librarian Stockton (Cal.) Free Public Library.
 - *Esther Nelson, asst. University of Utah Library, Salt Lake City.
 - *Clara Northrup, asst. Portland (Ore.) Public Library.
Frances Doremus Patterson, asst. Leland Stanford jr. University Library.
Ruth Royce, librarian State Normal School, San Jose, Cal.
 - *Susan Teegarden Smith, librarian State Normal School, Chico, Cal.
 - *Mabel Weed, asst. Berkeley (Cal.) Public Library.
- The sixteen students starred took the full course and the final examination, all of them passing with credit, and receiving a certificate from the university.

MARY FLOYD WILLIAMS, *Director.*

THE WISCONSIN SUMMER SCHOOL OF LIBRARY SCIENCE.

The need of some form of library training for those who cannot afford to attend the longer terms at the regular library schools was long recognized in Wisconsin. Such a course was not made possible, however, until the summer of 1895, when, through the generosity of the Hon. J. H. Stout, a Summer School of Library Science was established under the direction of Miss Katharine L. Sharp, then in charge of the Department of Library Science at the Armour Institute, Chicago. Four persons attended the course of four weeks' duration. The following year the session was extended to six weeks with an attendance of twenty-five students, its expenses being again paid by Mr. Stout, a member of the Wisconsin Library Commission. During the third year, the school became self-supporting and the course is now of eight weeks' duration. The eighth annual session, just closed, has been so remarkably successful that an account of the work done should prove of interest.

The present head of the school, Miss Cornelia Marvin, library instructor of the Wisconsin Free Library Commission, spends a large part of each year in the field helping librarians to solve difficult problems, coming in touch with all phases of practical library work, thus enabling her to plan a course particularly adapted to the needs of all librarians. Miss Marvin is also a woman of practical library experience, having been at the head of one of the model libraries of the West, at Oak Park, Illinois, after having graduated from a library course at Armour Institute, Chicago. All the lecturers are persons of practical experience also, whose work in their respective lines qualifies them to speak with authority. The requirements of the small library are kept constantly in mind in the instruction given, such as the need for economy in service, money and time. The school has been under the same head for the past six years, thus bringing to bear the experience gained during each successive year upon its policy. The extraordinary facilities offered through the location of the school should not be overlooked. Through the courtesy of the State Historical Society, the school is housed in its magnificent new building, a noble type of the best in modern library architecture. Its collection is at the disposal of the students. This fine type of a reference library is supplemented by the university library, in which college problems are happily solved; while the free public library which is rapidly being improved, with its fine children's room, its school duplicate collections, its library stations, etc., is an object lesson to those employed in similar institutions. The office of the Wisconsin Free Library Commission furnishes a fourth type of library endeavor, with its travelling library collections, at the same time giving opportunity to study the broad-

est side of library activity in the assistance given in the organization and management of all forms of libraries. A library supply house, a book printing office and a fine bindery are also visited by the students, where the various forms of work are explained. In the library school rooms is found a library of carefully selected volumes, containing books difficult to catalog and classify and to give experience in as wide range of classification as possible. The library contains the best books for small libraries, for young and old, and the students become familiar with their character through the actual work done with them. The professors of the State University give special lectures of great value, dealing with the books of their respective lines of work; and every effort is made to familiarize the students with as wide a knowledge of the best books of literature as the time will admit.

Miss Julia Elliott, librarian at Marinette, Wisconsin, a former student at the library school of the University of Illinois, and who made a reputation for accuracy in connection with the Cumulative Index of the Cleveland Public Library, assisted this year in the elementary course, gave instruction in accession, classification, loan, etc. Her work was especially valuable as she came from one of the libraries of the state which she had recently reorganized. The elementary course was intended especially for Wisconsin librarians who have charge of small libraries. Only those are received, it should be noted, who have had experience in library work, hold library positions or are under appointment to such places. Applicants from other states are taken if the limit of twenty students is not filled by Wisconsin librarians. While no special educational qualification is stated, a high grade of students is desired, and the commission has reserved the right to refuse applicants whose education seems defective, or who, in its judgment, are otherwise unqualified for library work. Personal visits are usually made by officers of the commission in judging applications; and only those who are earnest in their work are accepted.

The elementary course followed the lines of the course given for the past seven years, but with the advantage of improved tools and facilities. Miss Marvin has been collecting a library for summer school use during the past two years. It has been selected with two definite purposes in mind, first, to afford proper technical drill, and second, to familiarize the student with the best book for the small library. The books which have been chosen because they present difficulties in cataloging and classification, are not impossible, out-of-the-way books, but such as are usually found in libraries. The instruction is planned with the small library constantly in mind, as has been stated, its need of economy in time and money. Special lectures were given in this course by Miss Mary E. Dousman of the Milwaukee Public Library, Miss

Ahern of *Public Libraries*, and by Miss L. E. Stearns and Mr. F. A. Hutchins of the Wisconsin Commission.

The supplementary course, conducted also by Miss Marvin and offered for the first time this year, was designed for students of previous classes in the summer school who had had experience and desired to raise the standard of work done in their libraries. Eighteen students were in attendance. Preliminary circulars were sent out asking what work was most needed, and brought definite answers which helped materially in planning the course. It was decided to devote the 1902 session to the following subjects: 1, Cataloging and classification; 2, Editions and practical book buying; 3, Subject bibliography; 4, Children's work; 5, Wisconsin documents; 6, Administration and general library economy.

1. *Cataloging*: A part of every day was given to instruction and practice work in dictionary cataloging, first making a rapid review of the elementary work, and later taking up advanced work based, in part, upon the lists of books presenting most difficulties sent in by the students in response to the circular. One of the best features of this work was the consideration given to simplifying forms for small libraries. This was done in a definite and practical way by indicating on the cards the eliminations best to make, and under subject headings tracing closer and fuller analysis necessary for the small library because of the limited amount of material on each subject to be found in it. Classification was also taken up in connection with the study of subject headings, always including books indicated by the students as especially difficult.

2. *Editions*: One week was given to the study of editions, a knowledge of which is certainly most necessary in practical book buying, but a knowledge in which even many trained librarians seem singularly lacking. Consideration was given to the editions most suitable for the small library starting with limited funds and the best permanent editions for libraries not so limited. This study included a review of the cheap series of non-copyright books, comparing the paper, print, binding and general make-up of the book, as well as the cost price, discounts and reliability of the series. Attention was given to the best library editions of standard authors and classics, with due regard to the best translations of foreign literature; also to the cheap series of children's books, and to the fine illustrated editions. The actual examination of the books considered added much to the advantage as well as the interest and pleasure of this subject.

3. *Subject bibliography*: Practical talks were given by professors of the University of Wisconsin on the basis of selection of books on their respective subjects, the standing of the authors most commonly quoted,

giving short lists with comments, indicating books to be avoided as well as those best suited for purchase. The subjects covered were sociology, insurance, transportation, political economy, physics, American history, the Bible, education, philosophy, contemporary German literature. This was one of the most interesting and instructive features of the course, because the subjects treated were those on which librarians need most help and for sections of the library which now need building up. Some of the lists will be published in the fall numbers of the Bibliography Bulletin by the Wisconsin Commission.

4. *Children's work*: In this course no time was given to preliminary arguments for or against work with children, but the problems which librarians meet or attempt to meet were approached directly. In the main the seminar method was employed. The director drew out the results of every bit of experience the students had to combine with the results gained not only from her own broader experience, but from study of methods in the libraries of this country where the most successful work with children has been done. The subjects of this practical study were: library work with grades, outlining course for pupils, and reference work in library; the same for the high school, with more extensive reference work, and talks on bibliography; school duplicate collections, their use, selection, instalment and management; library leagues and clubs; the story hour. Study was made of such aids as graded and annotated lists, outlines of the grade work in Wisconsin schools being given to the students, upon which were based short lists made for the grades, both for general reading and on special subjects. Modifications recommended for cataloging and classifying children's books were discussed and attention was given to reference books for children, and to the use of pictures in connection with reference work. Opportunity was given for the careful examination of a large number of children's books collected by the commission, in connection with which suggestions were made regarding the comparative value of books on the same subject. Of especial value was a comparative study of the books on mythology, folklore and legends, with notes made by Miss Genevieve Mills, of Madison. Miss Stearns gave a lecture on books for girls accompanied by a list of books which she recommended. Miss Dousman gave five lectures on the following subjects: furniture and equipment for the children's room; administration of the children's room; government and discipline and relations with children; books that are read and some that are not; children's rooms in American libraries.

5. *State documents*: Four lectures on the value, use, and care of state, especially Wisconsin, documents, were given by Mr. Charles McCarthy of the Wisconsin Commission. Attention was called to the principal indexes and

their use, also the necessity and value of collecting municipal documents was urged.

6. *Administration*: One hour per day for a week was devoted to seminars on subjects found to be of especial interest to the librarians in attendance, such as supplies, loan system, re-registration, new method of record substituting the accession book, binding, renting collections, selection of fiction, new reference books, and librarians' aids. Special lectures were given by Miss Stearns on "The library beautiful" and by Miss Ahern on "Librarians," "Library associations" and "The business of being a librarian."

The first class organized for the study of public documents closed its three weeks' course in Madison, Wisconsin, on Aug. 27. The course was made possible through the generosity of the late J. D. Witter, Grand Rapids, Wis., who bequeathed a sum of money for this purpose. The course was conducted under the auspices of the Wisconsin Summer Library School by Miss A. R. Hasse, chief of the Document Department, New York Public Library. The members of the class, numbering 47, came from 13 different states, and represented many different kinds of libraries. There were representatives from five state university libraries, from three college libraries, from four high school and normal school libraries, from nineteen public libraries, from two library commissions, from two historical society libraries, and two students attended who were not in library work. Of the libraries represented 20 were depository libraries, and 14 non-depository libraries.

The undertaking being somewhat in the nature of an experiment and the variety of experience existing among so large a number of students, necessitated a more general character of work, than a smaller, more evenly experienced class would have required. The greatest need appeared to be for information concerning the distribution and arrangement of United States federal documents, and for an opportunity to make a purposeful acquaintance with them. Instruction was given by lectures supplemented with practice work, for which the document collection of the Wisconsin Historical Society furnished ample opportunity. One lecture was given on document catalogs and indexes, which was followed by a series of lectures reviewing the various publishing bodies of the federal government, taking up the distribution, character, general form of catalog entry of each serial publication of each department and bureau in turn. Irregularities of publication were especially described, and formulas for meeting them suggested. The practice or reference work was confined to the preparation of selected lists on selected subjects, resulting in a practical acquaintance both with the documents and with the indexes to the documents.

Upon the conclusion of the Summer Library School, the students attended the Western

Library Meeting, thus having opportunity to meet with representative librarians, trustees, architects, publishers, booksellers, and other friends and patrons of the book; and to hear helpful discussion on the vital library questions of the day.

The social side of the school was not neglected. Opportunity was given for acquaintanceship by informal gatherings at the Library School House, where a number of the students lived during the course. Drives, trolley rides, picnics, boating, steamer trips, etc., helped to give the students recreation in connection with their work.

That the Wisconsin Summer School is not, as was feared, a harmful short cut to superficial training is shown by the fact that 18 former students returned this year for further work. The summer school has, indeed, proved an active and living factor in the promotion of library interests in Wisconsin, and its permanency is especially essential to the growth and development of the smaller libraries, whose limited facilities totally preclude the possibility of furnishing to their librarians longer courses in the regular library schools. New libraries must largely depend for their administration upon the local, inexperienced applicant. An isolated public library loses most of its opportunities for good through ignorance of methods and facts that may be comparatively easily learned. Through attendance at the summer school many points dealing with administration are gained, and, best of all, the students become imbued with the "library spirit" and inspiration to pursue, independently, definite plans for self education in their chosen profession along lines which have received the endorsement of efficient and progressive librarians. As one student has said, "A new spirit was introduced into my work, new pleasure and interest—interest? Let me say rather enthusiasm. The profession of librarianship has a significance and life I never realized before."

Library Economy and History.

GENERAL.

DANA, J: C. Library problems; reprinted from *The Pedagogical Seminary*. 9:2, p. 169-179 [June]. 16 p. O.

A most suggestive review of the tendencies of library work, and a forecast of future development.

WELLMAN, Hiller C. What public libraries are doing for children. (In *Atlantic Monthly*, September, 1902. 90:402-409.)

LOCAL.

Alameda (Cal.) P. L. (23d rpt.—year ending May 31, 1902.) Added 1634; total 26,384. Issued, home use 123,547 (fict. 68,-

561; juv. 27,882; magazines 5514.) New registration 1385; total membership 6243. Receipts \$10,077.17; expenses \$8270.44.

American Congregational Assoc. L., Boston. (49th rpt.—year ending May, 1902.) Added 7006 v., 553 pm.; total 50,245 v., 49,753 pm.

The unprecedented record of accessions is due to the purchase, through Quaritch, of the library of the late Bishop Stubbs, of Oxford, who died in May, 1901. This collection was first offered for sale in July, was secured in September, was received in December, and is already classified and arranged on the shelves. It contains 6350 v., only about 150 of which proved to be duplicates. The cost of the collection was £900. It will be, for the present, kept separate (with its catalog) from the general collection. The Stubbs library, it is pointed out, was gathered for use and not for show. "There are very few fine bindings, or incunabula, or books collected for their rarity alone. It is the working library of a working scholar, who was both a leading historian, and a high official in the Church of England. By reason of these two functions, the historical and the religious, he accumulated books in the very departments which form the two main features of our own library. Everything historical, and especially English history, is always welcome here; also everything that bears on religion, and in particular, books relating to the Church of England and its offshoots. Apart from the Stubbs collection, the books which give our library its prime importance bear on the controversies in the English Church; and among these there are probably as many on the Episcopal side as on the Congregational." Among the notable works in the collection are the Domesday book, in four volumes; Rymer's "Foedera," in 27 volumes; the "Ordonnances des rois de France"; Statutes of the Realm, Rolls of Parliament, Calendars of State Papers, Historical Mss. Reports, the Master of the Rolls series, many antiquarian publications, a fine collection of liturgies, many important religious works, and a fine series of transactions of learned societies. This single accession "enables the Congregational Library to render especial service to the student of English history, and strengthens it materially in all other departments."

Brookline (Mass.) P. L. (45th rpt.—year ending Jan. 31, 1902.) Added 4158; total 58,866. Issued, home use 126,881 (fict. 62%), an increase of 74-10% over the previous year. Receipts \$17,020.72; expenses \$16,953.24.

Much has been done toward the rounding out of the collection by noting gaps, as the reclassification of the collection has been carried on under Miss Robbins' direction. An accurate inventory of the library (the first in 30 years) will be made as soon as the classification is completed. Owing to the new system of "net" prices of books it is estimated that the cost of new books other than fiction

"has been at least 25 per cent. higher than formerly. This fact accounts for the smaller number of accessions in spite of a larger expenditure for books." 160 v. were added to the music collection, which had a circulation of 2985 v., or 13 per cent. more than in any previous year. An appropriation of at least \$100 is requested for the increase of this department.

There is given an interesting chart showing the variations in circulation since 1860. A suggestive feature is the close correspondence between appropriation and circulation. "An increase of appropriation has been followed in almost every instance by an increase of circulation, and a decrease of appropriation by a falling off in circulation. It is apparent also that the circulation has been increasing at a much faster rate than the number of volumes owned by the library." Most of this gain is secured from the schools and the children's room, and it is evident that many former borrowers now make use of private circulating libraries instead.

The school reference work carried on through the children's department is reviewed. 15,976 v. were circulated through the schools of which less than 25 per cent. were fiction. "5555 visits have been made by children to the school reference room, and 14,308 visits have been made to the children's reading room. The collection of books for use in the schools now numbers 2628 volumes, and the collection in the children's room embraces 981 volumes more. Eight sets of stereoscopic views, purchased on recommendation of the superintendent of schools, have been borrowed by teachers, and proved a valuable aid in the study of geography and history. The elementary talks on methods of using a library and on the principles of consulting indexes, encyclopædias, and the card catalog, have been given to all pupils in the eighth grammar grade. The most notable innovation was simple bibliographical work undertaken by pupils of one eighth grade and three ninth grade classes. Each pupil was assigned a topic in English or American history, and was sent to find and make a list of every reference—book, article, chapter, even paragraph or footnote—bearing on his subject to be found in the collection in the school reference room. Any one observing the process could hardly fail to appreciate the benefit to be gained from it in judgment, in thoroughness, and in knowledge and facility in dealing with books. This work, which was done out of school hours, appeared to be an agreeable task, for many of the pupils after sifting the school reference collection continued the search voluntarily in the main library."

Cleveland (O.) P. L. At a board meeting held on August 12, W. H. Brett was re-elected librarian for one year from December 1, with an increase of salary from \$3600 to \$4200, and two months' leave of absence.

Covington (Ky.) P. L. The state court of appeals on May 2 rendered a decision in the case of the Board of Education *vs.* the Public Library of Covington, previously noted in these columns (L. J., April, p. 198). The decision reversed the action of the Kenton circuit court, and was in favor of the board of education, ruling that "a tax levied and collected by the common council of a city for school purposes cannot be appropriated by act of the legislature to maintain a public library which is open to the pupils of the common schools only as a part of the general public and which is not under the control of the board of education or of the common schools."

The opinion of Judge Durelle reviews the case *in extenso*, and is strongly affirmative of the view that the library is a distinct educational institution, not a part of the school system. He says:

"It is not denied that a part of the school tax in cities of the second class may be used for school libraries, as an adjunct to and a part of the school system. Nor do we controvert the proposition that play grounds may be properly considered a part of the school system. What we decide is that the library provided for in the sections under consideration is *not* a part of the school system, but independent of it. It is no more an adjunct to it than a public park would be. Counsel for appellee concedes that 'it must be clearly understood that the library is a school institution, and that it is the city that comes to the aid of the school institution, and not the school coming to the aid of a merely municipal institution.' In our opinion, the statutes provide exactly the reverse of this contention. It is not a case of using a part of the school tax for what is undoubtedly a school purpose, and a part of the school system—as the kindergarten and the high school—but the appropriation of a part of the tax levied and collected for school purposes to an object which, however laudable it may be, is not of the schools, and should be otherwise and specifically provided for."

Drew Theological Seminary L., Madison, N. J. (8th rpt.—year ending June 1, 1902.) Added 5933 v., 4747 pm. Issued 14,043. Absolutely free access to the shelves is allowed, except to the Bible collection and the early printed books. Of the 180 students recorded, only two have failed to use the library. "The librarian is entirely dependent upon student help for assistance. If enough of it could be had, it would be satisfactory." In all, this help amounted to 350 hours, or the work of one man for 200 days. "The quality of our student help is very good."

Mr. Ayres says:

"There are problems of circulation in the Theological Library as in the Public Library. One of the problems of the Public Library is the undue circulation of fiction. There is not enough of fiction in the Theological Library to

make this approach even the appearance of a problem; in fact, there is not as much as there should be. The classic authors of English fiction should at least be represented. In place of this problem we have another equally serious. The undue and indiscriminate reading of sermons is just as detrimental to the preacher as the other may be to the layman. This habit appeals most to some of those who are trying to earn their way by preaching. They retire to "saints' rest," as the sermon alcove has been facetiously called, read a half dozen sermons on a given text and then proceed to stir them together, and the result is that they have nothing but hash to offer to their people. Hash usually has some meat in it, but not always of the best quality, nor great in quantity. How the people can take it without rebellion is hard to imagine. This may be the reason why some men fail to do the best work. They do not do the truest work. A careful word spoken at the right time has saved some from falling into the habit, but it is certain that there are others who desire to form the habit, if one can judge by indications."

Fairfield (Ct.) Memorial L. The cornerstone of the new library building was laid on July 31.

Fallsington (Pa.) L. Co. The library celebrated its 100th anniversary on June 13. It is owned by 135 shareholders, many of whom are descendants of the original 35 members who established the library with 138 volumes a century ago. It now contains about 7000 books. The librarian, Miss Eliza Hance, has served continuously in that office for 25 years.

Galesburg (Ill.) F. P. L. The handsome \$50,000 Carnegie library building was dedicated on June 3 with elaborate exercises held in the Congregational Church.

General Theological L., Boston. The report of the librarian, as given in the Proceedings of the society for 1901-2, states that 321 free cards have been issued to the clergymen of Greater Boston, and that 154 distributing branches are now supplied from the library. Additions for the year numbered 1276 v.; the total now reaches over 20,000. The need of the proposed new stack building which would give a book capacity of 50,000 v. is urgent.

Guthrie (Oklahoma) Carnegie L. The cornerstone of the \$50,000 Carnegie library building was laid on the evening of July 1 with elaborate ceremonies, conducted under the auspices of the Guthrie Federation of Women's Clubs.

Haverhill (Mass.) P. L. (27th rpt.—year ending Dec. 31, 1901.) Added 3121; total (estimated) 70,000. Issued, home use 146,529 (fict. 110,093). New cards issued 1599; total cardholders 12,979. Receipts \$10,746.40; expenses \$10,629.22.

An interesting report, with numerous illustrations, and prefaced by a good portrait of the late librarian *emeritus*, Edward Capen. The present number of cardholders represents about one-third of the population. There are four branch library stations, and monthly parcels of books are sent to each public grammar school-room for distribution by the teachers. Ten travelling libraries of 50 v. each circulate among the 10 village union schools on the outskirts of the city. The total home circulation of 146,529 v. is about four volumes to each inhabitant.

"The most important event during the year was the subscription to the scheme by the Library of Congress for furnishing printed catalog cards. This necessitated a change in the catalog card from the small to the large standard size. New catalog cases were bought for both the main library and the Bradford branch. All new books are now cataloged with reference to the printed cards of the Library of Congress, and the cataloging progresses faster than formerly.

"One particularly popular feature of the past year was the purchase of the vocal scores of many of the comic operas of the day, as 'Robin Hood,' 'San Toy,' 'Miss Simplicity,' 'The Burgomaster,' and 'Florodora.' Many duplicates were bought to satisfy the demand, and the books were restricted in use to seven days."

Helena (Mont.) P. L. (16th rpt.—year ending Dec. 31, 1901.) Added 1784; total 30,529. Issued, home use 75,132 (fict. 59%). New cards issued 711; cards in use 6618. Receipts \$7373.43; expenses \$7160.93.

The issue of books to children formed 40 per cent. of the total circulation.

The library has a large collection of pictures mounted for school-room use. In most cases these have been cut from duplicate or old copies of the illustrated weeklies. The collection has been well used in the schools. Teachers are allowed to borrow 20 pictures at one time.

Lexington (Ky.) P. L. (3d rpt.—year ending April 10, 1902.) Added 1204; total 4250. Issued, home use 60,509 (fict. 88.34 %). Registration 3684.

During the year a children's room was opened, containing 950 v. The registration for this room reached 520.

Library of Congress, Washington, D. C. The provision for opening the library on Sundays went into effect on Sunday, Sept. 14. The attendance was practically double the average weekday attendance. The hours of opening are from 2 to 10 p.m.; it is hoped next year to extend the provision of opening to apply to most of the legal holidays.

Lincoln, Neb. Carnegie L. The new library building was formally opened and trans-

ferred to the city on May 27. There was a large attendance at the afternoon exercises, which included addresses by Charles H. Gere, for 20 years president of the board; S. L. Geisthardt, president of the board; and Mayor Winnett. In the evening a public reception was held, with music, and addresses by Chancellor E. B. Andrews, and by Mrs. W. J. Bryan.

The main building is 68 x 104, with an extension of 20 x 43 for the stack, and 19 x 27 for the administration rooms, standing at the northeast corner of 14th and N streets. The foundations are of Bedford stone, the walls of gray pressed brick, with terra cotta trimmings, and the roof of red tile. In the basement are two club rooms, storage and packing rooms, staff room, bicycle room, stack space, lavatories, etc. The main floor is so arranged as to be under complete supervision from the delivery desk. The delivery room is octagonal, and opening from it are the children's room and reading room to the left, the reference room and open shelf room to the right. In the rear, to the right of the stack room, are the catalog cases, the cataloging room and the librarian's room. Floors are of oak and Italian tile, wainscoting and mop boards of marble, and furniture in heavy oak. The actual removal to the new building was accomplished in one day, although a day or two following was given to settling down. The library contains about 16,000 v., most of which have been collected since the destructive fire of September, 1899. The new building has a shelf capacity of 33,000 v.

New York City. University Club L. (Rpt. — year ending Feb. 28, 1902.) Added 608 (359 purchased at a cost of \$979.16); total 18,820. The new catalog is nearing completion. There have been reclassified and cataloged 6771 v., for which 9940 cards have been written. Among the notable accessions of the year was a set of the Walters Collection examples of "Oriental ceramic art."

Newark (N. J.) F. P. L. The library has established a duplicate collection of popular books, from which volumes are issued at a charge of one cent per day. It includes 170 volumes, and the books are in constant demand. All books in this collection have been also bought for the general collection.

The library has sent out to librarians, editors and college instructors throughout the state the following circular:

"In connection with our work with the schools we have been looking for literary material having to do with New Jersey—sketches of prominent men, stories of dramatic incidents, descriptions of interesting historical spots, etc., in prose or poetry. Thus far we have found very little indeed. Has none of New Jersey's history got into the field of belles lettres? Can you refer us to

stories, poems, biographical sketches, etc., in this field, especially such as are brief and told in a way which makes them interesting to young people? We do not wish a bibliography of New Jersey writings. We wish a list of things written about New Jersey which can properly be classed as 'literature.' Do you know of any?"

It may be of interest, in view of Gardner M. Jones' record of the librarians' conference of 1853 in May L. J., to note that the Newark library possesses W. F. Poole's copy of Norton's *Literary Register* for 1853. It is a presentation copy from Charles B. Norton, and contains the second series of articles on "American libraries," and the "List of libraries in the United States," based upon Jewett's report, published by the Smithsonian Institution.

Newton (Mass.) F. L. (Rpt. — year ending Dec. 31, 1901.) Added 2983; total 61,423. Issued, home use 160,935 (fict. 56.02%). New registration 1085; total registration 13,761. Receipts \$13,207.74; expenses \$13,175.80.

"The figures show a decrease in home circulation, in common with neighboring libraries, but we think that never has the reference library been used more." The Expansive Classification has been adopted for the reclassification of the library. The large and increasing collection of photographs is constantly in use, and considerable additions have been made to the collection of stereoscopic views.

Norristown (Pa.) Carnegie L. The decision of Judge Edwards in the suit brought by taxpayers of the borough of Norristown to restrain the borough school board from carrying out its acceptance of Mr. Carnegie's offer of \$50,000 for a library building, is outlined in the *Legal Intelligencer* of July 11. The injunction was asked on the ground that Mr. Carnegie's offer was worded as if made to a municipality and not to a school district, a point that the judge regards as "utterly untenable and a trivial technicality"; and that the levy of \$5000 guaranteed will increase the debt of the school district beyond the constitutional limit of two per cent., a contention upon which decision is also adverse. The ruling throughout supports the action of the school board and upholds the constitutionality of the act of June 28, 1895, "for the establishment of free public libraries in the several school districts of the Commonwealth, except in cities of the first and second class."

Orange (N. J.) F. L. The library is in serious straits financially, and, except for the action of the trustees, who on June 9 guaranteed funds to pay the salaries of the librarian and assistants during the summer months it would have been necessary to close the building. The closing of the library for an indefinite period was seriously considered at

the meeting. In the autumn an earnest effort will be made to secure endowment or to devise some means of stable support.

It is less than a year since the new library, built by Joseph W. Stickler, of Orange, at a cost of \$110,000, as a memorial to his son, was formally opened. It is one of the handsomest buildings in the Oranges, the property on which it stands has been owned by the library for many years, and nothing remains but to provide for its maintenance. The library contains about 17,000 volumes, and there is also the Daniel Addison Heald library of 1135 volumes, the William Pierson medical library, the collection of the New England Society and other smaller collections in the building. The running expenses are about \$5000 a year.

Pekin (Ill.) Carnegie L. The cornerstone of the new library building was laid with Masonic exercises on the afternoon of Aug. 19.

Philadelphia, Academy of Natural Sciences L. (Rpt., 1901.) The additions for the year were 6184, an unprecedented growth, so far as current accessions are concerned. 1472 v. were bound, "making a noticeable improvement in the library, especially in the department of periodicals. Only those who have been compelled to consult unbound sets of journals, the numbers unavoidably mixed and the indexes probably misplaced, can appreciate the comfort of working with volumes bound to date. Large appropriations for the work are still required, nearly 3000 volumes in the department of periodicals alone still requiring binding, but it is a cause of sincere congratulation that they will now be handled as rapidly as the necessary collation will permit." The total number of volumes in the library is given as 51,249.

The report gives an interesting review of the history of the library during its 90 years of existence, noting particularly its growth through gift and purchase. The first catalog was published at irregular intervals in the first four volumes of the *Journal* from 1817 to 1824, and manuscript hand list catalogs remained in use until 1885, when they were replaced by a card catalog. The present arrangement of the books "is practically what the present librarian inherited from his predecessors in 1862. It is far from meeting the requirements of modern library classification, but in practice it has been found to be not far short of what is wanted by the worker."

Philadelphia City Institute L. (50th rpt. — year ending March, 1902.) Added 1055; total 26,247. Issued, home use 48,324. No. visitors 86,280, a daily average of 307. Receipts \$7662.19; expenses \$4360.92.

Pomona (Cal.) P. L. Designs submitted by Burnham & Bliesner, of Los Angeles, architects of the Riverside Public Library, have been accepted for the new Carnegie building.

They call for a building 61 x 78, in the Romanesque style. The entrance will be on the west side in the center through a triple archway reached by broad steps and lighted by two handsome groups of lamps. Flanking the entrance are groups of three arched windows lighting the reference room on the left and the reading room on the right.

The administration of the library will be from a central octagonal room, lighted from overhead, in which the delivery desk will be situated. This room is entered from a vestibule, on the left of which is the office and on the right the general reading room in the southwest corner. In the northwest corner is the reference room, connecting with the stack room directly back and having a capacity of 20,000 volumes on one floor. Back of the delivery room is the workroom, with a directors' room above. In the southeast corner is located the children's room, from which opens a ladies' parlor. In the basement are a number of unfinished rooms for future use.

Port Jervis (N. Y.) F. L. The cornerstone of the new library building was laid on Sept. 1, with elaborate exercises.

Redding (Cal.) P. L. Work has been begun on a new library building, to be of sandstone and in the old Spanish mission style of architecture. It will contain also a mining bureau and museum, with exhibits of ores and samples from the mines of Shasta county. It will cost about \$10,000, and it is hoped that it may be completed by Jan. 1.

St. Louis (Mo.) Mercantile L. A. (56th rpt., 1901.) Added 5818; total 125,282, of which 2149 are duplicate or deposited collections. Spent for books \$7271.66. Issued, home use 111,115 (fict. incl. juv. 67.61 %), an increase of 8000 over the previous year. Attendance of members and visitors 180,090. Membership 3423, a net loss for the year of 50 members.

An extremely interesting report, in its clear and sensible review of the history of subscription libraries in general and the St. Louis Mercantile in particular, as affected by the development of free public libraries and the growing specialization in all branches of educational activity. The library was founded in 1846. At this time "there was no free library in the United States. Such public libraries as existed were maintained in part by membership fees and in part by private beneficence. The plan of these libraries was co-operative. It was thought that by putting into a common purse such money as would otherwise be spent by individuals for private collections, and by stimulating a taste for reading, through literary associations, debates, and a lyceum lecture system, the members of such a society would be mutually benefited, and in time the library would become valuable for purposes of research.

"Even in the palmy days of subscription libraries — before a free library was thought of

—there never was a time when any of them prospered on membership fees alone. Nothing of this sort can succeed financially, unless it be a mere circulating book shop, with no higher aim than to gratify the fad of the hour, regardless of the consequences upon public taste. And even so, there is no American city in which such an institution as Mudie's or Smith's of London has ever really succeeded. The American subscription libraries aimed at something higher than merely to gratify a taste for novel-reading. Every one of them was an educational force. Every one of them bought books that would be read by only a few of its members; and it bought expensive books of reference that could not circulate. More than this: it employed men or women competent to give advice to the members in their choice of books, and to show them how to use the best books to the best advantage. All this was beyond the field of circulating book shops. It cost money that membership-fees did not repay; and this money had to be raised by private subscription, lectures, fairs, and other expedients. But it was precisely because the mercantile libraries did strive to educate rather than amuse the public that they drew any aid from private beneficence.

"Subscription libraries in the United States continued to prosper until the free public library movement was well under way. Then their fortunes, one and all, experienced a sea-change. Competition between fee-charging libraries and free libraries was out of the question. Even had the resources of subscription libraries been equal to those of the free libraries, it is self-evident that the former must have lost heavily in membership. But the rivals were far from meeting on even terms as to endowment and income. Where the subscription library had thousands, the free library had hundreds of thousands."

Under the new conditions, two things were necessary to the success of a subscription library—good business management, and specialization. "In former years our institution was a library, an athenæum, a lecture-bureau, a museum of natural history and antiquities, a conservatory of music, and a museum of fine arts, all in one. It had no competitor along either of these lines; consequently every one in St. Louis who cared five dollars' worth for either of these interests was virtually obliged to join the Mercantile Library.

"Then, gradually, other institutes arose: an academy of fine arts, an academy of sciences, a university, various musical clubs, theatres, etc. Each of these, by specializing, outgrew us along its particular line. Many of our members left us because they could best pursue their studies, or find recreation, within other walls. We no longer drew from the whole population of the city. We abandoned the idea of collecting works of art, giving public entertainments, keeping up a chess-room, and so forth, and we concentrated our

energies upon the one object of building up a first-class library. We specialized; and our membership was specialized at the same time.

"Finally, to the honor of our city, a free public library was established, supported by library appropriations from the public purse and by munificent private gift. Its resources are vastly greater than ours. Again we must specialize; again concentrate our energies upon a narrower but higher object. Again is restricted the class of citizens from which we can draw members.

"It is precisely as though our institution had once been a common school—the only school in St. Louis—primary, high, collegiate, professional, all in one. Then other schools arose, graded and specialized according to the needs of a growing community. And our school grew with the city, specialized with the city, drew ever from a less and less proportion of the mass, but ever from a better selected class of the people, and finally became a university. Would you expect that university to have as many pupils as all the other schools put together? Would the measure of its usefulness be determined by the mere number of those within its walls?"

San Bernardino (Cal.) P. L. (Rpt.—year ending June 30, 1902.) Added 344; total 5485. Issued, home use 25,516 (fict. 16,067; juv. fiction. 5923). Membership 2387. Attendance 12,249 (Sundays 448). Receipts \$2244.21; expenses \$1569.52.

Sedalia (Mo.) F. P. L. (7th rpt.—year ending April 30, 1902.) Added 1063; total 4357. Issued, home use 35,749 (fict. 24,143; juv. 8056). a decrease of 4123, entirely in fiction. At the same time there has been an increase of 2501 in juvenile books and of 270 in non-fiction. Cards in use 1841. The number of new readers is about 12 per cent. of the total population of Sedalia. Receipts \$7729.30; expenses \$6683.67.

The library was opened in its new Carnegie building on Aug. 1, and this was naturally followed by a large increase in membership and in public interest. Since September, 1901, the library has been open on Sunday afternoons, from 2 to 6 o'clock, and the attendance has ranged from 25 to 100. A printed finding list is in preparation.

Springfield (Mass.) City L. Assoc. (41st rpt.—year ending May 6, 1902.) Added 7016; total 128,178. Issued, home use 203,845; through schools and volunteer branches 43,368; fiction 61.6 per cent., including juvenile. Books for children form about a third of the total circulation. Cards issued in new registration, begun Feb. 1, 1901, 10,635, of which 2171 are held by children.

As the report covers the period before the appointment of Mr. H. C. Wellman as successor to Mr. Dana, it was compiled by Miss Alice Shepard, first assistant. She says:

"The library has tried to keep itself on the material side cheerful and inviting, on the side of its staff informed and hospitable. As to its administration, it has ventured on such experiments as home delivery, duplicate collection, vacation reading of children, evaluation of novels by outside readers, the exhibition of appropriate collections, the gathering and distribution of pictures, the extension of the hours of opening and the relaxing of the rules of administration as the public come in contact with them, not thinking that all these new lines of work or new methods would of necessity be permanently successful, but believing that only by testing these things and others, and by the constant taking of the public into its confidence, can work into the full possibilities of its usefulness."

The home delivery plan, after a year's operation, has not proved wholly successful, but has been useful in increasing the number of cardholders. There has been a decided increase in the use of books by teachers and pupils in connection with their school work.

The classification of books appears to be carried out in a rather unusual way. "The best of all new books added from year to year and a selection of the more useful of those in the older parts of the library" are classified by the Cutter Expansive system and stand together on the shelves. At the same time "the books not likely to be used, but still of sufficient value to be added to the shelves, are frequently entered in the old system." The ultimate idea is that when, in the course of time, the library has a new building a stack or storage room will be reserved for the older and less used books, "while on open shelves in the library proper will be kept the live, working library, carefully and closely classified in accordance with the Cutter system." This may be attractive in theory, but it is likely to be less satisfactory in practice. The report, as usual, is interesting and well arranged.

Trinity College L. Hartford Ct. (Rpt. — year ending May 31, 1902.) Added 2482 v., 1095 pm., of which 483 v. were purchased; total 45,130 v., 28,185 pm. Attendance 3826, of which 685 was evening attendance.

Mr. Carlton's interesting report is mainly devoted to a review of the accessions of the year. The most notable addition was the gift in November, 1901, from Sydney G. Fisher, of 1044 volumes, dealing with English and American literature, European history and literature and economics. From George E. Hoadley were received nearly 300 v., including a fine set of the "Jesuit Relations," and the nucleus for an important collection of early American newspapers. Many of the books given by Mr. Fisher were used to build up a "standard library," freely accessible, and modelled upon the plan adopted in Providence. This "standard" collection is placed in the center of the reference room, and is made

up of "the best editions that the library possesses of the chief names in the literatures of Greece, Rome, England, France, Germany, Italy and the Scandinavian countries. On its practical side the collection thus becomes a departmental library for the work of the classical modern language, and English departments, and as such has been of constant use ever since it was arranged. On the other side it places prominently before the eyes of the student an attractive, tempting array of the world's best literature. His glance cannot stray in any direction without alighting upon some name forever famous, or upon some book that has helped to mould human thought or to stimulate noble action. If the student does no more than remember the names upon the backs of these books it will be a distinct addition to his intellectual equipment. Many of the undergraduates have gone much further, and this portion of the library has already become a favorite spot for those who have the time or inclination for general reading."

It is suggested that the library should undertake the publication of a series of bibliographical monographs, and for a first essay of the sort a "Bibliography of Trinity College" is recommended. Mr. Carlton states that he already has in manuscripts over 700 titles of books, pamphlets, essays, sermons, and magazine articles for such a record.

The Library of Congress printed cards have been adopted for the catalog, with excellent results. A strong plea is made for the employment of at least two student assistants, to aid in the clerical work of the library. The need of an endowment fund and a new building is also touched upon; "an income of \$10,000 and a building planned to hold 200,000 volumes will be a minimum requirement almost before we know it."

Announcement was made during the commencement exercises that the sum of \$2500 had been presented to the library by the alumni, to be known as the Samuel Hart Library Fund. Among the recipients of degrees at commencement was William Newnham Carlton, the librarian who received the honorary degree of master of arts, *honoris causa*.

University of Texas L. (Rpt. — year ending April 19, 1902.) Added, 2161; total 36,136. The services of a trained cataloger have made it possible to accomplish much needed work. In addition to instruction given to the library training class 5352 v. have been cataloged, shelf-listed, and arranged. The greatest need at present is a proper catalog.

The freedom of access to books, which has been the rule, has resulted in the disappearance of numerous volumes; "in view of this evil, it seems desirable that access to the books be restricted to those who really need to see the books in the shelves, and supply all ordinary calls by having students apply at

the loan desk." The appointment of three student assistants is urged.

Mr. Wyche, the librarian, gives in the *University Record* an account of the library. It has been made one of the depositories of the printed catalog cards of the Library of Congress. He says: "Just how to make the books do the greatest service now is one of our problems. The catalog adds much along this line. Our next need is in the way of reference work with the students, very few of whom understand the use of the catalog and the various reference books. A few explanatory talks on these subjects have been given to groups of students for several years. But this reaches only a small number, and not being intelligently followed up by those who attend, is soon easily forgotten. An increase in the staff is urgently needed, so that time will be left to meet the students personally when they come in to look up topics and assist them to find what they want. At present it is often only possible to point out the case in which books on a given subject are shelved and let the student find what he can."

Washington University L., St. Louis, Mo. The cornerstone of the Washington University Library building, which is to be used during the Louisiana Purchase Exposition as a meeting place for the various congresses, was laid on the afternoon of Saturday, Aug. 30. The cornerstone was laid by Frederick M. Crunden, librarian of the Public Library, who delivered the address of the occasion. The building in its longest dimensions is 258 x 144 feet. It is to cost \$250,000. The materials used in it are the same as those used in the buildings already constructed; that is, hammer-faced red Missouri granite laid in "broken-range rubble," with ornamental courses of Bedford stone. The style of architecture is of a later period of the Tudor-Gothic than is employed in the other buildings. In the library building there is an admixture of the Renaissance. Its most noteworthy feature will be an arcaded cloistered walk on the eastern façade, running the entire length of the building (258 feet).

Westminster, Mass. Forbush Memorial L. The new library building was dedicated on Aug. 22.

Wilmington (Del.) Institute F. L. (45th rpt.—year ending Feb. 1, 1902.) Added 7078; total 46,028. Issued, home use 203,890 (fict. incl. juv. 68.2%), of which 37.2% was issued from the children's room. "On analyzing the circulation of the two departments of adult and juvenile literature, it was found that fiction formed 78.8 per cent. of the former class and 67.67 per cent. of the latter." No account is kept of reference use. New registration 3509; cards in use 17,971. Receipts \$18,090.17, expenses \$17,901.10.

A compact and interesting report. Special

attention is given to the work of the children's room, and the circulation of books through the schools, where much has been done to make library privileges attractive and useful to the young people. At the Rockford branch a children's corner was installed, and the hours of opening were extended, with good results. A serious incident was the discovery in June last that mutilation and theft of library volumes had been going on for some time. The record of the case, with the connection of the offender, was given fully in these columns at the time. "A beginning has been made at replacement, but the task is a formidable one and requires much time and more money than can be spared from present book appropriations."

Woodstock, Vt. A free reading room for men and boys was opened in August. It is centrally located, in a room formerly occupied by the local savings bank, and is open from 9 a.m. to 10 p.m. daily. The general management is in the hands of a committee of two or three citizens.

York (Pa.) P. L. (Rpt., 1901-1902.) Added 529; total 5820. Issued, home use 9776. Cards in use 1855.

The library was closed, owing to a local epidemic of smallpox, from Feb. 24 to May 1, 1902.

FOREIGN.

Battersea (London, Eng.) P. Ls. (15th rpt.—year ending March 31, 1902.) Added 2255, of which 209 were gifts; total 50,776, of which 13,503 are in the ref. dept. Issued 405,971, of which 24,964 were drawn from the ref. dept.

The children's reading room at the central library was opened on Oct. 7, 1901, and has proved most successful.

Bergen (Norway) P. L. (Rpt.) The progressive spirit and the clear, vigorous style of Fröken Valborg Platou add greatly to the interest with which one reads her report. A marked increase of borrowers, a large circulation, a large attendance in the reading rooms, together with the ambitions which the city has for a new library building, point toward a successful year.

The circulation has reached over 100,000 volumes, the home use being over 80,000, and the reading room use over 20,000. The use of the reading room was as great as the space permitted, and under other conditions would undoubtedly have been doubled several times. There is no sign of children's work, and in the report on the reading room it is stated that "during the winter season a large proportion of the juveniles were denied entrance."

Statistics of borrowers indicate a large proportion of the lower middle classes as using the library. The percentage of fiction is given as 79. Among the 25 most popular authors

were 9 Norwegian writers, 6 English and American, 5 Danish, 2 German, 2 French and 1 Swedish. A supplementary catalog of the accessions since 1897 is reported to have been at that time at the printer's, and a subject catalog is in preparation, but with the present staff cannot be completed in the near future.

The library is located on one of the popular thoroughfares, in a building over the meat market. The shelves are greatly overcrowded, which makes the need of a library building pressing. A volunteer committee has formed and collected over 60,000 kroner for this purpose. The committee also urges action by the municipality, "in the trust that the 28 previous years offer sufficient guarantee that a practical and careful administration in the future as well will claim a place for the library among the city's charitable and educational institutions." K. H. J.

Bodleian L., Oxford. At the Bodleian tercentenary in October the United States will be represented by James L. Whitney, librarian of the Boston Public Library, and delegates from Harvard, Cornell, University of Michigan, Yale, Columbia, and Princeton will also attend. Canada will have two delegates, the Australasian universities four, and India nine. The Bibliothèque Nationale, Laurentian Library, Biblioteca Estense, National Library of Naples, Royal Library of Berlin, and many other libraries will be represented.

Fulham (Eng.) P. Ls. (14th rpt.) "We have ordered the suppression of betting tips and prices in the papers provided for public use. As a result, order and quietness are more easily maintained in the mornings and, unexpectedly enough, the attendance has at the same time increased."

Kyoto (Japan) Imperial University. The library of the university is described in the official "Calendar" for 1901-1902. It comprises four apartments—reading-room, smoking-room, office, and book-stack. The reading-room accommodates 160 persons, and has also a card catalog. A separate stack building is needed, and will be erected at no distant date. The regulations governing use of books are extensive, covering both home and reading-room use. Professors and other members of the university staff may borrow from 5 to 30 volumes at a time, according to their grade. The number of volumes being estimated by the standard of books bound in European style, three volumes bound in Japanese style, and one sheet of maps, pictures, and the like in the form of a chart, or one case of the same in the form of a case, are counted as equal to one volume in European style.

Liverpool (Eng.) P. Ls., Museums and Art Gallery. (49th rpt.—year ending Dec. 31, 1901.) The total issues of bound volumes for the year were 1,630,292, of which 1,060,-

472 were drawn from the lending libraries. The issue of periodicals, magazines, etc., reached a total of 712,321, and there were 652,465 newspaper readers.

The experiment of placing a generous selection of reference works and new books for free access in the Picton reading room "has given great satisfaction to readers and no less satisfaction to the management, inasmuch as no losses as yet have been sustained of these particular books." There is a growing use of the reference library.

From the lending libraries there was a circulation of 889,511 v. for home reading, of which nearly half were fiction and 20,000 books for the young. 21,659 v. of music were issued, an increase of over 2000. There were 116 free lectures given under the auspices of the library, which were attended by 54,068 persons. "The provision of books for blind readers was inaugurated in connection with these libraries so long ago as 1859. Since that date considerable additions have been made, both by gift and purchase, to the collection, which is now probably the largest in any public library in the country."

Montreal, Can. Now that the offer of Mr. Carnegie to give \$150,000 for a public library has been accepted, the method of making it effective still comes up at intervals for discussion in the city council. The great difficulty is the apparent impossibility of harmonizing English Protestant and French Catholic ideas as to the character and selection of books. A by-law was recently drafted and passed by the finance committee of the city council which provides that the library shall be known as "The Free Public Library of Montreal," shall receive an annual appropriation of \$15,000, and shall be controlled by the finance committee, under the direction of a librarian. It also provides that "in order to give a moral and orthodox character to the library, three censors, who shall be laymen, shall be appointed every two years in the month of June, one of whom shall be named by the council, one by the principal of McGill University, and one by the vice-rector of Laval University. And in the event of the two latter refusing or neglecting to make such appointment, during said month of June, the appointments shall be made by the council." The by-laws were shelved when submitted to the city council.

The point of view of the opponents to the library is set forth in a recent issue of *La Verité*, which says:

"We are threatened with a Carnegie library. We all know that Mr. Carnegie, an immensely rich Scottish-American, has a mania for founding libraries. He has founded a large number in the United States; and now he is beginning operations in Canada, unfortunately with success. Indeed, the city council of Montreal has, by a large majority, just accepted an offer of \$150,000 made by Mr.

Carnegie, on condition that the city shall add to that sum an annual subsidy of \$15,000 in perpetuity, for a public library. Now a public library is an excellent thing or a very bad one, just as it is rightly or wrongly made up. A public library, opened indiscriminately to everybody, directed by incompetent, negligent, or unscrupulous persons, becomes, in a short time, and infallibly, a source of awful corruption, particularly for the young. Naturally, the public library which it is proposed to found in Montreal will be withdrawn from all religious control; for unfortunately they are unfortunately started on that pathway. We may, therefore, predict, without fear of being mistaken, that the taxpayers of Montreal will have to pay \$15,000 a year to keep in their midst a source of contagion a thousand, a hundred thousand times more dangerous than the worst epidemic of small-pox."

New South Wales P. L., Sydney. (31st rpt.—year ending Feb. 20, 1902.) Added 2487; total 151,141. Issued from lending branch 133,215 v. to 8821 borrowers; fiction forms 15.4 per cent. of the total volumes and 57.4 per cent. of the total issues. Attendance at the reference library was 199,592, an increase of 14,533 over the previous year. During the year 225 boxes, containing 10,188 v., were sent to 122 country centres; 198 v. were also lent to 22 individual students in remote country districts.

It is urgently recommended that government take action upon the selection of a site for the proposed new building, thus ensuring the bequest of the Mitchell collection. Appended is an extremely interesting outline of the requirements desired in such a building, calculated to provide for a twenty years' growth, and to allow of expansion for fifty years.

The D. C. has been adopted for the reclassification of the collection.

Newtown P. L., South Wellington, New Zealand. A series of free lectures are being given in connection with the library which are well attended and prove very popular. The series opened on May 28, with a lecture by J. W. Joynt on "The rise of the great nations of Europe," two lectures being given in June, July, August, and September, and the last one on October 1. The subjects dealt mainly with literature, natural science and history.

Westminster (London, Eng.) P. Ls. (Rpt. 1901-02.) The report covers the activities of the five public libraries administered under the direction of the Public Libraries Committee of the City of Westminster. The accessions are given as 4144; total 102,140. Issued for home use 277,970; ref. use 157,472. Estimated total attendance 2,702,000. The reports of the separate libraries follow the general summary.

Gifts and Bequests.

Canton (O.) P. L. By the will of Mrs. Katharine Barron Aultman, of Canton, the library receives a bequest of \$25,000.

Carnegie library gifts.

Dawson, Alaska. Aug. 12. \$25,000.

The following are reports for Great Britain:

Battersea, London. June. £15,000. Accepted.

Birmingham, Eng. June 17. £3000 for suburb of Selly Oak.

Brentford (Eng.) F. L. July. £5000.

Fenton, Eng. July. £5000.

Finsbury, London. July. £13,000.

Grays, Essex, Eng. July. £3000.

Hammersmith, London. July. £10,000.

Kettering, Eng. June 12. £8000.

Larne, Irel. July. £2500.

Londonderry, Irel. July. £8000.

Maidenhead, Eng. June 20. £5000.

Mansfield, Eng. July. £3500.

Monterose, Scotl. June 9. £7500.

Northampton, Eng. June 23. £5500.

Paddington, London. July. £15,000.

Rawtenstall, Eng. July. £6000.

Rushden, Eng. July. £2000.

Stirchley, July. £3000.

Woolwich, London. July. £14,000.

Workington, Eng. June 5. £7000.

Librarians.

FARR, Miss Mary P., has undertaken the cataloging of the recently established Public Library of Derby, Ct.

GRAY, Louis Freeman, formerly assistant librarian and executive officer of the Boston Public Library, died in Boston on August 24. Mr. Gray was born at Blue Hills, Me., in 1860. After the Civil War his family removed to Boston, where he attended the Franklin School, and later entered Harvard. After leaving Harvard he joined the staff of the Public Library, of which he was a member for several years. For some years past he had been engaged in newspaper work.

JONES, Lynds Eugene, who under the direction of Frederick Leypoldt compiled "The American catalogue" for 1876, died at his home in Brooklyn on August 3. Mr. Jones was born in Brooklyn in 1853. He was engaged in newspaper work before his connection with Mr. Leypoldt in 1875, and was later connected with the publishing trade. Since 1897 he had been senior member of the board of examiners of the New York Civil Service Commission. Mr. Jones attended the first conference of the American Library Association, held in Philadelphia in 1876, and was a member of the committee appointed to formulate the "A. L. A. rules" for cataloging. He had edited and compiled various manuals and handbooks.

LAIDLEY, Miss Caroline S., for fifty-two years librarian of the Northampton (Mass.) Public Library, died in that city on August 19 after an illness of five weeks. Probably no other woman librarian in the country has held as long a term of continuous service. Miss Laidley was the daughter of George and Marian Laidley, early Scotch settlers in the Connecticut valley, and was born in Northampton sixty-eight years ago. At the age of seventeen she became librarian of the local Young Men's Institute, with a collection of about one thousand volumes. The library was first housed in a small room in the city hall; in 1857 a second room was added; and in 1874 it was transferred to the Clarke memorial building, erected at a cost of \$75,000, partly by endowment and partly by subscription. At the present time the collection numbers about 32,000 v. Miss Laidley was a member of the Western Massachusetts Library Club. She was regarded as an authority on matters relating to local history and genealogy.

MEYER, Henry C., for thirty years a member of the staff of the Cincinnati (O.) Public Library, died in that city on August 11, after an illness of two months' duration. Mr. Meyer was born in Germany in 1844, and came to the United States early in life. He was at New Orleans when the Civil War broke out, and served in the Confederate Army. After the close of the war he came to Cincinnati, and in 1872 was appointed assistant in the Public Library, where for many years he had charge of the reference department. Mr. Meyer's wife died several years ago.

STOCKWELL, George W., New York State Library School, class of '95, for three years librarian of the Westfield (Mass.) Athenæum, has been appointed librarian of the Public Library of Parker, South Dakota. Mr. Stockwell is a member of the A. L. A. and of the Massachusetts Library Club, and was president of the Western Massachusetts Library Club during 1901-2.

TYLER, Arthur Wellington, of Plainfield, N. J., formerly of Branford, Ct., and Wilmington, Del., has been appointed assistant librarian of the Public Library, Washington, D. C., and entered upon his duties the 1st of September.

WAIT, Miss Marie F., formerly librarian of the New Jersey Historical Society, has accepted the position of librarian of the Longstreet Library, Peddie Institute, Hightstown, N. J.

WILLIAMS, Hugh, of the Catalogue Division of the Library of Congress, died at his home in Cleveland, O., on August 18. Mr. Williams was a graduate of Adelbert College, of the New York State Library School (B. L. S., class of '98), and an M. A. from Co-

lumbian University. He was appointed to the staff of the Library of Congress in June, 1898, and had been since then instructor in cataloging at Columbian University Library School, and secretary of the Library Association of Washington City. A bibliography prepared by Mr. Williams on "College libraries" was published as a bulletin of the New York State Library School; and Theodore E. Burton's recent book, "Financial crises," contained a bibliography of the subject by Mr. Williams.

Cataloging and Classification.

CATALOGUE OF THE PUBLIC DOCUMENTS OF THE 55TH CONGRESS, and of other departments of the United States, for the period from July 1, 1897, to June 30, 1899 [being the "Comprehensive index" provided for by the act approved January 12, 1895]; prepared under the supervision of the Superintendent of Documents, Government Printing Office, Washington, Gov. Print. Office. 1901 [1902]: 1069 p. 1. O.

This immense volume is the fourth in the series of "Document catalogs," and is an addition of the greatest value to the equipment of indexes and guides to our public documents that is gradually being developed through the work of the Office of Documents. It records in one alphabet the documents issued during the three sessions of the 55th Congress, a plan much more convenient to the user than the usual separate record for each session, though the great bulk of the volume resulted in considerable delay in publication. The style of preceding volumes is followed, in abbreviations, entries, and general plan. The catalog was begun under the direction of Miss Mary A. Hartwell, and finished under that of Miss Alice Fichtenkam.

The FITCHBURG (Mass.) P. L. *Bulletin* for September has a good classed reading list on "Municipal affairs."

GLASGOW (Scotland) P. Ls. Index catalogue of the Gerbals District Library. Glasgow, 1902. 24+455 p. sm. D. 8d; pap., 4d.

A compact, well printed dictionary catalog, containing much analytical work, and sparingly annotated. It is prefaced by a full descriptive introduction, and a table of the subject-headings used, which in the main follow the D. C.

PLAINFIELD (N. J.) P. L. Class list no. 2: history travel, and description. August, 1902. 4+78. p. O.

A well-printed D. C. list.

CHANGED TITLES.

"The Ulster guard [20th N. Y. State Militia] and the War of the Rebellion," by Theodore B. Gates, was published under the above title in 1879, and again in 1884 from the same plates, under the title "The war of the Rebellion, with a full and critical history of the first battle of Bull Run," etc., etc.

FULL NAMES.

Supplied by Catalogue Division, Library of Congress.

Allen, Gardner Weld, 1856- (tr. of The neuroses of the genito-urinary system in the male . . . by Dr. R. Ultzmann);
 Ames, Gaston William, 1857- (Gaston Griffin; a country banker);
 Andrews, Hiram Bertrand, 1867- (Handbook for street railway engineers);
 Asch, Julius, 1838- (The Jew of the present period);
 Brant, James Daniel, 1853- (Infinitives);
 Briney, John Benton, 1839- (The form of baptism. . . .);
 Brown, Christian Henry, 1857- (The optician's manual. . . .);
 Brown, George Washington, 1820- (Reminiscences of Gov. Robert J. Walker);
 Brown, Mrs. Harriet Adelaide, 1847- (Dress-making, its science and art);
 Caffin, Charles Henry, 1854- (American masters of painting. . . .);
 Cobb, Sanford Hoadley, 1838- (The rise of religious liberty in America);
 Cox, Joseph Abram, 1858- (Practical paragraphs for patients and physicians);
 Darby, James Ezra, 1856- (An analysis of the Acts and Epistles of the New Testament);
 Dresser, Frank Farnum, 1872- (The employers' liability acts and the assumption of risks in New York, Massachusetts, etc.);
 Emery, Mabel Sarah, 1859- (Russia through the stereoscope. . . .);
 Faust, Oliver Cromwell, 1859- (The piano-forte tuner's pocket companion);
 Haaren, John Henry, 1855- (Heath's graded spelling book);
 Hazen, John Munger, 1838- (Railway contractor's handbook);
 Heath, Herbert Milton, 1853- (Laws of Maine concerning business corporations. . . .);
 Ingraham, Charles Anson, 1852- (Songs of all sorts);
 Kruger, Frank Philip, 1878- (The so-short system of phonic shorthand. . . .);
 Lange, Heinrich Carl, 1842- (Feld und wiesenblumen);
 Loux, Charles William, 1868- (White ribbons—temperance verse);
 Marsh, George Cook, 1861- (A singular will);
 Mets, James Andrew, 1832- (Naval heroes of Holland. . . .);
 Morse, Hiram Gardner, 1832- (Robert Louis Stevenson as I found him);
 Newell, Wilbur Charles, 1859- (The life worth living);

Page, Ernest Clifford, 1862- (Page's Nebraska digest);
 Parsons, William Franklin, 1834- (Parsons' hand book of business and social forms);
 Roddy, Henry Justin, 1856- (Elementary geography);
 Selover, Arthur William, 1871- (The negotiable instruments laws. . . .);
 Smith, Curtis Pendleton, 1863- (Texas notarial manual and form book);
 Snyder, William Lamartine, 1848- (The notaries' and commissioners' manual. . . .);
 Trask, Robert Dana, 1852- (Human knowledge and human conduct);
 Vincent, Edgar La Verne, 1851- (Margaret Bowlby).

Bibliography.

COLONIAL GOVERNMENT. Reinsch, Paul S. Colonial government: an introduction to the study of colonial institutions. (The citizens library.) New York, Macmillan Co., 1902. 10+386 p. 12°.

The several chapters are followed by bibliographies of considerable extent and importance.

CURVED SURFACES. Gauss, Karl Friedrich. General investigations of curved surfaces of 1827 and 1825; tr. with notes and a bibliography by James Caddell Morehead and Adam Miller Hildebeitel. [Princeton.] N. J., Princeton University Library, 1902. c. 6+126 p. Q. \$1.75 net.

The 10-p. bibliography is limited to books, memoirs, etc., which use Gauss's method, or deal with the general theory of surfaces.

ELM LEAF BEETLE. Felt, Ephraim P. Elm leaf beetle in New York state. New York State Museum, bulletin 57, Entomology 15. 2d ed. 44 p. pl. il. O. 15 c.

The bibliography covers 7 pages (p. 30-37).

FRANCE. Molinier, Aug. Les sources de l'histoire de France. I: Epoque primitive, Mérovingiens et Carolingiens. Paris, Picard et fils, 1902. 8+288 p. 8°. 5 fr.

MISSISSIPPI. Mississippi Historical Society. Publications, vol. 5; edited by Franklin L. Riley. Oxford, Miss., for the Society, 1902. 394 p. 8°.

This volume contains the report of the Mississippi Historical commission, created by legislative act of March 2, 1900. Among the divisions of the commission's report are "Manuscripts, papers, and documents pertaining to Mississippi in public depositories beyond the state," "Manuscripts, papers, and

documents in public depositories within the state," "Manuscripts, papers, and documents in private hands," "Aboriginal and Indian history," "Points and places of historic interest in Mississippi." To the first division, "Public depositories beyond the state," Prof. James M. White contributes the section on Libraries and societies (pp. 75-117), and to the second division Prof. James M. White and Franklin L. Riley, Ph.D., contribute a similar section (pp. 169-227). These reports from libraries and societies are very unequal in their merit, as is to be expected where so much depends on the co-operation of so many institutions. In some instances there is only a brief paragraph, while in others there are pages of titles of works contained in the several libraries on Mississippi.

QUAKERS. Myers, Albert Cook. Immigration of the Irish Quakers into Pennsylvania, 1682-1750. with their early history in Ireland. Swarthmore, Pa., The author, 1902. 22+477 p. 8°.

The annotated bibliography of 11 pages contains a few annotations. The printed sources take up 7 pages; the manuscript sources 4 pages.

RENAISSANCE. Einstein, Lewis. The Italian Renaissance in England: studies. (Columbia University studies in comparative literature.) New York, The Columbia University Press, 1902. 17+420 p. 12°. Pages 391-409 are bibliographical.

SAMMLUNG BIBLIOTHEKSWISSENSCHAFTLICHER ARBEITEN; herausgegeben von Karl Dziatzko. 15 heft. Beiträge zur Kenntniss des Schrift.-Buch-und Bibliothekswesens. vii. Leipzig, M. Spirgatis, 1902. [4], 113 p. 6 m.

Besides Konrad Haebler's contribution on Spanish bibliography, noted elsewhere, the volume contains a list by Max Spirgatis of English book titles in Drandrius' "Bibliotheca exotica. Francof. 1625." This work is a list of French, Italian, Spanish, English, Dutch, and Hungarian books offered for sale at the Frankfort book mart. The English list covers the years 1561-1620, and is reprinted by Spirgatis with reference to Bullen's "Catalogue of [English] books in the Library of the British Museum . . . to the year 1640," and Arber's "Transcript of the registers of the Company of Stationers of London, 1553-1640." There is also the first instalment of a bibliography of printed university registers, by W. Falckenheimer, comprising the German registers, and the editor's critical examination of some points in Schwencke's "Untersuchungen zur Geschichte des ersten Buchdrucks." A. S. J.

SCOTCH-IRISH. Hanna, C. A. Scotch-Irish; or, the Scot in north Britain, north Ireland and North America. New York, Putnam, 1902. 2 v., 8°, net, \$10.

Contains a bibliography, v. 2, p. 531-551.

TEUTONS. La Saussaye, P. D. Chantepie de. The religion of the Teutons; from the Dutch by Bert J. Vos. (Handbooks on the history of religions.) Boston, Ginn & Co., 1902. 7+504 p. 8°.

Pages 417-463 are bibliographical. The bibliography is classified and extensively annotated.

Anonyms and Pseudonyms.

The following are supplied by Catalogue Division, Library of Congress:

Ambiguist, An, pseud. of John Luther Kraber, "Ambiguities."

Argyle, Harvey, pseud. of McIntire, John Jackson. "As I saw it . . . stories illustrated."

Aston, MacKay Bernard (1867-), author of "Correlation of history, geography and literature."

Deveron, Hugh, pseud. of Huger, Arthur Middleton, 1842- "Songs of the Sahnagnas."

Gallus, Arthur, pseud. of Wisner, Arthur, 1847- "Emma Calvé; her artistic life by A. Gallus. . ."

Monroe, Forest, pseud. of Wiechmann, Ferdinand Gerhard, 1858- "Maid of Montauk."

Trevert, Edward, pseud. of Bubier, Edward Trevert, 1858- "How to build dynamo electric machinery."

Wayland, Eugene Clarence, is the author of "The American transition."

Humors and Blunders.

THE LIBRARY GIRL.

A light to guide through learning's fogs
Is the girl of catalogs.

She will lead one back to Cæsar,

Ptolemy or Ebenezer,

To facts and things long prehistoric,

Whence came clams, why paregoric;

Tell why dogs, not ducks, have babies,

Hens have eggs instead of habies,

Knows the poets, can rehearse

All their naughty things in verse,

Knows who won the star and garter,

Who the tyrant, who the martyr,

In the whale what Jonah's menu,

From what type of monkey came you;

In all the range of human knowledge,

From protoplasm down to porridge,

On ancient lore or classic wit,

For an authority, she's "IT."

—The Oracle.

"METALLIC *versus* WOODEN FURNISHINGS"

is the title of an attractive little Brochure lately issued by us. We shall be pleased to put it into the hands of Librarians or Trustees interested in the **best** fittings for library buildings.

The growth in these lines has been so rapid that many officials are not yet conversant with their merits, but the question of Complete Furnishings for any modern library will not have been exhausted without an examination of these fixtures.

The very large demand for them for Commercial uses has indicated clearly their adaptability to library requirements ; an indication substantiated by the increasing call for them for this purpose.

Our **Steel Card Index Drawers** are a prominent feature of this line, among whose merits may be mentioned—Durability, Incombustibility, Freedom from Vermin and Cleanliness.

Copies of our "Complete Library Catalogue" or "Library Plans" also sent on application.

JAMESTOWN, N. Y.

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

BENJAMIN FRANKLIN STEVENS

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,
4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders or by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Subscriptions to Foreign Periodicals.

LIBRARIANS and others are requested to note the following prices of Annual Subscriptions to English Periodicals, which include postage from our New York Agency. The service will be found most punctual and reliable.

Academy, \$3.75; *Analyst*, \$2.50; *Annals of Botany*, \$7.67; *Annals and Magazine of Natural History*, \$8.75; *Antiquary*, \$1.70; *Architect*, \$5.25; *Army and Navy Gazette*, \$7.12; *Art Journal*, \$4.75; *The Artist*, \$3.25; *Athenaeum*, \$3.70; *Badminton Magazine*, \$3.40; *Banker's Magazine*, \$5.48; *Black and White* (incl. THE LITERATURE OF AMERICAN HISTORY

EDITED BY

J. N. LARNED

WITH the editorship of Mr. J. N. Larned, forty scholars and critics, each an acknowledged authority in a particular field of American history, have selected the 4000 works here presented, and give them brief descriptive and critical notes, so that for the first time the literature of American history is charted for the behoof of the reader and student, with frank and impartial criticism of books which do not seem to deserve the acceptance they enjoy. The chief historical societies of America are named, together with their most important issues. The sources of American history are outlined by Mr. Paul Leicester Ford, so that the student may pass directly to first-hand authorities and pursue a special research as far as he pleases. Much of the best biography, many of the most instructive and entertaining works of travel, of ethnological investigation, of scenic and scientific description of America are included. Canada, the West Indies, Central and South America have departments.

Professor Edward Channing, of Harvard University, appends lists for A SCHOOL LIBRARY, A TOWN LIBRARY, A WORKING LIBRARY.

This GUIDE will not become out of date. This autumn will be issued a supplement, edited by Mr. Philip P. Wells, Librarian of the Yale Law School, in which will be offered a selection from the literature of 1900 and 1901, with notes. Thereafter this continuation will appear at intervals to be duly announced. (Terms on application to the Secretary of American Library Association Publishing Board, 10½ Beacon Street, Boston, Mass.)

*One volume. Royal octavo, cloth, \$6.00 net, postage 32 cents;
sheep, \$7.50; half morocco, gilt top, \$9.00.*

Librarians and others will do well to communicate with us before placing their orders.

The latest publications of all the leading American and English publishers are kept in stock, thereby enabling us to fill orders with utmost despatch.

Special attention is asked to our facilities for importing books free of duty.

Correspondence solicited. Send for catalogues and specimen copy of **THE BOOK BUYER**, a monthly magazine devoted to books, authors, and literary affairs.

HENRY MALKAN, LIBRARY . . . DEPARTMENT

Now that the season is about to open for the purchase of Library books, we wish to call the attention of Librarians to our exceptional facilities for filling orders of all kinds, from the smallest "pick-up" to the complete furnishing with books of extensive Libraries, amounting to thousands of dollars.

We are in a position to sell regular or current stock considerably lower than other houses, and new stock at the lowest prices. Subscription books are our strongest point, if indeed it is possible to make a distinction in our well equipped and evenly balanced establishment.

Throughout the summer we have laid in a very fine stock of the most desirable books, and can safely state that there is not a better or more diversified stock in any book store in this city.

We mention a few titles. Note character of the books, and prices quoted :

Special Notice to Librarians.

British Catalogues of New and Old Books posted by every mail.

Books sent by Mail, Parcel, or as Heavy Consignments.

Advance Auction Catalogues of Rare Book Sales.

Newspapers, Scientific Serials and Periodicals supplied promptly by mail or otherwise.

Librarians who require Books from Great Britain are advised to lose no time in stocking their shelves.

British published Books are becoming daily scarcer, owing mainly to the enormous increase of Public Libraries, and the widely spreading demand for British published Books.

The following opinion was recently received from a correspondent:

"For some five or six and thirty years you have given us a service which in point of intelligence, accuracy and promptness could not in my opinion be surpassed. We have never had occasion to correct an account or to complain of delay. The various duties of collecting blue-books, pamphlets, continuations, rare books, etc., and of binding and shipping, have been discharged with energy, rapidity and economy. Your advice has always been sound and to our advantage; and I must add that my most cordial acknowledgment is due to you for your constant patience and courtesy in the tasks I have so often gratuitously imposed on you—in *re*, case of public men visiting London and requiring assistance and advice. Wishing you every success in your affairs."

EDW. G. ALLEN believes that he may fairly claim to be a Benefactor to the Intellectual Life of America, having, during his long experience of Library Work, shipped to American Libraries over two million Books, of course involving a very large expenditure of money.

1856—1902.

E. K. Rossiter, Architect.

THE GLEN HAVEN (N. Y.) PUBLIC LIBRARY AND SCHOOL.

THE LIBRARY JOURNAL

VOL. 27.

OCTOBER, 1902.

No. 10

At the Lake Placid meeting of the New York Library Association the subject of library training was much in evidence, and the discussion showed strongly the general feeling that there is need of more uniformity and a required standard in this particular branch of library effort. It is not the work of the established schools, nor of summer or other courses conducted under competent leadership, that is called in question; but the influence of various agencies of instruction in librarianship—so-called schools and semi-private courses—that have multiplied within recent years and that are known to all familiar with library training to be unworthy of the name. The direct question was asked, Is there anything that librarians as a body can do to save persons who desire to fit themselves for librarianship from applying to inferior sources of so-called training, and also to protect librarians and library boards from being imposed upon by certificates and diplomas from such sources?—and it met with the prompt suggestion that “a courageous committee” be appointed to report fully upon existing agencies of library training, from the point of view of their practical efficiency and the character of their instruction. Such a committee has been appointed by the New York association, following the example set a month before at the Western Library meeting in Madison. The results of their labors will be awaited with interest; their task is not an easy one, but if wisely carried through it will be an important move in the right direction. This whole subject of library training is one that especially demands the attention of the national body of librarians, and until it is taken up in earnest by the A. L. A. Committee on Library Training it will not have been put upon its proper plane.

It is worth while for librarians to consider carefully the conditions indicated in the presentation elsewhere of “the other side” of the

desk assistant's work. We have heard much—and rightly—of the importance of desk work, as the center of contact with the public, of its defects, and of its possibilities; but there has been too little insistence upon the fact that in the average public library the conditions under which this service is rendered are such as to militate against its best effectiveness. Indeed, in planning the routine of library administration the librarian is too apt to look upon the human machine as wholly mechanical, forgetting that the service he desires is one that machinery alone cannot give. Too unyielding a routine, too exacting an arrangement of hours, these, as much as if not more than the low rate of salaries, are mainly responsible for inefficient or unsuitable library assistants. It is quite true that there is a certain economy in time in keeping one person at the same work so long that it becomes in a way automatic, and perhaps there is less liability to mistakes, up to a certain point; but in desk work, at least, consideration for the assistant and for the public would dictate change of occupation once in two hours. Those of us who in times of mental fatigue have allowed ourselves to settle down to routine work in sheer absence of energy, know how more than stupefying routine work is, and how little interest we are able to take in it; and routine work of this sort is very far from being *service* to the public.

IMPROVED hours are really more important than improved salaries in their relation to the assistant's work. The break at noon should always be an hour at least, and for those who cannot easily go home for luncheon there should be a pleasant room, conveniently equipped, giving in itself a complete change of atmosphere. Such a change twice a day, at luncheon and at dinner, has the same effect throughout the year as the vacation change of surroundings once a year. The harness does not rub constantly in the same place;

it is eased a little. If liberal hours for meals are important, the time at which meals are taken is no less so. To keep any one from eight o'clock until two without eating, or to require one's lunch hour to be at eleven a.m., or dinner at five p.m., with a long evening's work afterward, is bad hygiene and bad policy, and should be avoided. More things can be done with time schedules than are dreamed of by the casual hand at schedule-making, if the welfare and convenience of the assistants are really a part of the matter at heart; and the number of hours per week need not be lessened, if it is a reasonable number of hours to begin with. So far as salaries are concerned, it may be fair to pay a low salary to an untrained beginner, if she has at the same time some opportunity to improve herself and prepare for promotion; but to take all her time and all her vitality in return for the small salary is not fair at all. One can get plenty of library machines; but when one desires live people, inspired to do good and always better work, there is only one way of securing them—reasonable hours, occasional change of occupation, opportunity to improve, and fair payment. The assistant who under these conditions regards her work as a "soft snap" will soon be detected, and superseded. The majority, under such a régime, would take a new interest in their work and be what they were intended to be, and what many of them, without such a régime, still faithfully try to be—assistants.

Communications.

INFORMATION DESIRED REGARDING BOOKS FOR THE BLIND.

THE Library of Congress is desirous of obtaining information regarding the books for the blind, from the various libraries throughout the country. This information should cover the number of books, music and magazines in the different systems, also number and class called for most frequently; the number of blind persons using the library, and if readings and musicales are given, the number in attendance.

Other information of like character will be appreciated. **ETTA JOSSELYN GIFFIN,**

In charge Reading Room for the Blind.

LIBRARY OF CONGRESS, }
Washington, D. C. }

INFORMATION ON LOUISIANA GENEALOGY.

MANY libraries devote large space to genealogy, in which information respecting Louisiana must of necessity be deficient on account of the lack of books on the subject. There are two sources of information, one "Creoles of St. Louis" by Paul Beckwith, the other a series of articles published by Chas. Patton Dimitry in the *Times-Democrat* of 1892. These have been indexed, and we shall be happy to forward copy of the index to any library desiring it, and especially to any library possessing a file of the paper of that year.

Since we have a file here, and there is also one in the city archives it will always be possible to find an amanuensis who can copy any parts specially needed.

THE BLOOD MEMORIAL LIBRARY OF WINDSOR, VT.

ON page 116, second column, of the report of the Magnolia Conference there is an erroneous item about "The Mary L. Blood Memorial Library." The item was published in substantially the same erroneous form some months ago in the L. J. This "Blood Memorial Library" is not in Windsor, but in *Brownsville*, formerly called West Windsor, and the gift referred to ought not to be referred to the Library of the Windsor Library Association, which was founded in Windsor nearly 20 years ago and now has nearly 10,000 volumes.

FIRST ISSUE OF THE "REVIEW OF REVIEWS."

SEVERAL requests for information regarding the first issue of *The Review of Reviews* in America have been received. The Library of Congress is in receipt of a letter from the publishers advising that the first purely American number of *The Review of Reviews* published and printed in this country was April, 1891. January and February-March (double number) were reprinted here, the reading matter being the same as the English edition. Special covers bearing the imprint of "The Critic Company, New York," however, appeared upon the numbers circulated in this country as early as September, 1900, volume 2, no. 1.

SOME GENERAL RULES AND SUGGESTIONS FOR A LIBRARY STAFF.

BY WILLIAM H. TILLINGHAST, *Assistant Librarian of Harvard College.*

To achieve good results the administrative force of a library, though it consist of but one person, must have a reasoned and approved habit of work. Where the force is small this habit of work is not commonly formed into a code of rules, but as the force grows in number the introduction of division of labor, the multiplying of detail, the greater diversity of individuality, the increasing remoteness of the subdivisions of the staff from one another and from the center of control, the frequency of change in personnel, combine to make necessary a definite statement of the customs and methods of the library that shall serve as a guide and standard with which every member of the force can become familiar. Under such conditions the introduction of written rules becomes a requirement of the business, in no way casting an imputation upon the staff. Indeed it is not to be supposed that any body of library workers will partake of that sensitiveness in regard to rules or laws which is so sure a sign of immaturity.

In Harvard College Library tradition had long taught what was permitted to the staff and what not, just as tradition had taught the methods of work—how to enter this or that, where to insert or where omit a comma, or when to make a subject entry in the author catalog—though tradition has sometimes been troubled to explain the why of its dictums to a new assistant of an inquiring turn, or to set forth satisfactorily by what steps a "blue" card has come to be, occasionally, one with a red line across it and a "red" card one with no line at all. In the process of compiling rules for cataloging and for other branches of the work it appeared that there were certain rules binding on all members of the force which might to advantage be formulated apart from the special rules, and certain suggestions about methods which might well be joined with them. These rules and hints were therefore set down, submitted to the heads of departments and to the more experienced assistants, and thus

gradually extended to cover the more important part of our work. Growing in this manner by accretion and representing two differing aims, the fact that they were not intended for publication hardly needs mention. Notwithstanding their defects, since other libraries have similar rules and perhaps the same need of codifying them, I am glad to avail myself of a suggestion that they might interest readers of the JOURNAL, and present them in the hope of getting help from the experience of others. They have been somewhat modified by omitting such as applied to customs peculiarly our own, and by giving to some paragraphs a general expression.*

Regular attendance is necessary, and a full day's work is expected of everyone. Begin work promptly, avoid interruption so far as possible, stop promptly at the closing hour. The entries on the time card are to be the times of actually beginning and quitting work, not the times of entering or leaving the building.

The time allowed for luncheon is an hour, to be taken between 12 and 2.30, and should not be exceeded; it is recommended, on the other hand, that it should not be greatly curtailed. The hours for luncheon are adjusted by heads of departments so that the necessary routine of each department may be properly carried on.

Absence without notification interferes with the proper arrangement of the work. It is necessary that everyone before taking time off shall consult the head of the department. In the case of unavoidable, unexpected absence, notice should be sent if the absence continues beyond the first day.

Vacations are not to exceed five weeks without special arrangement, and are to be taken in the summer. The schedule of vacations is arranged for each department by the

* The chief administrative divisions in Harvard College Library are the Ordering Department, Shelf Department, Cataloging Department, and Department of Circulation. A large proportion of the assistants are paid by the hour.

head of the department in such a way that there shall always be present one or more persons competent to meet the ordinary calls made upon the department in the course of the usual summer work. The schedules, so adjusted that the vacations of one department shall not hamper to an unnecessary degree the work of any other departments, are submitted to the librarian for approval before they are considered settled. Changes in the approved schedule can be made only by special arrangement.

The order in which books are to be taken up is important; so far as the order is prescribed it should be exactly followed, and beyond that it should be the subject of careful thought, bearing in mind the probable demand for the books, their relative chances of injury or misplacement, and the requirements of other departments. As a rule very large and very small books, manuscripts, loose maps and plates should be sent rapidly through all their stages. On rare occasions delay may be judicious, as when an accumulation of books of one sort or on one subject may be treated more economically together than separately, or when a difficult work may to advantage wait for the arrival of a special reference book.

As the books received pass through the various administrative departments in the process of preparation for public use the heads of the departments are responsible for them while in their departments, responsible for their being kept safely, forwarded rapidly, and found promptly when needed in process. In the same way each worker to whom books are assigned is responsible for them to the head of the department until they have been transferred in the proper manner to another person. It should be understood that every book is to be producible at any moment during the entire process, and is to be produced at once for use in case of real need; the other departments are to work for and not against the circulating department in this matter, and the circulating department, on the other hand, should be careful to limit its calls to cases of real need and should take pains to see that a book taken out from the regular process is returned promptly and to the person responsible for it.

Make it a habit on receiving books to ex-

amine them for the cards and slips that ought to be in them, and if any are missing at once hunt them up. Before sending books along see that all the required cards and slips are in place. Make it a point to know what should accompany a book when it is in your charge, even though your work may not be concerned with the material.

Let all assistants examine at regular, stated intervals all books in their charge; they can thus put their hands at once on any book that may be wanted, and none will become unintentionally a transmittendum on their shelves.

Heads of departments should examine at intervals the books in charge of the members of their departments.

The books on the shelves of each assistant should be arranged, and kept arranged either alphabetically or by special numbers, and the system should be the same for the whole force.

Any injury done to a book by a member of the force should be reported at once to the head of the department, and any injury discovered in a book should be reported at once by the finder. Books injured beyond repair should be marked to show that the injury was done before the book was loaned.

Quiet is necessary, or highly desirable, for concentrated attention. Unfortunately most forms of library work require more or less consultation. Nevertheless each one can and should exert an influence for quiet in the work-rooms. Make consultations as short as possible, and remember that while a word or two now and then for recreation is all right, conversations, especially if not on the work in hand, are entirely out of place in working hours. Some persons may imagine that they can talk and work at the same time without loss of efficiency; such a one is probably self-deceived, but even if the supposition were correct, it should be considered that other persons within hearing are probably not so favored by nature that they can listen and work to advantage. Visitors should never be received in the work-rooms and persons having errands to other departments than their own should make them as short as possible.* Whispering is

* In college libraries the order department will often be practically a public office, and it should on this account occupy a separate room.

peculiarly fatal to attention and should not be permitted, necessary speaking should be in low but natural tones.

Avoid hurry; it begets inaccuracy and a double waste. Forethought, accuracy, and steady application will ensure rapid work.

Be methodical; good routine saves much time. But be always ready to sacrifice routine to special needs. The object of all the work is to meet the needs of those who use the library.

Keep order among implements as well as among books. Disko Troop, according to Mr. Kipling, insisted that things should be "kept sep'rate," and the rule is a good one in library work. Time spent in keeping a desk in order is well spent. Cards should not be left scattered about. Rubber bands and clips save time.

Reference books are not to be kept at one person's desk longer than immediate need requires. If a book is needed constantly for an hour or more a block with the name of the person using it is to be put in its place, even if it is a book seldom used. This applies to books kept in the work-rooms for use of the assistants.

No book is to be taken from the stack and kept at a desk over night, or for any length of time, without being replaced by a block, or charged at the charging desk.

Books borrowed from the reading room are to be returned to the officer in charge of that room by messenger and not left to be put back in the regular distribution of books.

Books or cards should not be left at another's desk (outside the regular and understood routine) without a note of explanation, or, if that would be too long, the name of the person leaving them should be given.

Take pains to push in catalog trays after using.

Take pains to fasten the rod that holds the cards whenever cards are removed or replaced, and form the habit of noticing whether the rod is fast whenever using a tray.

Persons finding cards out of place should not themselves correct the error, but should report it according to rule.

No one not a member of the catalog department should take cards from the cata-

log except by special direction of the head of that department.

When using the catalog members of the force should carefully avoid interfering with readers who may be consulting it, but should be ready to give assistance whenever it is needed, either by answering inquiries or by referring the inquirers courteously to the proper officer. Employment in a library confers no privilege but is an obligation to interested service in behalf of those who use the library.

Uncataloged books in any department cannot be taken out, even by members of the department, except by express permission of the head; books so taken out must without exception be returned to the head of the department the next morning.

There should be a definite rule, which should be carefully enforced, in regard to the length of time a book must be in circulation before it may be taken out by a member of the force, and the length of time it may be kept.

Do not spend time in doing what can be done equally well by someone who is paid at a lower rate.

Checks indicate that certain things have been done. Never make a check before you have actually done the thing that it indicates. Do not make a collating check until you have finished collating the book and know its condition; do not begin cataloging a book by making the cataloging checks; wait until all the work of cataloging is done. Any other practice destroys the value of the check and injures the reputation for trustworthiness of one who adopts it.

RULES AND SUGGESTIONS INTENDED PARTICULARLY FOR CATALOGERS.

Catalogers should keep notes of new rules and of others which they find it hard to remember, and they should make specimen copies of cards that illustrate particular points and will be used for future guidance, arranging all this matter in form for convenient consultation. It is especially desirable that beginners should take time to study the rules, committing them to memory and understanding them. Every rule has a reason, good or bad; if good, the cataloger is better

equipped by knowing it; if the reason is bad, the library will be better off if the cataloger recognizes the fact and calls attention to it. Suggestions for improving methods of work should be welcomed by heads of departments if based on careful thought. It is not meant that time is to be spent (especially by beginners) in argument on points of cataloging; quite the contrary. It is meant that work ought to be done intelligently and with interest in improvement, and not mechanically; that instruction and advice should be sought with discretion and fixed in the mind. In cataloging a state of pupillage is essential, but it should have an end. Catalogers should be as familiar with the rules as the revisers, and their work should come to the revisers free from errors of ignorance and carelessness. Until this point has been reached let no one imagine that even the foundations of expertness in cataloging have been laid, however long the term of service may be.

Work that is not to be revised calls for the exercise of great care, but work that is to be revised should not on that account be done with less care. Revising is intended to detect the errors that result from human lack of perfection, but to afflict the reviser with the correction of careless errors is unfair as adding unnecessary strain to an anxious task, and wasteful of the resources of the library. To leave one's own work at loose ends on the theory that the next person to whom it goes will be responsible if an error in it slips through uncorrected is neither good logic nor, as David Balfour would say, "the good Christianity." Revisers should not have to expect errors in copying, or punctuation, or capitalization (though genuine differences of opinion will occur), or in the form of ordinary names and entry words, and catalogers are responsible for errors of such nature, quite as though their work were not revised.

On the other hand it is but fair to the catalogers that the rules even to the smallest detail should be made conveniently accessible to every member, and the rules should be supplemented by a full collection of examples copied from the catalog.

In the case of books requiring research catalogers should make notes of points that

will be of use to the reviser, such as unusual authorities consulted, or conflict of good authorities about the form of name. It is usually better to give information of this sort in writing than orally. In the same way by notes and references one department can often help another department, and prevent the wastefulness of two persons making the same research on account of one book. Thus where subject classifying for the catalog is not done by the catalogers, the classifier can often save the time of the cataloger, and the catalog and shelf departments can often help each other. In general every member of the force should cultivate the habit of using methods as helpful as possible to those who take the books afterwards.

When in cataloging a book it is found necessary to change cards already in the catalog always insert a slip in place of the card withdrawn, unless the change to be made will bring it back into a different place, and no card is to be written which will occupy the place of the first. The cataloger should write on the temporary card book number, author, and short title, and sign the card. It is desirable to have a printed form for such use.

Take out no more cards than are really necessary—that is, take out none on which no change is to be made.

Books for which old cards have been taken out or which have in them cards which take the place of old cards should be sent to the reviser as soon as possible, and the reviser will attend to them in preference to ordinary work. In fact wherever it is not necessary that the reviser should have the book in hand with the changed cards, the cards should be sent along as soon as changed without waiting to finish the book.

When cards are taken out and it is found that the book in hand cannot be cataloged immediately, the cards should be sent back to the catalog, reference books collected should be returned, and the book itself put in its proper place on the cataloger's shelf.

If the duty of distributing cards in the catalog is assigned to one or more persons, cards taken out by catalogers should be replaced by the distributors and not by the catalogers who removed them.

Do not spend more time in changing an old card than it would take to write a new one—unless the retention of the old card is necessary as a matter of record. If order slips are preserved the original writing upon them should be disturbed as little as possible.

Book numbers should be written with particular attention to accuracy and distinctness.

Work sent back to be changed should be attended to at once and immediately returned to the reviser.

Since information useful to the cataloger is often contained in prospectuses, it is desirable that the order department should preserve prospectuses in a convenient file, and refer to them on the order slips.

WHAT IT IS AND WHAT IT IS NOT WORTH
WHILE FOR THE CATALOGER TO SPEND
TIME ON.*

It is worth while—to keep the various editions of a work or the various translations or other forms in which it has appeared clearly distinguished and orderly arranged.

It is worth while—to keep all the works by the same author together and distinct from works by another author of the same or similar name. The greatest care should be taken not to confuse such cases.

It is worth while—to fill out, when possible, the initials in the case of authors with surnames of common occurrence; and to spend a moderate amount of time in looking up the full names of other authors who only give initials.

It is worth while—to ascertain the various forms of mediæval and oriental names, to choose with care the one to be used in the catalog and to make references from the other forms.

It is worth while—in writing cards, to aim, not only at accuracy and legibility, but also at neatness, even writing and clear arrangement, as the cards are to remain in the catalog for an indefinite period and will be repeatedly referred to.

It is not worth while—in writing slips for the printer, to aim at anything but ac-

curacy and legibility, meaning by legibility that each letter must show clearly at first sight what it is, so that the printer shall not have to guess at a letter from those before or after it. Extreme regard for form and evenness are entirely out of place.

It is not worth while—in the case of new names that come up, especially French and German names, to ascertain from reference books the additional baptismal names that are ordinarily given to a child in France or Germany but are not used by the man—or to cumber our cards with them, unless it is clear that the man himself has used one or more of them regularly in printed work and not merely in one or two early works.

It is not worth while—to spend much time in trying to find out whether a lady is married or single. The maiden name may be inserted if it is found near at hand, it is not worth much search. It is, however, worth while to give somewhat more time to finding the proper name of a lady who uses only her husband's names.

It is not worth while—to look up in reference books recent publications which are evidently complete, have the necessary particulars of imprint on the title-page, and give the author's name in an apparently full form and in the vernacular of the author, with a fair chance that the name is not a pseudonym.

It is not worth while—to search through *unindexed* bulletins or catalogs to find the date of a book.

Above all it is worth while, in cataloging as in anything else, to be constantly on the alert and to look for a thing in the most likely place. Probably in this way more time can be saved than in any other. For this a familiar acquaintance with reference books, and with the scope and object of each one is essential. It is therefore worth while for beginners to examine carefully the leading reference books with a view to acquiring this knowledge, and for others to examine new reference books, which should be placed for a time on a special shelf for this purpose. Special helps will sometimes be found by means of the subject catalog—"when found make a note of." It is well to post in the cataloging room a list of the more useful books which are not kept in that room.

* The following paragraphs are given, with one or two exceptions, as written by Mr. W. C. Lane when head of the Cataloging Department in Harvard College Library.

THE CASE OF THE DESK ASSISTANT.

PRESENTED BY HERSELF.

IN the LIBRARY JOURNAL for May a Librarian and a Desk Assistant held an imaginary conversation upon the requirements and opportunities of an assistant's work. Whether the Desk Assistant was overawed by this unusual interview with her superior, or whether the point of view, logic, and conclusiveness of the latter's exposition were effective preventives of debate, is not clear; but to some of her fellow assistants at least there seems to be another side to the question, not touched upon in that conversation, which should not be ignored in any consideration of the desk assistant's shortcomings. And this is the strictly practical side of the time schedules upon which the desk assistant is expected to do her work. It is a condition not a theory that confronts the desk assistant—a condition of hours of service that until better adapted to the human machine must keep the librarian's vision of "the ideal desk assistant" in the realms of theory.

The desk assistant gives on an average from 42 to 50 hours a week in service to the library, that time being arranged in various schedules so as to include evening work and sometimes a weekly or biweekly half holiday, although this is by no means the rule. From eight to nine hours' service makes the usual working day. Her salary ranges from \$25 to \$40 a month. She works from one to three evenings a week; some Sunday work is generally necessary; her time schedule varies on different days according to whether or not night work is required of her. The following are typical examples of desk assistants' time schedules, as they exist in different libraries:

A. In this library, where night work for two days a week is required of the desk assistant, her time schedule for these two days is arranged thus: she arrives at 8.45 a.m.; departs for lunch at 1 p.m.; returns at 2.30 p.m.; departs for supper at 5.15 p.m.; returns from supper at 6 p.m.; and is on duty until 9 p.m.—thus making a ten-hour day for these two days. The other four days

in the week she arrives at 8.45 a.m.; departs for lunch at 1 p.m.; returns at 2.30 p.m., and is on duty until 6 p.m.—thus making a 7¾-hour day for these four days. She is on duty one Sunday in ten from 2 p.m. until 9, with no time assigned for supper. This is the summer schedule; in winter it is the same with the exception that the hour of arrival is 9.45, the lunch hour is reduced one-quarter of an hour, and on two nights the assistants work until 10 p.m. instead of 9.

B. In this library, where 42 hours and three nights a week are the rule, the schedules are arranged thus: arrival 8.45 a.m., lunch 12-12.30, departure 6 p.m.; on the following day the hour of arrival is scheduled at 3.30 p.m., supper 5.30-6 p.m., departure 9 p.m. This scheme alternates a long day with a short day, and in some cases one hour is allowed for lunch and supper; on Sundays the reading room only is open from 2 to 9, and the work is shared by two assistants, who are paid extra.

C. In library no. 3, three nights are required one week and two nights the week following. The schedule, which combines three forms, runs thus: *first* arrival 9 a.m., lunch 1.30, departure 5 p.m.; *second* arrival 1 p.m., lunch 5.30-6 p.m., departure 9 p.m.; *third* arrival 9 a.m., departure 1 p.m., return 5 p.m., lunch 6 p.m., final departure 9 p.m. These three forms require 7½ hours a day.

D. This is a branch library in one of the larger cities, in charge of one assistant whose working hours are scheduled as from 10 a.m. until 6 p.m.—an arrangement that it seems should satisfy the most "complative" assistant, until one learns that there is no allowance whatever for noonday meal time, and that the assistant is "not supposed" to eat between morning and night.

These examples might be added to indefinitely, and they are in no way exceptional; but they indicate clearly the general tendency to regard assistants' time schedules simply as problems in arithmetic, unrelated to the human constitution.

It has been said that three evenings a week are sometimes required of the desk assistant, nor does this average appear unusual. As a rule the assistant who gives night service one day gives day service the next day, so that great irregularity of hours is entailed. It is this constant irregularity, and particularly the irregularity of meal periods, that is the desk assistant's most serious trial. The discomfort is not merely because she is obliged twice or three times a week to snatch a hurried and generally cold supper (if the untempting sandwich, the bakery shop bun, and the useful banana are to be dignified by that name), though every one who spends a day of tiring work knows that a hot and leisurely dinner at the end of it is an actual necessity; but it is because the hours of the meals are constantly changing. Eating to-day at one time and to-morrow at another is a physical evil; let it but continue long enough and health is seriously undermined. Many an instance might be cited where desk assistants in normal health have been reduced to a critical physical condition and years of ill health as a direct result of the hours imposed upon them. It is pertinent here to quote the statement recently made by a physician in the course of a conversation on "library hours." Said he: "I have had considerable experience from a professional standpoint with school teachers who have given way under the strain imposed upon them by the very modern educational system, and with the growth of libraries I am very likely to have a similar experience with library employees. There is nothing so conducive to a disarrangement of the entire organization as irregularity both as regards hours and eating. When these two evils coexist the result is rapid, and the victim is soon forced to abandon the work or take a prolonged rest, with a foundation laid for lifelong invalidism."

Another point that calls for notice is the kind of work required of the desk assistant. The possibilities are almost limitless, perfect responsiveness to the demands of the public being the ultimate end toward which all effort should be made. The work of the desk assistant should be intelligent, rapid and accurate; she should possess a wide knowledge of books, a good educational equipment, a ready interest, and an infinite amount of

patience and willingness. The average desk assistant does not possess these qualities, and no one more keenly realizes and more deeply deplores this fact than the librarian. Yet what likelihood is there for work of the desired grade under present conditions? The librarian lays much stress upon "the spirit of the work" which he feels should be so ardent and so zealous as to rise above all considerations of salaries and hours, and make the assistant feel that sufficient for her work is the joy of doing it. Practically, this is absurd. In exchange for inadequate salaries and overtaxing time schedules it is unreasonable to expect adequate work. Much personal force must be thrown into desk work to make it valuable; force is dependent largely upon vitality, and, with a daily routine such as the average library schedule demands, vitality is of necessity short lived.

Again, a working day of too great length weakens the character of the work. It is almost impossible for the assistant not to become narrow when her "library time" is practically all her time, and when there is no margin left for social recreation or personal duties. If a different atmosphere than that of one's daily work is never breathed, development is soon arrested, and the horizon of the work itself becomes pitifully small.

No less depressing to the tone of the work is the existing scheme of low salaries. Work well paid for is pretty sure to be work well done; and the increased expense the library would incur by a more generous scheme of payment would be fully repaid by the increased value of the library's service to the public. But the question of desk assistants' salaries is not wholly discouraging. In some libraries the salaries are placed on a very fair basis and in almost all there is an upward tendency.

It is the time schedules that seem hopeless; for, granting all that may be said against them, the librarian has yet to urge that these conditions are necessary to the service of the public: since the public has a right to books at any hour of the day, a desk assistant must, at any hour of the day, be available. This is quite true, but in admitting that the remedy is hard to find, why infer that none can be found? In his Imaginary Conversation with his desk assistant, the Librarian observes that the librarian cannot be ex-

pected to take cognizance of the desk assistant's affairs outside of the latter's working hours. That is just where the fault lies—in the librarian's accepted hypothesis that the desk assistant has no requirements apart from her work in his library, to which she must gradually sacrifice strength and health and social life. In indorsing such a system, the librarian, did he but realize it, is submitting to the existence of a permanent and positive force which makes for steady deterioration in the work of his desk assistants. As a rule, those assistants who do not leave desk work for some other department where conditions are easier, simply accept the situation and resigned, purposeless and unresponsive,

do the work required of them in the narrowest possible groove; while, were the conditions of the service normal, the same assistants might be inspired to better their work and double their value to the library and the public, or else their places would slowly but surely be filled by others better fitted to occupy them.

Taking into account all the circumstances under which the delivery desk assistant does her work, it is remarkable not that there are so few but that there are so many desk assistants who give conscientious and interested service, and who realize so fully their responsibility toward the library and the public.

THE EVOLUTION OF A RURAL LIBRARY: SECOND STAGE.

BY ANNA REDFIELD PHELPS.

THE story of the evolution of a library in a rural district has already been told in the pages of the *LIBRARY JOURNAL* (August, 1896, p. 362).

Since September, 1893, this little library has occupied a room in a small country schoolhouse at the head of one of the picturesque "finger lakes" of central New York. Not a dozen miles from the "Homeville" of "David Harum," this school district comprises parts of three contiguous counties and is known to the country round about as "the Glen." Hither come each summer many pleasure-seekers who find accommodation at the two or three guest houses, or in the private cottages that fringe the lake shore. From October to June, only the daily arrival of the mail-stage keeps the inhabitants from retiring like the polar bear into winter quarters.

The library has from the first been closely associated with the school. Even if these were not under the same roof, the children would probably always use the books more than do the adults.

When five years ago, the generous help of friends made almost a reality the hope for a separate building for the library, from one point of view this opportunity for growth and extension seemed so desirable, that we entered heart and soul into the effort to

secure this benefit. While waiting for the needed fund to grow a year passed, giving time for deliberate consideration. The urgent need of a more commodious schoolhouse as well as the disadvantages in separating these two educational allies presented themselves to us with suggestive force, and finally the disadvantages so outweighed the advantages to be gained by removal of the library to a home of its own that we became fully persuaded that the greater good could be secured by putting up one building in which both the school and the library might be housed.

The main reasons for endorsement of this plan for a combination of library and school were these:

1. The difficulty of caring for a separate building in winter time—heating it and keeping paths open.

2. The advantage of having the books under the same roof with the school. Most of the children, living at a distance, bring a noon-day lunch, and having an hour's intermission at that time have opportunity to enjoy the books in an adjoining room as they could not do if these were not close at hand and easily obtained. Many books are thus examined and handled and acquaintance is made with them just because they are to be had without going into another house.

3. The caretaker, or librarian, will usually be one of the older scholars, or the teacher. Her duties will be much lightened, and the public will be better served, if she has the books near the schoolroom and so is able to give them out either in the recess hour or immediately after school in a room previously made warm without much trouble. All the houses are heated by wood stoves.

4. A continuance of this close relationship of school and library must in time make the people, who recognize the value of both, willing to provide for the support of the library in the same way that they now maintain the school.

With these arguments in mind, and because from the first it had been the hope that the district would wish to contribute something towards a fund which was to furnish them with a long-needed improvement, the library trustees voted to make this proposition to the tax-payers: If they would determine what they felt able to give for a new schoolhouse, the money already in the hands of the library board would be made over to the school trustee for a building that should provide for the needs of both library and school.

A special meeting was called to consider this proposition, an attractive plan, prepared by a New York architect, was exhibited, and there seemed every reason to believe that the vote would be unanimous to levy a special tax, or that individuals would offer, according to their means, to make up a sum that should fairly represent the interest of the district to avail itself of these terms. But the project was carried through slowly. Some unexpected opposition was manifested, and it was over a year before the way was cleared for definite action. Finally, at another special meeting a majority voted to raise by special tax, \$400 when the library trustees were able to deposit the balance required for such building as should be contracted for by the school trustee.

This first step having been successfully taken and the conditions having been met by the library trustees, the builder was chosen, the plan already submitted was agreed upon and a contract signed, whereby a new building was assured.

This is not a school library as that term has been used since the law of 1892 defined the character and limitations of libraries in New York state under the school authorities,

nor is it a return to the old district school library which though free to the public was under the control of the school trustee. It is a district circulating and public library, deriving its charter from the regents.

It occupies a room in the new building, as it has for the last seven years in the old schoolhouse, by favor only, and retains as its own only the movable property it puts into that room.

But the district knows that in giving shelter to the library along with the school it is but caring for its own, so no opposition to this joint use of the building is anticipated.

Its trustees are five residents, elected one each year by the taxpayers at the annual August meeting, in the same manner as they choose the school trustee.

The facilities offered by the regents of the University of the State of New York for the establishment of libraries are well known; but it may be helpful to those contemplating the extension of this public benefit to some remote hamlet as yet ignorant of the blessing of good books, to know what has been the experience of the Glen library in the matter of maintenance and to what extent in the last seven years it has been aided by state funds.

From November, 1893, to November, 1900, a period of seven years, the state has given for the purchase of books \$390, the library has spent \$657.25 for books and \$338.45 in other ways. These have consisted of the payment of a small salary, never exceeding \$15 a year, for the services of a librarian during the winter months (October to July), the printing of a catalog with yearly supplements, the purchase of supplies and other incidentals. The average income has been, therefore, about \$142 (all proceeds from entertainments and private gifts), of which \$94 has been put each year into books and \$48 has been used for current expenses.

This average income is rather larger than we can hope for in the future. Fewer books added each year will suffice. The collection includes now a fair proportion of standard works and we know that caution is always advisable in the choice of current literature, so that if \$50 is available annually for the book fund the increase in volumes will be quite rapid enough.

In the hitherto cramped quarters of the old Glen schoolhouse, 1000 books have been

crowded on the two sides of a room 6 ft. by 8 ft., a mere closet. Of course after the fiction and young people's books were given the most favorable shelves there was little space left to display by subject arrangement the remainder, which were therefore grouped together in that comprehensive class called miscellaneous.

The capacity of the wall cases in the new room will be 2000v. The library is not likely to increase much beyond this—a floor case will provide adequate room for possible additions.

There will be new books added now and then, but as the old ones wear out they may not all be replaced and so the number will probably remain about the same from year to year. This number (1100-2000) will at no time offer too bewildering a choice to the resident reader, and yet with the yearly or semi-annual additions of new books it should furnish a sufficiently varied supply of wholesome reading for all who care to avail themselves of it.

With a simple dictionary catalog and a classed arrangement of the now miscellaneous group, it is thought readers will begin to discover treasures that have been concealed, and an increase in the circulation is confidently anticipated.

Much is being done in the cities and crowded centers to bring the people within reach of the widening influence of books. We know also how satisfactory are the reports of work of this sort carried on in the remote country towns and settlements of Wisconsin, Ohio and other western states. The missionary character of this effort is well enough at the beginning, but not until the people themselves, who are receiving the benefit, come to realize that here is a good thing worth maintaining and voluntarily agree to insure its maintenance, can the library be said to have entered on a healthy, vigorous career, likely to increase in usefulness and power to enrich the lives of those it serves.

And so, although it affords us a certain degree of satisfaction to be able to report this advance to the second stage of development of the Glen library—an advance that shows the accumulation of something over 1000 books, awaiting the completion of a commodious and artistic little building for shelter and opportunity to add to the happi-

ness and mental refreshment of an isolated people—we feel that there is a third stage to attain to that will not be reached until by some means a permanent income has been secured for the proper maintenance of the library in the community where its usefulness has already been demonstrated and where appreciation of its value is daily increasing.

Since this account was prepared the Public Library and School building at Glen Haven has been completed and is now furnishing to this little community all that was anticipated in the way of comfort and convenience.

In addition to the afternoon hours when the library is used by the public, the whole building has been thrown open for social and literary recreation one evening of each month since September, 1901. The circulation of books has greatly increased and the use of the room for reading, impossible before, has been much enjoyed. The plan elsewhere reproduced is from a drawing by Mr. Ehrick K. Rossiter, the architect. The building cost \$2050, including shelving in the library; \$250 covered the cost of furnishing both rooms. The larger part of its cost (\$1450) was defrayed by Mrs. Warner J. Baner, of Philadelphia, in memory of her husband.

The building has a frontage of fifty feet. The schoolroom is 28 x 32 feet and is 12 feet high; the book room is about 18 x 20 feet. There are ample coat rooms and closets, plenty of windows, and a high cellar under all. The exterior of the building is covered with red cedar shingles, the trimmings are painted light cream color, the doors and window sashes dark green. The interior of the schoolroom is selected Georgia pine—sidewalls and ceiling.

The library is particularly attractive. Wall cases, six feet high, fill every available surface, furnishing shelf room for about 2000 volumes. A projection 4 x 10 feet extends on the north side with three large casement windows commanding a beautiful prospect of the lake across the meadows. The walls above the cases, six feet to the ceiling, are covered with rounded red cedar shingles, surmounted by a deep cherry cornice. A corner chimney has above the fireboard a decorative cabinet, designed for a collection illustrating the geological history of the locality.

THE STERILIZATION OF BOOKS BY VAPOR OF FORMALIN.

Part of paper prepared for Lake Placid Library Meeting, by Andrew F. Currier, M.D., Trustee of Mt. Vernon (N. Y.) Public Library.

As a result of careful investigation it appears that books may be the medium by which the germs of a disease may be transmitted. It is not uncommon for books to be used in the sick room by those who are unaware of the possibility that such germs become attached to them. Such carelessness and thoughtlessness are too frequent to excite any feeling of surprise. Very often the books are obtained from a circulating library and when returned to the library it is quite possible for them to be quickly transferred to other individuals and thus to carry the germs of disease with them.

The subject therefore becomes one of practical importance and it was the consideration of these facts which induced me to investigate with the view of finding, if possible, a remedy for the evil. Germs, it is evident, may adhere more or less firmly to different parts of books because of their peculiarities and because they have been found free in the atmosphere. It may also be assumed that they will be more abundant upon the covers and edges than within the interior of books. In the investigations which were made they were actually found in abundance in the books which were used for experimentation, these books having been circulated by the Mount Vernon Public Library. It should be added however that of those which were thus found all were shown by cultivation to be of harmless varieties. A suitable agent for the destruction of germs both harmless and noxious which at the same time would not be injurious to the binding, paper, or text of the books was found in formalin gas. Its use for the disinfection of books was recommended by Billings in 1896 and a series of experiments to demonstrate its value was conducted by Horton at the laboratory of hygiene of the University of Pennsylvania, of which Dr. Billings was then the director. (*See Medical News*, Aug. 8, 1896; L. J., 22:388, 756.)

In an article on the disinfection of books by the vapor of formalin in the *LIBRARY JOURNAL* for August, 1897, p. 388, it is stated that Du Cazal and Catrin found as the result of their experiments that books could serve as vehicles of contagion. Their experiments gave positive results for the bacillus of diphtheria, streptococcus, and the pneumococcus, and negative results for the bacillus of tuberculosis and of typhoid fever. Their methods were impracticable inasmuch as bound volumes and board covers were injured by the process of sterilization which they adopted. Other experiments were made by Miquel and by Van Ermengen and Sugg, who found the sterilization of books difficult

but possible with formalin in a temperature of 60° C. after 24 hours exposure. Horton's experiments were at a temperature of 19 to 31° C. the books used for the purpose containing enclosed sheets first sterilized and then infected with a 24 hour bouillon culture of *Bacillus typhi abdominis*, *Bacillus diphtheriæ*, and *staphylococcus pyogenes aureus*. The books were placed under a bell jar in which was a glass dish containing formalin which was evaporated and the books submitted to its influence from 15 minutes to 24 hours. It was found that one cubic centimeter of formalin in 300 cubic centimeters of air would disinfect a book in 15 minutes. If the exposure of the book were prolonged for one hour or even for 24 hours complete sterilization was not obtained if air were admitted, so that the ratio should stand one cubic centimeter of formalin to 375 cubic centimeters of air. Books have also been effectively sterilized with formalin gas by the New York Board of Health under the direction of Dr. W. H. Park (Report on the use of formaldehyde as a disinfectant by William H. Park, M.D., and Arthur R. Guerard, M.D.) but the apparatus used was on too expensive and elaborate a scale for library use.

The apparatus in the various series of experiments to which reference has been made was merely intended to test the applicability of formalin gas for a specific purpose. It therefore became necessary to devise a suitable apparatus for library use and to institute a sufficient number of experiments to determine its efficiency, and this is the work which has been accomplished. The substance chosen for the generation of the formalin gas was a mixture containing

1000	parts	formaldehyde
200	"	water
200	"	chloride of calcium
200	"	glycerine.

A steel cabinet 59¾ inches high, 42 inches wide, and 17 inches deep, with heavy glass doors clamped at top, bottom and middle was carefully constructed. On its floor was a depression or pan 15 inches long, 12 inches wide and two inches deep, with a perforated cover, into which the unused formalin vapor would settle when precipitated, being drawn off through a tube leading from its lowest part. Two small steel tubes were fitted into the lower portion of the right side of the cabinet, one end of each tube projecting within and the other without for about two inches. To each of these ends was attached a piece of stout rubber tubing, those within the cabinet terminating in the pan on the cabinet floor, and those without being attached—one to the generator of formalin and the other to a generator of ammonia, the purpose of which is to be mentioned hereafter. These generators are of copper 20 inches high

and consist of a bowl or receptacle at the top with a suitable fitting to which is attached the rubber tubing which proceeds from the cabinet. Beneath the bowl is a space for the insertion of a Bunsen burner. The sides of the cabinet are provided with brackets at suitable intervals upon which rest trays three inches deep, made of thin steel strips crossing each other at right angles and with openings between the strips sufficiently large for the free passage of the gas or vapor from the bottom of the cabinet to the top. The cabinet is also provided with a series of adjustable rods attached horizontally upon which books may be hung, if this were desired or found necessary. It has a capacity of 200 to 250 duodecimo volumes according as they are packed together more or less closely. The less closely they are packed the more freely the gas can permeate all portions of them.

The books are collected in the trays after their return to the library by those who have been using them, *placed on end and not upon the side*, and the trays placed in the cabinet the temperature of which is that of the surrounding atmosphere. No attempt is made to produce a vacuum, or in any way submit the gas which is to be introduced to other than the ordinary conditions of temperature and pressure. When the doors of the cabinet are bolted it is practically air tight. The Bunsen burner having been lighted the boiling point of the mixture contained in the generator is reached in three or four minutes, and the formalin gas or vapor then passes out through the rubber tubing into the cabinet. The evaporation process is continued about 15 minutes or until six ounces of the mixture, of which the formula was given, are evaporated. In the Mount Vernon Library this operation is conducted in the latter part of the afternoon, the cabinet then remaining closed until the following morning. At that time the Bunsen burner is lighted under the second generator and a mixture of one ounce of ammonia and five ounces of water evaporated, the vapor being introduced into the cabinet through the proper tubing. The ammonia vapor mingles in the cabinet with the formalin which has not been absorbed by the books or has not condensed at the pan in the cabinet floor and produces a chemical combination which is not irritating to the eyes or the respiratory organs, as is the formalin alone. After the gases have mingled for half an hour the cabinet is opened and the books are returned to their places on the library shelves. The formalin odor very quickly disappears from the books and neither the bindings, paper, nor text are in the least injured. The bright red bindings are said to be discolored by the formalin but this has not yet been observed in our work. Many persons have objected to the use of books in public libraries on the ground that disease might thus be introduced into

their households. This objection is no longer tenable if the books have been subjected to the sterilizing process which has been described. It has also been a frequent experience with us that books have been returned to the library with direct or indirect information that they have been in houses in which infectious disease was present. Such books have heretofore been destroyed and ought always to be unless it is known that they have been effectually sterilized. The actual loss from this necessary destruction amounts to a considerable sum in the course of a year. This amount is now saved by means of the sterilizing apparatus.

The same necessity which calls for the sterilization of books also demands the sterilization of paper money and of many other articles in common use, which may have been exposed to the action of infectious germs. The principle is such an important one that there is scarcely any one to whom it is not a matter of personal concern. It may be interesting to give, in conclusion, the report of one of the experiments which were made for the purpose of testing the efficacy of the apparatus which has been described:

EXPERIMENT ON STERILIZATION OF BOOKS.

Jan. 28, 1902.

The experiment was carried on in an air tight chest and the vapor derived from commercial 40° formaldehyde by means of an ordinary generator.

The gas was admitted from below, and allowed to diffuse itself through the chest.

A six hour exposure to the vapor was suggested, and since this length of time would mean in practice only one sterilization a day, it was thought that the chest might just as well remain closed through the night. The vapor was therefore generated at about 2 p. m. and the chest not opened until the following day at 11 a. m. at which time the vapor was still quite strong.

Under these circumstances the sterilization appears to have been effective, even the resistant anthrax spores having been killed, except in one book. An interesting point is brought out here, since this particular book fell over accidentally at the beginning of the experiment and so remained closed. The only other organism that survived to any extent was the *staphylococcus pyogenes aureus* in two books out of five. In these two books the center of the page was smeared, and the margins in the other three.

Some of the plates which were otherwise sterile showed a few colonies of moulds, and these probably pre-existed in the books in the form of spores. Mould spores are particularly resistant to disinfectants.

The methods were as follows:

24 hour old cultures of the various organisms in broth were taken and smeared over

the pages with a cotton swab. Some of these were taken on Jan. 25, three days before the experiment, and others on the morning of the experiment.

After drying the books were closed and sterilized. Before sterilizing some controls were taken by cutting one-half square inch out of the infected page. These pieces were kept till the next day and then treated in the same way as the sterilized pieces.

After sterilization one-half square inch was cut from each infected page dropped into a tube containing 5 c. c. of broth and allowed to remain there an hour with occasional stirring.

At the end of an hour the broth was decanted into a tube containing 5 c. c. of 20 % gelatine previously melted, poured into a Petri dish and allowed to set. The plates were examined each day and results recorded.

Most of the plates were still sterile on the fifth day, and the question then arose: Were the bacteria actually killed or possibly only inhibited from growing by traces of formalin carried over from the paper? In order to test this the gelatine in those plates which showed no growth was melted by a gentle heat and then exposed to the air for 20 minutes. In three days the plates showed numerous cultures of air bacteria, but not of those with which the books had been infected, except for a few colonies on two plates of the coli communis series. This showed that with the exception of these two plates the bacteria had been actually killed and not merely inhibited in their growth.

In the chest were six shelves of which the three upper and two lower ones were tested: one of each organism on each shelf, and one of the books with smeared saliva. The books were partially opened and set up on end.

In conclusion it may be said that the test was effective, and shows that micro-organisms can be destroyed in books by prolonged exposure to formaldehyde gas.

In any work that is worth carefully reading there is generally something that is worth remembering accurately. A man whose mind is enriched with the best sayings of his own country is a more independent man; walks the streets in a town or the lanes in a country, with far more delight than he otherwise would have; and is taught by wise observers of man and nature to examine for himself. Sancho Panza with his proverbs is a great deal better than he would have been without them; and I contend that a man has something in himself to meet troubles and difficulties, small or great, who has stored in his mind some of the best things which have been said about troubles and difficulties. Moreover, the loneliness of sorrow is thereby diminished.

—Sir Arthur Helps.

"LIBRARY WEEK" MEETING OF THE NEW YORK LIBRARY ASSOCIATION.

"LIBRARY WEEK" at Lake Placid in the Adirondacks, being the annual meeting of the New York Library Association, was held this year from Sept. 22-27. It possessed all the features that have come to make this autumn conference one of the pleasantest library events of the year, being practically a vacation outing in delightful surroundings, with more ample opportunities for discussion of library topics than are afforded in the crowded program of the national conference. About a hundred and fifty persons were in attendance; the program proved interesting, and stimulating to debate; the weather was all that could be desired; and the Placid Club authorities aided in every way to make the meeting a success.

Besides the general sessions arranged for, there was a special round-table meeting, devoted to consideration of practical work in small libraries; the discussion on "Library training" overflowed into an extra session; and there was an informal meeting of those members of the American Library Association Council present (nine in all) to discuss place of next meeting of the national body. Among those in attendance was Dr. Andreas Sch. Steenberg, delegate of the Danish Committee for Public Library Extension, who has been sent by his government to investigate and report upon library work in the United States, particularly in its relation to public schools.

The first session was called to order at eight o'clock on the evening of Monday, Sept. 22, Miss M. E. Hazeltine, president, in the chair. Melvil Dewey spoke briefly in welcome. Miss Hazeltine then delivered the president's address. She said, in part:

"Library associations represent earnest, enthusiastic endeavor along practical lines, yet we must consider well three things—Personal equipment, Knowledge of the tools, Symmetrical development of the work.

"*Equipment* is always a theme for professional workers to discuss, and to this end 'Library training' has been chosen as a subject for this conference. But important as is school training there is something else which is just as necessary to make equipment for library work complete, and that is the personal side of the work. Our work means contact with the public; it means meeting that public in an interested, helpful, cheerful way; it means also the student's life. Can we do this evenly, serenely, unruffled from day to day, year after year, and be a victim of impaired digestion or shattered nerves, the result of our intensity and devotion to duty? Rather let the boast of the profession be that though we are zealous, yet are we sensible withal, conserving our health the better to work out our theories.

"Knowledge of tools. Our service is of books. Do we, as librarians, really know books well enough ourselves to select prudently, to advise judiciously, to lead our public wisely? Or are we not still afraid of the adage "The librarian who reads is lost"? It must be our study to see that all in the profession, so far as may be, from the page in large libraries to the chief librarian in small ones, be taught *books*, as well as classifying, cataloging, circulating, shelving and mending them. We must extend this book lore to our patrons also, by personal contact, by the use of the press, by display of the books, by every means within our power must they be led to know books, else we shall miss the true power of our work.

"Symmetrical development of the work. Even with our equipment and tools thoroughly mastered, the work will not reach its *nth* power until the value of the smallest library is appreciated, its needs realized, and its wants supplied. Small libraries, administered properly and in the right spirit have as great a field of usefulness as those in the large cities. As an association it should be our earnest endeavor to keep in touch with every one of them, not only because out of our experience we can help them, but because the help will be reciprocal and the common work be strengthened."

The discussion that followed centered upon the allusion made in the president's address to the health of library workers. Mr. Elmen-dorf said that this was a matter to be considered not only in small but large libraries. "The enthusiastic and willing librarian and assistant are the ones who are overworking, and the ones who are breaking down. Those who are slothful and have not this enthusiasm are getting the most vacations, taking the most advantage of sick leave, leaving others to do their work. The question of vacations in large and small libraries should be considered with justice. In large libraries assistants often ask for leave of absence at their own expense; librarians should be careful, in granting this time, not to do injustice to those who are working with enthusiasm, and doing the work of others while they are away."

Mr. Dewey said: "I am very glad the president has brought up this most important question of the physical side of library work. We hear a great deal about the intellectual side, but very little about the other. There is nothing more pitiful than to see our prominent men or women (generally women) dropping out of the ranks and living lives that have lost their efficiency. It has been my experience that students in the library schools need to be restrained and held back. Librarians should watch their assistants closely, and teach them that, if they are to do good work, they must take care of their bodies. Too many people sacrifice themselves to their work. They start out splen-

didly; in five years they are still holding their positions, but the mind has lost its keen qualities, and they are not doing the kind of work they should be doing; they are mere crank turners. It is the people who can do things that others cannot do that are in demand. We don't want people who can just dust books, paste on labels and charge books, even if they do these things correctly; we want people who can accomplish the highest things in library work. In regard to assistants, we are constantly putting on the whip and spurring them to know more about books, to extend their work, never thinking of the other side of the question."

Miss Nina Browne said that most people worked at high pressure for long periods. If each person working at high pressure would stop for intervals of relaxation he could go on for longer periods of time. The trouble is that we keep on at high pressure till we break down, and it takes us two or three months to recover. An absolute stop—even for an interval of fifteen minutes each day—is the only way that gives a chance to recover from high pressure.

Miss Josephine Rathbone spoke of the extension of the luncheon hour adopted some years ago in Pratt Institute Library of Brooklyn. "The lunch time used to be an hour, and the girls would hurry to their homes and back or bring their lunch with them in the morning. The lunch period was then extended to an hour and a half. The extra half hour gave the assistants time to go home, have a comfortable lunch, and sometimes a little nap, and the half hour taken off each day made the number of hours seven and a half instead of eight. The library did not suffer in the way of less work done, and gained a great deal in 'projected efficiency.'" A like experience was reported by Mr. Gail-lard, for the Webster Free Library, of New York. He said that in that library from the last of December until the first of June at least one member of the staff was generally ill. "On June first a staff room was opened, equipped with a couch, a gas stove and an ice chest. Before that the assistants brought sandwiches or almost nothing for their lunch, and in trying to do their work on that sort of diet they succumbed. From the first day that the staff room was opened illnesses in the staff have practically ceased; we insist that each assistant must take not less than one hour in the middle of the day."

Miss Helen Haines said: "This question of health seems to be just coming to its proper center. The general idea has long appeared to be that the librarian or assistant is herself responsible for breaking down and not taking care of her health. As a matter of fact, it is the schedule of library hours that is too often responsible. If one studies the time schedules in vogue, in the large libraries especially, it will be found that they are usually made on the principle that a human being is a machine

that can be turned on or off at varying hours, to run for stated periods. That is not the case. Take, for example, evening work. The effect of evening work upon assistants has not been sufficiently considered by librarians. At the Magnolia conference of the American Library Association, I happened at one time to be in a party of eight or ten assistants from several large libraries. The conversation turned upon library hours, and little by little I heard experiences, especially on the subject of meal-time arrangements, that opened my eyes to a condition of affairs that ought to be remedied. Take, for instance, in one library where the assistants work alternately, one day going to work at nine, having from twelve to one for lunch, and then working till six; the next day, coming at twelve and working till five-thirty, then working again from six till ten. Thus, nearly every other day their meals consist of breakfast, a nibble at about half past eleven, and no supper except another nibble at a sandwich or some miserable thing of that sort. No constitution can long stand such a system as this."

Mr. Dewey suggested that a readjustment of hours might be made whereby evening work should be done regularly by one set of assistants for from three to six months, and the daily alternations avoided, and that for Sunday work special extra service should be secured; but it was pointed out in reply that no one would be willing or should be required to do all evening work, nor could libraries afford to increase their salary list by large additions to their force.

Miss Ahern spoke of the high pressure under which most library school students worked, saying that many of them had confessed to her that the requirement for taking the second year course at the New York State Library School was an attack of nervous prostration. Too many library workers acquire "the sanitarium habit." This was emphasized by Miss Stearns, who said that all librarians should do three things: 1, be interested in some form of athletics or outdoor exercise; 2, take up some line of study outside their work; 3, have a hobby, or be a collector of something.

Tuesday evening's session was opened with the report of the Committee on Library Institutes, Dr. J. H. Canfield, chairman. In the absence of Dr. Canfield the report was read by the secretary, Mrs. Elmendorf. It was in part as follows:

To the Officers and Members of the New York Library Association:

At the meeting of your association held last September, you appointed a Library Institute Committee, consisting of the following: Mr. A. L. Peck, of Gloversville; Mr. W. R. Eastman, of Albany; Mr. James H. Canfield, of New York. You also provided that the secretary of your association should be *ex officio* the continuing member of the com-

mittee. You provided that the members of the committee should serve one, two, and three years; with an annual appointment thereafter of one member, to serve for three years.

The Institute Committee met immediately after the adjournment of the session of your association on Wednesday evening, Sept. 25, 1901. All members were present, including the secretary. Lots were cast to determine the terms of office, resulting as follows: Mr. Canfield for one year, Mr. Peck for two years, Mr. Eastman for three years. Mr. Canfield was named as chairman.

The committee decided to establish eight Institute districts, besides the work which should be undertaken by the cities of Brooklyn, Buffalo, and New York.

Following are the districts:

Brooklyn—Kings, Queens, Nassau, Suffolk counties.

New York—Richmond, New York, Westchester counties.

Buffalo—Orleans, Genesee, Wyoming, Erie, Niagara counties.

The institutes arranged for may be scheduled as follows:

1. Newburgh—Putnam, Dutchess, Rockland, Orange, Ulster counties. Secretary, Miss Elizabeth Thorne, Port Jervis.

2. Albany—Greene, Columbia, Schoharie, Albany, Rensselaer, Schenectady, Saratoga, Washington, Warren, Essex, Clinton counties. Secretary, Mr. B. A. Whittemore, Albany.

3. Utica—Montgomery, Fulton, Hamilton, Herkimer, Oneida, Madison counties. Secretary, John E. Brandegee, Utica.

4. Binghamton—Delaware, Sullivan, Broome, Chenango, Tioga, Chemung, Tompkins, Otsego counties. Secretary, Mrs. J. W. Clonney, City School Library, Binghamton.

5. Syracuse—Cortland, Onondaga, Oswego, Cayuga, Seneca counties. Secretary, E. W. Mundy, Syracuse.

6. Rochester—Schuyler, Yates, Ontario, Wayne, Monroe, Livingston counties. Secretary, Miss C. F. Webster, Genesee.

7. Olean—Steuben, Allegany, Cattaraugus, Chautauqua counties. Secretary, Miss Ella W. Green, Jamestown.

8. Ogdensburg—Franklin, St. Lawrence, Jefferson, Lewis counties. Secretary, Fred Van Dusen, Ogdensburg.

It was determined to hold three sessions in each institute: two of which should be known as instructional sessions, and one of which should be a public session, to be held in the evening whenever possible. For want of a better title the public session was called the "inspirational" session.

It was determined that the first instructional session should be devoted to the selection of books, the purchase of books, and the accessioning of books. The second instructional session was to be given to shelf arrangement and marking, to reference work, and to general questions and answers.

For instructors the committee determined to use the nearest librarians, as far as possible.

It was also determined to hold the first institutes in April, continuing into May until the entire number of institutes had been held.

Following this general scheme circulars were sent out to the libraries of the several districts, and arrangements for the meetings completed.

The program was printed by the secretary and sent to the local secretaries, who in turn sent them to the libraries, each in his own district, accompanying the program with a printed or typewritten letter giving the local details in each case.

Following this preliminary work eight institutes as planned by the committee were held as follows:

appointed speaker of the evening. The attendance upon both the instructional sessions and the evening meetings was largely increased at two places by the interest of members of the women's clubs of the immediate neighborhood.

Your committee is satisfied that the time and effort given to these institutes have been profitably spent. While the number of libraries represented has not been as large as could be wished, it has even exceeded the number anticipated by your committee for its first year's work. The fact that invitations were sent to 675 libraries and only 110 were represented, simply shows that there is a broad field for future effort. Certainly there is much encouragement to be found in the expectation that every library which was so fortunate as to be represented in these institutes

		110					

At these meetings secretaries were elected for the ensuing year, 1902-3: in each case the secretary already named above for the past year being re-elected.

At each institute it was voted with practical unanimity to continue the present organization.

At all these meetings at least two members of the state committee were present and took part, and at three meetings the committee was represented by three members. The general program prepared in advance for the meetings was followed, with occasional change of leaders. When the gatherings were small the work was often even more valuable to those present on that account. The very practical treatment of the subjects which were presented commanded the unflagging interest of all present through sessions of even three hours' duration. It was generally true that the instruction given by the appointed leaders was followed by prompt questioning and ready response from librarians who were able to contribute suggestions and advice based upon their own experience and observation. Expressions of profound satisfaction with the results of the sessions were the rule.

As far as possible, local speakers were secured for the evening meetings, to follow the

received a new impulse which will be communicated to other libraries, from which we may safely predict a much wider interest in the institutes of another year.

The enthusiasm with which the institute idea has been received in the state and the sincere and hearty welcome given to your committee and those working in the institutes, have been peculiarly gratifying. It was feared by some that there might be some hesitancy on the part of the different communities in accepting the offers of your committee, that the spirit and purpose of the proposed institutes might be misunderstood, and that there might be a mistaken idea that your association and your committee were undertaking what they would call missionary work and in a patronizing spirit. But nothing of this feeling developed or was manifested. On the contrary your committee everywhere met a hearty welcome, and earnest co-operation on the part of those of the immediate locality. It is hardly too much to assert that one result of these institutes has been a new thought and a higher appreciation of your association.

From the experience of the last year, your committee begs leave to offer the following suggestions:

The month of May seems to be better suited to institute work than April.

It is suggested that some of the institutes be held, experimentally, in October.

A larger number of institutes would certainly reach more libraries and more of the smaller libraries.

Two competent instructors for each institute are sufficient.

The same instructors ought not to be asked to attend more than two institutes in a week.

Saturday is not a desirable day for institute work. Many librarians find the greatest demand to be made on their time on this day.

Care should be taken to avoid a conflict between the institute meetings and other usual or unusual gatherings in the same community.

Local interest seems more easily aroused in the smaller towns.

The facilities for instruction and for travel and accommodation are generally better in larger towns.

Your association should take under careful consideration at this session the question of the expense of these institutes, and should reach some definite conclusion concerning this. A few workers connected with the state library have included the institute work with their regular duties, and thereby have saved both your association and themselves unnecessary expense. But much has been done at private expense, and the demands upon private time and private pocket-books, though not extraordinary or severe, have been such as cannot reasonably be met for a series of years.

The success of the general institute plan and the value of the work have been proved beyond a question. For the necessary expenses of this work provision ought to be made, either by larger contributions from your association (which seems impossible except by a corresponding increase in membership fees), or by local assessments on the libraries in each district (a measure of doubtful wisdom and success just at present), or by private munificence (not an impossibility), or by securing a complete adoption and support of library institutes by the state under express legislative provision (which will take time and perhaps considerable time).

Your committee recommend the adoption of the following votes:

1. That the association recognizes the value of the work done by the library institutes of the past year and desires their continuance along the same lines with such modifications of detail as the committee may think desirable.

2. That in the judgment of this meeting, while institutes serve an important purpose in arousing and directing public interest, their main object should be to help and encourage librarians.

3. That inasmuch as the holding of institutes is the most definite and important work of this association the funds in its treasury should, in large measure, be held for the benefit of this work.

In addition the committee reported from the Long Island Library Club plans for an institute to be held in October, from the Li-

brary Club of Buffalo record of an institute with 23 persons in attendance representing 14 libraries, from the New York Library Club report of an institute at which about 12 libraries were represented.

The report was accepted, and the three recommendations appended were then discussed *seriatim*, with description of the various institutes by those who had participated in them. The first and third recommendations were approved, the second one being withdrawn, in the desire to leave the Institute Committee free to carry its work on as it might think best.

On Wednesday evening, after the acceptance of the treasurer's report, a nominating committee was appointed, consisting of Mr. Dewey, Miss Josephine Rathbone, and Mr. E. W. Mundy. A committee on resolutions was named, as follows: Frank P. Hill, Miss C. M. Underhill, Miss Helen Haines; and it was voted that article 3 of the constitution be amended, providing that the registration fee be made \$1 and \$1 annually hereafter.

An address on the movement in progress to establish libraries, or "reading camps," in the lumber camps of Canada was then delivered by Rev. Alfred Fitzpatrick, of Nairn Centre, Ontario. Two years ago \$1200 was appropriated by the Dominion Government for the maintenance of the reading camps, which, during that year, were increased to 27. This year \$2000 is granted, and there are 30 camps. Mr. Fitzpatrick advocated the compulsory teaching of English in the schools of Quebec, and the teaching of French in the same manner in the schools of the other provinces of Canada.

The report of the Committee on Publicity was made orally by Miss Hazeltine. It was illustrated by a display on bulletin boards of the newspaper articles on library topics in the state published during the year. The committee had formed what was, so far as possible, a bureau of exchange and publicity, receiving from librarians of the state a dozen or more proof slips of library articles appearing in the local press, for the purpose of borrowing ideas and comparing methods. "Results have been gratifying. The proof slips are received regularly from 12 libraries and irregularly from 20 libraries. When we recall that this is a new experiment, this is a good showing. The slips were mailed to 23 libraries here and there throughout the state, hoping to reach and interest those who had not responded." Hints on the preparation of articles for the local press were given. Headings should be attractive, and not like an advertisement; they should not be left for the editor to put in, but should be written carefully; the articles must not be written in a slipshod manner, but must be in good English and must be something more than mere lists of books; annotations are very helpful; articles should always be impersonal—it is the library, not the librarian that is to be kept before the public.

In regard to general publicity, the chairman of the committee wrote to two large newspaper press firms asking if they could use and circulate library matter. Favorable replies were received from both, and there was no question that such matter would be welcome, but the difficulty was in securing it. Several articles were promised from interested persons, but only one was received. Some excellent work was done by the New York State Library School. It seems wise that the association should put its publicity work in the hands of the library school. Possibly Pratt Institute would help."

In the discussion that followed, Mr. El mendorf expressed the earnest hope that the work would be continued, and said that what had so far been done had been most helpful. Mr. Peck said that while the lists and articles were of interest in the library to which they referred, he did not see the special benefit of their general interchange and distribution. It was voted that the individual members of the committee be continued as the Committee on Publicity and Promotion during the succeeding year.

Thursday morning was devoted, from 10 to 12, to a very interesting and inspiring round table discussion led by the president, Miss Hazeltine, on "Detail work in small libraries." Many interesting ways of gathering at small cost material of the highest value were talked over. Suggestions as to saving of bills for supplies by careful use of cancelled catalog cards, etc., were made, but the warning note was also sounded that waste at the bunghole should not be overlooked while saving at the spigot, by squandering time in economies that ought to be given to work with the public.

In the evening the general session was opened with an account by Mr. Steenberg of what is being done in Denmark in the interests of public libraries. He said:

"Our country is a very small one, and our population chiefly farmers. We have only one large town. Our libraries are therefore small. Besides, although our public schools are very good, yet they do not teach the pupils to use books as well as they ought to.

"In our largest town, Copenhagen, there are seven libraries founded and conducted by the municipality; only three of them have reading-rooms. Besides, there are two large libraries belonging to workingmen's unions. Most of our smaller towns have small libraries, for the most part founded by private committees, but often subsidized by the municipalities. A few of them have a reading-room. The borrowers pay a small sum for using the library. The villages, too, have for the most part small libraries, but never a reading-room. It is very often difficult to run these small libraries. We therefore try to bring town and villages or village and village to co-operate by help of travelling libraries.

"In some towns the library sends out boxes containing from ten to fifty books to the surrounding villages. The village library pays a small annual sum for having these boxes sent, and they change them as often as they wish. For one of our isles they have organized a central library, from which the smaller libraries every fall get a box containing about 50 books. Besides these public libraries, open for all, we have a great many club libraries or union libraries, often two or three in the same town. I think in the evolution of American libraries you have seen these also.

"The state subsidizes the libraries in two ways. It supports the Committee for the Promotion of Popular Education, which publishes cheap books, and sells or gives them to the libraries. It spends yearly a sum for subsidizing the libraries with money. This sum is distributed by the State Library Commission, of which I am a member. This commission also helps the libraries in other ways. When they wish to found a library in a town or village, they write to the commission, which sends them a manual on public libraries, written by myself. Sometimes I go to the town myself and give a lecture on public libraries. Then we send them a printed catalog containing a list of books for popular libraries. And if they want to found a library in a very small village, we send to them one of our travelling libraries, containing about 50 books. But before we send this travelling library we try to get different villages to co-operate, because I know from sad experience that small village libraries often have a very short life.

"I am glad to say that in my work I am in close connection with the library work in Norway and Sweden. Some of you know perhaps Mr. Haakon Nyhuus, formerly of the Chicago Public Library, now in Christiania. He works very eagerly for the development of Norwegian libraries. In Sweden several students' unions are doing good work for public libraries. They arranged in 1901 a meeting in Upsala for the discussion of means for the people's education by help of the students, and asked me to come and lecture on public libraries. This year one lecture on public libraries. This year one of these unions asked me to write a small manual on public libraries. In this, as in my larger one, I have dwelt much upon American libraries. We cannot, I feel, advance in Denmark with our libraries if the public schools do not teach their pupils to use books in a better way than now. I have therefore written in one of our educational magazines an article on 'The school and the books,' which has been and is distributed to many teachers and librarians in Denmark, Norway and Sweden. By their help and by help of the experience gained on this visit I hope to be able to write a book which shall forward library work in our schools."

Dr. Lee H. Smith, president of the Buffalo Society of Natural Sciences, gave an address on "Co-operation work of the museum and the library," based upon his appreciation of the practical value that has resulted in the work of the society through its relations with the Buffalo Public Library. The society sends from its collections to the public schools exhibits illustrating archæological and other subjects of study, which are used in connection with the books sent out for school use from the Public Library.

"Teachers need books to teach from, but also things to teach about. We all appreciate how valuable is the picture, wood cut, or illustration in books to make clear the impression given by descriptive words, but how much more valuable as illustrating a subject is the actual thing itself. It gives a reality to the book. It makes the printed statement a real thing that remains as a tangible impression upon the brain instead of a hazy fog that soon dies from the memory.

"This joining of descriptive books to the real object adds a very great respect for the book and lends an added usefulness to library work.

"From an exhibit of Indian antiquities we branched into an exhibit of the honey bees, and with it one on the birds. This was, I think, inspired by Burroughs' 'Birds and bees.' Each class was invited with the teacher to visit the lecture room of the museum, and there we had a hive of bees with glass sides—specimens of drone, queen bee, honey bee, with such curious homes, associated forms of natural hive, as our native wild bees present. With this exhibit we have a good teacher, who presents the interesting and educational features of the exhibit. Prior to the visit of the classes to our rooms the library has had sent to the school a convenient and interesting selection of books upon the topic. The pupils come with some idea of what they are to see, but after their visit they return to their school greedy for knowledge, and with the library of books clear up the gaps in their knowledge of the topic.

"The value of the association of the museum and library in educational work was practically demonstrated in a way that astonished us all. It was a co-operation that lent the greatest value to the work of both institutions. The Academy of Fine Arts took up the work in their special lines, the library co-operating with them, so that art, literature and science were combined. We appreciate the value of associating museum and educational work with the library, as no one can who has not witnessed the great practical value of the results attained. When I tell you that we had 15,000 pupils visit our museum in six weeks' time you can appreciate the work. The plan as now arranged is that the library furnishes the books in ad-

vance, that the teachers may have opportunity to fully prepare the work that is to be done. Then comes the gradual enlightenment of the children; then their visit to the museum or the exhibition of the loaned specimens, after which the books are greedily read by the children, and the subject is understood and fixed in the memory in a way that drives it there to stay, a true and accurate mental picture."

There was some discussion. Mr. Gaillard said that the work being done in Buffalo was like that attempted through the Webster Free Library of New York. There the effort is made to provide schools with specimens illustrating natural science, and a bulletin has been made showing illustrations of birds, birds' nests, eggs, etc., which is sent to the schools. The difficulty is the matter of expense and storage space for specimens as well as for books. Nevertheless the library circulates steadily almost every day not only books, but pictures, maps, charts, plaster casts for anatomical models, birds, birds' nests, birds' eggs, minerals, reptiles in bottles, Indian articles, etc. Mr. Hill said that good results might be secured from co-operation of the library and the museum, rather than by the former taking over the work of the latter. "One of the branches of the Brooklyn Public Library is situated in a building where there is also a branch of the Brooklyn Institute of Arts and Sciences. The curator is very much interested in his work, and has besides his museum a collection of books on those subjects. Most of the books are reference books, and he uses the books of the Public Library in connection with his work. His own books do not circulate, and if any of the school children come to him for books in connection with their work he refers them to the Public Library. Small collections of specimens are made up at the museum and sent to the public schools, and it is the intention of the library to co-operate by sending books upon the same subjects." The feeling that the museum and the library occupy distinct fields, and that co-operation should not mean combination, was expressed by Mr. C. H. Gould, who said that in these days of specialization libraries should not try to absorb all activities; and Mr. Peoples, who spoke of the fact that in the early days of the New York Mercantile Library a Museum of Natural History was maintained, which later, owing to cost of development and administration, was turned over to independent management. In reply Mr. Dewey said that combination was the lesson of the age. Railroads, steamship lines, steel manufactures, every line of activity, is increasing efficiency and lessening expense by combination.

"Library training" was the next topic. It was opened by Miss Mary W. Plummer, who said:

"There are several things that might come

into a discussion of library training besides the actual training itself. I do not feel competent to pronounce a dictum upon any of them, and I shall put what I have to say chiefly in the form of questions, and for the purpose merely of opening the discussion, as I was asked to do.

"We hear occasionally—it seems to recur like a refrain at almost regular intervals—that the library schools press their students too hard. Each school should be allowed to respond for itself to this charge, and I shall say only of the one I know best that its hours of instruction, recitation and discussion are from 9 to 12; that the afternoons, as a rule, are used as the student sees fit, without any stated study-hours, and that the lights are put out and the school rooms closed at 6.30 o'clock. If students study at home, the school cannot prevent it. Students coming in with conditions to work off sometimes have a hard row to hoe for a time, but for the student without conditions there is no occasion for overwork. Almost invariably, where a student or a librarian or library assistant breaks down, it will be found that she was bearing some outside burden or responsibility, or was under the strain of some domestic or other anxiety; trying to be her own dressmaker, seamstress and milliner, or to respond to numerous social demands; that she is secretary of this and treasurer of that and chairman of the other, and that her school or library work alone occupied little more than half her time and attention. Some women, too, have not yet learned that not to worry is half the battle.

"That there is a great deal to be brought to the attention of the library student is quite true. It takes almost all our own time now simply to keep up with the movements in the library field. However, if the school does not proceed on the old cramming system, the stuffing in of information, but confines itself to teaching principles and inducing its students to think and read for themselves, it has set the ball rolling in such fashion that the instructors will not have to tell the students everything they know. And it will do no harm for the student to learn to do strenuous thinking, if he does not have to memorize all sorts of things at the same time.

"It does seem, however, as if there might be some differentiation in the nature of grading in the work of a one-year and a two-year student. And I offer this as a question to be discussed: Would it be wise to fit the one-year student for the work of small or medium-sized libraries and initiate the two-year student only into the larger questions of administration, the comparative study of systems of classification and cataloging, the more difficult reference problems, the work in languages, etc., giving a modified certification to the standing of the one-year stu-

dent, and a more unqualified one to the two-year students? I should be particularly glad to have this question discussed by graduates of the schools, who can tell us how their own work and standing would probably have been affected by such a grading.

"Another question: Would it be well, as was suggested at Magnolia, for the school to withhold the certificate until after the student had shown that he or she was successful in practice? Consider what this might mean to the student who, through her own ignorance of her limitations or her strong points, or through her recommender's failure in judgment should get into a position for which she is unfitted. Because there are diversities of gifts, as every library school can testify, and it does not follow that because the round peg will not fit into the square hole it will not fit into the round one. Such a plan as the one suggested would work great injustice, it seems to me, to the student who did not find her proper field immediately. I know one librarian who employs several school graduates who makes it a practice to try his new people in a second field if they do not seem to belong in the first one they attempt to occupy, and he has thus made several excellent successes out of assistants who, at the first trial, seemed likely to be failures. Had he or the school rejected them after the first attempt to place them, and refused a certificate, there would certainly have been grave injustice somewhere. Two, and probably three, of the schools are enabled by means of their own libraries or libraries at their disposal to test their students in the practical work of a circulating library in its various departments, before sending them out. To the objection urged by some that none of the time of the course should be given to practice, which should be acquired afterward, I would urge that this practice is not solely for the purpose of giving the student dexterity, self-possession, etc., but partly in order that the instructors may study the student in a practical environment and be able to estimate him or her as opportunities occur for recommendations.

"I cannot lay too great stress on this knowledge of the student's character, limitations, mental and personal equipment; and this brings me to my next question: Are the schools admitting students in too great numbers? From the economic point of view, possibly not. But from the point of view of the students' welfare and the school's best welfare, I think it wiser to limit classes in number. If the faculty has the power of inspiring students to do good work, to be their best selves in every way, still there are limitations to this power, for it depends upon the amount of vitality of the instructors. To know the individual student, to influence him at short range and help to mould his views and decide his prepossessions is difficult if the class is a very large one. The effect

upon the teaching staff of the enlargement of a class is almost at once noticeable in the greater effort, greater tension, and so greater expenditure of vitality. How, then, train every one who desires to be trained for librarianship and is worthy of such training, if the schools all limit their classes? By the establishment in proper centers, all over the country, of first-class schools, carrying on the best traditions of the present ones by a kind of apostolic succession. Why should not the Pacific coast have its library school, the northwest, the southwest, the middle west and the south?

"If this were the case there would not be such pressure for entrance into the existing schools, and where entrance is denied such readiness to grasp at everything which flatters itself with the name of library training and such disappointment at the results.

"I do not doubt that I speak the mind of all the recognized schools when I say they would gladly welcome the establishment of thoroughly good library schools in other parts of the country, all that they stipulate, as a condition of welcome, being that the new shall at least equal the old in their teaching equipment, their library resources and facilities, and their ideals.

"I come now to my last question: Is there anything that librarians as a body—either in their state or national association—can do to save

"1. Young persons of ability from choosing, in their ignorance of the field, inferior sources of so-called library training?

"2. Librarians and library boards from being imposed upon by letters and certificates from such sources?

3. And, if there is anything that can be done, have or have not librarians a duty in the matter?"

Mrs. Elmendorf said that this subject had been brought up at her request, as a result of personal observation of young people who had received their training in certain institutions, and when confronted with practical library work had found that training of little advantage. "How much we know of the training given in these institutions is uncertain. It is possible that the students may be at fault. What this association should do is to appoint a strong, courageous committee, with a chairman who is not a member of any library school, but with library school people represented on its membership, this committee to inspect and report at the next meeting of the association upon the newer and smaller schools and upon the work of the summer schools." This suggestion was then made as a motion, and discussion followed upon the scope of such a committee's work. Mr. Dewey said:

"There are two sides to this question. The better schools can only accommodate a limited number. We have had to reject a great many promising candidates, and have raised

our standard of admission so as not to admit any candidate who has not a degree from a college. Even after thus raising our standard we have more applicants than we can accommodate. Pupils who cannot afford to go to large library schools must either go to the smaller ones or go without any instruction at all. These schools should be, however, at least compelled to attain a certain standard. The question is, whether it is better to have second rate training or none at all." He also advocated a system of state registration for library schools, for students, and for libraries with apprentice classes, describing, as a kindred case, the development of the registration system in medical education and its excellent results. It was thought that the committee should not take up at all the question of apprentice classes if conducted entirely for the staff of the institution maintaining them. Miss Stearns pointed out that in this age of libraries there are springing up a multiplicity of library schools which is bound to continue unless some action is taken. The A. L. A. Committee on Library Training reports only on schools that are well known; but many graduates of schools which have no standing are coming into library work. Librarians must put a stop to quack library schools. At the recent Western Library Meeting a committee on this subject was appointed, its members coming from states without library schools, to avoid any thought of bias. This committee is to make a full and frank report, giving the names of the schools that are disapproved of, the report to be made public through the state library commission, and also through the library periodicals. An instance was cited of two women without either library experience or training who came to one of the officers of the Wisconsin Free Library Commission and asked to be told all about library work, in an hour or two, as they intended to open a school for librarians. The motion that a committee to report on library schools be appointed by the executive committee was unanimously carried, and the committee was later named as John E. Brandegee, trustee of the Utica Public Library; Walter L. Brown, Buffalo Public Library; A. L. Peck, Gloversville Public Library; Miss Harriet B. Prescott, Columbia University Library; and Miss Susan Hutchinson, Brooklyn Institute of Arts and Sciences.

On Friday afternoon a session was held. A recommendation was presented from the New York Historical Society urging that local records and archives throughout the state should be kept in fireproof buildings. The matter was referred to the committee on resolutions. Miss Stearns then spoke of the action taken by the Western Library Meeting in regard to a reformed distribution of public documents to libraries, and read the circular issued (*see* L. J., September, p. 832), asking that the New York association endorse

this movement. It was moved that this be referred to the committee on resolutions.

Mrs. Elmendorf, chairman of the committee on reading lists, presented the report of that committee. She said:

"Six lists have been published on 'United States government,' 'Debating,' 'Stories of delicate workmanship,' 'Stories that most men like,' 'Gardens and gardening,' and 'Botany.' The lists have been printed at a cost of \$53.25; have sold to the amount of \$47.08, and the committee has more than the difference in the value of the stock on hand. The publication of the lists has practically cost the association nothing, as we shall certainly dispose of the lists on hand. Lists have not reached a great many people we desired them to reach. We have reached by sale 30 libraries, and when one considers that there are about 800 or 1000 in the state alone it does not seem as though we had made very much progress. The committee has not been able to put as much time into the distribution of the lists as could be effectively done. If we could publish regularly at stated intervals we could find better sale. Selling the lists at 15 cents a hundred covers the cost of printing and postage. The second edition was printed at a cost of \$1 a thousand; the first 5000 were printed at a cost of \$1.25 per thousand, and the committee can probably get the printing done at the rate of \$1 a thousand for 5000 lots.

"The committee feels that it has not touched one of the most serious problems in library work. Many small libraries are situated in places where they can see no new books. Selecting books from reviews is very unsatisfactory work. The committee would like to make this proposition: that they prepare a list of a limited number of the best new books published each month and secure the publication of that list in some weekly paper once a month, calling it the 'New York Library Association's List of Recent Books,' asking the paper to which the list is given to send a copy of their publication containing this list (once a month) to a definite number of New York state libraries, of which we shall furnish them a list, for a limited time. These lists should be as far as they go a basis for selection which will be known to be absolutely unbiased by any publisher. The committee would not be willing to give up the special lists, but believes that these lists on special topics could be made more salable by the publication of the new book lists."

The report was approved, and it was voted that the same committee on reading lists be continued with power to act, first to publish the selected reading lists, and second to publish monthly in some weekly periodical selected lists of new books. The discussion showed plainly the recognized need of some help of this sort in the selection of new books.

Friday evening's session was a short one,

given to the announcement of the election of officers for the ensuing year. These were: President, Arthur E. Bostwick, New York Public Library; vice-president, Miss Theresa Hitchler, Brooklyn Public Library; secretary, Miss Rose, Buffalo Public Library; treasurer, Edwin W. Gaillard, Webster Free Library, New York. Miss Hazeltine and Mr. Bostwick both spoke briefly of their present and future relation to the association, and the short meeting was followed by dancing in the club house parlors.

On Saturday evening the last session was held, devoted to unfinished business. The Committee on Library Training was announced, as previously noted; and W. R. Eastman, chairman, presented the report of the Legislative Committee, as follows:

"At the last session of the New York legislature 10 laws relating to libraries were enacted. One of these is general in its application. The other nine are special and local.

"Two of the latter class relate to certain law libraries; chapter 16 raising the librarian's salary in Delhi from \$200 to \$400 a year and chapter 32 establishing at Norwich a supreme court library called the 'David L. Follett memorial library.'

"By chapter 21 the number of trustees of the New York Public Library is increased from 21 to 25, the mayor of the city, the controller and the president of the board of aldermen to be trustees *ex officio*.

"By chapter 606 the Brooklyn Public Library is reincorporated with 25 trustees, of whom the mayor of the city, the controller and the president of the borough of Brooklyn are trustees *ex officio*, and the other 22 are to be named by the mayor, 11 from trustees of the Brooklyn Library and 11 from trustees of the Brooklyn Public Library, the corporation to fill vacancies in its membership with regular terms of three years. This library is authorized to contract with the city of New York for construction of library buildings under conditions of the gift of Andrew Carnegie for this purpose. By this act the Brooklyn Library is consolidated with the Brooklyn Public Library, and other libraries in the borough may also be transferred to the new corporation.

"Chapter 20 authorizes the union school district at Chatham to use its library and to acquire property for a free public library under the control of the board of education; this board, with consent of the district, to contract with persons agreeing to furnish money for the library and an annual tax for support to be levied according to such agreement.

"Chapter 95 authorizes the town of Canton to raise money by tax and acquire property for a free public library and to accept gifts on condition of a specified annual appropriation for library maintenance.

"These two chapters last named apply directly to the well known conditions of Mr.

Carnegie's library gifts; one in the case of a school district, the other of a town.

"Chapter 403 authorizes the Oneida board of education to spend \$2000 to add to its school grounds a site for a public library, to permit trustees of any public library in the city to build thereon and control such building and to transfer to the public library the school district library which shall continue as the school library.

"Chapter 462 gives the council of Yonkers power to prepare a site and build foundation walls for the public library and issue bonds therefor not exceeding \$15,000; proceeds to be spent under directions of the public library board.

"Chapter 228 amends the charter of the city of Poughkeepsie and confers corporate powers for public purposes on the city library trustees to accept and execute trusts.

"The same general objects sought in these last five special acts appear also in the enactment of the general and very comprehensive act amending Sec. 36 of the University law. This amendment, known as chapter 185, applies to all municipalities and school districts. Any of them may raise money by tax for a public library or for library buildings or rooms or to share the cost with other like bodies or to pay for library privileges under a contract. Any municipality or district may acquire property, real or personal, and administer it for library purposes and by majority vote at any election or by three-fourths vote of a city council may accept gifts conditioned on future specified annual appropriation for library support. When such vote has been approved under seal by the regents of the University and recorded in its book of charters it is declared to be a binding contract.

"Several points in this law deserve particular notice. The power to pay by public tax for library privileges under a contract is specially important in opening an easy way by which any community, small or large, may profit by the resources of libraries privately controlled or of a library located outside its own territory. Wisconsin permitted this course in 1897 and New York recognized the principle in special bills of that year for both the Buffalo and New York public libraries. It is now made available throughout the state. It permits almost any library combination which may be found desirable and the small neighborhoods which are too small for independent libraries may, under this law, resort to their neighbors for help and pay their share of the cost. By such combinations many libraries will be found possible which were before impossible.

"The more striking feature of the act is the general power granted by it to municipalities and districts to accept gifts on condition of future annual appropriations; a provision which meets the terms of so many of Mr. Carnegie's great gifts. This power to bind

the future has been granted by the legislature in several individual instances. By this act it is extended to every municipality and district of the state; and a further plan for a formal record under seal in a state office is added.

"It may be noted, however, that the terms of this act do not cover the case of a library gift unless it is given directly to the municipality or district voting to comply with the giver's conditions.

"In conclusion we recommend the revision, codification and collation of all amendments to the University law as well as of the law itself, so far as these relate to public and chartered free libraries. Such revision should be made on the basis of that part of the Education bill proposed in 1900 which relates to libraries and which was at that time carefully examined by your committee and generally approved by the librarians of the state. If this bill shall again come before the legislature it will claim the interested attention of your committee."

Frank P. Hill presented the report of the Committee on Resolutions:

Whereas, The New York Historical Society is endeavoring to prevent the further loss of local historical records and asks for the co-operation of librarians. *Resolved*, That the New York Library Association approves the action of the New York Historical Society in securing the passage of an act looking to the appointment of a State Record Commission.

Resolved, That a committee be appointed by the president of the New York Library Association to co-operate with the New York Historical Society in calling the attention of the legislature to the need for action in this matter.

Resolved, That the New York Library Association approves the action taken by the Western Library Meeting in relation to the distribution of government documents, and recommends as a form for letter to be addressed by librarians to Congressmen the draft accepted by the Western Library Meeting, which appears in the September number of the LIBRARY JOURNAL.

Resolved, That the New York Library Association endorses the movement to establish reading rooms at the lumbering and mining camps as undertaken in Canada, and recommends the extension of the plan wherever feasible.

Resolved, That the thanks of the New York Library Association be extended to the Lake Placid Club, and particularly to Mr. and Mrs. Melvil Dewey and Mr. Asa Gallup for courtesies received by members of the Association during convention week.

Each resolution was read separately, and unanimously accepted; and with a few words from Miss Hazeltine the meeting was declared adjourned.

In conclusion a word should be said regarding the social and outdoor record of the week. As usual, drives had been arranged, to Wilmington Notch and to Adirondack Lodge, where several parties ascended Mt. Jo, and a few bold spirits camped out all night on the mountainside. One evening a beautiful "cathedral fire" illuminated the woods and twice the lake bonfires made a spectacular display. Golf and tennis were much in favor, and there were always the twin lakes to tempt explorers to long boating

excursions. The various peaks about Lake Placid were the goals of many. A goodly proportion of the members made the ascent of Whiteface, and Mount Whitney, Eagle's Eyrie, Overlook and the many other beautiful viewpoints were thoroughly explored. During the entire week the weather was delightful, save for one rainy morning—and this despite the fact that equinoctial storms were the rule elsewhere. In its combination of vacation enjoyments, beautiful environment, pleasant company, and the spontaneous and informal discussion of an interesting program, "Lake Placid week" will be long remembered as a red letter date in the library calendar.

MEETING OF GERMAN LIBRARIANS.

THE third annual meeting of the Association of German Librarians (Verein Deutscher Bibliothekare), held at Jena, May 22 and 23, 1902, is reported in detail in the *Centralblatt für Bibliothekswesen*, for August (p. 369-418). Sixty-six delegates attended the conferences of whom all but two were members of the Verein. It was at Jena 30 years ago that German librarianship was first recognized and voted a profession. Seventy-six new members were enrolled in the association during the year and it now numbers 280 members, which in the yearly report was considered a quite "imposing" number. The regular business took up the first day; the second was chiefly devoted to papers dealing with the relations between the libraries and the book-trade. Much that was said was pertinent to conditions in all countries and will be found summed up in a separate article in this issue. A proposition was also made for a yearly report on the book-trade and the libraries. The paper containing it was too long to be read but may be found in the number of the *Centralblatt* above given. The treasurer's report on the inadequate endowment of libraries, with reference to the very great growth of German literature (from 10,000 publications in 1870 to 25,000 in 1900), led to much discussion and many plans for the buying of books with more discrimination, according to location of libraries, specialties of universities and chiefly according to merit, to determine which competent committees of specialists should be appointed. A visit was made to the University of Jena and the report includes a valuable history of this world-renowned institution and a description of its library, overcrowded with treasures, many of them unique and priceless. This number of the *Centralblatt* also contains the laws and by-laws of the association, which show how very seriously the German librarians take their profession and what a high standard of education and knowledge is required to become a member of the Verein Deutscher Bibliothekare.

DISCOUNTS TO GERMAN LIBRARIES.

THE Association of German Librarians, assembled at Jena last August in yearly conference, gave their chief attention to plans to force the book-trade to continue a ten per cent. discount and also to discussions upon the duty of the government to make free copies obligatory to all libraries. This not being deemed feasible, concerted action is to be taken to obtain such free copies for the University of Berlin and put it on the same footing as the Library of Congress, the British Museum and the National Library of Paris.

The delegates were all smarting under the action of the *Börsenblatt* which has been withdrawn from general circulation and confined strictly to members of the book-trade pledged to maintain retail prices. The 13 libraries thus deprived this daily report on new publications do not consider it just to class them as general public. The *Börsenblatt* contains articles and discussions on bibliographic and literary subjects by leading specialists, and the libraries claim their right to see every side of arguments on such subjects and propose an edition of the *Börsenblatt* for outsiders if the secrets of the trade are no more to be revealed. The correspondence with the *Börsenblatt* following its withdrawal is given at length in the *Centralblatt* for August.

The librarians who spoke on the discount question did not think that the booktrade has been reduced to its present financial straits by giving discount. They claim that the profession of bookselling is overfilled and filled by incompetent people who are not up to date in business methods and are hampered by narrow-minded rules and regulations. For diametrically opposite reasons two of the speakers claimed that the book-trade can afford to give discounts to libraries. One said that the proportion of books sold to libraries was so small in comparison with the whole output, that the discount to libraries might be continued without influencing the experiment of enriching the book-trade by saving discounts. Later in the discussion another said that the consumption of the libraries formed such a large part of the bookseller's earnings that by concerted action and a combination offering large orders the bookseller could be brought to terms. One suggested plan of bringing the book-trade to terms was to restrict all purchases of new books and ephemeral publications to the very lowest figure. The claim for ten per cent. discount should be insisted upon for large libraries (defined as libraries buying 1000 marks per year from the same bookseller), but might be modified to five per cent. in the case of smaller libraries. Five per cent. is still allowed by some dealers, but it is being gradually reduced to two per cent., and the libraries look for a stopping of all discount.

It was advocated to combine and take a distinct stand against the book-trade, to beg no more, but to demand, to import direct, to establish an official organ to take the place of the *Börsenblatt*, and to appoint a committee to prepare resolutions to be adopted by all libraries by which the book-trade must finally, in self-preservation, be brought to terms.

It was recommended to librarians to make the book-trade feel how much the action of the *Börsenblatt* had offended. Librarians were requested to furnish no more articles to the *Börsenblatt*, and it was mentioned that the Berlin Königlische Bibliothek had already refused publishers the privileges formerly so freely given to reproduce original manuscripts, illustrations, etc.

By a short resolution the *Börsenblatt* was notified of the attitude taken and was begged once more to reconsider its decision and let booksellers again supply libraries. The German libraries intend to insist upon discount and to take ways and means to get it. What the outcome will be must be watched with interest.

THE LIBRARY OF CONGRESS PRINTED CATALOG CARDS.*

THE system upon which the Library of Congress is issuing printed catalog cards for the use of libraries throughout the country has been formulated and presented in the "Handbook of card distribution," recently issued by the library. The regulations there contained went into effect Sept. 1, and will be modified only in later editions. The handbook, which covers 49 pages, is divided into five sections, dealing with the printed catalog cards—Form of cards, Use of cards, Sale of the cards, Scope of the stock, Depository libraries—with appendixes which give the abbreviations used for forenames and the supplies required for ordering cards. As the handbook is especially intended to make clear the use and form of cards, and to facilitate ordering, it covers ground that is already familiar to readers of the JOURNAL, and need not be reviewed in detail. Numerous examples and facsimiles are given, and directions are as clear and as full as possible. The stock from which orders can be filled now embraces cards for all copyrighted books received since June 1, 1898; current accessions of all classes published since Jan. 1, 1901; American history, including British, Central and South America and the outlying islands; a selection of non-current works in bibliography and library science. A tabulation is given of the cards available in various subjects, the general classification of which are outlined, so that

cards may be ordered in any special subdivision desired.

The depository libraries already selected, to receive full sets of all cards issued, are as follows:

Brooklyn (N. Y.) Public Library.
Carnegie Library, Atlanta, Ga.
Cincinnati (O.) Public Library.
Cleveland (O.) Public Library.
Fiske Free and Public Library, New Orleans, La.
Illinois State University.
John Crerar Library, Chicago.
Johns Hopkins University Library, Baltimore, Md.
McGill University Library, Montreal, Can.
Massachusetts State Library.
Mechanics' Institute Library, San Francisco.
Minnesota University Library.
Nebraska University Library.
New York Public Library.
New York State Library.
Pennsylvania University Library.
Philadelphia Free Library.
St. Louis (Mo.) Public Library.
Texas University Library.
Wisconsin State Historical Library.

These depositories are selected for the following purposes:

1. To enable students and investigators to ascertain whether certain works are in the Library of Congress without making a trip to Washington or submitting lists of books.
2. To promote bibliographical work.
3. To promote uniformity and accuracy in cataloging.
4. To enable the depository library and other libraries in its vicinity to order cards for their catalogs with the minimum expenditure of labor by submitting lists of serial numbers taken from the depository cards.

Deposits are made on condition: 1, that they shall be accommodated in suitable cases; 2, they shall be alphabetically arranged; 3, they shall be made accessible to the public.

Choice of depositories has been made in regard to their geographical location and their relation to centers of population, of educational and of library activity, and their accessibility. The depository collections will practically be identical with the printed card catalog of the Library of Congress. On Sept. 1 it approximated a total of 85,000 cards, and the annual additions for the next five years will, it is estimated, be about 50,000 per year.

The "travelling catalogs" sent out by the library are described in Bulletin no. 2, issued Sept. 15 by the Card Distribution Section. These catalogs are especially intended to facilitate the recataloging of libraries by enabling them to order printed cards by serial number.

The expense of transporting and handling the catalogs will be considerable. Except in the case of the catalog for American history, the area covered by each is, at present, comparatively small. A catalog will not be

* Library of Congress, Catalogue Division, Card Distribution Section. Handbook of card distribution. 1st ed. Washington, Gov. Print. Office, 1902.

loaned unless the number of cards ordered from it is likely to be considerable. For the above reasons, libraries are requested to consider carefully, before applying for the use of a travelling catalog, whether the usual method of ordering cards, on slips by author and title, is not sufficient for their purpose.

The following travelling catalogs were ready by Sept. 20:

1. *General catalog.*

About 85,000 cards, representing all the printed cards now in stock. For details as to scope of stock see Handbook, p. 37-46.

2. *American history.*

About 25,000 cards. This section being now completely recataloged, the collection of printed cards is representative of the collection of books on this subject at the Library of Congress, with the exception of unfinished serial publications. Besides the general history and description of the United States, this class includes local history and description. In addition to the United States, it covers British, Central, and South America and the outlying islands. It does not include the constitutional history of the United States, nor American biography.

3. *Bibliography.*

About 3000 cards, representing works in bibliography and library science which have come by copyright since June, 1898, and by purchase since Jan. 1, 1901; also a selection of the books in most common use, of various dates, from the shelves of the bibliographical section of the library.

4. *Law.*

About 1200 cards. Covers cards for copyright books received since June, 1898, and books received by purchase since Jan., 1901. Includes cards for books on common law, constitutional law and history and theory of law.

In order to economize in the matter of transportation charges as well as in the time required for transportation, circuits will be arranged for the catalogs whenever possible. After circuits have been arranged, however, no further applications for that circuit can be granted, except in the case of a library in the vicinity of a portion of the circuit not yet covered by the catalog desired.

LIBRARIANS have passed through the repository stage, when they did little more than collect and save; the identification stage, when they devoted themselves greatly to classifying, ticketing and cataloging their books; the memorial stage—which we are unhappily still blundering through—when they surrendered themselves to the task of erecting Greek temples, Italian palaces, and composite tombs; the distribution stage, wherein they find themselves outstripped by commercial ventures which saw that the novel had become as much desired as the daily paper; and they are just entering upon the critical, evaluating and educating stage.

J. C. DANA.

Library Association of the United Kingdom.

ANNUAL MEETING, BIRMINGHAM.

The annual meeting of the Library Association of the United Kingdom was held this year at Birmingham, Sept. 23-26. This is the second time the association has met at Birmingham, the previous conference held there having been in 1887. The first session was opened on the morning of Tuesday, Sept. 23, at the city council chamber, when after an address of welcome from the Lord Mayor, J. H. Lloyd, the new president, Dr. W. Macneile Dixon, of Birmingham University, was installed, and a vote of thanks was extended to the retiring president, Mr. G. K. Fortescue, Keeper of Printed Books at the British Museum.

The president's address, delivered by Dr. Dixon, was mainly an exposition of the function of books in the development of the race, and the part that libraries should play in that development. Libraries serve to put us in mind of our intellectual and moral obligations, to remind us that the pillars of our world rest on the labors of others. They preserve for us the fragments of an uncommunicated past, which, however we choose to regard it, remains the present and inexorable critic of our modern doings. The library appears to be the natural home of the idealist, for one can hardly fail to observe the singular unanimity with which the books of the world uphold the highest ethical and spiritual standards. Nothing is more interesting than to observe how rarely the sordid or ignoble view of things finds its way into print. In books the cause of virtue and heroism is the wise man's cause. Librarians are to be congratulated that their business in life appears to place them on the side of the real, as opposed to the apparent, on the side of the protest made by humanity against the encroachment of the merely material life, which consists of the appearances or shows of things. It need not surprise us, therefore, to find that a faith in books is a part of any man's creed; it need not surprise us that in libraries many men should discern a hope for the world. Books, however, have the defects of their qualities; they are rarely accused of materializing the mind, but they fall short of what is sometimes expected of them. The thesis that libraries contain nothing that cannot be spared cannot be defended. Man is a loquacious animal, and the preserved verbosity of centuries contains many vain repetitions and lifeless redundancies.

Following the president's address Mr. A. Capel Shaw, of the Birmingham Public Libraries, read an historical sketch of the use and development of those libraries. The papers were: "Publishers and publishing," by Walter Powell, of Birmingham, dealing with points for criticism in modern book-

making; "Notes on a few experiments in Glasgow," by F. T. Barrett, who described details of cataloging, classification, and indicators; and "John Baskerville and his work," by R. K. Dent, of Aston Manor. In the afternoon visits were made to Kenilworth, and to the Wolverhampton Art and Industrial Exhibition, and in the evening a reception was given to the delegates by the Lord Mayor and Lady Mayoress.

Wednesday morning's session was opened with a paper by W. E. A. Axon, of Manchester, on "An Italian librarian of the 17th century: Antonio Magliabecchi." John Ballinger, of Cardiff, brought forward a topic of practical interest in "The rate limit and the future of free libraries." He said that more than 50 years had passed since the limit of a penny rate was fixed, either to check extravagance or to prevent waste of money on a scheme which many expected to fail. The library movement had travelled a long way since then. The need for expensive buildings and for branch libraries was not foreseen, nor could the original promoters of public libraries foresee that 25 years later the whole aspect of the library question would be changed by the passing of an act for general education. The spread of education had created demands upon libraries, both in range and extent, beyond the most sanguine dreams of those who pioneered the movement, and to a very large degree the libraries had failed to support those demands. At present funds were not available for the purchase of those expensive, but essential, books which went to make up a library of real value. Cheap bindings for books of permanent value were also false economy. The general ideas of the functions of a public library needed revision and extension.

"The idea of a great public library," as submitted by T. W. Lyster, of Dublin, called forth some discussion on the subject of discriminating in contemporary literature, in the course of which Dr. Garnett said that all public libraries, including the British Museum, were crippled through not having been built on a sufficiently large scale. The British Museum ought to be a universal library, so far as it is possible for any library to realize that ideal, and he hoped that would be borne in mind when the question came before the country of increasing the present grant to the British Museum. A paper by Benjamin A. Mullen, of Salford, followed, recommending a system of "Sight indices for a classified library," which should make it impossible, in returning a volume to the shelves, to place it in a wrong position without the fact being instantly shown by the book itself; and R. W. Mould, of Southwark, spoke on "Some library aids other than mechanical." In the afternoon St. Mary's College and the Oscott Library were visited, and in the evening, after a business session, there was a smoking concert tendered by the Midland Arts Club and the Royal Birmingham Society of Artists.

The business meeting on Wednesday evening was a prolonged one. The report of the council was read and accepted. The year's necrology included the names of the Marquis of Dufferin, who was president of the association at the Belfast meeting of 1894, and that of Benjamin F. Stevens. An invitation to hold the annual meeting at Leeds in 1903 was accepted, and Newcastle-on-Tyne was decided upon for 1904.

It was reported that the Public Libraries Acts had been adopted in 16 places during the year, and the Public Libraries (Ireland) Amended Act, 1902, had been successfully passed. An important change in the management of the classes hitherto conducted by the association had been agreed to. By arrangement with the governors of the London School of Economics and Political Science (University of London) those classes would in future be held at the new premises of the school in Clare Market, under the control of two governors of the school and two members of the Library Association. The teachers would be nominated by the council, by whom the professional examination would be held as hitherto. The first of the new classes would begin on Oct. 15, when Mr. J. D. Brown would deliver the first of 10 lectures on "Elementary bibliography." These would be followed early in 1903 by a course on "Cataloging, classification, and shelf arrangement," by Mr. F. T. Barrett. The office of honorary secretary having become vacant through the resignation of Mr. Frank Pacy, Mr. Lawrence Inkster had been appointed as his successor. Attention was directed to the remarkable series of gifts to library authorities in all parts of the United Kingdom which Mr. Andrew Carnegie had lately added to the many similar benefactions previously bestowed by him both in the British Empire and in the United States.

On Thursday morning the first paper read was by J. Potter Briscoe, on "The public library and reading circles," urging that some means of influencing systematic reading should be developed by librarians, and commending the work of the National Home-reading Union. Henry Guppy, of the John Rylands Library, presented the subject of "Analytical cataloging for the reference library." He said that the question of paramount importance to the librarian was how best to render accessible to readers and students the stores of literature which were to be found on the shelves of the library. The great desideratum of the library, and more particularly of the greater reference libraries, was the catalog or catalogs. Mr. Fortescue had done fine work in removing the reproach from the British Museum, in so far as the current literature since the year 1880 was concerned, but the vast accumulations down to that year remained still to be dealt with, and constituted a problem not easy of solution.

Other papers were: "The Library Asso-

ciation rules for author entries in catalogs," by L. Stanley Jast; "More about cataloging," by F. T. Barrett, and "The cataloging of the contents of the transactions of learned societies," by G. T. Shaw. A discussion followed, in which Dr. Garnett, Mr. Lyster, and Mr. Axon commended the cataloging rules of the British Museum, while other speakers urged the desirability of revising and completing the rules drawn up some years ago by the association. A representative sub-committee was appointed to report on the subject. The question of discount to libraries on net books was also brought up, and it was reported that in reply to a circular addressed to them on the subject, nearly all the library authorities connected with the association had expressed themselves in favor of asking the Publishers' Association to release booksellers from the existing restriction which prevents them from giving any discount on net books to public libraries. A committee was appointed to undertake the whole question of revising the rules of the association. The afternoon was devoted to excursions, parties visiting Coventry and Wolverhampton, and the annual dinner of the association was held in the evening. On Friday the meeting closed with a post-conference excursion to Stratford-on-Avon and Warwick.

American Library Association.

President: Dr. J. K. Hosmer, Public Library, Minneapolis, Minn.

Secretary: F. W. Faxon, 108 Glenway st., Dorchester, Mass.

Treasurer: Gardner M. Jones, Public Library, Salem, Mass.

A. L. A. PUBLISHING BOARD.

GUIDE TO REFERENCE BOOKS.

Miss Kroeger's "Guide to the study and use of reference books, a manual for librarians, teachers and students" (104 p. O.), will be published Oct. 25 (order of Houghton, Mifflin & Co., Boston, or of the A. L. A. Publishing Board, 10½ Beacon street, Boston). Miss Kroeger is the librarian of the Drexel Institute, of Philadelphia, and director of its Library School. Her manual is the only text-book available for instruction on this subject, and though intended primarily for use in library schools and for general library use, it will also be found of value in high and normal schools. Price, \$1.25 net; discount on copies bought in quantity.

INDEX CARDS FOR PERIODICALS.

For certain periodicals currently indexed by printed cards, the Board has issued in the course of the last three years cards covering the whole series from the beginning up to the date of the current indexing. The

following are the last series issued to subscribers, and a few additional sets can still be had from the Publishing Board. Prices are at the rate of 75 c. per 100 cards.

Johns Hopkins University studies, v. 1-15. \$2.44.

U. S. Geological Survey. Monographs, v. 1-28. 66 c.

— Bulletins, 1883-1897. \$2.78.

U. S. Geological and Geographical Survey of the Territories. Reports 1-13. 26 c.

— Miscellaneous publications 1-12. 23 c.

American Academy of Political and Social Science Annals, 1890-1901. \$5.88.

Bibliographica, 3 v. (in preparation).

CARDS FOR BRITISH PARLIAMENTARY PAPERS.

This is the most important set of printed cards lately issued by the Publishing Board, and includes 1339 cards, covering 559 titles. Price \$13.39. The work of preparation was done at the John Crerar and Harvard College libraries, and careful attention has been given to the difficult matter of author entries for the various British government boards; and it is hoped that the principles adopted will be followed by libraries in general. The set consists of two parts: First, 331 titles for reports currently continued from year to year. A note states in each case when the series began and its relation to earlier series, if any, on the same subject. Second, 248 titles for special papers and reports in the Parliamentary Papers of 1896 to 1899. The second section will be continued immediately by the issue of cards for the Papers of the session of 1900, and additional cards of the first kind will be issued from time to time, as necessary.

A few sets still remain on hand of some of the series of printed cards previously issued, namely:

Columbia studies in history, economics and public law, v. 1-7. 33 c.

American Economic Association. Economic studies, v. 1-2. 28 c.

— Publications, v. 1-11. \$1.13.

U. S. National Museum. Bulletins, 1-49. \$1.02.

Mass. Historical Society. Collections, 1792-1899. \$4.

Old South leaflets, v. 5. 50 c.

N. Y. State Museum, Bulletins, 1-23. 54 c. (2 sets.)

American Association for the Advancement of Science. Addresses, 1875-98. \$3.49. (1 set only.)

Of other sets already out of print, the Board is prepared to reprint and bring up to date the following, if enough orders are received:

U. S. National Museum. Annual reports.

U. S. Bureau of Ethnology. Annual reports.

Smithsonian Institution. Annual reports.

Smithsonian Institution. Contributions to knowledge.

125

Smithsonian Institution. Miscellaneous collections.

U. S. Bureau of Education. Circulars of information.

American Historical Society. Reports and papers.

Special consular reports.

Old South leaflets.

Advance orders for these cards should be sent promptly to the office of the Publishing Board.

WARNER LIBRARY.

In 1899 the Board issued printed cards for the "Warner library of the world's best literature," but they soon went out of print. So many inquiries for these cards have been received since, and librarians report so favorably on the increased usefulness of the volumes from the presence of the cards in the catalog, that the Board has decided to reprint the cards. They will probably be ready for distribution in November, and early orders are requested. The set consists of over 1000 cards. Price \$6.

BIBLIOGRAPHICAL SERIALS.

The indexing of current bibliographical serials, begun in co-operation with the Chicago Bibliographical Society, is under way, and cards for the *Bibliographie moderne*, vol. 1 to 5, and the *Bulletin of bibliography*, vol. 1 to 3, no. 2, have already been sent out. The list of publications indexed consists of 20 titles. Indexing begins with the volume for 1901, except in certain cases where the periodical itself started shortly before that time, when the indexing begins with the first volume. Subscriptions are received for the complete series at the rate of \$2.50 per 100 titles (two cards per title), and it is estimated that the usual annual cost will not exceed \$12. Subscriptions for individual periodicals are received at the same rate for the first titles sent out, but for the continuation the rate will be \$4 per 100 titles, the same as for other current periodical cards. A few extra sets will be printed, but libraries that have not subscribed should do so promptly. Cards for the *Bibliographie moderne*, vol. 1 to 5, 87 titles. Price, \$2.17. Cards for the *Bulletin of bibliography*, vol. 1 to 3, no. 2, 36 titles. Price 90 c.

CROSS REFERENCE CARDS.

Requests have been received for printed cards giving the "see" and "see also" references contained in the A. L. A. "List of subject headings." The Board is ready to issue such cards if the demand proves sufficient. The price probably would not exceed 1c. per card, and to those subscribing in advance a discount of 25 per cent. will be given.

LIBRARY TRACTS.

A new library tract is in preparation, giving library plans, etc., supplementary to the tract on library rooms and buildings by Mr.

C. C. Soule. Suggestions for future tracts will be welcome. Those now on hand are:

1. Why do we need a public library?

2. How to start a public library, by Dr. G. E. Wire.

3. Travelling libraries, by F. A. Hutchins.

4. Library rooms and buildings, by Charles C. Soule.

Price 5 c. each, \$2 per 100, in lots of 50 or more. Orders should be sent to the secretary of the Publishing Board, 10½ Beacon street, Boston.

NINA E. BROWNE,
Secretary.

State Library Commissions.

MICHIGAN STATE BOARD OF LIBRARY COMMISSIONERS. Secretary: Mrs. M. C. Spencer, state librarian, Lansing.

The commissioners have issued their second annual report for the year ending Dec. 31, 1901, which is practically devoted to tabulated statistics of Michigan libraries. The majority of the libraries recorded, however, are township school libraries, regarding which no information was forthcoming. It is rather discouraging to find on page after page the statement "no report to board," and some method of discriminating between live working libraries and moribund school collections might usefully be adopted for future reports. The summary of statistics shows a total of 4437 libraries, of which 1170 have reported, containing 1,429,169 v. and spending in 1901 \$33,498.80 for books.

NEW YORK. PUBLIC LIBRARIES DEPARTMENT:

Melvil Dewey, director.

The University of the State of New York, Home Education Department, has issued the annual report for 1901 of the Public Libraries Division (Bulletin 41, Public Libraries 11), which, in addition to its statistical review of library conditions in New York, touches in general upon the library history of the year. The number of independent libraries formally admitted to the university, like colleges, was increased by 11 during the year, and is now 186. "Those free for circulation contain 718,775 v., an increase of 112,443, or 18 per cent. for the year. This is the largest gain in seven years. Their circulation was 2,605,610, an increase of 423,456 or 19 per cent, and the average circulation was 362 for each 100 volumes." Of these 186 libraries, 135 received state grants of money for books, and 100 were aided, or in a few instances supported, by local taxation. There are also 99 public libraries registered in the university, 151 libraries in 42 counties were visited by the state inspector and his assistants, and 48 lectures or addresses were delivered by the inspector.

In all reports were received by the division from 1137 libraries of 200 v. or more. This is a gain of 102 over the previous year.

"The increase of libraries free for circulation is 60, counting for the first time 25 branches as libraries. These free lending libraries report an increase of 238,135 v. and 780,252 in circulation. The total free circulation was 9,232,097, an average of 25,350 daily, 381 for each 100 v. in those libraries and 1270 for each 1000 of population." Tabulated statistics are given of the volumes and circulation of free lending libraries in New York city for the year ending June 30, 1901; there are notes of new buildings, administrative changes and like details; tabulated summaries of gifts and bequests and library legislation, and a review of library meetings and training for the year.

Library Clubs.

WESTERN MASSACHUSETTS LIBRARY CLUB.

President: Frank G. Willcox, Public Library, Holyoke.

Secretary: Miss May Ashley, Public Library, Greenfield.

Treasurer: Mrs. A. J. Hawks, Meekins Memorial Library, Williamsburg.

A library institute was held in Granville on Tuesday, Sept. 23.

Librarians were present from Hartford, North Granby and Hartland, Ct., and from Westfield, Brimfield, Holyoke, Sunderland, Greenfield and Springfield, Mass. The schools in Granville were closed for the afternoon in order to enable teachers and older pupils to attend.

After a few words of welcome by Mrs. A. C. Carpenter, the first talk of the afternoon was given by Miss C. M. Hewins, librarian of the Hartford Public Library, on "What we can discover in books."

C. A. Brodeur, principal of the Westfield normal school, spoke on "The teacher's tools." Books are the most useful tools the teacher has; they are her stock in trade. She needs them for herself and for the children, hence there must be close co-operation between herself and the librarian. She wishes to know what she is recommending and what will give just the best material. To that end, graded lists are useful, lists on which groups of teachers may work together with the librarian. The talk was followed by an interesting discussion.

After a bountiful supper, provided by the women of the Granville Library Club, the session was continued. F. G. Willcox, librarian of the Holyoke Public Library, who acted as chairman, summed up the functions of a library as a storehouse, a bureau of information, a provider of pastime and an educator. He then introduced C. D. Hine, secretary of the Connecticut Board of Education, who spoke on "The librarian, the teacher, and the child." Every home should have a library of its own, in which

some books should stand for character and ideals. There is danger in these days of books being too highly colored with imagination; danger in fairy tales which teach wrong motives; danger in Indian tales, full of blood and thunder; danger in tales of well-dressed little prigs. A warm discussion followed, showing a great difference of opinion in regard to the value of fairy tales and Indian stories.

Rev. W. E. Waterbury, of Springfield, gave the final address, speaking on "The value of the library to every citizen."

Library Schools and Training Classes.

AMHERST SUMMER LIBRARY SCHOOL.

The twelfth session of this summer school was held in the library of Amherst College as usual. The number of pupils was larger than ever, being 54, and the class was of excellent quality as to scholarship and ability. The six weeks from July 7 to Aug. 15 were crowded with hard work, done with spirit and enthusiasm. Visits were made to important libraries in the neighborhood, and at the close a trip was made to Boston and Cambridge, including visits to the libraries, the Library Bureau, and the Riverside Press. Following is a list of the pupils:

Miss L. G. Bew, Baltimore, Md.
Nellie Preston Blanchard, Ascutneyville, Vt.
Carol W. Brewster, Northampton, Mass.
Ingrid Busck, Washington, D. C.
Grace W. Bushee, Merrimack, N. H.
Lulu Carpenter, Logan, Utah.
Alma M. Chickering, Dover, Mass.
Elfreda M. Clarke, Waltham, Mass.
Bessie F. Cordes, Winthrop, Mass.
Miss M. E. Craighead, Indiana, Pa.
Amelia W. Davis, South Boston, Mass.
Jessie Dunn, Titusville, Pa.
Charles H. Dye, Athens, Ga.
Mary L. Erskine, Newville, Pa.
Anna Friedlander, New York City.
Marion Herbert, New York City.
John W. Herrick, Plymouth, Mass.
Henrietta J. Hifton, North Plainfield, N. J.
Herbert S. Hirshberg, Brookline, Mass.
Alice Holt, Stamford, Ct.
Catherine Horner, Edmond, Okla.
Edith Johnson, Matawan, N. J.
Florence Kimball, Brockton, Mass.
Adah M. Judd, Westhampton, Mass.
Effalene H. King, Williamstown, Mass.
Fred H. Lawton, Boston, Mass.
Lucy S. McClary, Windsor, Vt.
Mary T. McCloskey, Philadelphia, Pa.
Helen C. McGown, Woburn, Mass.
Elizabeth V. McLaws, Savannah, Ga.
Elizabeth Merritt, Millbrook, N. Y.
Abbie Montague, Sunderland, Mass.
Lilla M. Oberly, Quakertown, Pa.
Florence M. Pease, Conway, Mass.

A. Gertrude Phelps, Brookline, Mass.
 Edith M. Pratt, Greenfield, Mass.
 Beatrice Putnam, Uxbridge, Mass.
 Henrietta Schoverling, Brooklyn, N. Y.
 Mrs. C. P. Simpson, Rome, N. Y.
 Harriet B. Sornborger, Hopedale, Mass.
 George Dana Smith, Burlington, Vt.
 Mabelle Smith, Amherst, Mass.
 Grace M. Stoddard, Norwood, Mass.
 Miss E. S. Talcott, Elmwood, Ct.
 Charles S. Thayer, Hartford, Ct.
 M. Louise Topliff, Pomona, Cal.
 Miss L. T. Wilder, Waltham, Mass.
 Florence L. Wildes, Waltham, Mass.
 Leonard Worcester, Burlington, Vt.
 Jessie W. Wright, Schenectady, N. Y.
 Madge E. Yeager, Washington, D. C.

CARNEGIE LIBRARY TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS.

The training school for children's librarians conducted by the Carnegie Library of Pittsburgh opened for its third year on Sept. 29 with 17 students. As heretofore, the mornings will be devoted to lectures and class work, and afternoons or evenings to practice work in the six children's rooms, the schools, home library groups, clubs, etc. The junior studies for the first term include library handwriting, order department routine, classification, cataloging, folklore and myths (as an introduction to the story telling), and annotations for children's books. The students also attend the weekly round table discussion on the rule and regulation of a children's room, which are participated in by the central and branch librarians and the students of the school.

The following is a list of the students for 1902-1903:

Senior class.

Alice Gordon Goddard, Zanesville, O. Apprentice, Utica (N. Y.) Public Library, Sept., 1897-May, 1898.
 Florence Janney Heaton, Hamilton, Va. Woman's College of Baltimore, A.B. 1901.
 Louise Kennard, Pittsburgh, Pa.

Junior class.

Gertrude Elizabeth Andrus, Buffalo, N. Y. Assistant, Buffalo Public Library, March 1900-Aug., 1901.
 Helen Grant Betterley, Wilkesbarre, Pa. Substitute, Osterhout Free Library, April, 1902-Sept., 1902.
 Emma Arrietta Floyd, Pittsburgh, Pa. Pennsylvania College for Women, 1889-1893.
 Ruth Grosvenor Hopkins, Auburn, N. Y.
 Harriet Josephine Imhoff, Johnstown, Pa. Northwestern University, Sept., 1899-Feb., 1900. Assistant, Carnegie Library of Pittsburgh, June, 1900-Dec., 1900. Assistant, Newark Public Library, Newark, N. J., Jan., 1901-Jan., 1902.

Grace Addison Kingsbury, Pittsburgh, Pa. Pennsylvania College for Women, B.L. 1902.

Adelaide Leiper Martin, Baltimore, Md. Wilson College, B.A. 1902. Assistant librarian, Wilson College Library, Sept., 1901-June, 1902.

Lucy Boardman Moody, Beaver, Pa. Wellesley, B.A. 1902.

Amena Pendleton, Bryn Athyn, Pa.
 Edith Morley Smith, Philadelphia, Pa.

Special students.

Lillie Capelle Bryer, Wilmington, Del. Assistant, Wilmington Institute Free Library, Oct., 1895-Jan., 1900, Jan., 1901-March, 1901. Children's librarian, Wilmington Institute Free Library, March, 1901-Aug., 1902.

Dorothy Emma Burrows, Rutherford, N. J. Librarian, Rutherford Public Library, May, 1896-Sept., 1902. Chautauqua Library Summer School, July 10, 1901-Aug. 15, 1901.

Minnie Wells Le Cl  ar, Lyndhurst, N. J. Brooklyn Public Library, apprentice, May, 1900-Jan., 1901. Brooklyn Public Library, assistant, Jan., 1901-Sept., 1902.

Effie Louise Power, Cleveland, O. Children's librarian, Cleveland Public Library, March, 1895-Sept., 1902.

APPOINTMENTS.

The following students of the Training School for Children's Librarians have been appointed to positions on the staff of the Carnegie Library of Pittsburgh:

Edna May Cullis, Oil City, Pa. Assistant in charge, East Liberty Children's Free Club and Reading Room.

Josephine Louise Gutman, Pittsburgh, Pa. Children's librarian, Mount Washington Branch.

Annabelle Porter, Kent, O. Assistant, West End Branch.

Helen Underwood Price, Kent, O. Children's librarian, West End Branch.

Lilian Rod  , Pittsburgh, Pa. Assistant, Hazelwood Branch.

Elva Sophronia Smith, South Pasadena, Cal. Annotator, Children's department.

Marie Martin Smith, Philadelphia, Pa. Children's librarian, Lawrenceville Branch.

DREXEL INSTITUTE LIBRARY SCHOOL.

CLASS OF 1902-03.

Bessy Forsyth Bache, Columbus, Ohio.

Susan Katherine Becker, Lebanon, Pa. Graduate Pa. State Normal School, Lebanon Valley College, 1901-2.

Marie Estelle Binford, Macon, Ga. Wesleyan Female College, Macon, Ga.; graduate Toronto Presbyterian Ladies' College, Toronto, Canada.

Edith Julia Chamberlin, Bradford, Vermont. Graduate Bradford Academy; graduate Salem Normal School, Salem, Mass.

Jane Evans, Burlington, N. J.

- Emily Jane Fell, Urbana, Ohio. Graduate Urbana High School, Urbana University, 1901-2.
- Rosalie V. Halsey, Baltimore, Md.
- Helen A. Keiser, Millersville, Pa. Graduate State Normal School, Millersville, Pa.
- Bessie McCord, Joliet, Ill. Graduate Hampton High School, Iowa College (two years).
- Ina Forrest Nelson, Morgantown, W. Va. Graduate Fairmount State Normal School.
- Nina K. Preston, Ionia, Mich. Graduate Ionia High School, University of Michigan, 1892-93.
- Anna Mary Rodgers, McVeytown, Pa. Graduate Lewistown Academy, Woman's College, Baltimore, Md.
- Daisy M. Smith, Piqua, Ohio. Graduate Piqua High School, Wesleyan University, 1890-91.
- Margaret Clark Smith, Martin's Ferry, Ohio. Graduate Martin's Ferry High School; graduate Wilson College, A.B.
- Ora I. Smith, Rock Hill, S. C. Graduate Winthrop Normal and Industrial College of South Carolina.
- Elfreda Stebbins, Shelton, Neb.
- Helen A. Stiles, Haddonfield, N. J.
- Helen D. Subers, Ashbourne, Pa.
- Flora B. Turner, Berlin, Pa.
- Irene DuPont Winans, Rochester, N. Y.

ILLINOIS STATE LIBRARY SCHOOL.

The sixth year of the Illinois State Library School at the University of Illinois opened Sept. 17. The per cent. of students returning for the senior year is unusually large.

A new arrangement in the practical work of the senior class has been instituted by which the instructor is afforded an opportunity to justly estimate the ability of the student to organize and carry on independent work. In addition to the previous custom of requiring practice in all departments of the library, during the entire year each senior student is to be held responsible for the performance or supervision of some branch of work in the university library, and, in so far as the performance of this duty is concerned, she is considered a regular assistant in this library. The purpose of this plan is to develop in the student a sense of responsibility, and to make her feel that she is an active worker in the university library.

Each student is required to make her own plans for the execution of her work, which plans may include assistance from junior students, whose work she must supervise. In this way excellent practice is given in administrative work. The library, being a university library, affords unusual facilities for training along this line, and already much interest and appreciation of the opportunity offered has been expressed by the hearty co-operation of the students in this plan.

MARGARET MANN.

NEW YORK STATE LIBRARY SCHOOL.

LIST OF STUDENTS 1902-1903.

The fall term opened Wednesday, Oct. 1, with the following students:

Senior class.

- Bacon, Corinne, New Britain, Ct. Packer Collegiate Institute, 1888-90; assistant New Britain Institute Library, 1895-1901.
- Bennett, Bertha Ilione, Iliion, N. Y. B.L. Syracuse University, 1899.
- Blunt, Florence Tolman, Haverhill, Mass. B.L. Mt. Holyoke College, 1896; B.A. 1899; assistant Haverhill (Mass.) Public Library, 1899-1901.
- Brown, Zaidée Mabel, Albany, N. Y. B.A. Stanford University, 1898.
- Casamajor, Mary, Brooklyn, N. Y. B.A. Adelphi College, 1899; filer and indexer of correspondence Munson Steamship Line, New York, 1901; librarian Asbury Park (N. J.) Public Library, 1901-2.
- Chapman, Grace Darling, Geneva, N. Y. B.L. Lake Erie College, 1901; cataloger Lake Erie College Library, 1900-1.
- Deming, Margaret Childs, Sacramento, Cal. University of California, 1890-91 B.A. Stanford University, 1897.
- Draper, Annie Elizabeth, Auburn, N. Y. Cornell University, 1900-1.
- Groves, Charlotte Elizabeth, Alfred, N. Y. B.A. Wilson College, 1899; assistant Wilson College Library, 1895-1901.
- Hepburn, William Murray, Pictou, N. S. B.A. Dalhousie College, 1895; M.A. 1897.
- Jenks, Edwin Munroe, Boston, Mass.
- Katz, Louise Waldman, Ithaca, N. Y. B.S. Cornell University, 1900.
- McCurdy, Robert Morrill, Andover, Mass. B.A. Harvard University, 1900.
- Mathews, Mary Eliza, Brooklyn, N. Y. B.A. Adelphi College, 1899; cataloger New York Public Library, 1901; librarian American Institute of Mining Engineers, New York, 1901-2.
- Perry, Everett Robbins, Worcester, Mass. Harvard University, 1899-1901.
- Seligsberg, Ella Rosina, New York City. B.A. Barnard College, 1899.
- Whittlesey, Julia Margaret, Cleveland, O. B.L. Lake Erie College, 1899; assistant Cleveland Public Library, 1900-1.
- Wyer, Malcolm Glenn, Excelsior, Minn. B.A. University of Minnesota, 1899; assistant University of Minnesota Library, 1900-1.

Junior class.

- Barker, Beatrice J., Providence, R. I. Ph.B. Brown University, 1895; cataloger Brown University Library, 1896-1902.
- Bonnett, Marguerite Waldron, Pittsburgh, Pa. B.L. Pennsylvania College for Women, 1896; assistant Carnegie Library, Pittsburgh, 1902-2.
- Clarke, Mary Reynolds, Whitinsville, Mass. Wellesley College, 1876-78; Smith College,

- 1879-80; assistant Worcester (Mass.) Free Public Library, 1902.
- Dickinson, Asa Don, Westwood, N. J. Columbia College Law School, 1894-96.
- Dunham, Mary Eleanor, Richmond, Ind. University of Colorado, 1895-96; B.A. Indiana University, 1898; Yale University Graduate School, 1899-1901.
- Eastwood, Mary Edna, Burlington, N. J. B.A. Vassar College, 1899; junior assistant New York State Library, 1901.
- Emerson, Margaret Ann, Canajoharie, N. Y. Mt. Holyoke Seminary, 1870.
- Goodrich, Nathaniel Lewis, Utica, N. Y. B.A. Amherst College, 1901.
- Hedrick, Ellen, Washington, D. C. B.A. Smith College, 1892; indexing and bibliographic work in Washington libraries.
- Hyde, Mary Elizabeth, San Francisco, Cal. B.A. Stanford University, 1901; assistant San Francisco Free Public Library, 1901; cataloger California Academy of Sciences Library, 1901-2.
- Ketcham, Ethel Belden, Dover Plains, N. Y. B.A. Radcliffe College, '99.
- Leupp, Harold Lewis, New York, N. Y. B.A. Cornell University, 1902.
- McCullough, Ethel Farquhar, Franklin, Ind. Ph.B. Franklin College, 1901.
- McConnell, Lillian Brown, Merrimac, Mass. B.A. Mt. Holyoke College, 1900; assistant Merrimac Public Library, 1895-96.
- McKay, Mabel, Dunkirk, N. Y. Vassar College, 1898-1900; assistant Brooks Memorial Library, Dunkirk (N. Y.), 1901-2.
- Mackey, Mary Evelyn, Pittsburgh, Pa. B.A. Pennsylvania College for Women, 1897; assistant West End Branch, Carnegie Library, Pittsburgh, 1899-1902.
- Manchester, Earl Northup, Factoryville, Pa. B.A. Brown University, 1902; assistant Brown University Library, 1899-1902.
- Mumford, Rosalie, Detroit, Mich. Vassar College, 1894-96; assistant Detroit Public Library, 1899-1902.
- Nernoy, May Childs, Green Island, N. Y. B.A. Cornell University, 1902; junior assistant N. Y. State Library, 1897-98.
- Pearson, Edmund Lester, Newburyport, Mass. B.A. Harvard University, 1902.
- Peck, Harriet, Gloversville, N. Y. B.L. Mt. Holyoke College, 1902; assistant Gloversville Free Library.
- Peters, Orpha Maud, Circleville, O. B.L. College for Women of Western Reserve University, 1902; assistant Library of the College for Women.
- Reed, Lois Antoinette, Rochester, N. Y. University of Rochester, 1900-2; assistant University of Rochester Library, 1901-2.
- Riggs, Alice Winifred, Pittsburgh, Pa. Ph.B. College for Women of Western Reserve University, 1901; assistant Adelbert College Library, 1900-1; assistant Carnegie Library, Pittsburgh, 1901-2.
- Rose, Ernestine, Bridge Harrington, N. Y. B.A. Wesleyan University, 1902.
- Saleski, Mary Agnes, New York City. B.A. Wesleyan University, 1900; assistant Circulating Department New York Public Library, 1900-2.
- Spofford, Martha Elizabeth, Rutland, Vt. B.A. University of Vermont, 1896.
- Votaw, Albert Hiatt, Westtown, Pa. B.A. Earlham College, 1874.
- Wead, Mary Eunice, Washington, D. C. B.A. Smith College, 1902.
- Whitbeck, Mrs. Alice Grover, Berkeley, Cal. B.L. University of California, 1887.
- SALOME CUTLER FAIRCHILD.

Reviews.

A. L. A. RULES, *advance edition*. Condensed rules for an author and title catalog; prepared by the Co-operation Committee of the A. L. A., 1883; revised by the Advisory Catalog Committee, 1902. Issued by the Library of Congress, Washington, Government Printing Office, Library Division, August, 1902. 23 leaves, Q.

This pamphlet is a direct outcome of the Library of Congress plan of supplying printed catalog cards to other libraries. One of the first questions asked by each cataloger was "Will the rules of entry conform to those already in use in my catalog?" There are several codes of cataloging rules in use in this country. The "A. L. A. condensed rules," presented and adopted at the Buffalo conference (L. J., 8:251, 292), is merely a skeleton outline of a code and gives opportunity for many variations in detail. "Cutter's rules" and the "Library school rules," the codes in most general use, differ in many important particulars. Libraries founded previous to the publication of these codes have their own rules which they follow with more or less consistency, and the Library of Congress has its own variations. In view of these differences in practice it was found necessary to take up the whole subject of cataloging rules from the foundation. In December, 1901, the A. L. A. Publishing Board appointed an advisory committee on cataloging rules. This committee reported progress at the Waukesha conference in 1901 and at that conference the A. L. A. Council voted "That the Council authorize the promulgation of the proposed A. L. A. cataloging rules for printed cards so soon as the Publishing Board and its special advisory committee and the Library of Congress, shall have agreed upon the details of same." Further progress was reported at the Magnolia conference. At both these conferences the sessions of the Catalog Section were mainly occupied with discussion of points upon which the committee had failed to come to an agreement. The pamphlet now before us is entitled "A. L. A. rules—advance edition" and the committee invites further

discussion. We do not therefore understand that the rules in their present form are "promulgated" by the A. L. A. Council but that, as a preliminary report of the committee, they are still open to criticism and amendment.

Before entering upon a criticism of some special points we wish to commend the committee for the common sense view which they have taken, meaning by that the attempt to realize so far as possible, the attitude of the intelligent public and to avoid the extravagances in which some catalogers have indulged, such as the worship of the full name. A part of rule 47 reads "Forenames not used by authors and not represented by initials on the title-pages of their works shall be omitted." The rule for modified ("umlauted") vowels is also one that will be easily understood by the public and will probably meet with the approval of catalogers. A quotation in the introduction, taken from Cutter's rules, well states the position of the committee. Its gist is in the first sentence. "The convenience of the public is always to be set before the ease of the cataloger." Another point to be commended is the clearness and directness with which the rules are stated.

As the committee invites criticism and suggestions we will call attention to a few rules which might, in our opinion, receive further consideration.

Rule 4. "Enter under initial of author's names when these only are known, the last initial being put first," etc. Although this is the usual practice in American libraries it would probably be better to follow the British Museum rule and consider such books anonymous. Often the initials do not correctly represent the real name of the author and entry under the last initial is absurd. An example is T. W. O., pseud. for V. C. Young and M. C. Hungerford (authors of "Philip"). For a discussion of this point by Mr. Henry Guppy see *Library Association Record* for June, 1901, p. 312.

Rule 9. "Enter Government Bureaus or offices subordinate to a department directly under the country, not as sub-headings under departments." This rule is one upon which the committee requests comment, especially in regard to the alternative forms of entry suggested in the note, viz. (a) Bureau of education, (b) Education bureau, (c) Education, Bureau of. Although (b) is the practice of the Superintendent of documents it should be at once ruled out of court as it is not the correct official name of the bureau. Of the other alternatives (c) is to be preferred as it places first the word under which the entry is to be alphabetized. In the entry of divisions certain exceptions to the rule should be made. For example, the divisions of the Library of Congress should be subordinated to the library, and the Auditors and Statistics

divisions belong under their respective departments rather than under the headings Auditor and Statistics.

Rule 14 calls for the entry of "a society under the first word of its corporate name." Rule 23 reads "Enter bodies whose legal name begins with such words as Board, Corporation, Trustees, under that part of the name by which they are usually known." This exception to rule 14 should be extended so as to allow of entry under that part of a society's name by which it is best known; for example "Young People's Society of Christian Endeavor" under "Christian Endeavor, Young People's Society of." This inversion of the name is already allowed in cases of orders of knighthood, see Rule 17. Compare also 25, Academies.

Rule 24. The rule for entry of firm names, Appleton, D., & Co., should be extended so as to cover corporations, libraries, colleges, etc., whose legal names include forenames. For example, the Silas Bronson Library is frequently called the Bronson Library, and should be entered "Bronson, Silas, Library." It is especially awkward when the name begins with initials as T. B. Scott Public Library.

Rule 23. All banks should be entered under place. They are as purely local as churches, benevolent societies, etc., and their names, although often in one sense distinctive, occur over and over again in all sections of the country: City, Security, Merchants.

Notwithstanding the long discussion at Magnolia upon the use of capitals the committee is not yet ready to formulate rules. As a statement of the present usage on the printed cards and as a basis for further discussion, the rules now in force in the Library of Congress are printed as Appendix 1. Appendix 2 contains the Library of Congress rules for entry of periodicals with examples. This is a full, clear, and satisfactory treatment of the many vexatious problems arising from changes of title, imprint, etc.

The rules are numbered in one series from 1 to 81. When finally "promulgated" a numbering similar to that of the Library school rules would be preferable as it would allow additions and interpolations without disarrangement of the old numbering.

The committee desires to bring about conformity between these revised rules and the forthcoming editions of Cutter's rules and the Library school rules and it is confidently expected that in their final form they will be accepted as the standard for American libraries if not for all time at least for the lifetime of most of those now engaged in library work. In order that they may adequately represent the consensus of opinion of catalogers let all who question the rules in their present form communicate at once with the committee.

G. M. J.

NEW YORK STATE LIBRARY. Bulletin 70, January, 1902. Bibliography 33: Partial list of French government serials in American libraries; prepared by the A. L. A. Committee on Foreign Documents. Albany, University of the State of New York, 1902. p. 97-164. O. 15 c.

The task of which this list marks the completion was begun several years ago by the Committee on Foreign Documents of the Library Association, as the result of a suggestion made by Mr. Clement W. Andrews. Foreign public documents are represented to any extent only in the larger reference libraries of this country, and it was thought that a guide to the files available might be useful to students and to librarians. The publications of the French government were selected for a beginning, and whether the work of the committee is extended to German or other documents will probably depend upon the use made of the present list. This is in no sense a bibliography, but a compact title list of such French government serials as may be found in leading American libraries. Omissions, the compilers point out, are many, among the publications excluded being the legislative proceedings of the Revolutionary assemblies, the Consulate and the Empire.

The arrangement is alphabetical by title, the main list being supplemented by an index of the various government offices, giving the publications of each office. Changes of title and numbering are indicated when possible under a single heading, by means of notes or references, and the annotations give clue to variations and special characteristics. To each entry is appended the abbreviations of those libraries in which files of the publication recorded are available. Full sets are indicated by the abbreviation alone; for partial sets dates are noted. Thus, of the "Almanac national" a complete set is available at the Boston Athenæum; Columbia University has the volumes for 1792, '99, 1803, '09, '12, '13, '26, '43, '85, '86; while Library of Congress, Cornell, John Crerar, Detroit, Harvard, Massachusetts, New York Public, New York State, and Peabody have similar partial sets. These libraries, with the addition of Boston Public, University of California, St. Louis, Wisconsin Historical, and Yale, are the only ones represented in the list and of them the New York Public Library seems to lead, in the extent of its collections, with Harvard and the John Crerar next in order. The Library of Congress does not make a strong showing in full sets, but it is probable that much of the work recently done toward rounding out its collection is not represented in this list. Several publications ("Annuaire de l'Algérie et des colonies," "Annuaire de l'arme de l'infanterie," etc.) are included without indication of any library in which they may be found—a practice which does

not accord with the purpose of the list; and there are 29 titles for which the New York Public Library alone is representative. The list certainly makes clear the need of more systematic rounding out of their collections by those libraries large enough to take up reference work in public documents. Its practical use, of course, can be only tested by experience, but it seems likely to be extremely helpful in a limited field. If this is demonstrable, the present list will probably be followed by a similar list of German official publications, for which much material has already been gathered by the committee. Mr. Gould, the chairman of the committee, emphasizes especially the work done by Mr. Andrews and Miss Adelaide Hasse, the former in collecting material and arranging for publication, the latter in transcribing, compiling, revising and editing. The New York State Library has given material aid, in including the list among its bulletins and in permitting type to stand during prolonged correction of proof.

PUBLISHERS' TRADE LIST ANNUAL, 1902, 30th year: Index, by author, title, and subject catch-word to the books cataloged in the publishers' lists of 1902; edited by A. H. Leyboldt. New York, Office of the *Publishers' Weekly*, August, 1902. 12+1104 p. O.

Both extrinsically and intrinsically this book is calculated to disarm criticism. For the former there is a powerful appeal to sentiment in its favor, in the name of its editor and in the attendant circumstances. A generation has passed since the late Frederick Leyboldt, husband of the editor, devoting himself to a high bibliographical ideal in a spirit truly heroic, and with efforts no less so, laid the foundations for the series of publications which issue from the *Publishers' Weekly* office, and gave them from the start the high character for general excellence which they still bear. The "Trade list annual" is one of these publications and has appeared since 1873 with singular regularity and promptness of issue and with as much completeness as to the catalogs included as could be hoped for. It was the leader among such publications winning that "sincerest flattery—imitation" in England and France, though in neither country has an annual issue been attempted. This shortcoming has been partly atoned for by the fact that the English and French books have been copiously indexed, while the "Trade list annual" has had no index. This has constantly been felt as a serious drawback, and hopes have been entertained that an index might come to be a feature of the publication. The present volume more than realizes any hopes based on a comparison with the English and French catalogs. For while their indexes are so brief as to necessitate for most purposes a reference to the catalog, this gives most of

the items for which one usually refers to the catalog—author's name with initials, title of book, and price, as well as publisher's name.

By an ingenious arrangement of title entries, often under subject-words, the index becomes practically a subject-catalog as well, without being overloaded with three kinds of entries, author, title, and subject. The immensity of the labor involved in such a work becomes apparent when it is observed that there are 1104 double-columned pages, about 95 lines to a column. The volume is a very light and thin one for this number of pages, and perhaps the paper is a little too thin, making rapid turning of the leaves somewhat difficult.

A marked innovation is in the use of the dash at the beginning of a line to represent a family name, after the fashion of foreign catalogs, American practice having been to repeat the name for each individual. So much is gained in space by this method that it will be generally accepted as entirely justifiable in an index of this sort. In some cases the "colon-abbreviations" used in the "American catalogue" and by librarians generally for the commonest Christian names are employed, but more often the initials are given without such indication. It is becoming so necessary, for cataloging purposes, to have full Christian names given, especially now that the Congressional Library makes an extra charge for cards ordered without giving such names, that librarians will often have occasion to wish the colon-abbreviations could have been oftener used.

Having spoken of the only things which can be noted as defects it remains to be said that in this Index we have much the handiest and most useful bibliographical tool at present available to the librarian and bookseller.

Whether the patronage will warrant the annual issue of such an Index remains to be seen. As it stands it is a great credit to the patient and almost unflinching accuracy of its editor, and to the enterprise of its publishers.

W. I. F.

Library Economy and History.

LOCAL.

Baltimore. *Enoch Pratt F. L.* On Monday, Oct. 6, the Enoch Pratt Free Library opened a new station and reading room at the corner of Gay and Mott streets (Old Town), a neighborhood with a large foreign population. The reading room is designed especially as a children's reading room and is opened in co-operation with the Arundell Good Government Club of the city—an adjunct of one of the leading women's clubs. The room is in one of the branch buildings of the Provident Savings Bank. Another branch of this bank is in one of the branch buildings of the library.

Recently the library has arranged with one of the department stores of Baltimore—Hochschild, Kohn & Co.—to send a hundred books to the store every two weeks for the use of the employees in their lunch room. The firm is responsible for the books, which are sent to them in the same way that books are sent to the public schools.

Binghamton (N. Y.) City School L. (Rpt.—year ending Aug. 30, 1902.) Added 534; total 14,562. Issued, home use 66,241. No. borrowers 3972.

The city recently voted to accept Andrew Carnegie's offer of \$75,000 for a new library building. A site has been purchased for \$15,000, and a library commission appointed by the mayor. The board of education will turn over to this commission a part of the City School Library.

Bloomfield, N. J. Jarvie Memorial L. Public exercises were held in the Jarvie memorial building on the evening of Sept. 19, when the library department was opened to the public. The building is the gift of James N. Jarvie, of Glen Ridge, to the Westminster Presbyterian Church of Bloomfield, and is a memorial to the mother and father of the donor. During the exercises announcement was made that in addition to his gift of the building and its equipment, costing above \$100,000, Mr. Jarvie had given the sum of \$50,000 as an endowment fund for the library. The building contains four distinct departments: Sunday-school rooms, church parlor and kitchen, boys' drill room, and the public library. The latter has a separate entrance, and is not connected with the rest of the building. It contains a hall 8 x 31, with delivery room at one end and stairs to the men's reading room at the other. Opening from this is the stack room, 18 x 48, with steel stacks, and a book capacity of 20,000 v. At the east end is an open alcove 8 x 12, arranged as a reference room, and at the west end a children's alcove. The general reading room is 23 x 34, with six tables accommodating six readers each. At the foot of the stairs is the men's reading room, intended as a quiet place for evening use. The library contains over 5000 volumes. The endowment fund for its maintenance is given as a memorial to Mr. Jarvie's sister, to be known as the Mary Jarvie Memorial Fund.

Brooklyn (N. Y.) P. L. On Sept. 15, it was voted by the Administration Committee to expend \$3000 to increase the reference collections at the branches. The books have been selected and the orders placed. Prof. Steenberg, delegate of the Committee for the Extension of Public Libraries of Denmark, visited in September seven branches of the library to study the housing of the books, the methods in use, and the results attained.

The chief librarian and twenty members of the staff were granted leave of absence, with full pay, to attend Library Week at Lake

Placid; 14 of these were heads of departments or of branches.

Miss Minnie Le Cl  ar has been granted one year's leave of absence to attend the Training School for Children's Librarians conducted by the Carnegie Library of Pittsburgh.

The fortnightly staff-meetings, which had been discontinued during the vacation period, were resumed on Sept. 17.

The site recently secured on Franklin avenue and Hancock street is intended for a Carnegie branch library, and not for the central building of the library system, as was previously stated in these columns.

Dallas (Tex.) P. L. The book fund of the Public Library of Dallas, Texas, has recently been increased by gifts amounting to \$2000. Miss Helen Gould gave \$1000, and \$1000 was the gift of the late Philip Sanger of Dallas.

Dover (Del.) P. L. The library was opened to the public on Sept. 23.

Hartford (Ct.) P. L. (64th rpt.—year ending June 1, 1902.) Added 5962; total, about 74,000. Issued, home use 213,381, of which 198,564 were delivered from the main library. New registration 1594; total in re-registration begun Nov. 1, 3706. Receipts \$16,307.05; expenses \$16,268.60.

An interesting report, especially significant in its review of ten years of the library's history. The library was made free to the public on Sept. 15, 1892. Just prior to that change it had about 35,000 books, from 500 to 1000 registered readers, and a circulation of from 27,000 to 43,000 v. yearly. It has now about 74,000 v., 12,000 readers, and a circulation of about 200,000. Its book purchases have risen from 1000 v. yearly at \$700 or \$800, to 6000 v. at from \$4500 to \$5000. To-day it spends from three to four times as much for binding as was formerly spent for books, and annually removes from the shelves as worn out a number which in a few years would have depleted the old library.

Johnstown (N. Y.) P. L. The cornerstone of the new library building was laid with Masonic exercises on the afternoon of Monday, Sept. 27.

Kentucky library legislation. The library bill passed by the recent legislature (act of 1902, chap. 65) does not provide for a state library commission, as was incorrectly stated in these columns. (L. J., April, p. 217.) The bill as introduced by Senator Allen provided in sections 1-3 for the establishment of a free library commission, in sections 4-12 for the establishment and maintenance of public libraries and reading rooms in "any city or town." This bill was passed by the Senate but amended in the House. The amendments consisted of (1) the omission of the sections providing for the commission and

(2) the limiting of the application of the remaining sections to "any city or town of the third, fourth, fifth or sixth class."

Lima (O.) P. L. (1st rpt.—year ending Sept. 21, 1901.) Added 1037; total 2678. Issued, home use 31,423. Borrowers' cards issued 1952.

When the library was first opened to the public, on Sept. 21, 1901, there were 1641 v. on the shelves. During this first year of use six books were lost, of which three were paid for.

Michigan, Township libs. The state board of library commissioners has just issued a "Legislative history of township libraries in the state, from 1835 to 1901," compiled by L. M. Miller. The laws are summarized in chronological order, and show the gradual decay of the township school library system, which seems to have given way before the development of the municipal public library.

Norwich, N. Y. Guernsey Memorial L. The library building was formally opened on the evening of Sept. 11.

Phoenixville (Pa.) F. P. L. On the evening of Tuesday, Sept. 30, the new Carnegie library was opened.

The library movement was started in Phoenixville as long ago as 1857, by the opening of a Young Men's Literary Union, and had a precarious life until 1890, when from various causes it became necessary either to realize or to store the property of the institution. The school board came to the rescue and provided a room in the Church street school building. In 1895, the legislature of Pennsylvania having passed an act authorizing school boards to establish free libraries, to be supported and maintained by the district, the Y. M. L. U. property was transferred to the school board and the nucleus of the present institution was made safe. The building in which they had a location being sold over their heads, it became necessary to find, if possible, new quarters. The managers applied to Mr. Carnegie and he donated \$20,000 which enabled the committee to erect the handsome building in which the library is now housed.

After introductory remarks by the chairman of the meeting, the founder of the Young Men's Literary Union traced the history of the library movement from 1857 to the present time. Mr. John Thomson of the Free Library of Philadelphia, who had visited Phoenixville and been interviewed by the trustees on various occasions two or three times, attended the opening on special invitation and spoke on the advantages of public libraries in their fourfold capacities for usefulness. He described them as store-houses, bureaus of information, providers of pastime, and promoters of education. A speech followed from Mr. McElree, who voiced the feeling of indebtedness to Mr.

Carnegie and the exercises closed with an address by Colonel H. H. Gilkyson full of humor and good sense.

The building is situated on South Main street and is built of Avondale stone with Indiana limestone and marble trimmings. It is a one-story structure surmounted by a dome. The entrance is approached by a broad set of stone steps and the library room presents an unbroken area of some 40 by 60 feet, with a height of 25 feet. Over the carved mantel is cut the inscription "This Library Building is the gift of Andrew Carnegie—1901."

Riverside (Cal.) P. L. (Rpt.—year ending June 30, 1902.) Added 836; total 13,626. Issued, home use 72,084 (fict. 82%). New registration 666; cards in use, 4223.

The Carnegie library building is rapidly approaching completion. A new printed catalog is under way. The circulation shows a gain of 6708 over the previous year.

St. Joseph (Mo.) F. P. L. (Rpt.—year ending April 30, 1902.) Added 1349; total 21,537. Issued, home use 96,806. Borrowers' cards in use 4778. Receipts \$8433.05; expenses \$8379.84.

During the year the library was removed to its new building, previously described in these columns, which naturally caused a temporary falling off in circulation. During the first two weeks in the new building (all that is covered in the report) the records showed the largest daily average use of the library in its history. Open access and the attractions of the children's room have been special factors in this increase. The two-card system has been adopted for the simultaneous issue of fiction and non-fiction, and is found preferable to the old plan of issuing two books on one card.

"A matter affecting the growth of the library during the year just closed, and which will be more deeply felt from this time forward, is the combination formed by the publishers and dealers whereby the discount to libraries is curtailed. It is a question of serious import to libraries with limited incomes, as it adds greatly to the cost of new books. In adopting a net price system, it was claimed that it was not the intention to increase the price either to the general purchaser or the public library, but a careful comparison of old prices with the new of many of the publishers discloses the fact that in a majority of cases prices have been advanced; in many instances the increase being from 16% to 24 per cent. No one attempts to find fault with the net price idea, as it unquestionably helps the smaller book dealers and does away with price cutting on a few of the popular books. It is not claimed that libraries are the largest purchasers of books, but publishers will admit that were it not for libraries many books now published at a profit would show a loss. And a further point that seems to

have been lost sight of is that libraries are 'continuous' purchasers—that is, a good book once placed on the shelves will be bought time and again long after the demand on the part of the public has practically ceased."

San Francisco (Cal.) P. L. A reading room for the blind was opened on Aug. 19 in the branch library building at Fourth and Clara streets. The room will be maintained under the auspices of the San Francisco Auxiliary for the Establishment of Reading Rooms for the Blind. It is open from 10 to 12, and from 2 to 4, and arrangements have been made for morning and afternoon readings by members of the auxiliary.

Springfield (Mass.) City L. The home delivery system carried on last winter was resumed Oct. 1. The prices are the same as previously, viz., \$1 for 12 weeks' service and \$3 for 38 weeks. It is planned to carry a "travelling library" in connection with the system, limited to about 25 volumes, from which subscribers may choose books if they desire.

Waterloo, Ia. In consequence of the local quarrels and rivalries arising over the choice of a site for the \$30,000 library building offered by Andrew Carnegie, Mr. Carnegie has withdrawn his offer until the site question shall be satisfactorily settled.

Wisconsin, Township libraries. The development of school township libraries in Wisconsin is touched upon in the biennial report (two years ending June 30, 1900) of the State Superintendent, L. D. Harvey (p. 105-112).

The library, it is said, "has grown to hold a permanent place in the economy of school work in the state of Wisconsin; teachers are finding more and more that efficient school work necessitates the use of books other than the text-books." The law was made mandatory six years ago, and for some years its enforcement required much vigilance; but the opposition has diminished each year, and its acceptance is now becoming more and more a matter of ordinary routine. "The greatest need at present is to make the libraries more valuable in the education of children." To this end instruction in the use of juvenile books is made a part of the normal school course, and in the teachers' institutes one week's instruction is given in library reading. "Libraries have been brought into the institutes, books read and discussed, and plans for the use of certain books made out. The instruction in the proper use of the different kinds of literature has been given as outlined in the institute circular. This outline was discussed in the school for institute conductors and has been carefully followed in most cases, with very good results both in the kind of instruction and the work accomplished by the members of the institute."

FOREIGN.

Birmingham (Eng.) F. Ls. (40th rpt. — year ending March 30, 1902.) The reference library now contains 164,319 v., and the total v. in all the libraries is given as 272,166. The total issue was 1,332,315, or a daily average of 4177, compared with 1,260,000 (daily av., 3965) for the previous year.

THE JOHN RYLANDS LIBRARY, MANCHESTER: a brief description of the building and its contents, with a descriptive list of the works exhibited in the main library. Printed for private circulation, July, 1902. 47 p. O.

A general review of the history, contents and characteristics of the Rylands Library. The rich special collections of early printed books, Bibles, and rare volumes are noted, and the building is described somewhat in detail. Appended is a "Descriptive list of the manuscripts and books exhibited in the show cases in the main library."

MACFARLANE, Harold. A library within a library: being some account of the "Doll's house" at the British Museum. (*In Pall Mall Magazine*, Oct., 1902. 28:276-281) il.

The library described is a collection of 49 volumes printed in exceedingly small type. The 49 volumes occupy a space eight inches high and six and a half inches broad. Reference is made to the travelling library invented by Sir Julius Cæsar, Master of the Rolls in the time of James I.

Marylebone, London. On Sept. 29 the committee of the Marylebone Borough Council decided that it was impracticable to accept Andrew Carnegie's offer of \$150,000 for branch library buildings. The refusal was based on the objections of the borough to the increased rates which would be entailed by acceptance of the libraries.

New Zealand, General Assembly L. (Rpt., 1901-2.) Added 1770; total, about 52,000. There are 710 books reported as missing, of which 259 are from the fiction department. These figures are the result of a thorough stock taking, made during the recess while the library was closed for a month. This was the first inventory made in many years and proved a "much more tedious and onerous task" than had been anticipated. It is pointed out that the losses recorded "are spread over a long period. It is now some eleven years since the compilation of the main catalog was commenced; and, divided by eleven, the total does not show so alarming a yearly average, especially when it is remembered that many of the works are official publications, used continually in the House, and apt to be easily mislaid or forgotten."

Recess privileges, exclusive of fiction, were granted to 219 persons, to whom 3351 v. were issued; in addition 1380 v. were issued to members of Parliament.

The library holds about the same relation to its constituency as is held in the United States by the Library of Congress, and is used mainly by the legislative and professional classes. Mr. Charles Wilson, the librarian, writes: "Of course we do things on a very small scale as compared with the great American and English libraries, but then you see we are a country only about 60 years old."

Nottingham (Eng.) F. P. Ls. (Rpt., 1901-2.) Added 3895; total 104,122. Issued 398,000, a daily av. of 1493, which is an increase of 35,210 v. over the previous year. Issue of fiction was 51 per cent. "The reference library is doing excellent educational work." The total attendance was 2,199,169. The series of half hour talks about books and authors, begun 12 years ago, was continued through the winter months.

SAVAGE, Ernest A. The Bodleian Library. (*In Nineteenth Century*, Sept., 1902. p. 448-454.)

A readable account of the Bodleian library and its founder.

Practical Notes.

ATKINSON, Edward, and Norton C. L. "Fire-proof wood," so-called. (*In American Architect and Building News*, Sept. 6, 1902. 77:75-78.)

Describes a series of experiments to determine what fire-resistant material would best serve for shelving a library. This investigation is not yet completed, but the "evidence is conclusive that wood, whether treated chemically and called fireproof, whether painted with what are called fireproof paints, and unless covered with fire-resistant materials of considerable thickness, is unfit to be used for interior finish in buildings which are otherwise of incombustible materials." Mr. Atkinson further says: "In dealing with shelving for libraries or museums, the new material known as uralite, not yet attainable, promises to be the most suitable and absolutely safe material at low cost yet known. It is hoped that large works corresponding to those now supplying Russia, where it was invented, and England, where a large supply is taken up for home use, will soon be established in this country."

BOOKBINDING. (Described in *Official Gazette* of the U. S. Patent Office, Sept. 2, 1902. 100:2006-2007.) il.

A device for binding loose sheets, for which there are 15 claims.

DEVICE for fastening loose-leaf books. (Described in *Official Gazette* of the U. S. Patent Office, Sept. 2, 1902. 100:2020.) il.

An arrangement with telescopic tubes.

REMOVING STAINS FROM PRINTS. Many of the prints procurable now are stained through various causes and in different ways. Water stains may be removed by floating the print on a bath of boiling water and alum (2 ounces of alum to one quart of water), sometimes for an hour. Then place the print on a polished marble plate and, before it becomes dry, lay it between pulp-boards and apply slight pressure until perfectly dry. For fox marks, bathe the print in diluted hydrochloric acid or Javelle water, wash it in running water and dry as above. For green spots apply a layer of powdered chalk, about one-quarter of an inch thick, place a blotting-paper over it and apply a hot iron. Dust is removed by gently rubbing over the print virgin rubber or rye-bread. Ink-stains are difficult to remove. Moisten the print on the back with a sponge and then touch the spots with oxalic acid, immerse the print in a solution of chloride of lime (one part chloride of lime to nine parts of water) and wash in running water. Several immersions in chloride of lime may be necessary. Dry as previously described. Rice-paste is more desirable for the reason that it retains its clear white color when dry, while the book-binders' paste leaves a yellow tint. A good quality of rice-paste may be made as follows: Mix one pound of rice-flour with enough lukewarm water to dissolve it, having added one teaspoonful of alum. Stir to a thick cream until free from lumps; then slowly pour on boiling water, stirring all the time until the paste becomes stiff. If covered with some loosely woven cloth and put in a cool place it will keep for months without becoming mouldy. —*From a paper on "Extra-illustration," by A. J. Rudolph, Newberry Library, Chicago.*

URALITE. Manufacture of the new fireproof material uralite. (*In Scientific American*, Oct. 4, 1902. 87:242-243.) il.

Mr. Edward Atkinson in an article on "Fire-proof wood," previously noted, spoke of uralite as promising to be "the most suitable and absolutely safe material at low cost yet known" for libraries and museums. The article in the *Scientific American* gives in some detail an account of its manufacture and convincing illustrations of its fire resisting qualities. The fundamental component of uralite is asbestos. In London fire insurance companies have decreased their rates where uralite is employed from \$5.25 to \$1.90. This new material is the invention of Col. Ichenetsky, of the Russian artillery, and takes its name from the Ural mountains, where large quantities of asbestos are obtained. It is extremely light in weight, of great strength, durable, and is a first-class material for building purposes — all adapting it for library use.

Gifts and Bequests.

Carnegie library gifts.

The following recent gifts are reported for Great Britain:

Ashby-de-la-Zouch, Eng. £1500.
Criccieth, Wales. £800.
Dingwall, Scotl. £2000.
Flint, Wales. £200.
Jarrow, Eng. £5000.
Kelso, Scotl. £3500.
Limerick, Irel. £7000.
Lowestoft, Eng. £6000
Moseley, Eng. £3000.
Sterling, Scotl. £6000.
Stornoway, Scotl. £3500.

Librarians.

BARR, Charles J., New York State Library School, class of 1902, has been appointed reference librarian at the John Crerar Library, Chicago.

CANFIELD, Dr. James Hulme, librarian of Columbia University, and first vice-president of the American Library Association, received the honorary degree of doctor of literature from the University of Oxford on Oct. 9.

DENIO, Herbert W., New York State Library School, class of 1894, head cataloger of the New Hampshire State Library, has been appointed librarian of the Westfield (Mass.) Athenæum, succeeding George Stockwell. Mr. Stockwell will not continue in library work, but has gone to Parker, South Dakota, to enter the ministry, and will have charge there of the Church of the Good Samaritan.

DERICKSON, Miss Maud E., Pratt Institute Library School, class of 1902, has been appointed head of the circulating department of the Portland (Ore.) Public Library.

EATON, Miss Harriet Louise, Pratt Institute Library School, class of 1902, has been appointed librarian of the Normal School Library, at West Superior, Wis.

FORD, Worthington Chauncey, chief of the Documents Department of the Boston Public Library, has been appointed chief of the Division of Manuscripts of the Library of Congress, at a salary of \$3000 per year. Mr. Ford was from 1893 until 1898 chief of the Bureau of Statistics of the Treasury Department, where he won an international reputation. At the Boston Public Library he practically organized the department of documents, and has developed it to a wide usefulness. Mr. Ford was engaged this summer to conduct an analysis of the municipal finances of New York City, under the auspices of the Merchants' Association of New York.

GIBSON, Miss Charlotte C., formerly librarian of the Fletcher Memorial Library, Ludlow, Vt., has been appointed first assistant at the Washington County Free Library, Hagerstown, Md.

GIBSON, Miss Irene, assistant librarian of the Washington (D. C.) Public Library since its organization, resigned in September to become an assistant in the Order Division of the Library of Congress.

HUSE, Hiram Augustus, for nearly 30 years state librarian of Vermont, died suddenly at Williamstown, Vt., on Sept. 23, of angina pectoris. Mr. Huse was born in Randolph, Vt., Jan. 17, 1843. When he was two years of age his parents removed to Wisconsin, where they resided until 1868, but young Huse returned to Vermont in 1860 to fit himself for college. He was graduated from Dartmouth College in 1865, and in 1867 from the Albany Law School, where William McKinley was at that time a student. He was admitted to the Orange county (Vermont) bar in 1869. While attending college he enlisted Aug. 19, 1862, and served in the 12th Vermont Volunteers in the Civil War, until his regiment was mustered out. In 1872 he moved to Montpelier and began the practice of law, serving at the same times as editorial writer on the *Green Mountain Freeman*. He was made state librarian in 1873, represented Montpelier in the legislature of 1878, and was elected state's attorney in 1882. Mr. Huse was married in 1872, and leaves a widow and two children. He was connected with many state organizations—among others the G. A. R., Sons of the American Revolution, and Society of Colonial Wars—and was for many years a member of the school board, and a trustee of the Kellogg-Hubbard Library, of Montpelier. Mr. Huse was known throughout the state, and his keen humor and kindly nature made him generally loved and respected. He was a member of the National Association of State Librarians, and had attended the Montreal and Waukesha conferences of the American Library Association.

SCHENK, F. W., formerly assistant in the Harvard Law Library, has been appointed in charge of the law library of the University of Chicago.

SONNECK, O. G. T., of New York City, has been appointed chief of the Division of Music of the Library of Congress, at a salary of \$2000 per year. Mr. Sonneck, who was born in Jersey City in 1873, studied the history and theory of music at Heidelberg and was for four years at the University of Munich. He has contributed widely on musical subjects to American and foreign periodicals, and has for some years been engaged in special research with reference to the history of secular music in the United States.

Cataloging and Classification.

BOSTON P. L. Finding list of books common to the branches. No. 5, September, 1902. Boston, 1902. 8+140 p. O.

Previous issues of this list have contained only accessions since June, 1897; the present volume covers all important titles included in all the branches. The branch collections are not uniform, however, so that the list is not complete for any branch. It shows a creditable and fairly well rounded selection, although, naturally, series volumes and "popular" books predominate. Fiction covers 40 p. and books for young people 38 p.

COSSITT, L., *Memphis, Tenn.*, began in July the publication of a monthly bulletin. The three numbers already issued are devoted to classed lists of accessions with annotations, and the September number contains also a list of periodicals on file in the reading room.

GENERAL ASSEMBLY L., *Wellington, N. Z.* Lists of accessions from 18th February, 1899, to 14th June, 1902; Charles Wilson, chief librarian. Wellington, 1902. 92 p. O.

Made up of five lists, covering from three to six months each; some are classed, others alphabetical, fiction lists being given separately.

The OTIS L. (*Norwich, Ct.*) *Bulletin* has recently contained some good special lists. In the June number was given a list of books in the library by Norwich authors, covering 44 names; and in the August number is a list of Connecticut local histories contained in the library.

PATENT OFFICE, *Great Britain*. Subject list of works on domestic economy, foods, and beverages, including the culture of cacao, coffee, barley, hops, sugar, tea, and the grape, in the Library of the Patent Office. (Patent Office Library ser. no. 9; bibliographical ser., no. 6.) London, Patent Office, 1902. 136 p. S. 6d.

A compact little volume, listing 1270 works representing some 2043 volumes. The subject headings are in alphabetical sequence, and entries are chronological by imprint date. Appended is a key to the classification headings. There is a lack of connecting references between allied subjects. Thus under Beer. Beverages and Brewing are entries which apply equally to all three topics, but are given only under one, with no cross-references from one heading to the other. In so restricted a list, of course, this lack of references is less important. In details of entries thoroughness and care are evident.

ST. JOSEPH (Mo.) P. L. Fourth supplement to the classified list of the circulating department: Additions from June, 1901, to May, 1902. v. 5. Quarterly bulletin, consolidated. 22 p. O.

THE SALEM (Mass.) P. L. *Bulletin* for September devotes its special reading lists to Coal and coal mining, Earthquakes and volcanoes.

VICTORIA P. L. OF WESTERN AUSTRALIA, Perth. Catalogue of books. Part I [A-B]. 64 p. I. O.

A dictionary catalog, to cover in all about 5000 v., issued in quarterly parts of 64 pages. This first part covers A to Barr, and with it is issued, in separate pamphlet, an outline of the "System of classification" followed. This is a fixed location scheme, with 26 classes; one for each letter of the alphabet. The catalog is neatly printed, and gives evidence of careful work. There are abundant analyticals, especially for society publications, collections of voyages, etc. Imprint data includes size, date and place of publication. Title entries are generally followed by brief indication of character of the work, as "nov.," "tale," "trag.," etc.

Bibliography.

CRIMINAL AND DEFECTIVE CLASSES. A series of special bibliographies by Arthur MacDonald are included in the recently published volume devoted to the "U. S. House Committee on Judiciary, Hearing on the bill (H. R. 14798) to establish a laboratory for the study of the criminal, pauper and defective classes." (Washington, Gov. Print. Office, 1902.) The bibliographies cover: Bibliography of genius, p. 141-43; Alcoholism, drunkenness, etc., 177-213; Pauperism, poverty, etc., 213-29; Criminology, 229-80; Physical criminology, 281-85; Capital punishment, 285-87; Crime and insanity, 288-89.

EDUCATION. Cubberley, Ellwood P. *Syllabus of lectures on the history of education; with selected bibliographies*. New York, Macmillan, 1902. 2 pts. 12+129; 8+130 p. il. 8°. bds., ea., \$1.25 net; complete, \$2.25 net.

FRANCE. Mackinnon, James. *The growth and decline of the French monarchy*. New York, Longmans, Green & Co., 1902. 20+840 p. O. \$7.50.

Bibliographies are appended to each chapter.

HISTORICAL SOURCES. New England History Teachers' Association. Report, by select committee, Charles D. Hazen, E. D.

Bourne, Sarah M. Dean and others. *New York, Macmillan Co., 1902. 9+299 p. 12°, (Historical sources in schools ser.) net, 60 c.*

Contains an excellent series of annotated bibliographies.

HOADLY, Charles Jeremy, LL.D.: a memoir; by W. N. Chattin Carlton, M.A. *The Acorn Club of Connecticut: 8th publication. 1902. 54 p. 8°, 2 ports.*

This memoir of the former state librarian of Connecticut is by the librarian of Trinity College, Hartford. He gives a list of Dr. Hoadly's writings, 44 titles.

KANT, Immanuel. Paulsen, Friedrich. *Immanuel Kant: his life and doctrine; from rev. Germ. ed., by J. E. Creighton and Alb. Lefevre. New York, Scribner, 1902. 19+419 p. por. O. net, \$2.50.*

Contains a 7-page bibliography.

LAND-GRANTS FOR EDUCATION. Schafer, Joseph. *Origin of the system of land-grants for education. Univ. of Wisconsin, Bulletin; History series, vol. 1, no. 1.*

Bibliography, p. 50-53.

MEDICAL INSPECTION OF SCHOOLS. Zirkle, Homer W. *Medical inspection of schools. Univ. of Colorado, Dept. of Psychology and Education, June, 1902.*

Bibliography, p. 60-66.

RHEUDE, Lor. M. *Bibliothekzeichen, 32 Exlibris; mit einem Vorwort von L. Gerster. 31 z. Teil farbige Tafeln mit 14 S. Text. Zürich, Fritz Amberger, 1902. 8°.*

TRUSTS. Flint, Charles R., and others. *The trust: its book — being a presentation of the several aspects of the latest form of industrial evolution; edited by James H. Bridge. New York, Doubleday, Page & Co., 1902. 38+255 p. 12°.*

A list of books relating to trusts (p. 227-255) is given.

UNIVERSITY OF NEBRASKA L. *Bibliographical contributions, 3: Practical bibliography; by J. I. Wyer, Jr. Reprinted from the Bulletin of Bibliography, July, 1902. Lincoln, Neb., July, 1902. 10 p. D.*

WHISTLER, James Abbott McNeill. Bowdoin, W. G. *James McNeill Whistler, the man and his work. London, The De La More Press, 1902. 78 p. 8°.*

Contains a bibliography of works by and about Whistler.

“METALLIC *versus* WOODEN FURNISHINGS”

is the title of an attractive little Brochure lately issued by us. We shall be pleased to put it into the hands of Librarians or Trustees interested in the **best** fittings for library buildings.

The growth in these lines has been so rapid that many officials are not yet conversant with their merits, but the question of Complete Furnishings for any modern library will not have been exhausted without an examination of these fixtures.

The very large demand for them for Commercial uses has indicated clearly their adaptability to library requirements; an indication substantiated by the increasing call for them for this purpose.

Our **Steel Card Index Drawers** are a prominent feature of this line, among whose merits may be mentioned—Durability, Incombustibility, Freedom from Vermin and Cleanliness.

Copies of our “Complete Library Catalogue” or “Library Plans” also sent on application.

Art Metal Construction Co.,

Ten Branch Offices.

JAMESTOWN, N. Y.

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

~~BENJAMIN FRANKLIN STEVENS.~~

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,

4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders or by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Subscriptions to Foreign Periodicals.

LIBRARIANS and others are requested to note the following prices of Annual Subscriptions to English Periodicals, which include postage from our New York Agency. The service will be found most punctual and reliable.

A KEY TO BOOKS IN PRINT

The users of THE PUBLISHERS' TRADE LIST ANNUAL
for 1902 will be interested to learn that the

INDEX VOLUME

is now ready. The books of the 246 publishers who this year have contributed the lists bound up in alphabetical order in the Catalogues volume, are indexed by author, title and subject catchword, furnishing, by means of 140,000 entries, ready reference to the books of the leading publishers in print on July 1, 1902, and to forthcoming books of which they could furnish information in August. The Index volume and the Catalogues volume of

The Publishers' Trade List Annual, 1902

will be found the most useful, as well as the least expensive, single book trade reference work yet issued, especially for the booksellers and small libraries who cannot afford to buy many trade tools. Price, \$2 for the Catalogues volume and \$5 for the Index volume, or \$7 together, absolutely net.

Of the Catalogues volume less than 300 remain unsubscribed, and the edition of the Index volume is also limited. Address

Second Notice to Librarians

Another Scarce New York Book to be Reprinted

1701—Wolley's Journal—1902

A Two Years' Journal in New York and part of its Territories in America, London, 1701

PROF. EDWARD GAYLORD BOURNE, of YALE UNIVERSITY, has written a new and valuable introduction to the above and has added notes of great value and interest alike to the historian and student. There are 250 copies on handmade and only 15 copies on Japan paper, the price is \$2.00 and \$3.00 net respectively (postage 5 cents), and orders are being booked very rapidly. The extreme rarity of the original edition and its value to those interested in New York and New Jersey History is manifest.

EDW. G. ALLEN & SON, Ltd.,

28 HENRIETTA ST., Covent Garden, LONDON.

Special Notice to Librarians.

British Catalogues of New and Old Books posted by every mail.

Books sent by Mail, Parcel, or as Heavy Consignments.

Advance Auction Catalogues of Rare Book Sales.

Newspapers, Scientific Serials and Periodicals supplied promptly by mail or otherwise.

Librarians who require Books from Great Britain are advised to lose no time in stocking their shelves.

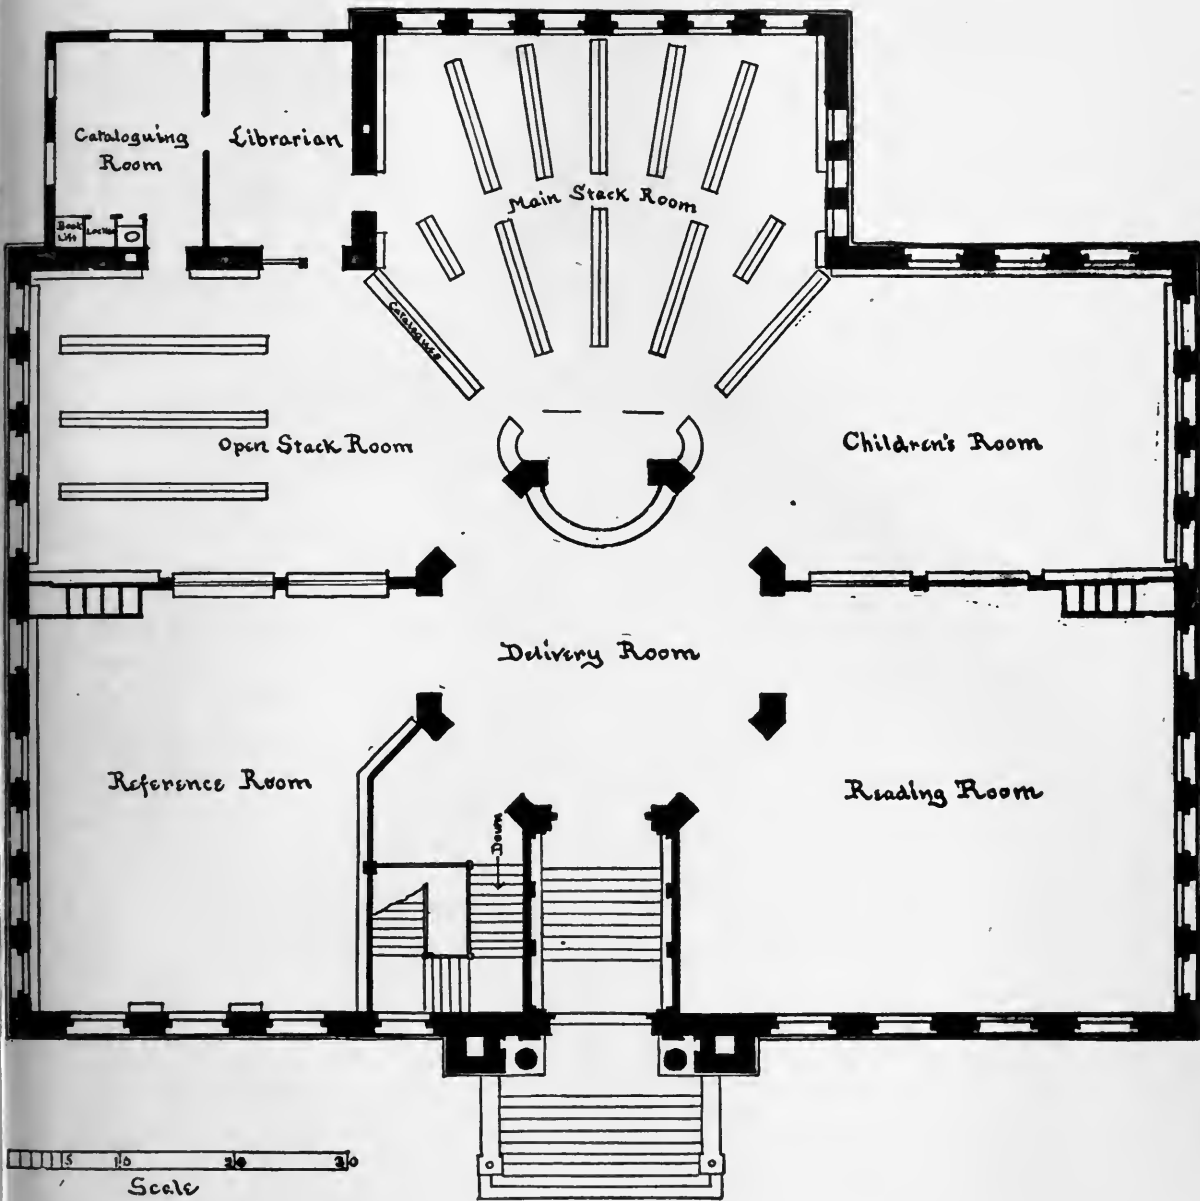

British published Books are becoming daily scarcer, owing mainly to the enormous increase of Public Libraries, and the widely spreading demand for British published Books.

The following opinion was recently received from a correspondent:

"For some five or six and thirty years you have given us a service which in point of intelligence, accuracy and promptness could not in my opinion be surpassed. We have never had occasion to correct an account or to complain of delay. The various duties of collecting blue-books, pamphlets, continuations, rare books, etc., and of binding and shipping, have been discharged with energy, rapidity and economy. Your advice has always been sound and to our advantage; and I must add that my most cordial acknowledgment is due to you for your constant patience and courtesy in the tasks I have so often gratuitously imposed on you—in *re*, case of public men visiting London and requiring assistance and advice. Wishing you every success in your affairs."

EDW. G. ALLEN believes that he may fairly claim to be a Benefactor to the Intellectual Life of America, having, during his long experience of Library Work, shipped to American Libraries over two million Books, of course involving a very large expenditure of money.

CARNEGIE BUILDING OF LINCOLN (NEB.) CITY LIBRARY.

THE LIBRARY JOURNAL

VOL. 27.

NOVEMBER, 1902.

No. 11

SIMPLE as were the exercises at the laying of the cornerstone of the New York Public Library building the other day, they were doubly impressive, for they marked the completion of one great undertaking and the formal beginning of a second. Only those familiar with the history of library development in New York City within the last few years can appreciate how remarkable are the results accomplished, and how great a change has been brought about in the attitude of the city toward library interests. Mayor Low in his address paid a fitting tribute to the clearheadedness, sagacity and public spirit which made possible the federation of the separate library foundations, whereby alone a public library worthy of the city was secured; and these same qualities have been dominant in the period of its later development. With its absorption of the free circulating library system, formerly supported largely through private efforts, and the acceptance by the city of Mr. Carnegie's magnificent offer of branch buildings, the public library organization has been rounded to completeness. There remains the practical carrying out of this great scheme of organization, the upbuilding of the library as a center for students and scholars and as a great instrument of public education. The completion of the stately building in Bryant Park will be the first great step in this second stage of the library's development, for it will give the foundation and equipment without which any scheme of organization must remain largely theoretical. All who have library interests at heart will look forward eagerly to the day, in the near future let us hope, when that step shall be taken, and the New York Public Library is able to reach out with multiplied efficiency into the wide field of usefulness and inspiration so admirably described by Mayor Low.

IN other large cities besides New York library organization is taking a significant trend. What is foreshadowed is the development in such cities of a library system,

paralleling in a measure the public school system, and coming at varied points into direct contact with the life of the community. This movement may be traced between the lines in recent reports of such libraries as the Boston Public, the New York Public, the St. Louis Public, and others of the same rank, and it will receive remarkable impetus within the next two or three years as a result of the Carnegie gifts made to Detroit, St. Louis, New York, Cincinnati, and other cities for the establishment of branch library systems. For the branch library will be the main factor in this development, and the organization and administration of branches is becoming one of the most important of the librarian's problems. At Boston last year the circulation from branches, delivery stations and like agencies was nearly four times as large as the circulation from the main library, and this is becoming the common experience. The public library, in the larger cities at least, has entered upon a new and most interesting phase of development, which cannot fail to have far-reaching results.

NOTABLE in the library chronicle of the month was the Bodleian Tercentenary celebration at Oxford. It was alike memorable for the distinguished gathering assembled to do honor to the memory of Sir Thomas Bodley and to his noble foundation, and for the opportunity it afforded of a perspective view of the influence of a great library upon the intellectual life of successive generations. The exercises were of the true Oxford temper — dignified, conservative, brilliant by inherent qualities but marked by no elaborate preparations. A pleasant feature was the extending of greetings from sister universities of Great Britain, the continent, and America, among the representatives of the latter being the librarians of Cornell and Columbia universities. Four American universities — Harvard, Yale, Princeton and Columbia — were honored in degrees bestowed upon their representatives, among whom it is pleasant to record the name

of Dr. Canfield, librarian of Columbia. Our own libraries stand but as the creation of a day beside the timeworn walls of the Bodleian, but even the least of them may feel a kinship and a pride in the great Oxford library, for, as was said at the Tercentenary exercises, "Bodley wrought for Oxford first and England, but also for the world, the wide commonwealth of letters."

It is hard to say what will be the outcome of the discount question. So far the case has gone against the libraries, and the letter of Mr. Scribner, submitted elsewhere by the chairman of the A. L. A. committee on relations of libraries with the book trade, gives little encouragement for the future. Evidently the opposition of the booksellers has outweighed the representations of the librarians, and the Publishers' Association appears disposed to shelve the matter indefinitely. It is unlikely that the librarians will be content to let the subject rest in this way. It is too vital, especially in its effect upon the many smaller public libraries, which have less money and more limited opportunities for bookbuying than the large libraries. In the nature of the case the librarians are at a disadvantage; no effective substitute for books as the basis of their work has yet been invented, and publishers and dealers may be, and probably are, serenely confident that books will continue to be bought by libraries whether discounts are increased or not. American librarians are not alone in their predicament. In Germany and in Great Britain the libraries have begun a vigorous campaign to secure more liberal discounts, but so far with little success. The American Library Association, however, is not likely to let the matter drop, and it is to be hoped that through its efforts library discounts may yet be placed upon a more satisfactory footing.

Communications.

GOETHE AUTOGRAPHS DESIRED.

THERE is reason to believe that in American libraries and private collections there are still many unpublished autographs, etc., of Goethe, which, for the sake of future scholars, should be published or referred to in the monumental Weimar edition of Goethe's complete works, diaries, and letters, still in progress under the protection of H. R. H. the Grand Duke of Saxe-Weimar-Eisenach, with the

active co-operation of the Goethe Gesellschaft and of many scholars and specialists.

Therefore on behalf of all who are interested in this great undertaking, I earnestly beg all librarians and others who think that there is a chance of their having any such autographs or other similar matter, however insignificant apparently, to look these up as soon as possible, and to urge others to do likewise, and send us *accurate* copies, together with short notes by way of description and history of the original, as far as known, stating carefully what portions are in Goethe's own handwriting, for he usually employed a secretary. (A good photograph of an original is, when obtainable, always preferable to a transcription.)

Similarly autographs of Eckermann, Goethe's secretary, and any of Carlyle that may refer to either Goethe or Eckermann, are much to be desired in this connection.

Very often the name of the person addressed does not appear at all on the face of the original letter itself, but as this Archiv possesses all of Goethe's papers, the addressee's name may frequently be determined from sketches of the letters preserved by the writer, or otherwise. Full credit will, of course, be given to all who send us copies, and if, for example, we can determine the name of the person addressed the sender will be notified of that fact.

Those whose sets of *Schriften der Goethe-Gesellschaft* are incomplete will be glad to know that the society will soon issue a reprint of vols. 1 and 2, which alone are out of print and have long been most difficult to obtain.

B. SUPHAN, *Director*.

"ESTHER BURR'S JOURNAL."

DURING the past few months I have been asked several times about "Esther Burr's Journal," a charming little volume edited by President J. E. Rankin, of Howard University, published by the Howard University Press and sold by Woodward & Lothrop, of Washington, D. C. Perhaps the interest in the book, with which I have come in contact, is mainly local to Princeton, but as the title is rather misleading it may be of service also elsewhere to state that the "Journal" is, with the exception of one brief passage, entirely the work of Dr. Rankin. The excepted passage is the account of the Princeton revival. The rest of the "Journal" is merely based on a manuscript of Mrs. Burr, to which Dr. Rankin has had access and from which the revival account alone has been extracted. I write with no special desire to destroy so clever an illusion as this remarkably well-written "Journal," but merely that the true authorship may be recorded for those whom it may concern.

REFERENCE WORK FROM THE LIBRARIAN'S POINT OF VIEW.*

BY CORINNE BACON, *New Britain (Ct.) Institute Library.*

WHAT is "the librarian's point of view"? Is there but one? It seems to me that the point of view is conditioned, both by the librarian and the library in which she works, and that the number of ways of looking at the subject is equal to the number of librarians engaged in the work.

The point of view here taken is that of a librarian in a library of from 15,000 to 20,000 volumes, where there were for some years but two librarians, and where consequently the duties of each were as all-embracing as the duties of the railroad employee, who, when reprimanded for negligence, versed his woes as follows:

"Oh, I am a train and a station hand,
And a flagman as tends a switch,
And a ticket-seller, and a handy feller,
And I don't know mostly which!"

Each of us was reference librarian—and a great many other things as well. To this valuable experience I have recently added a brief term of service in the reference department of a library of some 400,000 volumes.

I fear that I shall be unable to set forth any new truth concerning reference work. All that I can do will be to emphasize certain truths, familiar and self-evident, which loom up especially on my horizon; and to set forth the subject in an orderly fashion, it may be well to take up in sequence (1) the worker, or reference librarian; (2) her materials and methods of work; (3) those for whom she works—the public.

If anything is impressed upon us nowadays, it is the seriousness of our profession as librarians, the importance, nay, the necessity of attaining physical, mental and moral perfection. After listening to such preaching, one feels almost sorry for the unfortunates who inhabited our little planet before the modern librarian appeared to teach them how to live! Are we not taking ourselves too seriously? Why should we insist upon shouldering the whole burden of the well-

being of the universe? There are others—parents, teachers, doctors, ministers, legislators—with whom we may and ought to share the responsibility. Why should not mothers take at least as much thought for what goes into their children's minds as for what goes into their stomachs? And is the printed page the only influence at work upon humanity?

But this heresy is leading us astray from our subject. Suppose we grant that librarians in general ought to be perfect, then what shall we require of the reference librarian? It seems to me that she should then be what an old French teacher used to mark his pupils when they had an unusually good lesson—"More than perfect." For is not the reference department the heart of the library? It is well to provide men, women and children with the literature of power and with the literature of amusement, but the function of the library in both of these directions is necessarily limited. The books which serve for inspiration should be owned, they can never do all that it is in their power to do for the reader while on a fortnight's visit from a library, while the amount of ephemeral light literature purchasable by most libraries is strictly conditioned by the paucity of funds available for new books of this type. The reference department, which purchases for the many, books too expensive for any one man to buy for the limited use he is likely to make of them, which supplements and continues the work of the school, is, in the eyes of many taxpayers, the sole justification of the tax-supported library. This department therefore calls for a high grade of service, and even though the librarian in charge of it cannot attain unto perfection, still there are a few qualifications which seem to be essential to the proper discharge of the duties of her office.

The reference librarian should first and foremost

Be approachable. There are some people who are reservoirs of knowledge, and yet all their wisdom is of no avail to the man who wants information, because their manner is so forbidding that the average man would as

* Read before Connecticut Library Association, Oct. 15, 1902.

soon face a Gatling gun as ask them a question. Cultivate a pleasant, easy manner of meeting people on their own ground. This does not mean to cultivate the grin of the Cheshire cat. It is quite possible to make oneself too agreeable. It is not necessary to be "keepin' your face in smilin' order like a grocer o' market-day, for fear people shouldna think you civil enough!"

Be omniscient. If you can't be omniscient, be as omniscient as you can. You never thought or said or learned or did anything which may not some day be of use to you in your reference capacity. Have you built a boat, or sailed one? Made a pudding, or taught a Sunday-school class? Studied conic sections, or specialized in abnormal psychology? Climbed the Alps, or experimented upon yourself with mushrooms? You are sure to want some day whatever knowledge you have gained in these ways, or in any others.

Be tactful. A keen insight into human nature, the power to read people quickly, the tact which tells us when to offer and when to withhold help, and how we may often help without the appearance of doing so, are invaluable qualities to the reference librarian. It will not do to make the mistake of thinking that an intelligent person needs no assistance in order that he may successfully wrestle with card catalog, indexes and bibliographies. People of far greater intellectual ability than the librarian may not, generally do not, know how to use the librarian's tools. And even if the public do know the use of these things, they are not likely, when left to themselves, to take the short and royal road to knowledge. It is one of the hardest problems which confronts us—the problem of deciding when to offer assistance—of striking the happy mean between the attitude of the sphinx and the attitude of a Cook's guide. One of the most intelligent women in town walked into my library, one day and asked for Poole's index. I thought to myself, "That woman is one of the few who know just what they want. I'll not question her. I'll simply give her what she asks for." So for the space of one hour I carried out bound magazines as she called for them—all to no purpose. Finally, in a burst of confidence, she told me what she was trying to find. Inside of two minutes I was able to put a book into her hand which made her exclaim in delight: "Why, this is exactly what I wanted!" I had wasted an hour

of her time and an hour of mine because I was afraid of seeming officious and inquisitive if I asked such an intelligent woman just what she wanted.

It is equally easy to err on the other side. I remember carefully explaining to a school-girl, who asked for some antiquated books of science, that those books were unreliable and that I could give her some much more up to date, only to find out that she was preparing an essay on old scientific text-books, and wanted the very things which I was so eager to prevent her from having.

The quality which I should place next to tact is *patience*—the patience of Job. Yea, more than the patience of Job, for the public, however foolish, flighty and unreasonable, may never be taken to task by its humble servant as Job took to task the Almighty. I do not go so far, however, as to set up patient Griselda for a model, for I think that there should be a limit to the long suffering of even the reference librarian. There was a teacher in our town who sent in the following list of questions with a request that we should within twenty-four hours get out all the books and articles in the library bearing upon every one of them, as she would like the class to look over the material in order to decide upon which subjects they would prefer to write. This is the list:

1. Is the Cuban capable of self-government?
2. The bearing of the Monroe doctrine upon the questions of the day.
3. The influence of art on character.
4. International arbitration as a preventive of war.
5. Journalism as a profession.
6. The influence of music upon a community.
7. What the musical world owes to Germany.
8. Noted rides in history.
9. Historic churches.
10. The necessity of methods in modern campaigning.
11. The effect of the present methods of campaigning.
12. Are the present political methods justifiable?
13. Warships of the twentieth century.
14. Problems confronting Greater New York.
15. Our next really great electrical invention.

This was too much. The worm (otherwise reference librarian) turned and told the teacher that if she would decide which sub-

jects the class were to write upon, the material should be speedily forthcoming, but that it would be impossible to hunt up all the references on those fifteen subjects. It was rather puzzling anyway to know just what material one could offer on "Our next really great electrical invention" before it was invented.

It goes without saying that one must have the persistence of a sleuthhound when on the trail of a fact, must be accurate, and must be thoroughly familiar with the tools of her trade.

It is also necessary to form the newspaper habit. A librarian who does not read the daily papers loses many opportunities of usefulness. It is especially desirable to read the local papers, and in every possible way to gain a thorough knowledge of your town. I fear that the model librarian often held up for our admiration, who knows all the ministers, teachers, editors, political bosses, members of the school board, labor leaders, officers of the woman's club, and of all other clubs and classes, religious and secular, is a myth. A woman in the ordinary small library who should attempt to add all this outside work of keeping in touch with everybody and everything to her required eight hours or more in the library, would certainly have very few hours left for eating and sleeping, and though she might cut down her allowance of food and rest for a time with impunity, she would soon do what the old horse did just as he was nicely trained to live on a straw a day—"up and die!"

Nevertheless, a great deal can be done if you will only read the papers and thus keep in touch with what is going on. Is there a smallpox epidemic, necessitating the erection of an isolation hospital? Send the chairman of the committee on construction that recent book you bought on "Epidemics and isolation hospitals." It will never occur to him to come and ask whether you have any such book in the library. Is the town considering a new method of sewage disposal? See that those who are to determine what system shall be adopted know the resources of the library on the subject. Is a noted man about to lecture in town? Put up a portrait bulletin with a list of all of his books that are in the library, and if possible a few references to the man himself. Have you a G.

A. R. post? Send it a carefully prepared reading list of your books on the Civil war. Perhaps I am now trespassing upon the preserves of what would be in a large library the loan department, but in the small library the work cannot be divided on any hard and fast lines.

Given the qualities of approachableness, omniscience, tact, patience, persistence, accuracy, knowledge of one's tools, knowledge of one's town, and familiarity with current events, yet all is not said. Last, but by no means least, the reference librarian should possess a sense of humor. It will lengthen her days, as well as add materially to the comfort of the public. It is better to be able to smile than to be irritated at the foolishness of a teacher when she sends a boy presumably aged ten to you for material for a composition on "The duties of parents," or "The nature and choice of a procession." (The boy evidently varied that last subject slightly.) The child who asks you for the "Anthropology of poetry" in order that she may look up a piece to speak, and that other who demands "The laws of New Britain against trees" when he wishes to look up local ordinances bearing upon tree protection, will add to your joy in life, and enable you to be more polite to the next bore who victimizes you.

Secondly, as to methods and materials of work. The reference books proper should be as compactly arranged as possible. Extra copies of books circulated, but also necessary in reference work, should be provided for the reference room. My own experience indicates that one can do better work with a few well-selected books under one's hand, than with a greater number scattered over a considerable area. When books needed are located in different rooms, perhaps widely separated, so that the intervention of runners is necessary, it is harder to do satisfactory work, than where immediate personal inspection of the books is possible.

While indexes and bibliographies should be freely bought so far as they are of use, there are many which are not of sufficient value to the small library to make it worth one's while to invest in them, because so few of the books listed are in the library. A complete bibliography of a subject is generally less useful than a well-selected and annotated

list. The thing that we usually want to know is what are the few *best* books and articles on a given subject, and the complete, unannotated bibliography has usually been of greater use to the compiler than it is ever likely to be to any one else. And no bibliography can ever take the place, in public library work, of the librarian who knows her books.

The usefulness of magazines as substitutes for and supplements to books, their superiority to books in scientific work, because the scientific book is out of date before it can be put upon the market, their value in getting up debates, etc., is, I think, generally understood. I wonder whether the desirability of indexing certain articles in them as soon as the magazines are received, is equally well understood?

The Astor Library used to (and may still) index periodicals as soon as received, placing the slips in its card catalog, and withdrawing them at the end of the year upon the arrival of Poole. Few libraries can afford anything so elaborate as this. But if there be a librarian here who does not and cannot take the "Cumulative index," I feel sure that it will pay her to index on cards for her own use whatever magazines she takes. Before the issue of the Cumulative, we used to do that in our library, and were well repaid for our trouble. Since taking the Cumulative, we have continued to index certain articles likely to be called for in our town. For example, certain subjects which come up pretty regularly for debate in the schools each year, are kept up to date by the addition of current articles on those subjects to existing reference lists.

It is natural to go on from this to speak of the importance of keeping notes of the lairs of facts once painfully run to earth. The few minutes spent in making a permanent note for your card index of the sources of information which it has been difficult for you to find, is never wasted. What one man wanted to know to-day, someone else is pretty sure to want to know a few months hence.

The importance of working through the newspapers also needs to be emphasized. If the editors are friendly, it is possible to print lists of books and interesting paragraphs about the library which will lure many a citizen to the reference room.

Thirdly, the public. The public may be divided into three classes:

(1.) The select few who know just what they want, state their want with clearness and expect you to meet it. It is a joy to work for them.

(2.) The people who expect nothing of you, apologize for disturbing you, and break out into a fever of gratitude over the slightest assistance. These are amusing.

(3.) The people who expect you to do all their work for them. These are irritating.

Still they are all good fellows in the main, with more virtues than I can take time to point out. Let me rather dilate upon a few of their failings—express a few wishes of the reference librarian concerning certain of them. The librarian wishes

That they would learn to know what they want. So many people are like the woman who wanted to study up the settlement of Ireland for her club, but didn't know whether she wanted books on the earliest or the Danish or the Cromwellian colonization; or like the woman who went into a Chicago library and said that she wanted a book which would tell her how to be a virtuoso! The librarian tried to ascertain a little more definitely what was wanted, and was answered as follows: "Oh, I don't know. I heard a virtuoso was a good thing to be, and I just thought I'd like to be one. Haven't you a book that will tell me how?"

If a man knows what he wants, even though he can express himself to you but vaguely, he has taken one step towards simplifying your problem. The man who asked for "a book about a man who appropriated everything he saw. If he saw a castle, it was his because he enjoyed it. There was a good deal in it about his wife," helped the librarian materially to a lucky guess that the book wanted was Curtis's "Prue and I."

That they would conquer their reluctance to tell you what they want, when they do happen to know. I have never yet been able to understand the secretiveness of the average individual when he confronts a reference librarian! He could not be more reticent about his debts or his love affairs than he is about the fact he wishes to ascertain. One would almost think that he considered it indecent to state baldly what he wanted. He will ask you for a United States history, and

shake his head over all that you offer, until he finally decides as a forlorn hope to reveal to you his exact want, and tells you that what he is after is something about the battle of Gettysburg. Whereupon you produce the book desired.

That they would not tell you that they know where certain information is to be found when they don't. That makes you lose time. One soon learns, however, that when a man says he wants an article on Hawaii which appeared in *Harper's* for 1893, it is much more likely to be found in *Scribner's* for 1889 (or somewhere else), and that it saves time to look first in Poole.

That they would cultivate a willingness to use their own brains, instead of requiring that their mental food be predigested. Do you recall what Mr. Dooley says about reading? "The thruth is that readin' is th' next thing this side iv goin' to bed f'r restin' th' mind. With most people it takes th' place iv wurruk. A man doesn't think whin he's readin', or if he has to, th' book is no fun. Believe me, Hinmissy, readin' is not thinkin'. It seems like it, an' whin it comes out in talk sometimes, it sounds like it. It's a kind iv nearthought that looks ginooyne to th' thoughtless, but ye can't get annything on it." Now Mr. Dooley's idea of reading is the idea a good many people have about studying up a subject in a library. They don't want to think when they're doing it or it's "no fun." They will indulge in "a kind iv nearthought," but if there is any real thinking to be done, they prefer that the librarian should do it. Now while we are glad to furnish the man with tools wherewith to build his house, he really has no right to expect us to build the house for him.

I wonder whether we as a people are losing the power to think our own thoughts on a subject, and to deal with it in an independent, original way? Perhaps not. It may be only that nowadays every one reads, and writes papers, and indulges in debate, so while there may be as many people as there ever were who can stand squarely on their own feet, and look steadily out of their own eyes, and form their own conclusions, these are lost sight of in the countless multitude who prefer a second-hand article in thought. The reference librarian is frequently and sadly

struck by the number of people who refuse to attack a subject for themselves, but are very eager to know what others have thought and said about it. Often the very teachers, whether through lack of time or of training I will not attempt to decide, are unwilling to deal with the simplest sort of original material, from which they may select and boil down what they want, but insist upon a book which will give them the information in the exact form in which they intend to present it to their pupils. And their pupils too often prepare for composition or debate by copying what they half understand from encyclopedias and magazine articles, instead of thinking for themselves along the lines suggested. This induces mental indolence, and, to quote Mr. Dooley once more, the state of the man who "so doped himself with books that he'd stumble over a carpet-tack!" Of course the schools should not put a premium upon this sort of thing. But neither should the reference librarian.

That people would treat books properly. The librarian who quails not before the man who wants to know what proportion of the fresh water of the globe pours over Niagara Falls yearly, or what was the old English form of the freedom of the city, or what determines the rate of wages, or what are the recent changes in the customs of the English court as to ostrich plumes, or in what month and day Shrove Tuesday fell in 1820; and who is ready to furnish information upon a wide range of subjects, from the addresses of the manufacturers of envelope-making machines, to "the dog in mythology and in the Bible," will yet shrink from suggesting ever so politely to a woman who is ruining the "Century dictionary," that she should handle it a little more carefully. The boldness of a lion is needed to do this at all, and the craftiness of Machiavelli is needed to do it without offence.

Lastly, the reference librarian wishes humbly, knowing that she is wishing for the impossible, *that the people wouldn't all come at once.* If the man who wants everything that the library contains upon landscape gardening, and the woman who wants references for a club paper on "The causes of pauperism," would only delay their coming until you have gotten out the books on "Govern-

ment control of railroads" for the Y. M. C. A. debate, and a few references on "What the 19th century has done for women" for the High School girls, uninterrupted except for a call to the desk now and then to translate an Italian word, or tell the cost of a seat in the New York Stock Exchange, or suggest some new and pleasing entertainment for the Methodist Church, or help your new assistant by telling her what the boy wants who is calling for "Eugene's book of western verse," or the woman who is demanding "Various fairs" [Vanity Fair], or the man who is clamoring for "Dewent's origin of insects" [Darwin's origin of species], or the novel "Ben she." But no, it always pours inquirers when it rains at all, and the reference librarian who cannot, outwardly serene as a matter of course, and inwardly serene if possible, attend to at least six things simultaneously, might better leave the profession.

Before closing I want to make a brief plea for reasonably short hours of work.

"There was a young student of Tyre,
Who said, 'Tis my constant desire
To work night and day,
For it bores me to play'—
Now was he a prig or a liar?"

I think that he was both—and something of a fool into the bargain. There is a limit to all human endurance. The more exacting ones work is, the briefer should be the period of labor. The reference librarian cannot maintain the required mental keenness, concentration and agility of mind, and serenity of temper demanded by the work, for many hours at a stretch.

I have held up my ideal for the librarian, and my ideal for the public. We fall far short of our own ideals, and the public for whom we so gladly work fall far short of our ideals for them. "I'm not denyin' the women are foolish," said Mrs. Poyser, "God Almighty made 'em to match the men."

"I'm not denyin' the reference librarians are faulty," we may say, "God Almighty made 'em to match the public!"

LIBRARY BOOK PLATES.

BY HENRY W. KENT.

THE mild contempt or undisguised amusement of the average librarian towards that harmless occupation known as book plate collecting has always puzzled me. Just why such an attitude is taken it would be difficult to say. Perhaps the weightier matters of counting readers' noses and of making up self-satisfying statistics leave little time for the cultivation of the amenities of library work. Collecting book plates is not a serious vocation, of course, but few, we hope, regard it as more than an avocation. Whatever may be the motive that inspires the collector the lessons to be learned from his collection are always entertaining and sometimes valuable, even to librarians.

Without going into details, without mentioning what these entertaining points are, leaving all that to the enthusiastic genealogist, bibliophile and artist, we will consider merely what are the instructive points which the librarian might gain from half an hour's

examination of the book plate collector's specimens.

There are few librarians probably, even of the statistical kind, who are not called upon at one time or another in their careers to apply themselves to the difficult task of devising a book plate. It may be for the library which they have been called, fresh from some library school, to organize, or it may be a special label for some collection within the *omnium gatherum* they preside over, or it may be a plate to record a recent valuable gift. The usual method of procedure, if we may judge by specimens too frequently met with, is to call in the local printer (does he not advertise to do "artistic printing"?) and to throw the whole matter upon his willing shoulders, beseeching him to let loose his art. His artistic sense being tickled, he proceeds, in the five or six lines necessary to the announcement that the book is the property of The Fag End Library of

Fag End, and the gift of the Reverend Mr. Blow, to use as many different styles of type, all of them as unlike as possible—a line of monumental Gothic, one of "Satanic," or Kelmscott, one of Caslon and another of Jensen's designing. Italics and Roman, capitals and lower case letters are jumbled together in a helter-skelter mass. If the library owns a seal the printer will introduce this also into the composition. Then, when printed on paper selected from the stock which supplies the local theatre with hand bills and serves to announce the opening of ice cream parlors, the plate will be ready to be pasted into the books, and examples will be offered for exchange by the young lady assistant who is "just starting" a collection of her own. There are, no doubt, some lady librarians who would add a colored capital letter to the variegated type of the printer, in the manner of the initials used by a certain E. Hubbard at his Art Book Factory somewhere out in darkest New York. Such a lady might even like to go further and order a real design from a hard-up designer of her acquaintance—something which would have on it a nude male figure of Strength, a draped female figure of Learning, an owl, a marble hall vista, a bookworm, or symbols of Art, Science and Literature. She might do this unless she were turned from her course by the reference librarian who, having had experience with classical dictionaries and dictionaries of quotations, would know how short life is and how long Art can be.

But, to be serious and to point the lesson of the book plate collection. A public library book plate is most appropriately made with printing types, and the reason is too obvious to even mention. There is no more fitting method of expressing the fact "*ex libris Bibliotheca Thingumabobla*," none which may be so pure a piece of decoration, and none so cheap even in its most expensive form, as plain print. The designed or picture plate is expensive in its first cost and, if engraved either on wood or copper, is entirely out of the reach of the ordinary library, while the photo-mechanical processes, if cheap, are in questionable taste.

The type itself ought to be the clearest and so, of course, the simplest to be found; and if none at once clear and simple is to be had

in the local printer's office, the librarian should insist upon having a new font ordered. He will undoubtedly have other occasions for its use in his bulletins, circulars and announcements; unless as seems to be too often the case, he regards this privilege of upholding a good standard of printing with the same indifference he displays towards book plates. It would be better not to indulge in faddish type upon a book plate which must stand for many years, but to use those logically developed and physiologically reasonable types which great printers, as well as the educated eye, tell us are good. The archaic and impracticable types of the poet-printer, William Morris, find many admirers and imitators, especially among so-called "artistic printers" and managers of private presses whose books are never read, but it seems probable that they represent only a passing fad and as such will undoubtedly soon go out of use. One style of type only should be used on a plate and as few sizes of that type as may be necessary to clearness and emphasis.

The book plate should follow the shape of the average book cover, that is, it should be taller than it is wide, to fit octavo, quarto and folio. It is a very good plan to have several sizes of plates. The average or octavo plate should be kept as small as the size of the type chosen and a properly proportioned margin will allow, because, as even an average librarian will know, it takes more paste and more time to stick on a big label than a small one.

After the type has been chosen, the most important matter is the composition of the lines and of the words in the lines. The words should be so arranged that the most striking shall stand out clearly. This can be accomplished either by a larger type or by dividing the lines so that the main words may stand by themselves. But, however the lines are broken up, it should be done with an eye to the geometrical shape of the whole, for upon this the general decorative effect of the plate depends. Like the title pages of the 16th century books, the outline of the composition may be square, oblong, diamond or vase-shaped, and much ingenuity may be expended upon it.

A paper which can be written on with ink, which will not absorb the paste quickly, and

which will remain flat when pasted without curling up over the brush of the paster, is best. A better grade might be used in permanent books than that used for duplicates or temporary volumes which are soon worn out and thrown away, but even here the newspaper or highly calendared papers should never find a place. Vellum, Japanese and Chinese papers are much in vogue for private libraries, but, like other soft papers, are difficult to write upon and cannot even be touched with an eraser. A good grade of uncalendered laid paper or a bond paper gives the best results and looks the best. Colored papers are in questionable taste, and there seems to be no real excuse for the departure from the time-honored white label which is generally in harmony with end papers of all colors.

The question of a seal or some device will often come up in making a plate but, as it is ten to one that this bit of ornament will be badly conceived and worse executed it may be given as a safe rule that the plate will be better off without it. One, two or three bordering lines may be successfully used in some cases, especially where the effect sought is that of a tablet.

In one case only is the exception to the rule of plain printing types advisable, and that is in book plates for those rapidly

growing collections called children's libraries. Here a designed or picture plate might be used with good results. But this matter of design in book plates is such a difficult one that I hesitate before mentioning it. There are few modern book plates, even those made by designers of ability, that are good in decoration. The cant, the silliness, the mock assumption of elegance and learning, the inaptness and the incongruity of most of them, would be pitiful if it was really a serious matter. For the children, use frankly a picture, not symbols or mythological subjects, and let the picture be in colors if possible. Do not use the cheap reproductive processes unless a wood block or lithograph is entirely out of the question. A picture need not obscure the purpose of the book plate but may, if properly used, emphasize it. Do not try to preach or to be goody-goody but say in an attractive way that "This book belongs to the Fag End Library." If a motto must be used, let clean hands be the subject rather than the pure heart.

To many this may all seem to be time and space wasted on a very small subject, but in nothing more than in printing does the saying ascribed to Michelangelo hold true, that trifles make perfection, but perfection is no trifle.

LIBRARY ROTATION.

BY DREW B. HALL, *Librarian The Millicent Library, Fairhaven, Mass.*

EVERYONE acquainted with the use of public libraries knows the great numbers of worthy books unread by and unknown to the general reader. Although every shelf in the Millicent Library is free to all persons and there are specially good collections on engineering, the sciences, travel and biography, it was found that last year that fiction received over 75 per cent. of the circulation. Convinced that the very number of the books on the non-fiction shelves, the darkness of much of their stack, and the mysteries of a close classification, discouraged and repelled many persons who would have gladly read something more serious than the latest novel

if it were as easily found, we decided to try the plan called by Mr. Ballard, for want of a better name, "library rotation," and intended by successive monthly exhibitions of small all-round collections, no two including the same book, to bring some works of general interest into prominence.

A selection of books covering all subjects, whose backs and covers were as attractive as their contents were entertaining and trustworthy, were picked from the stack and placed in a neat bookcase in a conspicuous corner of the reading-room, a comfortable chair (there was room for only one) was put before it and a strong light above the chair;

notices were posted and printed in the local paper urging people to browse over the "rotation" collection, to take home the books on any congenial subject, and to read from the stacks or from succeeding selections those in the same line, for if two books were read from each selection, the twenty chosen in a year would give the persistent reader a good understanding of that subject.

In the selection some attempt was made to anticipate the interest likely to be shown in various classes, and it happened (following the Decimal classification) that three zeros were selected, twelve 100s, twenty-two 200s, twenty 300s, seven 400s, thirty-three 500s, eighteen 600s, sixteen 700s, twenty-one 800s, nineteen travels and history, and six biographies. During the first two weeks, 28 were taken home, including Quakenbos' "Hypnotism," Wingate's "What shall our boys do for a living," Dole's "Theology of civilization," Hyde's "God's education of man," van Dyke's "Gospel for a world of sin," Collyer's "Talks to young men," "Pilgrim's progress," Brooks' "New starts in life," Roosevelt's "Strenuous life," Washington's "Future of the American negro," Lubbock's "Beauties of nature," Sloane's "Liquid air," Wright's "Four-footed Americans," Miller's "First book of birds," Joaquin Miller's "True bear stories," Baker's "Boys' book of inventions," Winslow's "Concerning cats," Griffith's "Care of the baby," Bates' "Talks on writing English," Lang's "Blue poetry book," Dickinson's poems, Mathews' "Aspects of fiction," Stockton's "Buccaneers and pirates," Lynch's "French life in town and country," Crawford's "Ave Roma immortalis," Larned's "History of England," Rosebery's "Napoleon," Wharton's "Martha Washington." That is, two, or 16 2-3 per cent. of the 100s in the selection; six, or 27 per cent. 200s.; two, or 10 per cent. 300s; five, or 15 per cent. 500s; three, or 16 2-3 per cent. 600s.; four, or 19 per cent. 800s; four, or 21 per cent. travel and history, and two, or 33 per cent. biography. Thirty-five volumes more were drawn from the remainder in the three weeks following, when a new selection was made.

This second case, exhibited from January 25 to March 11, contained larger per cents. of 100s, 500s, travel and biography. By the latter date 100 of its 154 volumes had proved attractive to home readers. The third selec-

tion, with more travel and biography, circulated in five weeks 85 of its 146 volumes.

A fourth exhibit of 155 works, ending May 24, sent out in the first two weeks 41 books, 20 per week, and 35 in the remaining three, 12 per week. The decline in volumes per week, and a falling off in the interest shown by casual readers, lead me to the conclusion that three weeks is long enough for the exhibition of a selection of less than 175 volumes. Of the 76 drawn, one book was a zero, a showing of 50 per cent., as there were but two in the case; six, or 51 per cent. 100s; nine, or 75 per cent. 200s; 10, or 66 per cent. 300s; seven, or 70 per cent. 500s; four, or 33 1-3 per cent. 600s; two, or 16 per cent. 700s; 14, or 50 per cent. 800s; 15, or 65 per cent. travel and history; and 11, or 37 per cent. biography.

These four exhibits, averaging 157 volumes each, brought so prominently to notice 630 books that would hardly have been found otherwise, that 35, 65, 58 and 49 per cent. of the respective collections were drawn for home use. The low per cent. of the first was due probably to the fact that it was the first, to its extending over the holidays, and to inexperience with local readers' preferences, which prove in general to be for popular scientific books suitable to the season, and for travel and biography; in particular two or three constant readers draw the philosophy, religion and economics. Though 322 of these volumes were circulated, it seems a very small number when compared with the total circulation, 66 times as great, for the same period. But this 1½ per cent. is distinctly encouraging in showing that many people care for serious reading if it is as easily obtainable as fiction and one-tenth as much advertised; and if the pleasure received from fiction and non-fiction is measured, not by the number of volumes of each circulated, but by the number of "hours enjoyment" to be had from each, the results of the "rotation" case are not at all meager. It has, moreover, encouraged more non-fiction reading than is indicated by the 1½ per cent. of the entire circulation taken from it; for in four months, January to April, 1902, (during which the "rotation" case has been in operation) the fiction drawn was eight per cent. less than in the same four months of 1901, leaving a decrease of 6½ per cent. in fiction read to be accounted for partly by the

indirect influence of the case, and partly by other causes less important.

There is something of the "standard" library idea in this of library rotation, but broadened and thereby weakened perhaps; for it furnishes a small collection on all subjects approaching, if not quite, "standard" in its quality, and alterable in its contents as seasons or local occurrences bring birds and flowers or yachting and fishing into special prominence. And it escapes the limited interest of a reading list by its inclusiveness. Its simplicity, and the fact that it involves no expense, makes it practicable in the smallest library.

Great as is the influence of the "rotation" case on those who draw its books, it is as broad on those, many more in number than the takers of books, who can spend but half an hour comfortably browsing among the pages of some hitherto unknown and undiscovered volume. The chair is seldom without an occupant afternoon and evening, and several of our morning newspaper readers who do not care for a borrower's card, have taken their ease in it, book in hand.

On the present plan, we choose about every five weeks from the stacks 150 works that are not on lists of previous selections and that are attractive and reliable, apportioning the classes according to the season or the preferences shown by the lists. At this rate some 1600 will be exhibited in a year, and in three or four that portion of the 12,000 odd volumes non-fiction in the library as are suited to such general reading will have been brought prominently to notice, and the library will have been completely "rotated."

FOR if we take an examination of what is generally understood by happiness, as it has respect either to the understanding or the senses, we shall find all its properties and adjuncts will herd under this short definition—that it is a perpetual possession of being well deceived. And first, with relation to the mind or understanding, 'tis manifest what mighty advantages fiction has over truth: and the reason is just at our elbow, because imagination can build nobler scenes, and produce more wonderful revolutions than fortune or nature will be at expense to furnish. Nor is mankind so much to blame in his choice thus determining him, if we conceive that the debate merely lies between things past and things conceived. — *Dean Swift*.

THE WORK OF THE DOCUMENT OFFICE.

L. C. FERRELL, Superintendent of Documents, requests the publication of a communication sent by him to J. I. Wyer, chairman of the committee on public documents appointed at the recent Western Library Meeting, and relating to the report of that committee as printed in the *LIBRARY JOURNAL* for September (p. 832). It is as follows:

Mr. J. I. Wyer, Chairman Committee on Government Publications, Lincoln, Nebraska:

DEAR SIR: I am obliged to you for sending me a copy of the report of your committee. It would have been better, however, if you had sent the copy before sending it out for publication, thus affording me an opportunity to correct some of the many errors in it.

Your report is under four heads and I will reply in detail.

I. "Graduated distribution to designated depositories."

This question has been under consideration by me for some years. In my annual report for 1901, p. 5, I said:

"To many libraries the receipt of 527 documents (in one year) more than half of which are large bound volumes, is embarrassing. A few depositories have already been dropped at their own request, having no available room for documents, while others have asked permission to select such as they find most useful. I have not yet found it practicable to comply with such requests because of the great increase in labor and bookkeeping involved. It is only a question of time, however, until something must be done that will enable librarians to select documents most useful to their patrons."

Your committee report is misleading in that it states "that only the largest libraries and those so desiring shall receive *both cloth and sheep-bound* copies of documents issued in both forms. Many of the smaller depository libraries would be glad to be relieved of the burden of shelving and caring for *these second copies* and in many cases the smallest libraries would be glad to discontinue entirely certain titles for which they have little or no use."

The impression here given is that designated depository libraries receive regularly *two* sets of public documents; one in sheep and the other in cloth binding. But as a matter of fact, only one copy of any document is supplied regularly to a designated depository. If duplicates are received it is because they are requested from members of Congress or from heads of departments before the editions to which depositories are entitled under the law are ready for distribution. Of course many documents are sent to libraries by members of Congress and heads of departments without request, complimentary.

The remedy has been sought in a change of the law so as to supply designated deposito-

ries with documents as soon as printed so that they might not be under the necessity of applying to members of Congress and heads of departments for early editions of documents which, under the law now in force, cannot be supplied by the Superintendent of Documents until months and in some cases more than a year after the first editions have been in circulation. It is believed that Senate bill 4261, which was passed in the Senate through the efforts of the late Senator McMillan, of Michigan, March 6, 1902, will, if it becomes a law, accomplish this result. It provides for printing a "library edition" composed of all the annual reports and miscellaneous publications of the executive departments and other offices of the government, to be bound in cloth and distributed to designated depository libraries as soon as printed.

When the law revising the printing law was passed in 1895, Congress, being aware of the great delay in supplying documents to depository libraries, provided that any library might receive its quota out of the first edition, provided that notice of such desire be given prior to the meeting of Congress, the documents to be supplied in unbound form. No depository has ever availed itself of this privilege.

In concluding this subject I will say that an opportunity will be given depository libraries at an early date to indicate such of the periodical publications of the government as they wish discontinued. If any considerable number desire a change I shall try and accommodate them.

2. Privilege of selection by non-depository libraries.

I will state that such libraries have been afforded every facility possible for obtaining documents desired. This office has adopted a rule to supply anything available to any library upon request, provided that the document or documents desired have not previously been supplied or will not subsequently be supplied under existing law. The Superintendent of Documents cannot, however, create an additional depository list unless authorized by law. To permit a library—a non-depository—to select documents to be supplied regularly as printed would be establishing a depository list contrary to law. I would heartily favor a law which would provide for sending the reports of the Bureau of Education, Bureau of Ethnology, Smithsonian Institution, American Historical Association, Department of Agriculture, Geological Survey, and the like, to every library in the United States. I believe such a law ought to be passed. The *Congressional Record* ought also to be supplied to at least one library in each county in the United States; and it ought to be bound up and distributed from time to time while Congress remains in session instead of waiting, as at present, until long after final adjournment.

3. Larger edition of Monthly Catalogue.

This office has frequently recommended to

Congress that a sufficient number of copies be printed to supply such libraries as desire the Monthly Catalogue. The authorized edition is 2000 copies. Of these about 1400 go to libraries and the remainder to heads of departments, members of Congress, and the press. When I took charge of this office in 1897 the distribution was made to about 600 libraries and the remainder to individuals.

4. Prompter issue of Monthly Catalogue.

The law requires that a Monthly Catalogue shall be prepared on the first day of each month which shall show the documents printed during the previous month, etc. It has always been the practice of this office to send the copy for the Monthly Catalogue to the printing office on the 7th of the month, or as soon thereafter as possible. Ordinarily when sent to press on the 7th it has been received back for distribution about the 25th of the month. So that the normal date of distribution of the Monthly Catalogue for any month would be the 25th of the month following. This, however, was before we began to make the cumulative index, which adds, at the very least, 10 days. So that the normal date of distribution of, say the June, 1902, catalog, would be Aug. 5. With this explanation let us see what delay has occurred in the distribution since Jan. 1, 1902, which your committee state "*is now from three to four months behind, appearing six to eight weeks after the British monthly catalog reaches this country.*"

Beginning with January, 1902, the Monthly Catalogue has been distributed as follows:

MONTH.	DATE OF DISTRIBUTION.
January	March 25.
February	April 21.
March	May 19.
April	June 25.
May	July 26.
June	September 8.
July	September 24.
August	October 1.

It may be also stated that Congress was in session January to July, making these six months the busiest of the year. But *in not a single instance* was the catalog more than six weeks later than usually issued. I do not know where your committee obtained its data for the statement that the catalog is now from three to four months in arrears. But from whatever source, the information was not according to the facts, which could have easily been obtained upon application. When it is considered that the addition of the cumulative index has added at least 100 per cent. to the value of the Monthly Catalogue, and that it is issued with but little additional delay, it would seem that the office should, at least, escape criticism. But your committee goes beyond just criticism and makes a statement not borne out by the facts.

The report also states that the Monthly Catalogue is received from six to eight weeks

after the British monthly catalog reaches this country.

I take it for granted that your committee never saw a copy of the British monthly catalog or it would not have referred to it. I have before me the British monthly list of publications for December, 1901. It was received Feb. 11, 1902. Our December, 1901, catalog was distributed Feb. 21, 1902. Only 10 days difference in time. Now how do they compare? The British monthly list for December, 1901, which is a fair sample, contains seven pages and 89 entries. Our Monthly Catalogue for the same month contains 111 pages, with a consolidated index to all documents printed by the United States Government during the calendar year, and 10,000 entries, including the index. One of our catalogers could prepare the British monthly list in one day.

In conclusion, I will say that I have no doubt but that your committee can secure careful consideration from Congress of any matter connected with the printing and distribution of documents. Speaking for myself, I will say that it will always be a pleasure to me to render any assistance in my power in securing legislation tending to improve the service.

L. C. FERRELL,

Superintendent of Documents.

OFFICIAL TITLES OF GOVERNMENT PUBLISHING OFFICES.

I READ with interest Mr. Jones's review of the Advance Edition of the new catalog rules in the October JOURNAL. I have no desire to take issue with any part of it except the comments upon Rule 9, which relates to entries for Government publishing offices. As to this he says: "This rule is one upon which the committee requests comment, especially in regard to the alternative forms of entry suggested in the note, viz. (a) Bureau of education. (b) Education bureau, (c) Education, Bureau of. Although (b) is the practice of the Superintendent of Documents, it should be at once ruled out of court, as it is not the correct official name of the bureau."

Of course the reviewer knows what the "correct official name of the bureau" is, and in such knowledge he is fortunate, for the Documents Office, though searching long and diligently for it, has not been able to find out. The popular name of it is certainly "Education Bureau," and that form has quite as good legal sanction as Bureau of Education. Both are in direct opposition to the law, but the legal name cannot be used, because it has been so long out of use that nobody would recognize it.

The government organization dealing with the subject of education was first organized as an independent executive department, and manned by a commissioner and two clerks.

After two years this was abolished and an act passed (July 20, 1868) which provided that "there shall be established and attached to the Department of the Interior an office to be denominated the Office of Education." This has never been repealed. On the contrary it has twice been re-enacted, in the Revised Statutes, editions of 1875 and 1878. But in the Revised Statutes a modification was introduced which has served as a peg on which to hang both the present officially used title and the much more generally used popular title. The language of the Revised Statutes (sec. 516) is: "There shall be in the Department of the Interior a bureau called the Office of Education." Sec. 517 provides that "the management of the Office of Education shall be intrusted to a Commissioner of Education." The word "Bureau" added in the Revised Statutes to the original enactment of 1868 has apparently been made the excuse for using the preferred title "Bureau" and for ignoring the legal title "Office." The Revised Statutes were enacted June 22, 1874, and were taken cognizance of in the first report of the "Office" or "Bureau," though that was dated Oct. 27, 1870. The explanation is found in the fact that the imprint date is 1875, the report having evidently not been issued till after the enactment of the statutes. In this first report the then commissioner (Eaton) says of the branch of the government of which he was the head: "First established as an independent department, it was afterward reduced to an office in the Interior Department, where now the law styles it a Bureau." Note the artful phrasing and capitalizing. Though the law says that it shall be called an office (with a lower-case "o"), it "styles it a Bureau" (with a capital "B"). And ever since every commissioner has both styled it and called it a Bureau. For two or three sessions Congress followed the text of the law and appropriated for the organization under the name "Office," then accepted the wish of the commissioners as more potent than the letter of the law, and has since made the appropriations for the Bureau. Under these circumstances, what is the "correct official name"? The Documents Office decided that it didn't know and couldn't find out, and it therefore felt at liberty to use in its catalogs the briefest and clearest form that would unmistakably identify the publishing office and most fully comply with the first and best rule of good cataloging, namely, "The convenience of the public is always to be set before the ease of the cataloger."

Evidently the Co-operation Committee has encountered some of these difficulties and is therefore not so sure on the point as the reviewer felt himself to be. If this is not the case, why does the committee leave the question open and ask for suggestions?

Inconsistencies of this kind run through nearly all the long list of government publishing departments, bureaus, offices, commissions, and what not. Nobody ever thinks or speaks, and no cataloger need ever feel called upon to write, of the Fish Commission under any other name, yet it is known to the law as the Commission of Fish and Fisheries. On the title-pages of the whole series of annual bulletins issued by the commission, the only title used is Fish Commission. On most of its pamphlet publications both forms may be found on the same title-page. All of the great executive departments except the Post-Office Department are legally known as "Department of," or "of the," the distinctive word which the cataloger must use first coming last in the legal title. Yet popular usage has shown itself so much more powerful than the law that you never find on the title of a War or Navy or Treasury publication the name of the department given in legal form. It is always War Department, Navy Department, Treasury Department. The Department of State is the only one which popular usage inverts that has not officially yielded to the popular voice. The Department of the Interior has made a feeble and unsuccessful effort to keep up the legal form. In an official history of the department issued in 1897 the title-page says "Department of the Interior," but the very first words in the text are: "The Interior Department was established." Not even the Documents Office has yet ventured to say Justice Department,* but there is no sufficient reason why it should not. If popular speech had found that a euphonious combination doubtless the catalogers would have followed the current. So long as they must put the word Justice first, nothing is gained in perspicuity by appending the preposition, and to my mind something is lost in logical form. The public boggles over Agriculture Department, but does something far worse by saying Agricultural Department. No cataloger could possibly follow that usage, because it brings in a word not found in the legal designation. The cataloger may invert or omit—he cannot interpolate. The catalogers of the Library of the Department of Agriculture itself have shown more appreciation of the logic of the situation than even those of the Documents Office, for you may find in catalog entries of the Department Library the form Agriculture Department, while the Documents Office in most of its publications still appends the unnecessary "of."

I may add that the original act creating the Interior Department is headed "Act to create a Home Department," and it was at first indexed in the Statutes at Large and appropriated for under the name Home De-

partment. The Peabody Catalogue—and I do not know a better one—enters the Department of the Interior as Interior, Department of. That is no more the legal title than Interior Department, and is on other grounds not so good.

My general conclusion, after much tribulation of spirit, is that the cataloger who determines to use only the "correct official names" of Government publishing offices will give himself a vast deal of useless trouble and come to no solid conclusion at last. Let common sense be the rule, and let those who have the courage follow where it leads. It has not yet led the Documents Office, or any other, to enter Department of the East as East Department, but there is no knowing what we may all come to in good time.

F. A. CRANDALL,
Public Documents Library.

THE BODLEIAN TERCENTENARY.

THE most important event in the library world during the month of October was the celebration of the three hundredth anniversary of the founding of the Bodleian Library, at Oxford, England. Strange as it may seem, the beginnings of the University of Oxford are so shrouded in the mists of the past that there are no definite dates upon which anniversaries and academic functions can be hung. The colleges of Oxford have had their celebrations, but the Bodleian Tercentenary is the first university function and great university celebration in the history of that old and august institution.

The Bodleian Library was first opened to readers on Nov. 8, 1602; but as it is impossible for the colleges to accommodate a large number of invited guests during term time, the celebration was placed on Oct. 8 and 9. Invitations were not sent out broadcast and carelessly, yet every university and college and learned society of any standing in the world doubtless received notice of this celebration.

Nearly 120 educational institutions and learned societies responded, sending delegates—and some institutions sending more than one. Eighteen different countries were represented in the great gathering in the Sheldonian Theatre, and some three hundred formal guests were present, besides a large number of most distinguished graduates of Oxford, returning to honor their colleges and the university at this time.

The celebration opened with a general reception on the evening of Wednesday, Oct. 8, given in the beautiful Ashmolean Museum and University galleries. It was decidedly the most brilliant social function that the old town has ever seen. In addition to the invited guests, all of whom were in full academic dress, there were a large number of the most noted men of all the Oxford colleges

* Except in the recently-issued Index to the documents of the Congressional series.

and of other educational institutions, and an unusual representation of local and national officials. The crush was something terrible at the first doorway and in the first corridor, but once beyond that the visitors scattered through the different rooms and alcoves of the museum, finding ample opportunity for delightful social intercourse.

On the following morning the officials of the university and of the various colleges entitled to recognition in the University Convocation, together with those who were about to receive degrees, assembled at the Hall of Oriel College, moving thence through the streets of the old town and through the historic corridors and quads of the immediately adjoining colleges, to the Sheldonian Theatre. Here, in formal Convocation, from which those about to receive degrees were excluded—remaining in one of the dimly lighted halls of Brazenose—the names of those about to be honored were canvassed and received the final and formal vote of approbation. Then the candidates for degrees, garbed in the rich scarlet Oxford gowns, were escorted to the theatre, passing up the central aisle in the midst of one of the most brilliant academic assemblages imaginable, and perhaps the most brilliant and noteworthy ever assembled in any country. With the head of the little column resting at the foot of the steps leading up to the seat of the Vice Chancellor (the Chancellor—now Lord Salisbury—is rarely present except when royalty is concerned) each candidate was formally presented for his degree, the Vice Chancellor rising at the close of the presentation, uncapping and granting the degree. Each person thus honored then ascended the steps, received the right hand of fellowship from the Vice Chancellor, and was then escorted to the circle of those “high in dignity and power” in the university. It will interest all Americans to know that Yale University was recognized by the degree of D. C. L., conferred upon Hon. Andrew D. White; that Harvard University was remembered with the degree of D. S., granted to Professor Minot; that Princeton was honored through Professor Andrew F. West, who now adds D. Litt. to his name; and that Dr. James H. Canfield, librarian of Columbia University, brought home a similar degree.

Then followed presentation (without speeches) of the addresses from the various institutions represented. The exercises closed with an eloquent address in sonorous Latin. With the exception of one or two informal and unimportant announcements, Latin was the language of the entire function. It was noticed that the English pronunciation was used, which was explained by a member of the faculty of one of the colleges as the result of the open and vociferous ridicule heaped upon the Roman pronunciation by the students of the university whenever that pronunciation had been essayed.

The fall term not having opened, no stu-

dents were present, so the peculiar spice of an Oxford gathering was wanting.

At the close of the exercises a large number of the guests, especially those from foreign countries, visited the Bodleian Library. No special arrangements had been made to receive these visitors, and no special display was made of the gathered treasures of this wonderful collection. Those who were so fortunate as to pass through the various rooms and alcoves simply saw the old library in its working every-day garb, precisely as it appears during the academic year to those who are its constant patrons. “They change all that in France,” and it would probably have been very different in the United States; but there was no serious complaint and no severe criticism, though there was some quiet astonishment when the librarian was discovered drudging away at his daily correspondence, and apparently somewhat impatient at the unusual interruption. However, as the interruption comes but once in 300 years no serious sympathy was felt for his discomfort and annoyance.

In the evening the guests assembled in the old dining hall of Christ's Church College at seven o'clock, where a dinner was given in their honor, followed by the usual after-dinner addresses. The gathering was a notable one in every way, both in the place and all its memories and traditions and in the personnel of those who assembled. At the “table of honor” were such men as Professor Jebb, Sir E. Maunde Thompson, Lord Strathcona, Professor de Martens, Professor Paul Meyer, Hon. John Morley, Sir Michael Foster, Rev. Dr. Mahaffy, and Hon. James Bryce; while at the other tables were the representatives of learned societies and notable colleges and universities, as well as those coming from the professions and other walks of life. Such men as Gen. Warren, Dr. Garnett, Mr. Fortescue, Professor Massie, Dr. Parkin, Dr. Ginsburg, Dr. Furnivall, Professor Croiset, Mr. Michael Sadler, Mr. John Murray, Professor York Powell were easily recognized; and scattered through the room were the presidents of the various colleges of Oxford and Cambridge, most notable members of their faculties, and men of most brilliant record in statescraft and the world of letters.

To an American there were two noteworthy omissions in the program of the great Convocation—the entire absence of music of any kind and the fact that there were no devotional exercises whatever.

Barring a dash of rain just as the procession was forming on Thursday morning, the weather was all that could be asked. Oxford was never more beautiful, and the impression of its gray walls and ivy, brilliant with autumn colors, and beautiful gardens, will long be remembered by those who were so fortunate as to take part in this unique and remarkable celebration.

LAYING OF THE CORNERSTONE OF
THE NEW YORK PUBLIC LIBRARY.

THE cornerstone of the great building for the New York Public Library, now in course of erection at Bryant Park, was laid on the afternoon of Monday, Nov. 10, before an audience of about a thousand persons. The exercises were short and very simple. William Willcox, the city park commissioner, presided and introduced Rev. W. H. Huntington, of Grace Church, who opened the ceremony with an invocation. John Bigelow, president of the library board, then read a review of the successive steps in the history of the library, during the 18 years since Samuel J. Tilden had bequeathed the bulk of his estate to the city of New York for public library purposes. He traced the course of the Tilden will contest and of the later compromise effected with the heirs by which a fund of over two million dollars was secured for the library—a sum entirely inadequate for the great purposes in the minds of those to whose charge the development of the library was entrusted. The consolidation of the Tilden bequest with the Astor Library, and later with the Lenox Library, was described, and the speaker referred to the broad lines upon which the New York Public Library—Astor, Lenox, and Tilden Foundations—has been developed, and to the efforts which have placed it in the rank of the world's greatest libraries. The great gift of Mr. Carnegie, which will bring the library in direct contact with the life of the people throughout the city, was fittingly acknowledged, and Mr. Bigelow referred to the cordial recognition and support accorded to the library by the city and by the people.

At the close of Mr. Bigelow's address Mayor Low advanced to the cornerstone, and received a silver trowel from the architects, Messrs. Carrere and Hastings, who stood by his side. A large bronze box containing the usual collection of documents relating to the history of the library, papers of the day, etc., was placed in the hollow made for it in the stone, and after the mayor had spread mortar on the base the cornerstone was slowly lowered into place. It was of Vermont marble, weighing seventeen tons, the only chiselling on its face being the date in Roman letters. The mayor then formally declared the cornerstone laid of the New York Public Library—Astor, Lenox and Tilden Foundations—and made a brief address, accepting the building on behalf of the city. He said:

"The laying of the cornerstone of the New York Public Library is an event of unusual importance and significance for the city of New York. I congratulate all, both officials and citizens, who have had any part in bringing this public library project to its splendid consummation, upon their good fortune, and I count myself happy to be permitted, as mayor of New York, to lay this cornerstone.

"The creation of a comprehensive free li-

brary system for the city of New York is as remarkable in its origin as it is full of beneficent promise in its development. I gladly avail myself of this opportunity to express the thanks of the city to Mr. Bigelow and his colleagues for their great contribution of time and thought and labor in this behalf. I know of nothing in the history of private benefaction so unusual as the agreement of the boards of trustees of the Astor Library, the Lenox Library and the Tilden trust to unite in the promotion of the New York Public Library upon the Astor, Lenox and Tilden Foundations.

"This union may well have seemed to those inclined to take a narrow view of things to involve the surrender of some distinction on the part of each one of these undertakings, and it required great breadth of vision, a large public spirit and a fine sense of the fitness of things to appreciate that the increased power for public service to be obtained by such a merger would exalt rather than belittle each of the individual benefactors, precisely as the states of our Union had retained their individuality while multiplying beyond calculation their power and their influence by uniting.

"Sometimes, though not always, it is only the first step that counts, and this was the first indispensable step in the creation of the New York Library. It is a conspicuous illustration of the truth that 'he who would save his life must lose it.' Out of this loss of separateness by the Astor, the Lenox and the Tilden libraries has grown the New York Public Library, upon the Astor, Lenox and Tilden foundations.

"It is, perhaps, well to point out that when the corporation of the New York Public Library had been formed and the co-operation of the city of New York had been secured for the erection of this building the only thing that had been made sure was the erection of a great reference library within the city. There remained to be added the feature of free circulating libraries upon a scale adequate to the needs of the city, such as should fully justify the title of the corporation, 'The New York Public Library.' The steps toward this second end were as unique and as interesting as those that had resulted in securing for the city a great reference library. First the Free Circulating Library Association of the city amalgamated with the New York Public Library, and then other smaller libraries in different sections of old New York did the same thing.

"In the meanwhile the city itself was developing the Brooklyn Public Library, with suitable branches throughout that borough. But still the prospects of securing circulating libraries upon an adequate scale for all parts of the city in any future that could be foreseen were faint enough until Andrew Carnegie, with his accustomed liberality, offered to supply the necessary buildings if the city would supply the sites for them and make

itself responsible for the running expenses. This unique offer, so characteristic of American citizenship, made possible the early accomplishment of a purpose that otherwise could have been realized only very slowly.

"The vast outlay required to provide for such a circulating system for the entire city is easily shown. Mr. Carnegie's contribution for the buildings will amount to \$5,200,000, the city's contribution of sites, when complete, will represent \$1,000,000, and when all branches are in working order the operating expenses will amount to \$1,000,000 annually. So far as the New York Public Library is concerned the city's obligations and expenditures, apart from the erection of this building, are entirely in the interest of its circulating department. The Astor, Lenox and Tilden foundations both provide and support the reference library.

"It may safely be predicted, therefore, that in the near future the city of New York will enjoy the most adequate and effective system of free circulating libraries to be found in any city of the world, and a reference library also of the very highest rank.

"I ask your attention for a few moments, to a consideration of what it means for the city of New York to be in possession of so great a library of reference as the New York Public Library already is and is destined to become, and of such a system of free circulating libraries as the city is soon to have. Some one has said that there are two elements necessary for the making of a great book: first, the man capable of writing it; and, second, the materials with which the man may work.

"It may be said, with almost literal accuracy, that, 50 years ago, there were in the United States no great collections of books; none, for example, that could compare with the old libraries of Europe, in either number or quality. At the present time there are several centers in the country at which great collections of books are being formed; and, while New York is the last of American cities seriously to enter the lists, the public library situation here, as it has been outlined to-day, is an interesting illustration of the results obtained by applying the city's immense power and resources to the library problem. Happily, it reflects, not only the city's wealth, it is equally a fine illustration of the quality of its citizenship.

"It is probably true, or it has been until recently, that for the purpose of writing American history a student can work in the British Museum to greater advantage than in any other single library in the world. It is doubtless true that the American historian must still go to the British Museum and to other libraries in Europe and America if his work is to be thoroughly done; and this will continue to be the case; for no library can hope to command all the material bearing upon such a subject. But it is equally true that the time is close at hand when the

student of American history, if he can go to only one library, will come to the New York Public Library as the one offering to him, on the whole, the largest opportunity. What is true of American history is likely to be true, as time goes on, of many other fields of human interest. Of the city of New York, as distinguished from the Public Library, this is certain to be so, for, besides the Public Library, there are here fine collections of books such as scholars use in both universities of the city. Of the New York Public Library as it is to-day it may truthfully be said that the Astor, the Lenox and the Tilden foundations have already accumulated so fine a nucleus of reference books, and the large funds at their command enable them to supplement this collection so freely, that the New York Public Library, on the reference side, is making giant strides year by year, toward the very front rank of libraries.

"The library system of the city of New York, when completely developed upon the lines that have been begun, will be as nearly an ideal system as any city could wish. At the center, in the superb building to be erected here, there will be the treasure house of the world's learning, which will draw to itself choice spirits from every land for the purpose of study and work. In every quarter of the great city there will be a circulating library that will develop in many a home, not otherwise to be discovered, the taste for scholarship and learning that will certainly result in blessing the world in ways not to be measured. For books are mute upon the shelves, until they are given new voices by the workings of the human spirit. The city, therefore, that supplies the books to meet the craving of the student, and, at the same time, makes provision to develop this craving wherever the basis for it exists among the multitudes of people, is a city certain to confer lasting benefit upon mankind.

"It is hardly necessary for me to point out what it means to a city to be the centre of a literary and scientific life such as a library of this kind draws about itself. It means that New York will become more and more the home of men who will minister to the higher life of the city and of the country; who will acquaint the city with the deep lessons of the past; who will honorably identify it with the discoveries of the future, and who will assure to it a worthy position in the inspiring march of progress in which the cities of the world are taking the lead. Great libraries are the storehouses of human knowledge, and as such they are the granaries out of whose rich accumulations come the seeds that fructify the years that are to be. The New York Public Library, therefore, means that the city of New York will serve mankind in the days to come as never before."

At the end of Mr. Low's address Archbishop Farley closed the ceremonies with prayer and benediction.

LIBRARY APPROPRIATIONS IN NEW YORK CITY.

THE municipal appropriations for 1903 for library purposes in New York City, as made by the New York Board of Estimate and Apportionment, are \$66,550 in excess of the amount granted for the year 1902. A comparative table of the appropriations for the two years follows;

	1903	1902
New York Public Library, Astor, Lenox and Tilden Foundations.....	\$111,150.00	\$85,650.00
Aguilar Free Library So- ciety.....	38,000.00	38,000.00
Webster Free Library....	6,800.00	6,800.00
Cathedral Free Circulating Library.....	17,275.00	17,275.00
Free Library of the Univer- sity Settlement Society.	4,500.00	4,500.00
Washington Heights Free Library.....		5,500.00
Maimonides Free Library of District No. 1 of the Independent Order Benai Berith.....	10,000.00	10,000.00
Young Women's Christian Association Library....	5,900.00	5,900.00
Harlem Library.....	8,300.00	8,300.00
General Society of Mechan- ics and Tradesmen of The City of New York....	6,150.00	6,150.00
Tenement-house Chapter Li- brary.....	950.00	950.00
Public Library, Brooklyn.	186,700.00	150,000.00
Queens Borough Library. (for maintenance of es- tablished free circulating libraries when acquired as branches).....	30,000.00	20,000.00
New York Free Circulating Library for the Blind..	677.70	677.70
Young Men's Benevolent Association Library....	4,025.00	4,025.00
Tottenville Library.....	1,116.10	1,116.10
	\$431,493.80	\$364,843.80

In announcing the library budget for the coming year, Comptroller GROUT stated that "private libraries receive no increase, and will be entirely excluded from the next budget (1904), in view of the opening of many of the Carnegie branches." The policy here proposed must undoubtedly have a serious effect upon the future of the Aguilar, Y. M. C. A., Harlem, Mechanics' and Tradesmen's, and other special institutional libraries which have heretofore received city aid.

CARNEGIE BRANCH LIBRARIES FOR BROOKLYN, N. Y.

THE Brooklyn Public Library has issued in pamphlet form the "Instructions to architects" which are to govern the erection of the Carnegie branch libraries in that borough. Sites have already been decided upon for five of these branches, and it is hoped that building operations may begin early next year. Four of the branch buildings will be practically similar in size, capacity and cost (\$80,000) and possibly uniform in plan; one, the Williamsburgh branch, will be larger than the others, and will cost in all \$110,000.

*Merged into New York Public Library during 1902.

For the four smaller branches, the sum of \$62,000 each is allotted for cost of building proper, \$18,000 being assigned to cover equipment, architects' fees, and incidental expenses. A total book capacity of 35,000 volumes is desired, of which 10,000 to 13,000 must be on open shelves, and 22,000 to 25,000 may be in the stacks. "The stacks should not be in a wing separated by walls and doors from the delivery desk, as liberal access to them will be allowed to frequenters of the libraries, and they must therefore be in full view from the desk." The buildings must be two-storied, with a basement. The first floor is to contain a delivery room (400 sq. ft.); stack space with stacks for 25,000 v (600-1200 sq. ft.); reading room (1200 sq. ft.); reference room (400 sq. ft.); children's room (1600 sq. ft.); and librarian's room (300-350 sq. ft.). "The whole first floor, except the entrance hallway, may be considered as forming really one large room, the partitions being chiefly of glass above the level of five feet from the floor." The children's room may have a separate side entrance, and a children's reference room should be partitioned off. On the second floor should be provided a lecture room, seating 200 to 250 (1500 sq. ft.); two ante-rooms (450 sq. ft.); two study rooms (1000-1200 sq. ft.); staff lunch room (180 sq. ft.); staff sitting room (180 sq. ft.); staff lavatory (150 sq. ft.), and if practicable one or two rooms for janitor. In the basement, besides space for heating and ventilating plant, closets, coal storage, janitor's storerooms and lavatories, is to be a workroom (1500 sq. ft.) with space for magazines, newspapers and stock. For the Williamsburgh branch the general plan is practically the same, except that more space is allotted, that shelving is required for 35,000 volumes, that a cataloging room is provided on the first floor, and a combined reading and reference room with a periodical storage room adjoining on the second floor.

Other suggestions are:

"If radial stacks are used, the stack space may be treated as a projecting one-story wing, permitting of the future addition of a second story, doubling its capacity. Except in this stack-space, no bookcases or stacks should be set upon or project into the open floor-space. In other words, all open shelving should be against walls or form partitions. Public catalog cases, if not arranged as part of or close to delivery desk, should be in delivery room at some point accessible also to children's room and reference room.

"The architects are requested to bear in mind that abundant natural light and natural ventilation are great *desiderata*, and that no convenience of arrangement should be sacrificed for mere architectural effect. Convenience and directness of access, simplicity and obviousness of arrangement—such that a stranger on first entering the building may see at once where to go for what he needs—are of prime importance, as well as a general spaciousness, cheerfulness and hospitableness of aspect."

THE CARNEGIE BUILDING OF THE LINCOLN (NEB.) CITY LIBRARY.

ON Sept. 16, 1899, the city library of Lincoln, located in the Masonic Temple, was totally destroyed by fire. Immediate steps were taken for its restoration, so that at the present time the library again contains upwards of 12,500 volumes. Soon after the fire, the needs of the library were brought to the attention of Mr. Andrew Carnegie, and at Christmas time of 1899, he offered to the city the sum of \$75,000, for the erection of a building. Immediate steps were taken to secure a site. Several sites were offered as a gift, but none of these were wholly suitable for the purpose. The library board therefore appealed to the citizens of the city for voluntary donations with which to purchase a site, with the result that about \$10,000 was subscribed for this purpose by some 3500 residents of the city, in amounts ranging from five cents to one thousand dollars.

Preliminary plans were adopted by the board after a careful investigation of modern libraries, and the particular needs to be met in this case. On the basis of these, a number of architects were invited to submit competitive plans. The plans finally selected were those of Messrs. Fisher & Lawrie, architects, of Omaha, Neb. Ground was broken on Dec. 1, 1900. The prime feature in determining the essential details of the plan was the possibility of economical administration. With this in view, it was deemed necessary to bring all the essential departments of the library together on a single floor, with the rooms so arranged, as to allow complete supervision from a single point. The main portion of the building is a rectangle, 68 by 104 feet. In the rear is an extension for the main stack room, 20 by 43 feet, and a small extension for the librarian's and cataloging rooms, 19 by 27 feet. The building consists of a main floor, and a high basement, the floor of the latter being but $3\frac{1}{2}$ feet below the building grade, which itself is about three feet above the level of the street. The entrance is directly to the main floor. The basement to the top of the water table, a distance of about 10 feet, is faced with first quality blue Bedford stone, accurately squared and rubbed. Above this, the building is constructed of the best quality gray pressed brick, with trimmings of gray terra cotta several shades lighter. The roof is covered with a dull red tile, and the whole is surmounted by a low dome faced with gray brick, and roofed with copper.

The entrance, which is approached by a flight of easy steps, is surmounted by a pediment in which are placed ornamental designs of terra cotta in high relief. The pediment is supported by two fluted Ionic columns, one on each side of the entrance. The entrance through the outer door is into a

broad light vestibule, wainscoted with dark Tennessee marble. The upper portion is finished in Keen's cement, the sides being moulded in the form of pilasters. A short flight of easy steps brings the visitor to the level of the main floor, and from the vestibule he passes into the spacious and well lighted delivery room, octagonal in form. This is floored with mosaic tile, wainscoted in Tennessee marble, and lighted from the dome above.

To the right of the delivery room, in front, is the spacious reading room for newspapers and periodicals. To the left is the staircase leading to the basement. This is well lighted by windows in the front of the building. To the left, and next to the staircase, is the reference room, in which the arrangement of the books is such as to permit the later doubling of the first shelf capacity, without rearrangement. Immediately opposite the entrance in the delivery room, is the main delivery counter, semi-circular in form, where the books are received and issued. This is in front of the main stack room, which extends from this point into the rear extension. In this the stacks are arranged in radial form, so as to bring every book in this stack room within view of the attendants at the counter. This stack room at present is equipped with only a single tier of stacks, so constructed as to permit the addition of a second tier whenever it may be needed. This part of the building is constructed so as to permit its extension rearward, whenever the space may be needed, and if desired, the stacks can then be arranged at right angles to its sides, in the conventional manner. The public is allowed full access to these stacks, even though by doing so, it was necessary to be more lavish of space than would otherwise be the case.

To the left of the delivery room, and adjoining the reference room, is the open stack room. This is arranged with stacks to which the public has the freest access at all times, even though lack of space in the future should necessitate limiting the access to the main stack room. Here are kept the books of greatest general interest, the general catalogs, with tables and counters for the convenience of patrons consulting them, so arranged as to bring the catalogs within easy access of the public, the attendants at the counters, the librarian, and the catalogers.

To the right of the delivery room in the rear, is the children's room, in which will be kept all books and periodicals for the special use of juvenile readers. The librarian's and the cataloging rooms are in an extension off the open stack room, the former commanding supervision of the main portion of the library. This extension is lower than the rest of the building, thus permitting small windows above the extension to furnish light into both stack rooms.

In the basement, provision is made for a bicycle room, accessible from the outside of the building, two studies which can be thrown into one, for use as a lecture room, an unpacking and work room connected with the cataloging room overhead by means of a book lift, a storage room, a room for the staff, a janitor's room, toilet rooms and lavatories, and a large apartment designed for use as a museum, or for any other purpose for which it may be needed in the future. With the exception of the storage room, these are all well lighted and airy. Under the front steps there is a large vault with steel door, for the purpose of preserving records and material of that character. A hall runs through the basement from north to south, at the north end of which is the entrance from the alley, for the use of the janitor, and the delivery of boxes and packages.

The building is completely fire-proof, the only wood used in its construction being some of the floors, the doors, and part of the window cases. On the north side of the building, where there is a possible exposure from fire from without, the windows are of fire-proof wire glass in metal frames. All rooms are thoroughly ventilated, fresh air being taken into ducts in the cornices of the building, thence passed into plenum chambers under the basement, and from there circulated into various apartments by a system of indirect radiation. To supplement the indirect radiation in cold weather, a sufficient amount of direct radiation is provided everywhere. Steam heat has been adopted as on the whole, the most efficient and economical. The heating plant is in a separate boiler house, entirely disconnected from the building. The building is piped and wired so as to permit the use of both gas and electricity; but in the stacks electric lights only are used. The building is now supplied with stacks sufficient to hold 35,000 standard volumes. The shelf capacity can be increased so as to give the present building a maximum capacity of upwards of 75,000 volumes. By the extension of the stack room rearward, the shelf capacity can be increased to a practically unlimited extent.

Since the opening of the library in its new building (May 27, 1902) the work has grown in every way, many more persons avail themselves of the privilege of drawing books and the number of visitors to the reading and reference rooms has materially increased. The children seem to have taken a new interest in books and the children's room is daily filled. The members of the Women's Club of Lincoln have furnished the study rooms in the basement of the library with handsome rugs, tables, chairs, etc., making them attractive and extremely comfortable and convenient. The large room in the basement has been fitted up for an assembly room, and is used for general club meetings

by the women of Lincoln, and will be rented for other gatherings of a literary nature. The room designed especially for the staff has been cosily fitted up, and is thoroughly enjoyed. Altogether the Lincoln City Library rejoices greatly in this new building and the good fortune that makes it possible to accommodate so many interested friends and patrons.

THE NET PRICE QUESTION.

W. T. PEOPLES, chairman of the A. L. A. committee on relations with the booktrade, has received the following letter from Mr. Charles Scribner, president of the American Publishers' Association, regarding increase of the discount granted to libraries on net books:

NEW YORK, Oct. 31, 1902.

Dear Mr. Peoples:

Your communication of September 9th was presented to the Board of Directors of the American Publishers' Association at its last meeting. I was directed to write that in view of the opposition of the Booksellers' Association it was thought inexpedient to recommend at present any change of discount to libraries. As I explained, a change could only be made at a meeting of the Association itself.

Concerning the prices of books I would write that these are fixed by individual publishers and any complaint should be addressed directly to them. The Publishers' Association does not attempt to control the prices at which books should be published, and indeed we have been advised that such a control would be illegal. The prices of books are subject to the ordinary business laws of competition and supply and demand.

Yours very truly,

CHARLES SCRIBNER.

Mr. Peoples writes: "The copy of Mr. Charles Scribner's letter tells its own story. The Board of Directors of the American Publishers' Association is composed of the largest and most influential publishers of the country. Whatever the board decides upon prevails in the association. It is the ruling factor, and there appears recently to have been a revulsion of sentiment on the question of discount to libraries from that which was thought to prevail at one period. It would be useless to attempt to accomplish anything in opposition to this board.

"As the board has refused to recommend that the association should increase the rate of discount to libraries nothing more can be done in this direction at the present time; consequently, librarians should be governed accordingly. The A. L. A. committee on the relations of libraries to the booktrade will meet in New York on Nov. 14th, to review the situation brought about by the action of the board of directors of the American Publishers' Association."

A PROPOSED CLASSIFICATION OF FICTION.

At the 1901 meeting of the Keystone State Library Association a committee was appointed to consider the advisability of classifying the statistics of fiction circulation in public libraries. The report of this committee was presented at the third annual meeting of the association, held in Williamsport, October 18. It was as follows:

"At the annual meeting of the Keystone State Library Association held at Harrisburg last year it was resolved: that a committee of three be appointed by the chair to consider the matter of the differentiation of fiction and to report at the next meeting.

"A committee was appointed as follows: Joseph G. Rosengarten, William M. Stevenson, John Thomson.

"Your committee have carefully considered the matter submitted and report—

"That it is not in their judgment desirable to attempt any system of evaluation of fiction.

"That in preparing for publication statistics of circulation it is desirable to classify fiction according to the leading thought or object of the book.

"That fiction in these statistics should be divided into classes according to the methods known as the Dewey Classification.

"That most easily to effectuate this system the figure 1, 2, etc., according to the class of the book of fiction be written in red ink on the left hand corner of the book slip in a line above or even with the book number.

"That in counting up the circulation a record should be made of the number of volumes hundreds (for example) and be so entered, in the one hundreds, seven hundreds, or eight e.g.

Fiction 000
100
200
300, etc.

"That probably it would be necessary to put those books which cannot be included in any one of the ten classes or in Biography under a twelfth division entitled 'unclassified.'

JOHN THOMSON,
WILLIAM M. STEVENSON."

The committee's report formed the subject of an interesting debate by the association. The discussion was very full and was conducted on the principle of a round table, no set papers being read. In the end it was voted,

"That a committee of three librarians be appointed by the president to endeavor to obtain the assistance of say 20 of the smaller libraries or branches of large libraries in the United States in testing the proposed scheme of differentiating fiction according to a simple system of classification during the ensuing year and to bring up a report at the next

Keystone State Library Association meeting as to the advisability or otherwise of adopting this scheme."

The president, Mr. Anderson, subsequently appointed this committee as follows: William M. Stevenson, Carnegie Library, Allegheny, Albert R. Durham, Public Library, Reading; and John Thomson, Free Library of Philadelphia. It has been decided by the committee to begin the work by classifying the fiction in the Wagner Institute Branch of the Free Library of Philadelphia. Mr. O. R. Howard Thomson, the assistant librarian in charge, has begun this work and the classification will be done upon cards, the general heading or classification to be stamped or printed on the ordinary library labels, on the book plate, the book slip, the catalog cards and the shelf list. This list, as soon as made, will be mimeographed so that copies can be sent to some 15 or 20 of the libraries and branches in other parts of the United States and a request will be made that the librarians so consulted should classify their fiction, in each case, according to the differentiation adopted at the Wagner Institute Branch, and should then send to the committee in charge of this matter the classification of the additional works of fiction in their library and not in the Wagner Institute Branch, so that if possible, all the libraries co-operating may have the same book in the same classification.

An idea of the classification scheme proposed is given by the following suggestive outline, presented at the meeting:

Suggestive outline of classification.

- 000 General. (Unclassified fiction.)
- 100 Philosophy.
 - Stevenson. Dr. Jekyll and Mr. Hyde.
 - Kingsley. Hypatia.
 - Holmes. Elsie Venner.
- 200 Religion.
 - Ward. Robert Elsmere.
 - Kingsley, F. M. Paul; Stephen; Titus.
 - Bagot. Casting of nets.
- 300 Sociology.
 - Bellamy. Looking backward.
 - Dickens. Little Dorrit (prisons.)
 - Dickens. Nicholas Nickleby (schools.)
 - Stowe. Uncle Tom's cabin (slavery.)
 - Reade. Put yourself in his place.
 - Besant. All sorts and conditions of men.
- 400 Philology.
- 500 Natural science.
 - Verne. Hector Servadac (comets.)
- 600 Useful arts.
 - Crawford. Marietta (glass blowers.)
 - Trowbridge. Three boys on an electrical boat.
- 700 Fine arts.
 - Smith. Fortunes of Oliver Horn (painting.)
 - Sand. Consuelo (music.)
 - Sheppard. Charles Auchester (music.)
- 800 Literature.
- 900 History.
 - King. Between the lines.
 - Thackeray. Henry Esmond.
 - Ebers. Uarda.
- B Biography.
 - Muhlbach. Empress Josephine.
 - Atherton. The conqueror (Alex. Hamilton.)

Mr. Thomson says: "I think we can get all the preliminary work done in the course of a couple of months, so that when the rec-

ords are kept in the libraries and branches there will be a sufficient time before our next Keystone State Library Association meeting to enable us to have a thorough test of this system for at least six months. This will enable the report made at the third annual meeting of the association to be very definite, and will help us to see whether it is desirable to adopt this method in libraries or whether the result of our test shall lead us to say, 'let the matter drop.' There is no way of deciding this question by theorizing, but when we have an opportunity of judging the results from a practical user of the system in 20 or more different places, we shall be in a position to critically estimate its usefulness or valuelessness."

State Library Associations.

CONNECTICUT LIBRARY ASSOCIATION.

President: H. M. Whitney, Blackstone Library, Branford.

Secretary: Miss Anna Hadley, Public Library, Ansonia.

Treasurer: Miss Jennie P. Peck, Bronson Library, Waterbury.

The Connecticut Library Association held its fall meeting, Wednesday, Oct. 15, in the Public Library, Wallingford, at the invitation of the ladies of the Public Library and Reading-room Association, and was cordially welcomed in their behalf by Rev. J. E. Wildman. At 10.45 the meeting was called to order by Prof. David N. Camp, who presided in the absence of the president, H. M. Whitney. The reports of secretary and treasurer were read and approved. Two invitations from Norwalk, and one from the Kent Library, Suffield, inviting the association to hold meetings in their respective libraries during the coming year were noted, and referred to the executive board for action. After a very pleasing violin solo by Miss Mabel L. Hall, Mr. Frank B. Gay, of the Watkinson Library, Hartford, presented his paper "Should a librarian cultivate hobbies (of his own)?" Dr. George E. Wire of the Worcester (Mass.) County Law Library then read a paper on the "Selection of technical books for small libraries." He advised that no book worth more than \$5 should be bought for a library of 5000 volumes, but that a reasonable number of new and popular books on science and useful arts should be placed on its shelves. New England libraries should have small travelling collections of such books. Professors and high school teachers often recommend books for purchase that no one reads but themselves. Books on science and useful arts for small libraries should be American rather than English, and published by standard houses. In medicine a small library needs books only on three subjects, hygiene, trained nursing and gymnastics, and some large libraries have

given up their medical departments to medical societies. Small libraries need books on engineering, steam and sanitary, dynamos, gas engines, bicycles, and boat-building, and books on farming. Many lists for libraries are made by persons who have no idea of the poverty of small towns, or that what is good for a large library is not necessarily good for a small one.

Many of those present participated in the "Experience meeting," in which each related particular benefits derived from attending the A. L. A. conference at Magnolia—the results of personal contact and association with "leading lights" in the profession, the accounts of children's work in various libraries of the country, President Eliot's address, were among the many points noted.

The afternoon session was called to order at two o'clock by President Henry M. Whitney, who immediately named Mr. F. B. Gay, Miss Anna G. Rockwell and Mr. W. K. Stetson as a committee to nominate officers for the coming year, to report at the next meeting. It was then proposed that the record books of the association that are now complete be given a permanent home, and by vote it was decided that such records be sent to the state library.

Professor David N. Camp, Dr. A. C. Beardsley, and Miss L. M. Carrington were named as a committee to draw up resolutions on the death of Homer F. Bassett, late librarian of the Silas Bronson Library, Waterbury.

The first paper on the afternoon's program was presented by Mr. Roy L. Marston, Yale University Forest School, who took for his topic, "Forestry in Connecticut: Can our libraries awaken the people to its importance?" This was followed by two papers on the "Use of reference books by the public—from the librarian's standpoint, and from the public's point of view." Miss Corinne Bacon, of the State Library School, Albany, upheld the ideals of the librarian, also the ideals for the public as the librarian would have them, while Mrs. Jessie B. Gerard, of Norwalk, presented ideals for librarians as the public would have them. Miss Bacon's paper is given elsewhere. (See p. 927.)

Discussion then arose as to the best way of helping the small country libraries, and among suggestions made was that some of the larger libraries admit to classes of instruction the librarians of those libraries needing help along technical lines. A state school was mentioned, but the idea of strengthening the hands of the Connecticut Public Library Committee was deemed most feasible, and a motion was made that a committee be appointed by the chair to represent the association for this purpose at the next meeting of the legislature.

After a vote of thanks to the librarian and the hostesses of the day, the meeting adjourned. ANNA HADLEY, *Secretary*.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.

President: Thomas H. Clark, Law librarian, Library of Congress.

Secretary: R. K. Shaw, Library of Congress.

Treasurer: F. E. Woodward, 11th and F streets, N. W.

The first fall meeting of the District of Columbia Library Association was held Oct. 15 at the Columbian University, the president, Mr. Thomas H. Clark, being in the chair, and 42 members attending. After admitting to membership Miss Woodin and Miss Sewall, of the departmental libraries, the association had the pleasure of listening to a most entertaining paper by Dr. H. Carrington Bolton, entitled "The Solomon of Bohemia," and describing the life and vagaries of King Rudolph II., of Bohemia, or, the Solomon of his country, who claims the distinction of having been the most eccentric monarch of whom history has any record.

On conclusion of Dr. Bolton's paper the president invited the members to exchange vacation experiences of a literary or bibliographical character. The first to respond was Mr Crandall, who invited the association to inspect four recent bibliographical productions. He first displayed a reprint of a paper by De Morgan issued as the first publication of the Bibliographical Society of Chicago. Regret was expressed at the large number of errors, chiefly typographical, which the work contains, showing that the society has still to perfect itself in the art of printing. The second book was Miss Adelaide Hasse's valuable work on public documents, giving in brief form the results of her long experience in public documents. That the book will be received with gratitude by the many librarians of the country is certain. The few errors in the book only prove the difficulty of the problem. Daniel Denton's "Description of New York" was the next book exhibited. Mr. Neumann's scholarly introduction was highly complimented by Mr. Crandall. Last came Mr. Larned's annotated bibliography of American history, and the notes by Dr. Hosmer were specially mentioned as being concise and full of information.

Mr. Solberg spoke of reading with much pleasure some new novels by the Swedish writer, Selma Lagerlöf, and the "Verlorene Paradies" of Ludwig Fulda. He referred also to a new bibliographical publication on the Balearic Islands.

Mr. Koch next gave an interesting summary of the publications of private and limited presses of America. The large number of these presses was a surprise to many of the members and Mr. Koch was asked to make some arrangement for printing the information thus gathered.

Finally Mr. Martel referred briefly to the first two parts of the new "International cata-

logue of scientific literature," and the meeting adjourned before 10 o'clock.

R. K. SHAW, *Secretary*.

INDIANA LIBRARY ASSOCIATION.

President: Miss Eva M. Fitzgerald, Public Library, Kokomo.

Secretary: Miss Bertha F. Poindexter, Public Library, Jeffersonville.

Treasurer: Miss Virginia Tutt.

The eleventh annual meeting of the Indiana Library Association was held in Indianapolis on Oct. 28 and 29. Sessions were held in the state house, where on the morning of the 28th, the president, Miss Elrod, opened the program with a short address on the more significant library events of the year.

Miss Merica Hoagland, library organizer for the state, gave an address on "The library movement in Indiana for 1902." She reported visiting the 28 Carnegie libraries now established, and stated that the demands upon the state library commission were now very much greater than a year ago. Miss Eliza Browning gave an account of the A. L. A. conference at Magnolia, which was followed by brief statements from others who had attended that conference upon the features that had most impressed them in connection with it.

"Special lines of particular publishers" was the subject presented by F. R. Kautz, of Indianapolis, who gave practically a historical sketch of some of the older publishing houses.

In the afternoon, following the appointment of committees, Miss Anna Hubbard spoke on "Reference aids for a small library." Her talk was addressed to librarians having \$150 per year to spend for such books, and she recommended 50 useful reference books, costing from 35 c. to \$3 each. There was an informal discussion, many members suggesting books that had been of special service to them, and the talk served as an excellent opening for the "Experience meeting symposium" which followed it. This latter proved most successful, bringing librarians of the smaller libraries into helpful association with one another, and eliciting informal spontaneous discussion. The topics considered were Systematic work, School and library, Discipline, Personality of the librarian, Fines, Selecting books for patrons, Fads, Advertising.

In the evening Melvil Dewey spoke to a large audience on "The educational value of the public library," and later an informal reception was held in the state library rooms.

Wednesday morning's session was devoted to Libraries and schools. Arthur Cunningham, of the State Normal Library, spoke on "Reference work with teachers," outlining the course given at the State Normal Library. Mr. Dewey agreed that the normal school should train the pupil-teacher for work with the public library. He favored institutes and training classes, but emphasized the necessity of capable and well-equipped instructors.

"The relation of the superintendent of schools to the library" was presented in a paper by T. F. Fitzgibbons, superintendent of schools of Columbus, who said that the superintendent should strive to make the public school a preparatory school, in the highest and best sense, for that larger school, the library—the university of the community.

In the evening, W. E. Henry, state librarian, spoke on "The comparative cost of library buildings," saying that library boards in Indiana are paying two and three times as much for their buildings as are paid for school and church buildings. Miss Hoagland endorsed this, but added that building cost has been unusually high this year, that local architects are not used to handling library construction, and that the local pride of a community is not satisfied unless a handsome library building is erected.

Reports from the several committees were then received. The nominating committee recommended the following as officers for the ensuing year: president, Miss Eva M. Fitzgerald; vice-president, Miss Belle Hanna; secretary, Miss Bertha Poindexter; treasurer, Miss Virginia Tutt. The secretary was instructed to cast one vote for this ticket, which was thereupon declared elected. Resolutions of thanks for local hospitalities were passed and a proposed amendment to the constitution was reported on. This would provide that each member of the association should be entitled to a vote instead of giving one vote to each library represented, as is now the case. The committee submitted a majority report favoring the change, signed by Mrs. Earle and Miss Allen, and a minority report in opposition from Mr. Cunningham. Action was deferred until the next meeting of the association.

The meeting was the most successful yet held, in point of attendance, freedom of discussion, and enthusiasm.

IOWA LIBRARY ASSOCIATION.

President: Johnson Brigham, state librarian, Des Moines.

Secretary: Miss Clara Estabrook, Public Library, Eldora.

Treasurer: M. Hall Douglas, Grinnell.

The 13th annual meeting of the Iowa Library Association was held in Grinnell, Oct. 28-30. The attendance was larger than at any previous meeting, 108 persons being registered, besides many friends and visitors who attended for a part of the sessions.

The opening session Tuesday evening was held in the beautiful new Colonial Theatre. The program opened with music furnished by the Iowa College Glee Club. Professor Parker, trustee of the Stewart Public Library, presided and introduced the new president of Iowa College, Dr. Bradley, who greeted the association in a graceful address

of welcome. This was responded to by Mr. F. F. Dawley of Cedar Rapids, president of the association, who after a few words of appreciation on behalf of the association, gave an address on the outlook of library affairs in Iowa. In reviewing the progress of the last two years, he said, "If it had not been for the influence of women and women's clubs, who understand that there is something more in life than the mere earning of a living, many of the new libraries would not yet have commenced their existence," and in answering the question, "What is the place of the library in education," "If one is ever to become more than a hewer of wood and a carrier of water he must always keep on not only acquiring personal experience in his calling but studying it and its history, and its relations to other affairs, and the experience of others in the same calling. That which any one man can see with his own eyes and hear with his own ears is but a trifle compared with the experience of all mankind in the same affairs."

Wednesday morning, the business session at 9.30 occupied about one hour, after which a report on "Library extension in Iowa" was given by Miss Tyler, the secretary of the Iowa Library Commission. This report briefly set forth the agencies which are active in extending library interests in Iowa in addition to the commission, which exists primarily for this purpose. Among these is the receptive attitude of the people of Iowa toward an educational movement, the activity of the club women, both locally and through the State Federation of Women's Clubs, the impetus given to the work through the library buildings being erected through Mr. Carnegie's generosity and also by Iowa citizens, among whom during the past year are Hon. C. J. A. Erricson of Boone, Mr. P. M. Musser of Muscatine, Ex-Gov. F. M. Drake of Centerville, and Hon. Joel Stewart of Grinnell. The spirit of improvement among both librarians and trustees was noted and also the attention given to the children in providing a children's room or corner in many libraries and abolishing the age limit. Library legislation has during the past year transferred the travelling library from the state library board to the Iowa Library Commission and makes the extension of the travelling library work possible. The revised commission law provides for a report on library conditions in Iowa, containing sketches and illustrations of the libraries in the state to be printed next year. It is hoped this will be a valuable document in library extension in the state. A list of the places visited by the secretary during the past year was given; also, a list of the free public libraries in the state in which any event of importance had occurred during the year or which are erecting buildings, 42 being enumerated. A list was also given of the county seats having no free public library supported by municipal tax and those present were

urged to co-operate with the commission in inaugurating the work in these towns.

The Round Table of practical methods conducted by Miss Harriet L. McCrory, librarian of the Cedar Rapids Public Library, created much interest, the topics under discussion being, Work vs. weariness, Borrowing ideas from neighboring libraries, Publicity, Staff training and the apprentice system. Under the last topic, Miss McCrory explained the attitude of the Cedar Rapids Library where an apprentice class has been conducted for the past two years. The distinction was shown between such a class, which only attempted to prepare assistants for the local library, and the library training given in the regular library schools and summer schools.

At 1.30, a drive was given through the courtesy of the Public Improvement Association of Grinnell and when the meeting convened, the general theme, Library work with children, the school and the library, was announced. Mrs. Charlotte Whitney Eastman, editor *The Young Citizen*, Cedar Falls, spoke on "Educational ideals in schools and library," urging that children be familiarized, through books, with the most noble and pure ideals of character and life. She gave suggestions of means whereby children might be attracted to the library—the use of pictures and the choice of books on timely subjects. "New duties, new responsibilities, are fast opening up for the librarian of children's books, and she should be given new authority. Here she should be enabled, after all reasoning with the child has failed, to say 'You can not.'"

This paper was discussed by Miss Harriet A. Wood, who emphasized the educational side of the librarian's profession and dwelt upon the importance of a capable librarian in maintaining the educational ideals of the library.

"Personal element of library work with children" was the subject of a thoughtful paper by Miss Lillian Pospishil, children's librarian, Cedar Rapids. She said in part: "The personal element begins with the atmosphere we create in the children's room. To make it as homelike as possible, and as much unlike the schoolroom as we can, is to be desired. If it is so pleasant that it attracts the child who, perhaps, has come from curiosity alone, to find out what the library is like, it is living up to the requirements. To make them feel we know and love our books is the best way to produce in a child the reverence due to a good book. The man who wrote 'The librarian who reads is lost' evidently knew little or nothing of work with children, for here a knowledge of the books themselves is the important element. Knowing your books and knowing your children, to bring the two together is comparatively easy. The child who once feels you are really interested in what he is reading, and that you know the books he enjoys as well as he

does, will come to you perhaps oftener than there is any need, but you have the satisfaction of feeling that you are in touch with his wants and know when it is necessary to help him."

This paper was discussed by Mrs. C. H. Bryant, trustee Corning Library, who was followed by Miss Ruth G. Gatch, Des Moines Public Library.

"How the library and school may work together" was presented by Miss Marilla W. Freeman, librarian of the Davenport Public Library. Miss Freeman spoke of her experience in helping to bring about a closer co-operation between the library school and gave many practical hints as to how such co-operation may be accomplished.

Miss Mary E. Downey, librarian of the Ottumwa Public Library, outlined her plan for "Talks to school children on the use of books," suggesting the possibilities for instruction in familiarizing the children with the resources of the library.

The meeting of the college librarians was held in the conference room simultaneously with the general meeting in the auditorium.

In the evening, Rabbi Hirsch, Chicago, gave an address on "Libraries and education."

On Thursday morning, the first hour was devoted to the business meeting. The committee on place of meeting reported three invitations, but Marshalltown was recommended, owing to its central location. The standing committees for the ensuing year were announced and the following officers were elected: president, Johnson Brigham, state librarian; vice-president, Mrs. C. H. McNider, Mason City; secretary, Miss Clara Estabrook, Eldora; treasurer, M. Hale Douglas, Grinnell.

The general theme of the morning program was "Books and reading." "The clubs and the library" was the title of a paper presented by Mrs. Jessie Waite Davidson, Burlington, a member of the Iowa Library Commission. This paper written by one who has been prominently identified with the Iowa Federation of Women's Clubs, set forth the mutual helpfulness of club and library, emphasizing the service the librarian can render to the club women.

Miss Ella McLoney, librarian of the Des Moines Public Library, discussed this paper from the point of view of a librarian in close touch with club work. She described the methods in use in the Des Moines Library which had proven helpful to club women. Mrs. C. H. McNider, trustee, Mason City, followed with a most interesting description of what had been accomplished for the local library by the club women of Mason City.

An address by Judge H. E. Deemer of the Iowa Supreme Court on "The selection of books" was a stimulating and thoughtful presentation of this important subject. It was briefly discussed by Mr. H. M. Dysart, librarian, Fairfield. Rev. E. M. Vittum, trus-

tee, Grinnell, spoke on the perennial "Question of fiction" in a most discriminating manner and this was discussed by Mr. Johnson Brigham, state librarian.

The general theme for the afternoon session was, "Management of libraries and responsibilities of trustees." "Responsibilities of trustees to readers," by Mrs. H. J. Howe, presented in a most pleasing manner the duties of the trustee and the possibilities for far-reaching usefulness for one who occupies this responsible position. The paper was discussed by Mr. Geo. F. Henry, trustee, Des Moines, who emphasized the responsibility of the trustee to the taxpayer.

A comprehensive paper on the subject of library buildings was presented by Mr. Grant C. Miller, of the firm of Patton & Miller, architects, Chicago. Mr. Miller outlined the steps to be taken in the erection of a building and the rooms necessary in a small library, basing his arrangement on free access to shelves and with a view to economical administration. In the evening those especially interested in the subject had an opportunity to examine the plans of buildings now being erected in Iowa.

The chief interest of the afternoon program centered about the guest of honor, Melvil Dewey, who discussed "Questions of administration" in his usual, characteristic and inspiring manner. The live and practical questions relating to the best conduct of a library were set forth and his own advanced views as to the relation of the national, state and local libraries were outlined, and following this, the Question Box, conducted by Mr. Dewey, gave ample opportunity for expression of his views on many phases of library work. His presence was an inspiration and he was enthusiastically received by the association and the students of Iowa College, whom he addressed at chapel, both Thursday and Friday mornings.

An informal reception was given at the new Stewart Library building of the Grinnell Free Library on Tuesday evening and the closing feature of the meeting was a reception given at the college gymnasium by Iowa College and Grinnell people.

MARGARET BROWN, *Secretary*.

KANSAS LIBRARY ASSOCIATION.

President: Miss Carrie M. Watson, University of Kansas Library, Lawrence.

Secretary: Miss Zu Adams, State Historical Library, Topeka.

Treasurer: Miss Syrena McKee, Public Library, Leavenworth.

The second annual meeting of the Kansas Library Association was held in Topeka, Oct. 2 and 3. The association was invited by the Topeka City Federation of Women's Clubs to hear a program prepared by them for the afternoon of Oct. 2. In the evening, Miss L. E. Stearns, the official organizer of the Wisconsin Free Library Commission, Madison,

Wis., gave an interesting paper on "Wanted—the library spirit." At the meeting the next morning, the president, Mr. James L. King, state librarian, reviewed the work of the association during the past year. The relation of the library to the schools was discussed by Miss Stearns, Miss Walsh, of Ottawa, President Wilkinson and Professor Hill, of the State Normal School. Upon invitation Miss Stearns conducted a question box in a very enthusiastic and helpful manner. A business meeting was held, at which the above mentioned officers were elected, with Mr. J. L. King, State Library, Topeka, Mr. Wilkinson, president Kansas Normal School, Emporia, and Miss Julia M. Walsh, Public Library, Ottawa, as vice-presidents. A committee on library legislation was named.

KEYSTONE STATE LIBRARY ASSOCIATION.

President: Isabel Ely Lord, librarian Bryn Mawr College, Bryn Mawr, Pa.

Secretary-Treasurer: Robert P. Bliss, librarian Crozer Theological Seminary, Chester, Pa.

The second annual meeting of the Keystone State Library Association was held in Williamsport, Oct. 17-19. All the association meetings were held in the Park Hotel, the headquarters for the meeting. The first session was on Friday evening at 8. It was announced that there would be no discussion of the papers of the evening, as these would be the topic for the round tables on Saturday evening.

Mr. Edwin H. Anderson, librarian of the Carnegie Library of Pittsburgh and president of the association, made his presidential address in the form of a brief statement of library conditions in Pennsylvania, as follows:

"In the number of books for every 100 of population Pennsylvania stood thirteenth among the states of the Union in 1891, twelfth in 1896, and thirteenth again in 1900. It will be seen, therefore, that while Pennsylvania ranks second only to New York in wealth and population, she by no means holds her proper rank in library development.

"It was with the idea of removing this stigma from our state that the act creating the Pennsylvania Free Library Commission was placed on our statute books in 1899. Unfortunately the legislature of 1898-99 failed to make any appropriation for the use of the commission, whose members, therefore, found themselves without the means to carry on the work for which they were appointed. Through private subscription, however, they managed to raise \$2800 with which to begin a traveling library system. The legislature of 1900-01 made an appropriation of \$1500 for each of the two following years. The commission has therefore had for the prosecution of its work only \$5800 in four years, nearly half of which has come from private subscriptions. For similar purposes the legislature of New

York last year appropriated about \$60,000. The Wisconsin Free Library Commission has about \$10,000 a year for its work. There are other states far ahead of Pennsylvania in this respect, notably Ohio, Michigan, Iowa and Massachusetts. In fact Pennsylvania is hardly in the running, compared with other states which have really entered upon the work of stimulating library development. Our commission has done well with the funds at its disposal, having 80 travelling libraries now in the field, and having only one paid worker, and this one only for the last few months. I do not think this association can better serve the purposes for which it was created than by making a determined effort to induce the legislature this coming winter to make an adequate appropriation for the work of the Pennsylvania Free Library Commission, and not for books only, but also for a sufficient number of trained workers.

"There is, I think, one radical defect in the law creating the Free Library Commission. This act provides that the state librarian shall be *ex-officio* the secretary of the commission. Now the state librarian is appointed by the governor and is removable at his pleasure. This automatically subjects the position to the vicissitudes of politics. I speak of general principles, and not, I beg you to believe, with any personal reference to the present distinguished incumbent in the state library. The efficiency and continuity of the work of the commission are largely dependent upon its secretary, the state librarian. He should not be subject to the caprices of political weather. He should be compensated for the additional responsibilities placed upon him and be provided with a sufficient number of competent, paid assistants to carry on this extra work. He should be appointed by the commission and perform his duties to the state under the commission's general direction. This seems the easiest way out of the difficulty, since the commission would thus secure a paid official under its own control, with suitable quarters at the state capitol. Continuity as well as efficiency of administration would thus be secured."

Mr. Anderson then introduced Mr. Frederick M. Crunden of St. Louis. Mr. Crunden read a brilliant, thoughtful and most suggestive paper entitled "Public libraries a paying investment for a community." This will be published later by the association. Mr. Anderson then introduced Mrs. Salome Cutler Fairchild, vice-director of the New York State Library School. Mrs. Fairchild gave a careful and full account of the origin and development of library institutes. She was followed by Mr. Frank A. Hutchins, secretary of the Wisconsin Free Library Commission, who talked on travelling libraries. Mr. Hutchins laid special stress on the necessity for the right people to carry on the work, if that work was to command true success. The first session then closed.

The second session began at 9.30 Saturday morning, the meeting, after the business session, being in charge of Mr. John Thomson, librarian of the Free Library of Philadelphia, and chairman of the committee appointed at the last annual meeting to consider the subject of the differentiation of fiction. The report presented and a summary of the ensuing discussion are presented elsewhere.

Saturday afternoon was left free for the enjoyment of the beautiful country about Williamsport, and for the informal conferences that are so often the best part of such a meeting. The managers of the hotel provided as part of the entertainment a trolley trip about the town. At four a tea was given to the members of the association by the trustees and librarian of the Public School Library in their attractive library rooms. These were gay with flowers for the occasion, and there was every other evidence of hospitality. In the evening at eight the third and last session was held. It consisted of two round table discussions, one after the other, on the subjects of the last two papers of Friday evening. The first, on "Library institutes," was conducted by Miss Lord, librarian of Bryn Mawr College. The second, on "Travelling libraries," was in charge of Mr. Henry J. Carr, librarian of the Public Library of Scranton. Among those who discussed the questions presented were Mr. Stevenson and Mr. Thomson, of the Pennsylvania Free Library Commission; Miss Krichbaum, recording secretary to the commission; Miss Kroeger of the Drexel Institute, Philadelphia; Mr. Eastman, New York state library inspector; Mr. Bowerman, of the Wilmington (Del.) Institute Library; Miss Kane, recently librarian of the Delaware Free Library Commission; Mr. Fletcher, of the Carnegie Public Library of Bradford; Mr. Durham, of Reading; Professor Martin, of Bucknell College; Mrs. Fairchild, Mr. Crunden and Mr. Hutchins. During the discussion on travelling libraries Miss Lord reported that she had gone to the meeting of the State Federation of Pennsylvania Women to address them on the subject of travelling libraries, and to secure their support in the attempt to get a more nearly adequate appropriation for the work of the commission from the next legislature. She reported the following resolution adopted by the federation:

"Resolved, That the State Federation of Pennsylvania women pledges its support to the Keystone State Library Association and stands ready to do all in its power to secure an appropriation for the Free Library Commission when the time is propitious."

In reply the following resolution was adopted by the association:

"Resolved, That the Keystone State Library Association extend its hearty thanks to the State Federation of Pennsylvania Women for their effective co-operation already given in advancing library interests in this state, and also for their promise of aid for the future."

Among the other resolutions passed were the following:

"Whereas, Certain critical journals of wide circulation and many local newspapers regularly publish circulation lists of the most popular books in public libraries, these lists being predominantly the latest fiction successes, which are already sufficiently advertised by puffs, reviews and regular book advertisements; be it

"Resolved, That the Keystone State Library Association views with regret the fact that the librarians who give out such information seem to lend the influence of their libraries to the advertisement of books whose circulation is already abnormally stimulated when it should in many cases be reduced rather than increased; and be it

"Resolved, That this association puts itself on record as opposed to the giving out by libraries of such lists (particularly of fiction) for publication."

It was also moved, as a result of Saturday morning's meeting, that a committee of three librarians be appointed to obtain the assistance of some 20 of the smaller libraries or branches of large libraries in testing the proposed scheme for the differentiation of fiction. The president appointed Mr. John Thomson, Mr. W. M. Stevenson, and Mr. Albert R. Durham, librarian of the Public Library of Reading.

The following officers for the ensuing year were elected: president, Isabel Ely Lord, librarian of Bryn Mawr College; vice-president, Robert S. Fletcher, librarian of the Carnegie Public Library, Bradford; secretary-treasurer, Robert P. Bliss, librarian of the Crozer Theological Seminary, Chester. These officers later chose the two other members of the executive committee as follows: Eliza May Willard, reference librarian of the Carnegie Library of Pittsburgh; Thomas Lynch Montgomery, librarian of the Wagner Free Institute Library, Philadelphia.

Many of the members stayed on for Sunday, for the sake of better acquaintance with fellow-members. The meeting was altogether a most satisfactory one. There were about 75 in attendance. The association intends to publish the papers of the meeting for distribution. The transactions of the previous meeting have been printed and were distributed at Williamsport.

MAINE LIBRARY ASSOCIATION.

President: George T. Little, Bowdoin College Library, Brunswick.

Secretary: Ernest W. Emery, State Library, Augusta.

Treasurer: Alice C. Furbish, Public Library, Portland.

A union meeting of librarians and others interested in library work was held at Fairfield on Wednesday, Oct. 15. Its forces consisted of the Maine Library Association, of the state library commission and of the Eastern Maine Library Club. It was the eighth annual meeting of the state association whose officers believed a larger and more successful meeting could be held by inviting the other two organizations to meet with them. The sessions were held in the reading room

of the beautiful Lawrence Free Library building in Fairfield, and were attended by about 50 persons.

The conference was called to order by the president, Mrs. Mary H. Curran. The minutes of the meeting of the association held at Magnolia, Mass., last June were read by the secretary, and the treasurer, Miss Furbish, of Portland, presented her report. The committee on design for an association pin reported, showing design that had been accepted by the committee, which design was adopted by the association.

Officers of the association were then elected for the ensuing year as follows: president, George T. Little, Bowdoin College, Brunswick; vice-presidents, Miss Annie Prescott, Auburn, Miss Carrie Smythe Greene, Bangor; secretary, Ernest W. Emery, Maine State Library, Augusta; treasurer, Miss Alice C. Furbish, Portland.

Invitations for place of holding the next meeting were received from Saco and Portland and were referred to the executive committee.

A recess was then called and business meetings of the Eastern Maine Library Club and of the state library commission were held in different rooms. At the latter the resignation of Mr. Little from his place on the commission was accepted with sincere regret.

The meeting was then reassembled, and Miss Carrie S. Green, librarian of Bangor Seminary, read a paper on "Children's reading rooms." The work done for public libraries of the state by the state library commission was presented by Mrs. Kate Estabrooke, of the commission, who spoke especially of the travelling libraries sent out to women's clubs, granges, and like centers. Ralph K. Jones, librarian of the University of Maine, spoke on "Direct co-operation of college and public libraries," urging interlibrary loans and the issue of a co-operative list of periodicals or valuable sets as means of bringing the two types of libraries into closer relations.

The afternoon session opened with a paper by L. D. Carver, state librarian, on "The value and use of state publications," noting some of the most important and interesting of these documents, and urging their more intelligent use in public libraries. Papers followed on "Fines and penalties," by J. H. Winchester, of the Stewart Library, Corinna; and "What pamphlets should the small library preserve?" by E. W. Hall, of Colby College Library, Waterville. There was a well-filled question box, from which drawings were made at intervals during both morning and afternoon, and a general "experience meeting" on "New books worth buying," opened by Mr. Little, while nearly every topic elicited spontaneous discussion.

In the evening Arthur J. Roberts, of Colby College, delivered an address on "Books and reading," which was enjoyed by a large audience.

MASSACHUSETTS LIBRARY CLUB.

President: Otto Fleischner, Public Library, Boston.

Secretary: T. F. Currier, Harvard College Library, Cambridge.

Treasurer: Miss Theodosia McCurdy, Public Library, Boston.

The fall meeting of the club was held in New Bedford and Fairhaven on Wednesday, Oct. 29, 1902. After inspecting the Public Library of New Bedford, the club adjourned to the city hall, where Mr. Tripp, librarian of the Public Library, welcomed the members in behalf of the mayor.

Mr. Robert A. Woods, head of the South End House, Boston, read a paper on the "Bearing of settlement work on the public library." He began by telling of the free public library campaign for Whitechapel district in London, carried on under the leadership of Toynbee Hall. The settlement, he said, is a small neighborhood influence and there is need of many of them.

It is a settlement principle to begin with people on the basis of their own interests, and by sharing common experiences, instill better ideas. A particular function of the settlement is to be a "talent saving station on the shore of poverty." Children stop going to school at an early age, and stop perhaps at the very point where, if a bit more schooling could be obtained, they might be in a position mentally to continue their education. The settlement tries to deal with these children who have talents but are not led on to develop them. People of wealth might well give money to aid these deserving children, to help them into the secondary schools just as scholarships are given to aid in getting a college education. The public library can somewhat make good the loss of school education. Perhaps the public library will be the selecting power to find bright boys and girls who are worthy to be carried on. In the smaller places the public library might be the talent saving station.

Another service the settlement renders is providing a common ground for the meeting of the educated with the uneducated, the capitalist and the laborer, the Roman Catholic and the Protestant, the Christian and the Jew, the immigrant and the native. In a democracy there should be a unity of feeling. This unity is not coming as rapidly as it should, and the settlements work to bring together these separated classes. It is possible for the public library to make itself a social center and meeting place for these classes. Of course the library may get hold of these people more or less, but only as individuals and not in a definite meeting with each other. The public library is the neutral ground and could bring together representatives of all the different sets existing in any given community and could thus increase its readers and its influence.

The public library tries to meet the needs of special occupations, but does it make con-

nections with the trade unions or local benefit associations, etc., as the settlement takes a gang of boys who have a common interest? The public library could increase its missionary functions. It should be the organized center for better government, æsthetic improvement, and higher social life.

Mr. Woods was followed by Miss Sarah C. van der Carr, of the Loring Reading Room, North Plymouth, Mass., who told of her experience with boys' reading clubs.

After luncheon a visit was paid to the Millicent Library, and other places of interest in Fairhaven.

MICHIGAN LIBRARY ASSOCIATION.

President: Henry M. Utley, Public Library, Detroit.

Secretary: Miss Margaret C. Upleger, Public Library, Mount Clemens.

Treasurer: Mrs. M. F. Jewell, Public Library, Adrian.

The 12th annual meeting of the Michigan Library Association was held at Detroit, Oct. 11 and 12, and proved the largest in the history of the association. Sessions were held in the rooms of the Fellowcraft Club. The opening session was called to order at 2 p.m. on Friday, Oct. 10, when President Utley introduced Mr. John S. Gray, president of the Detroit Library Commission, who gave the address of welcome. In referring to the remarkable present development of public libraries, he cited figures showing the increase in the use of the Detroit Public Library within the decade as compared with increase in the city's population during the same period. "In 1890 the population of the city was 205,669 and in 1900 287,704, an increase of 40 per cent. In 1890 the circulation was 292,877, and in 1900 it was 1,057,412, an increase of 277 per cent., or 237 per cent. greater than the increase in population. Lest any one should say this is entirely due to the increase in our reference room, it may be further stated that the percentage of increase in home reading alone is 113 per cent. for the time in question."

Mr. H. S. Pattengill, of Lansing, formerly superintendent of instruction for the state, and recently elected to fill the place of the retiring Hon. Cyrus W. Luce on the Free Library Commission of Michigan, gave an interesting talk upon "The schools and the public library." He spoke of the close relation of schools and the libraries, saying that while the schools lay the foundation of an education it is but a preparation for the supplementary work of the library, and that where schools do not cultivate a taste for good reading, they fail in their work.

He spoke also of the work the free libraries were doing and the extension of its usefulness that was being contemplated for the benefit of the rural districts. His remarks were followed by a few words upon the travelling libraries of the state, by Mrs. Mary C. Spencer, secretary of the commission and

state librarian, who originated the system in Michigan.

"Library progress of the year," was reviewed by H. O. Severance, of the University of Michigan Library, who dwelt upon the great increase in gifts to libraries, especially of buildings, the movement for library instruction through normal school course, institutes and like agencies, and the gradual organization and systematization of library effort. Miss Gertrude Humphrey, librarian of the Lansing Public Library, followed with a paper on "The selection of books for a small public library." She gave a thoroughly practical exposition of the conditions and methods regarding selection of books at the Lansing Public Library.

Miss Humphrey's paper was followed by a list of questions from the "Question box," which elicited general discussion.

Oct. 11 having been set aside as Pioneer Day in Michigan, the association was fortunate in the presence of Mr. C. M. Burton, of Detroit, president of the Michigan Pioneer and Historical Society, who gave a very interesting talk upon "Collecting in the public library, everything of a local historical character." Mr. Burton has for the past 30 years been indefatigable in his search for historical matter bearing upon the history of Detroit, and has gathered, as a result, one of the best historical libraries in the state. He gave a very interesting account of his library, which contains 15,000 volumes connected with the history of Detroit, 300,000 pamphlets, and 400 volumes of unpublished manuscript, consisting of letters, narratives, diaries, account books, reaching back to the time of Cadillac in 1701. Some years since Mr. Burton set a writer at work in the archives of the Department of Marine in Paris, to make a transcription of everything relative to the Northwest Territory. This work was very completely carried out, and is embodied in 24 volumes of closely written manuscript pages, which are now being printed as are the Jesuit Relations, the French on one side and the translation on the other. Mr. Burton has also procured a complete transcript of the old Notarial Records of Montreal, pertaining to the upper countries and will shortly have like records from Quebec. These papers fill 30 volumes of closely written foolscap. His method of keeping them is to have books made for the purpose, consisting of covers and stubs. The documents are arranged as nearly as possible in chronological order, and then pasted at the margin on the stubs in such a way as to permit the reading of every word of the manuscript. Sometimes there is no margin on which to paste and in that case, the document is sewed in its proper place, so that it may be detached without injury and replaced after using. They are then indexed. The pamphlets are kept in cases made for the purpose and cataloged, as other books

are cataloged, by the card system. Mr. Burton has recently been thinking of having a catalog of these made and printed for distribution among college libraries, with an offer on his part to send the pamphlets for inspection and study to any college requesting them for use by its students, upon their agreeing to return the same within a specified limit of time. He has been wondering whether this would be acceptable to colleges, and would like an expression of opinion on the subject from those who would be interested in the matter.

The second session was held in the evening, by invitation, at the residence of Mr. James E. Scripps, and was devoted to the joint discussion, with the club women of Detroit, of the subject "The woman's club and the library." This was based upon a paper by Mrs. George H. Stevens, of the Woman's Historical Club, who emphasized the value of the library to all members of clubs and study courses. She urged that clubs give early notice at the library of the subjects to be studied during the year, so that careful reference lists might be available, and she recommended that if possible the library assign a special room, or portion of a room, for the use of club members. This was followed with a few remarks by Mrs. G. Robinson, and Mrs. J. B. MacFarlane made a plea for development of musical collections in public libraries. Mr. Jones, of the Normal College of Ypsilanti, was called upon, and made a brief, happy response. Refreshments were served, and the visitors later enjoyed the treasures of Mr. Scripps' fine library.

Saturday morning's session opened with a discussion of "Points on the binding of library books," by W. C. Holland, of Ann Arbor, and L. B. Gilmore, of the Detroit Public Library. The former reviewed, with comments and practical suggestions, the "Directions for binding," of F. J. Soldan, published in the *LIBRARY JOURNAL* for June, 1883. Mr. Gilmore gave much valuable advice, the result of his ten years' experience in the binding of books for the Detroit Library. He spoke in the first place of the agencies destructive to book bindings, *i.e.*, gas, heat, dust and sunlight; saying that the carbonic acid gas and carbon dioxide, arising from poor ventilation, which most libraries claim to be the most destructive factors, are not as much to be feared, at least can more easily be dealt with than the sulphuric acid gas arising from the sulphuric acid used by modern tanners and not properly washed out. He recommended highly the Fall River method of dusting the books and as to destructive sunlight recommended that red, yellow and green glass be used as a protection where the sun strikes, white, violet and blue glass being hard upon both books and bindings.

A "Round table on practical public library work followed," conducted by Miss Phebe Parker, of the Sage Library, West Bay City.

The subjects treated were Organization, Buildings, Fittings, Accessioning, Classification, Cataloging, and Meeting the public, each presented, briefly and practically, by a different speaker. The last subject was treated by Miss Genevieve Walton, librarian of the State Normal School, Ypsilanti, who said, in part:

"It is said that there are certain professions to which one must be born, and I firmly believe that unless a librarian is born with an interest in people, there are certain functions of her office which she can never perform. To interest, I would add patience. A librarian's time should be fully at the disposal of the public, for the public to use, but not for the public to abuse. I know full well the amount of detail work and clerical work that must be done in the smallest library, but I would still insist that the first work of the librarian is to meet the public, and one fatal mistake that is too often made, is having the head librarian back out of sight, pasting on labels or writing cards, while an indifferent assistant, or worse, the substitute of an assistant, is left at the delivery desk, where the public is standing with a right to expect the best help the library affords.

"Women librarians make one or two mistakes, which we rarely find in men. In fact the difference between men and women in business relations, has some very interesting aspects. A woman too often works on nerve (and a cold luncheon). Then we reach the fatigue limit, and then we get cross. If women would only regard that fatigue line more seriously, and keep on the inside of it! Then, again, even in business, a woman makes a personal application when none is intended. Correct her and her feelings are hurt, and finally she ends a hard day by carrying home both work and worry. Good nature, and the saving grace of humor would go far to overcome this and keep one in a serene state of mind and body, which are the great points in meeting the public."

There was a short business meeting early in the afternoon, when the officers of the association were unanimously re-elected, as follows: president, Henry M. Utley, Detroit Public Library; first vice-president, H. O. Severance, University of Michigan Library; second vice-president, Miss Phebe Parker, Sage Library, West Bay City; treasurer, Mrs. M. F. Jewell, librarian of the Public Library, Adrian; secretary, Miss Margaret C. Upleger, librarian Public Library, Mount Clemens. The meeting was pleasantly closed with a trolley trip around the city, stopping at various places of interest and visiting the branch library at the Central High School. During the trip resolutions of thanks to the local hosts were adopted.

The place of meeting was not finally determined upon, the association awaiting the decision of the A. L. A. The meeting will be held in conjunction with the A. L. A. conference if the latter is held at Mackinac.

MISSOURI LIBRARY ASSOCIATION.

President: J. F. Langton, Public Library, St. Louis.

Secretary-Treasurer: Miss Faith E. Smith, Public Library, Sedalia.

The first session of the third annual meeting of the Missouri Library Association was called to order at 3.30 p.m. Oct. 23, at the Carnegie building of the Sedalia Public Library, with an attendance of 38. Mrs. Carrie Westlake Whitney, president of the association, was in the chair. Mr. Lee Montgomery, representing the library board of the Sedalia Public Library, made a short address of welcome, which was responded to by Mrs. Whitney.

The secretary then read his report as treasurer, and the report was referred to an auditing committee consisting of Mr. Burnet and Miss Simonds. The president appointed a nominating committee consisting of Mr. Crunden, Miss Thompson and Miss Bishop.

Mr. Crunden, of the committee on a model library at the World's Fair, read a paper on that project. He detailed the progress made up to this time in inducing the Executive Committee of the Louisiana Purchase Exposition to grant such a sum of money as will enable the construction of a suitable building on the grounds of the Exposition. No definite results have as yet been attained, but it is hoped that some progress will be made very soon. The formal report of General Milton Moore, chairman of the committee, was read by the secretary.

In the absence of Miss Ahern, who was to have read a paper on the "Relation of the trustee to the library," the secretary read a symposium compiled by her from letters written by prominent librarians. Mr. Crunden and Mr. Whiteford also spoke.

The paper on "Library buildings for small libraries" was read by Mr. Wright. He was followed by Mr. J. L. Mauran of St. Louis, and Mr. F. C. Gunn of Kansas City, both practicing architects, who discussed the question in the light of their experience in constructing several such buildings.

In the evening a reception was tendered to the visiting delegates by the Sedalia Public Library board.

The second session was called to order at 9.30 a.m. on Friday, and was opened by a paper by Mr. Duncan Burnet, on "The selection of books for small libraries." Mr. J. F. Langton took up the discussion, calling attention to the fact that the prime requisite to successful book selection is a study of the constituency of the library. Miss May Simonds then read a paper on the "Province of periodicals," showing the great value of such publications and the best methods for their use. Miss Anna Powers led the discussion. "Library commissions, their nature and functions" was a subject of an address by Miss Alice Tyler, of the Iowa commission. She described the rise of the commission idea, its

development in the various states, the system of co-operation between the different commissions, and the methods of work in the Iowa commission. Mr. Wright and others discussed the prospects of the passage of a library commission bill at the coming session of the General Assembly and the relation of the commission to the present library board.

Mr. J. A. Whiteford and Mr. G. V. Buchanan spoke on "District school libraries" from the viewpoint of the superintendent of schools. They called particular attention to the lack of training in the use of books displayed by the graduates of normal schools. Mr. Wright was appointed as delegate to the Missouri Teachers' Association which is to be held at St. Louis.

In the afternoon the first paper on "The evolution of trifles" was read by Miss Bishop. She spoke of the value of many things not esteemed of much consequence by the ordinary library, and detailed the methods by which newspaper clippings are made available at the Kansas City Library. Miss Tutt led the discussion.

Mr. F. A. Sampson, secretary of the State Historical Association, then read a paper on the "Public documents of the state of Missouri." He called particular attention to the difficulties in the way of collection by reason of the low estimate placed by the public on such documents and criticised very severely the method of publication.

The question box, in the absence of Miss Ahern, was conducted by Mr. Langton. After the completion of the program the association took up the regular business.

A vote of thanks was passed expressing the gratitude of the association to Miss Tyler for her kindness in attending the meeting and reading the paper on "Library commissions."

The auditing committee reported that the report of the treasurer was found correct, and it was accordingly received and filed.

The following amendment to the constitution, which was proposed at the last meeting of the association, was passed:

Resolved, That the constitution of this Association is hereby amended by striking out the words, "50 cents" in line one of section VI, and the words "one dollar" inserted in lieu thereof, so that said sections amended should read:

Dues and debts. The annual fee shall be one dollar. No officer, committee, or member of the Association shall incur any expense in its name, nor shall the treasurer make any payment from its funds unless authorized to do so by a vote of the executive board.

The nominating committee made its report, and following officers were elected: president, Mr. J. F. Langton, St. Louis Public Library; 1st vice-president, Prof. W. F. Webb, Central College, Fayette; 2d vice-president, Miss Anna Powers, Warrensburg Normal School; secretary-treasurer, Miss Faith E. Smith, Sedalia Public Library.

Invitations for the next meeting of the association were received from Jefferson City and St. Joseph, and the matter of the de-

cision was referred to the executive committee.

It was voted to continue the library commission committee, consisting of Messrs. Lathrop, Yeater and Wright, for another year.

A motion was passed appointing a committee consisting of Mr. Crunden and two others of his selection to confer with the State Teachers' Association in regard to common interests.

The association then passed a vote of thanks to Miss Smith and the members of the Sedalia Board for their kindness and courtesy to the association during the session of the convention. The meeting then adjourned. In the evening the association listened to a very interesting address on "The argument for libraries," by Mr. Crunden.

NEBRASKA LIBRARY ASSOCIATION.

President: Miss Edith Tobitt, Public Library, Lincoln.

Secretary: Miss Clara Mulliken, Lincoln.

Treasurer: Miss Margaret O'Brien, Public Library, Lincoln.

The eighth annual meeting of the Nebraska Library Association, held in the Omaha Public Library building, Oct 16 and 17 was successful in all its details. About 75 people were in attendance at each session and the membership enrolled into the association during the last year has reached a gratifying number.

This is the first year the meeting has not been held in Lincoln in connection with the State Teachers' Association. The innovation of another meeting place and a three session program instead of one session seemed to add dignity and enthusiasm. Prominent among the out-of-state visitors and lecturers were Dr. J. K. Hosmer, of Minneapolis, president of the American Library Association; Mr. Purd Wright, of St. Joseph Public Library, and Mr. Matthew Hale Douglass, of Grinnell College Library.

The first session on Thursday afternoon was one devoted almost entirely to the problems of the small town and village library. Small resources and an abundance of energy to build up a library is usually the situation — and this was truly the testimony of all the representatives who spoke during the afternoon. Two ladies who represented a small, newly organized library in McCook, Nebraska, had travelled hundreds of miles across the state to attend the meeting, and they roused warm interest with the sparkling stories of their persistent efforts to have a library whether the council would or no.

Miss Tobitt, the president, introduced the program with words of welcome.

Mr. Jay Amos Barrett gave a short talk on the Nebraska library law. He dealt with the best methods to use in working for establishment of libraries and particularly advocated emphasizing the practical use of libraries as

raising real estate values, when bringing the matter before the city council.

Miss Edna Bullock, secretary of the Public Library Commission, gave a report of the work accomplished through the commission, especially mentioning the traveling library as the only substantial way of encouraging the establishment of libraries where none exist.

The report was illustrated with a number of statistical maps showing the population of Nebraska cities and their relative progress in establishing libraries. Miss Bullock's report was very encouraging. It is to be regretted that the secretary cannot spend more of her time in doing field work, since there is more demand for her work than she has time to give outside her office duties.

Following this Mr. Ross G. Hammond, of Fremont; Mrs. W. G. Whitmore, of Valley; Mrs. Lane, of South Omaha, and Mrs. Berry, of McCook, gave interesting accounts of the establishment of libraries in their towns. This was one of the brightest parts of the program.

Miss Abbott, of Lincoln, read a paper on library plans from a librarian's standpoint, prepared by Mrs. John Reed, former librarian of the Lincoln Public Library, who was unable to be present herself. The paper showed an intelligent knowledge of the subject, and spoke of the responsibility of planning a library and the things to be taken into consideration in selecting a site and making the plans. Two short talks followed on the same subject by architects, one by Mr. Harry Lawrie, architect of the Lincoln Public Library, and the other by Mr. Pierce, who represented Mr. Thomas R. Kimball, the architect of the Omaha and the South Omaha public libraries. Mr. Cheek, of South Omaha, gave a short talk on the establishment and development of the library of that city.

Miss Pfeiffer, of the Omaha High School, closed the session with a good paper on "The use of the library by the schools." This was not a treatment of practical methods and devices by which schools may make use of the libraries, for libraries, she says, have already placed at the disposal of the schools more material than they have used. Miss Pfeiffer urged the teacher to realize her part in teaching the child appreciation of good books, mutual interest and sympathy between them.

The most delightful and attractive part of the program was the Thursday evening session, in which Dr. Hosmer addressed the association. He spoke upon "Books living and dead." His text he took from a suggestion of President Eliot, of Harvard, that "dead" books, such being indicated by failure to call for them for several years, should be put away in a receiving vault. Dr. Hosmer differed with President Eliot and instanced that a book might thus be classified as "dead"

to some and yet be alive to others, and for books as well as men there was a resurrection.

Preceding the lecture Lewis S. Reed, president of the Omaha Public Library board, sketched its beginning and development, its turning over to the city, the Byron Reed bequest and the erection and outfitting of the building.

The library building was thoroughly lighted and thrown open for inspection in all its departments. Music added to the pleasure. In the upper hall of the library Miss Tobitt had carefully arranged an exhibition of book-bindings, model plans for library buildings and a travelling library belonging to the commission.

The second day's session opened with a business meeting. The officers read their reports. The treasurer reported a large increase in funds. The invitation of Fremont Public Library to entertain the next meeting was accepted. A motion by Miss O'Brien was passed, in which the association expressed its sympathy with the movement of the Omaha Women's Club looking toward securing from the next legislature an increase in the appropriation of the state library commission. A committee was appointed to co-operate with the Women's Club in this work.

The following officers were elected: president, Edith Tobitt, Omaha; first vice-president, Jane Abbott, Lincoln; second vice-president, Mrs. C. L. Talbott, Omaha; treasurer, Margaret O'Brien, Omaha; secretary, Clara Mulliken, Lincoln.

The first paper of the program was given by Miss Compton on "Book-buying."

Miss Compton's paper presented the subject of the local dealer in favor of the larger publishing houses, and was warmly discussed by a number of those present.

Miss Parsons in her paper on "Public documents in a non-depository library" made a selection of the most useful city, state and federal publications for the small library. She likewise listed those that they need not buy.

In his paper, "How to advertise a library," Mr. Wright advocated that much more aggression be used in making the library known to the people. "The keeping everlastingly at it" is the keynote of his suggestions.

Mr. Douglas, of Iowa College Library, presented a paper on "Reference work in a small library," which was a valuable compilation of reference tools.

In conclusion the social features of the two days were most pleasant. On the last afternoon congenial parties visited the libraries of the Creighton University and Omaha High School. Mr. and Mrs. Haller, the former of whom is a member of the State Library Commission, invited the members of the association and their friends to their beautiful home for the remainder of the afternoon.

NEW JERSEY LIBRARY ASSOCIATION.

President: Adam Strohm, Public Library, Trenton.

Secretary: Miss B. G. Carr, Princeton University Library.

Treasurer: Miss Sarah S. Oddie, Public Library, East Orange.

The New Jersey Library Association held its 13th annual meeting in the Trenton Public Library on Oct. 15. Owing to the illness of Mr. Ayres, the president of the association, Mr. Bostwick, of New York, presided over the meeting. The meeting was opened by an address of welcome by Mr. F. S. Katzenbach, mayor of Trenton. The first paper on the program was by Dr. E. C. Richardson, of Princeton, on "The travelling librarian," in which was emphasized the necessity of travel to a successful librarian. Travel is a great educational factor, both in respect to general information and in respect to the technical knowledge of a librarian's work.

Then followed a discussion on "The establishment of libraries in small towns." This was opened by Mr. W. C. Kimball, who told of the lack of libraries in the state and the work that the public library commission has done to arouse interest in the small towns. Mr. Charles Baxter, state superintendent of schools, asked for co-operation in revising the lists of school reading and spoke of what has been accomplished in the school libraries. A general discussion followed and as a result the executive committee was empowered to appoint a committee to unite with the public library commission in exciting interest throughout the state for the establishment of libraries. The state is to be asked to put the charge of the travelling libraries in the hands of the public library commission. The executive committee is also empowered to appoint a committee of five to co-operate with the state superintendent of instruction in the revision of lists for school reading. It was decided to hold more frequent meetings through the winter of the nature of library institutes.

Mr. Dana, of Newark, then spoke of the great and lamentable dearth of literary matter connected with the state, and he with Mr. E. T. Tomlinson, of Elizabeth, was appointed a committee to collect information on the subject and as far as possible excite new efforts in that direction.

The report of the nominating committee was accepted and the following officers were elected for the coming year: President, Adam Strohm, Trenton Public Library; vice-presidents, V. L. Collins, Library of Princeton University, and J. L. Naar, of Trenton; secretary, Miss B. G. Carr, Library of Princeton University; treasurer, Miss S. S. Oddie, East Orange Public Library. Luncheon was served at the Trenton House. In the afternoon visits were made to the state library and, through the courtesy of the Trenton Street Railway Company, a trolley trip was made to the library of Princeton University.

OHIO LIBRARY ASSOCIATION.

President: W. T. Porter, Public Library, Cincinnati.

Secretary: Miss Gertrude S. Kellicott, Public Library, Columbus.

Treasurer: Miss Grace Prince, Wittenberg College, Springfield.

The eighth annual meeting of the Ohio Library Association was held in Columbus, Oct. 1-3, with headquarters at the Great Southern Hotel. With the exception of the session of Wednesday afternoon at Ohio State University, all sessions were held in the convention hall of the hotel. In point of attendance the meeting was a successful one, though the number present from outside the city was not as large as was expected. In spite of the somewhat unfavorable weather the trip to the state university, the trolley ride, and visit to the state institution for the deaf and dumb, were most pleasing features of the meeting, and the local reception committee deserve the thanks of the association for their success in making the social side of the conference so attractive.

The efforts of the association during the past year have been directed entirely toward the passage of better library laws, and, naturally, a large part of the time of the annual meeting was devoted to a discussion of legislation. The library bill drawn up by the legislative committee, and presented to the legislature last spring, failed to reach a vote in the House. The presence in Columbus of the legislature, specially called to consider the new code bill, added interest to the meeting, as the provisions of the bill affect almost every public library in the state. At the first sessions of the conference the legislative committee presented a partial report, bringing before the association for its indorsement a bill prepared as an amendment to the so-called Harrison bill, and designed to meet the needs of township libraries directly controlled by boards of education.

This bill was unanimously indorsed by the association, and the committee instructed to lay it before the proper committee of the legislature. Work was promptly begun by the committee, and the bill became a law a few days after the close of the conference. Great credit is due Messrs. Porter and Brett, of the committee on legislation, and President Wicoff, for the intelligent zeal they have displayed in the legislative work of the past year. It is due to no fault of theirs that library conditions in Ohio were not greatly improved. Within the past month the objectionable clauses in the new code bill, which would have affected all present library laws, have been stricken out and the old library laws will stand.

The conference opened on Wednesday morning at 9 o'clock. Governor Nash was present and made a very happy address of welcome, to which Mr. A. S. Root responded for the association. The reports of the offi-

cers and of committees were then received, followed by the partial report of the committee on legislation, previously mentioned. The very full discussion of this report consumed the remainder of the time of this session. In the afternoon the members went out to the state university, where they were met at the entrance by guides, and shown about the grounds and buildings, convening in Townshend Hall at 2.30 o'clock for the afternoon session. After a few hearty words of greeting from President Thompson, the regular program was taken up. The first subject was "Bookbuying," and it was treated in an interesting way from the standpoint of the college library and of the large public library, by Miss Gertrude S. Kellicott and Mr. W. H. Brett respectively. Miss Gertrude A. Baker was to have spoken on this question from the standpoint of the small public library, but she was unable to be present. The subject was then put before the house for informal discussion, and a helpful interchange of ideas resulted. Following this Mr. E. O. Randall and Miss Ellen Summers Wilson, speaking as trustee and librarian respectively, gave interesting and suggestive addresses on "The respective functions of trustees and librarians." The afternoon session closed with a discussion of these addresses.

A large audience was present at the open meeting in the evening, and listened to instructive and inspiring addresses by President Wicoff and Dr. W. J. Conklin. Mr. Wicoff discussed, in an able and suggestive paper, the place of the public library in the community. Dr. Conklin's address on "The union of library and museum" was unusually instructive and inspiring. The speaker, for many years a trustee of the Dayton Public Library, gave an interesting account of the growth of the museum in connection with that library, and made a most convincing plea for the museum as a necessary part of every public library. It is hoped that this address may be published in full, and that it will be read by everyone who is interested in the many-sided development of the library. Following the program was a reception in the parlors of the hotel, arranged by the Columbus librarians and their friends. It was a very pleasant function, and most of the guests remained until a late hour.

With the exception of a few minutes given to business, Thursday morning was devoted to the meetings of the Small Library Section and the College Section. The meetings are quite informal, and always interesting.

At 2 o'clock the members boarded special cars and took a trolley ride about the city, visiting the capitol, the institution for the deaf and dumb, and the public libraries, spending a most enjoyable and profitable afternoon.

At the evening session the complete report of the committee on legislation was received

and discussed, and following this report there was an adjourned meeting of the Small Library Section. Friday morning witnessed the final session. Unfinished business being disposed of, the committee on nominations reported as follows:

President, W. T. Porter; 1st vice-president, C. B. Galbreath; 2d vice-president, E. O. Randall; 3d vice-president, Miss Mary Lowe; secretary, Miss Gertrude S. Kellicott; treasurer, Miss Grace Prince. The report was adopted without discussion. Miss Ahern then conducted the "question box" in her usual happy manner, and, following this, the report of the committee on resolutions was presented. The committee extended the thanks of the association to Governor Nash, and to the Columbus librarians and their assistants who had done so much to make the conference a pleasant one.

EDWARD C. WILLIAMS, *Secretary*.

Library Clubs.

BAY PATH LIBRARY CLUB.

President: Miss M. Anna Tarbell, Brimfield, Mass.

Secretary: Miss Mary D. Thurston, Public Library, Leicester, Mass.

Treasurer: Miss Eliza Hobbs, Brookfield, Mass.

The Bay Path Library Club held its fall meeting in the assembly room of the grammar school building in Palmer, Mass., Oct. 28. The attendance was small, owing to unfavorable weather, but the program was one of unusual interest, and those present felt well repaid for the effort made in attending.

The morning session opened with a few words of welcome by Mr. Harold M. Dean, superintendent of the Palmer schools and librarian of the public library, to which Miss M. Anna Tarbell, president of the club, responded. The first address was by Mr. Hiller C. Wellman, of the City Library, Springfield, on the Magnolia and Lake Placid meetings.

The subject of "Branch libraries and delivery stations" was taken up by Miss Dorcas Tracey, of the Forbes Library, Northampton, who read an interesting paper on the work done in the districts around that city. The first strictly branch work was started at Bay State, when 50 books were taken out one evening to a store, the use of which had been offered for the purpose. The people had expressed no desire for books, but received them gratefully, and liked a good class of literature. From seven books given out on the first night the circulation has increased to 180, and the branch has now moved into one of the mill offices.

Miss Medlicott, of the City Library, Springfield, read a paper from Mrs. E. N. Lane, of the circulating department, in which she

spoke of the help given through the branches of that library, which include a street railway station and reading rooms in twelve engine houses. Mrs. Lane thinks that even the small libraries should reach their outlying districts, where books can be left at some house or store. Everywhere it is the means rather than the opportunity for extension that is lacking.

Mr. Fletcher, of the Amherst College Library, was the next speaker. He said that we should remember that the library is here to be read, not to be taken care of, and we should secure its reading by the many. He suggested that a census be taken to ascertain the number of families in a town, the number using the library, and those who might be induced to use it. A general discussion followed, the keynote of which seemed to be liberality in the matter of fines in the branch libraries.

After dinner at the Converse House, the second session opened at 2.30 o'clock by a paper on "Pictures in the library," by Miss Mary E. Lane, librarian at Barre. She spoke of the collections they had received from the Library Art Club, of their value educationally and as a means of advertising the library. In Barre the experiment was tried of giving a tea at the library while a set of pictures of Paris were on exhibition. All the townspeople were invited, and a number of people who had recently been in Paris were asked to be present and talk informally about the places of interest. The ladies of the board served at the tea table, the librarian kept open house all day, and the affair was a pronounced success.

Miss Alice G. Chandler then told, by request, how the Library Art Club started with her purchase in Washington of a set of pictures of the Congressional Library. These were first hung in the Lancaster Library, then loaned to a few others, and were so much enjoyed and appreciated that the club was formed which now owns between three and four thousand pictures and numbers over a hundred libraries in its membership. Miss Chandler also spoke of the Woman's Education Association, which circulates 22 collections among the smaller libraries.

The next topic was "The public library as a part of the educational system," and Mr. O. H. Adams, superintendent of the Warren and Wales schools, was the first speaker. He said in part that in his experience pupils read much or little as the teacher reads much or little. Many teachers did not form the reading habit when young and have not acquired it since. The problem then is how to induce the teachers to form the reading habit. He said further that the ideal library would be one with means so unlimited and policy so broad that it could send out branches in every direction and furnish whatever books were needed in whatever quantity needed by any school, neighborhood or section.

Mr. F. W. Cross, principal of the Palmer High School, was the next speaker. He finds difficulty in the fact that pupils have to read certain things in connection with their school work and will not do much outside.

Other speakers were Mr. Wheeler, superintendent of the Monson and Brimfield schools; the Rev. F. B. Harrison and Dr. O. P. Allen, of Palmer, and Mr. W. I. Fletcher, of Amherst. MARY D. THURSTON, *Secretary*.

CAPE COD LIBRARY CLUB.

President: Everett I. Nye, Wellfleet, Mass.

Secretary: Miss Martha N. Soule, Hyannis, Mass.

Treasurer: Miss Elizabeth C. Nye, Barnstable, Mass.

On Tuesday, Oct. 7, the Cape Cod Library Club held its fourth meeting at Yarmouthport. The members of the club were the guests of Mrs. George Russell Agassiz at luncheon at Sandy Side. Immediately after lunch the president, Mr. Charles F. Swift, in opening the meeting, spoke of a book which a member of the club has written and which is a welcome addition to the literature pertaining to local history. This is the "Memorial of Brevet Major General Joseph E. Hamblin," prepared and issued for private circulation by his sister, Miss Deborah Hamblin, and through the kindness of the author, copies were presented to a number of libraries represented in the club. The report of the treasurer showed that the finances of the club are in a very satisfactory condition.

The nominating committee, consisting of Mr. F. C. Small, Mrs. Harlow and Miss Bradford, reported the following list of officers for the coming year: President, Everett I. Nye, Wellfleet; first vice-president, H. A. Harding, Chatham; second vice-president, Miss Sarah A. Haskell, Rochester; secretary, Miss Martha N. Soule, Hyannis; treasurer, Miss Elizabeth C. Nye, Barnstable. Executive committee, Mrs. G. R. Agassiz, A. S. Bowerman, Mrs. L. A. Ryder, Miss Mary C. Defriez, Judge F. C. Swift, Miss Laura M. Bearse. These officers were elected by a unanimous vote.

Wm. L. R. Gifford, of the Cambridge Public Library, spoke of the next meeting of the Massachusetts Library Club, and it was hoped that a large delegation from the Cape Cod Club might attend, as the state club seldom holds a meeting in this vicinity.

F. W. Kingman, trustee of the library at Hyannis, invited the club to hold its next meeting at the Hyannis State Normal School next spring.

Miss Nye, of the Sturges Library, Barnstable, who was chosen a delegate to the conference of the A. L. A. at Magnolia, June 14-20, read a report upon that meeting, and Miss Ida F. Farrar, of the City Library, Springfield, read an account of the work of library institutes in the western part of Massachusetts.

The club was fortunate in having as its guest Miss James, librarian of the Library Bureau in Boston. Her talk was on "How to make bricks without straw" and was full of practical hints upon how the little village library may meet some of its problems; how to make the most of everything—not to despise trifles. One of her suggestions was that there should be a Library Exchange where questions could be asked and answered and where library problems could receive the attention of experts in the various lines of work.

The club has now about 110 members, about 70 being present at the meeting.

MARTHA N. SOULE, *Secretary*.

CHICAGO LIBRARY CLUB.

President: Miss Irene Warren, Chicago Institute Library.

Secretary: Miss Renée Stern, 6037 Monroe avenue.

Treasurer: C. A. Torrey, of Chicago University.

The 10th annual meeting of the club was held at the Chicago Public Library, May 8. Officers for 1902-03 were unanimously elected as follows: President, Irene Warren; vice-presidents, Earl G. Swem and Mary E. Hawley; secretary, Chesley R. Perry; treasurer, Clarence A. Torrey. President Josephson presented a report of the work of the club during the past year. The secretary's report showed a net gain in membership of 25, there now being 102 members. The treasurer's report showed receipts and expenditures of over \$700, the publication of the union list swelling the amount, with a balance on hand of \$46.11.

Mr. Perry and Miss Ahern opened the discussion pro and con on the proposition that the club undertake the preparation, publication and distribution of special reading lists. Mr. Perry took the position that the club ought to be doing something, that this was something that it could do; that special reading lists would be most useful in Chicago, that the failure of the Chicago libraries to issue such lists was the club's opportunity. Miss Ahern replied that the club ought not to undertake to do work that the Chicago libraries should be doing, that the members of the club are overworked as it is, and that this new work would probably devolve upon a handful of the hardest worked ones; that what the club needs is not more technical work, but more professional spirit, higher ideals of the work that belongs to it already, more relaxation, more sociability and fellowship.

A discussion followed and culminated in a motion that the club undertake the preparation and publication of special reading lists. This was lost. It was then moved and seconded that the club purchase from the New York Library Association, or elsewhere, special reading lists and distribute them. At this

point a motion to lay the whole subject on the table prevailed, and the club adjourned until October.

A regular meeting of the club was held Oct. 8 in the Fine Arts building, the president, Miss Warren, in the chair. Mr. E. G. Swem's resignation from the club was read and accepted, as was Mr. C. R. Perry's resignation of the office of secretary. Mr. Hopkins reported that the committee on statistics expected to begin active work in December co-operating with the University of Illinois. It was voted that an invitation be extended to Mr. Dewey to address the club upon the occasion of his proposed visit to the west. The executive committee reported informally that owing to the closing of the Public Library in the evenings the club was without a meeting place, and that it had been suggested that meetings be held in the afternoon. It was voted to leave the matter in the hands of the executive committee. Miss Warren announced that the program for this year would consist largely of addresses by specialists on topics of interest to all librarians. Miss Mary E. Hawley was chosen as first vice-president to succeed Mr. Swem, W. Stetson Merrill was elected second vice-president to succeed Miss Hawley, and Miss Renée B. Stern was elected as secretary to succeed Mr. Perry. Mr. Charles Wilkes, a sanitary engineer of Chicago, then addressed the club on "The sanitary construction, heating and ventilation of library buildings." After Mr. Wilkes had finished his paper he kindly submitted to a severe cross-examination by members of the club upon the topics presented by him.

CHESLEY R. PERRY, *Secretary*.

LONG ISLAND LIBRARY CLUB.

President: Frank P. Hill, Brooklyn Public Library.

Secretary: Miss Irene Hackett, Brooklyn Y. M. C. A. Library.

Treasurer: Miss Mabel Farr, Adelphi College Library.

The 14th regular meeting of the Long Island Library Club was held at the Pratt Institute Free Library at three o'clock on Thursday, Oct. 16, with an attendance of over 100 members, Mr. Frank P. Hill presiding. The minutes of the May meeting were accepted as published in the LIBRARY JOURNAL, and twelve new members were elected.

A report was read by Miss Mary W. Plummer, chairman of the committee on library institutes, upon the institute held at College Point, Long Island, on Saturday, Oct. 11. The librarians of the western end of Long Island, exclusive of Brooklyn and Long Island City, were invited by letter, having been previously interested in the meeting by a visit from some member of the committee, or if this was impracticable, by a personal letter. An exhibit of suitable library literature, supplies, and bulletins was arranged, and those

in attendance grew acquainted while examining and discussing these before the meeting. Of the 23 persons present, 11 represented suburban or town libraries. The meeting was opened by a few remarks by Miss Plummer as chairman, followed by Mr. William Harper, librarian of the Poppenhusen Institute where the meeting was held. Mr. Harper told of his experience at the Albany summer school. "Selection of books for a small library" was treated by Miss Hinsdale, from her experience with the former Flushing Free Library. Miss Hutchinson, who was at one time acting librarian of the Blackstone Memorial Library at Branford, Ct., explained "What happens to a book in a well-regulated library." Two hours were allowed for the luncheon, and each one was seated next to a new acquaintance, and requested after the meal to rise and give his name and that of the library he represented. The afternoon session was fully occupied in the discussion of the questions found in the question-box, which was conducted by Miss Frances B. Hawley, of the Brooklyn Public Library, and Miss Josephine A. Rathbone, of the Pratt Institute Free Library. Miss Plummer concluded, "On the whole the committee feels encouraged, realizing that the coming into personal acquaintance with one another is, after all, the important thing among librarians, since it may, and generally does, lead to professional discussion, incitation, emulation, and progress." Mr. Hill called attention to the fact that 50 per cent. of the librarians invited were present, which, as the day was very stormy, he considered a more than satisfactory representation, and cause for congratulation. It was voted that the committee be continued.

The treasurer's report, showing a balance of over \$56, was read and approved, and the committee were authorized to pay all bills incurred for the institute.

The first subject on the program of the meeting was "A librarian's personal reading," on which Miss Plummer read an interesting paper. She touched upon the subject of her own reading, of which she had kept an author-and-title list for some years, then recommended that every librarian keep a list of books she wished to read, from which to choose when the leisure offered, instead of going to the nearest shelf and so "letting the book choose itself." She advocated reading something stimulating rather than following the line of least resistance when the brain is tired, as being really more restful if not so soporific; turning to the old authors, even when read before; and owning good editions of standard books to take up at home instead of carrying a book from the library.

The discussion which followed was varied and animated, being led by Miss Anthony of the Packer Collegiate Institute, who said we were apt to forget that "the King's taster might have a private trencher of his own," and that we should read along the lines, if not of "least resistance," yet of our

best liking. Miss Jacobson, librarian-in-charge of the City Park Branch of the Brooklyn Public Library, spoke of the influence upon the young assistant of being surrounded by a well-selected collection of books, and associated with a librarian of good taste. She spoke of a club of assistants for reading and discussing book reviews. Miss Hutchinson, of the Brooklyn Institute of Arts and Sciences, told of another club which was pledged to read non-fiction for half an hour a day in order to overcome the tendency to superficiality by a little systematic solid reading. Miss Rathbone spoke of a policy of exclusion with regard to the novels of the day, whereupon Mr. Hill suggested that of reading no novel until it was six months old. Mr. Bishop, of the Polytechnic Institute, advocated having a hobby around which one's reading should center. Miss Haines urged that we increase the amount of our reading, which led to a protest from Miss Davis, of the Pratt Institute Library, as to the limitations of time and strength, and the query from Miss Hawley, of the Brooklyn Public Library—"When do the people who read incessantly get time to think?" Miss Rathbone suggested the atmosphere of the early novels, such as Jane Austen's as a restful change from the hurry of the day; and Mr. Bostwick closed the discussion with a word of personal and professional experience.

"How do librarians select books?" was the other topic of the afternoon, being a symposium by Miss Mary L. Davis, head of the cataloging department of the Pratt Institute Free Library; Mr. Arthur E. Bostwick, chief of the Circulating Department of the New York Public Library; Mr. Benjamin Adams, librarian of the Prospect Branch of the Brooklyn Public Library; and Miss Louise G. Hinsdale, librarian of the Flushing Branch of the Queens Borough Library.

Miss Davis called attention to the wide field of purchase of the Pratt Institute Library because of its relation to the institute as well as to the general public, making it necessary to buy many technical and reference works beside general literature, especial attention also being paid to the needs of the children, and their parents and teachers. She mentioned the best critical reviews in English, French, German, and Italian as sources of information concerning the new books, with publishers' lists, trade bulletins, and auction catalogs to aid in ordering. The librarian makes her selection from these reviews, and from recommendations by the instructors of the departments of the Pratt Institute, encouraging suggestions also from the readers, and submitting very expensive, especially if technical, works to specialists for an expert opinion of their value. Few subscription books are bought, and these only from well-known publishers. The forms observed in the order department of collating, approving, and filing order-slips were outlined.

Mr. Bostwick said that he spoke for three

boroughs—Manhattan, Richmond and the Bronx—but that he had nothing to do with the ordering of reference books. The order list is made up weekly, and suggestions are welcomed from the readers, or made by the librarians in charge of the branches, or by the chief of the department himself when he sees that a branch is weak in a particular subject. As reviews are frequently found unreliable, a doubtful book is often submitted to two or three chosen members of the staff for approval. The weekly list is collated for prices, duplicates, etc., and then compared with the duplicates on hand, as books are sometimes supplied from this source. It is then sent for approval to a committee before the books are finally ordered. No hard-and-fast rule of selection is possible as each book must stand upon its own merits.

Mr. Adams and Miss Hinsdale confined their remarks to the principles of selection in branch and small libraries, with the modifications suitable to each. Miss Plummer summed up the matter by saying that no rules could be given, experience forming in time a composite impression which served as a guide. Miss Haines suggested that this impression had for its background the knowledge dependent upon the extent of one's personal reading. The discussion terminated in the statement that both sides of a disputed subject should be represented in a library, and where opinions clashed the books should be let to fight it out; and finally, that the selection should represent the needs of the library and not the librarian's personal choice.

IRENE A. HACKETT, *Secretary*.

NEW YORK LIBRARY CLUB.

President: Frank B. Bigelow, New York Society Library.

Secretary: Silas H. Berry, Y. M. C. A. Library, 317 W. 56th street.

Treasurer: Miss Theresa Hitchler, Brooklyn Public Library.

A regular meeting of the New York Library Club was held at the general library of the Young Men's Christian Association, 317 West 56th street, Thursday, Oct. 9, at 3 p.m. The minutes as printed in the *LIBRARY JOURNAL* were approved. Mr. A. A. Clarke, of the Y. M. C. A. Library, and Mr. Charles E. Booth were elected to membership.

The committee on handbook reported that receipts from sales to date had been \$128.44 and the expense of distribution and collection had been \$11.75. Mr. Nelson, for the committee, called attention to the fact that as printing, binding and distribution of the handbook had cost to date \$550 and as the club had been able to pay but \$250 on account it was important that all arrears in dues be made up and that the sale of the handbook be promoted in every way possible.

The afternoon's program opened with reports upon the library meetings of the sum-

mer. Miss Helen Haines told briefly about the Post conference trip to Bar Harbor, which followed the American Library Association conference at Magnolia in June; and the "Library week" meeting at Lake Placid was described by Miss Elizabeth G. Baldwin, of Teachers' College, in a breezy outdoors paper on the social side of the meeting, and by Mr. Robert G. Welsh, who reviewed the business transacted and subjects discussed at the sessions.

Dr. Andrew F. Currier, president of the board of trustees of the Mount Vernon Public Library, gave an address on "The sterilization of books by vapor of formalin" (*see* L. J. Oct., p. 881), which he illustrated with a miniature sterilizing plant. He stated that book disinfection is a part of the subject of preventive medicine which is the most important branch of scientific investigation and human knowledge. His paper caused some discussion. Mr. Frank Weintenkampf told how the sterilizing process was carried on at the New York Public Library and mentioned that the only disease known to have been transmitted by the use of library books was scarlet fever. He said that many libraries destroy all books that are known to have been exposed to smallpox and other infectious diseases, not only as a measure of safety but to allay the fears of the public. Miss Frances Thomson, librarian of the Mount Vernon Public Library, explained in answer to questions, how Dr. Currier's sterilizing plant was operated at that library, it being used only for such books as there was possible doubt about. About 200 books a day were sent to the sterilizer, at a cost of about \$40 per year.

Reports on this subject were made from the Plainfield Public Library the Bridgeport Public Library, Pratt Institute Library, and others, showing that it was the general practice for libraries to co-operate with the local board of health, and on being informed of infectious diseases to refuse to circulate books which had been exposed to infection.

Before adjournment the committee on library institutes asked for information as to the term for which it was appointed, and on motion of Mr. Cole the committee was continued until next meeting.

SILAS H. BERRY, *Secretary*.

WESTERN MASSACHUSETTS LIBRARY CLUB.

President: Frank G. Willcox, Public Library, Holyoke.

Secretary: Miss May Ashley, Public Library, Greenfield.

Treasurer: Mrs. A. J. Hawks, Meekins Memorial Library, Williamsburgh.

The fall meeting of the club was held Oct. 9, at Holyoke, and brought together an attendance of about 80. The morning session was in the lecture-room of the Holyoke Public Library, and the afternoon meeting in the assembly-room of the summit house on

Mt. Tom. W. S. Loomis, of the board of directors opened the morning session with a few words of welcome. He contradicted the assertion that corporations have no souls with a report of what one Holyoke corporation has done to help build the public library. The principal topic for the morning was "The best books of the year for a small library to buy." The discussion was opened by Miss Medlicott, of Springfield, who emphasized the difficulty of choosing from book reviews, and of selecting by title from publishers' catalogs. Other speakers were W. I. Fletcher, C. A. Cutter, Mr. Greenough, and Mr. Willcox. Mr. Wellman in closing the discussion, emphasized the purchase of books that contain information, rather than supplying books on topics that are fads and which contain no contributions to knowledge.

"Means of attracting people to the library" was the subject of a paper by Miss Mabel E. Emerson, of the Providence Public Library. She said that it is through philanthropic associations that the library hopes to reach that large proportion of children who leave school even before they reach the ninth grade. Probably more can be done through the schools than in any other way. Interest the children as early as possible. In work with older people, the various reading circles, study clubs, lecture courses, etc., claim attention. Debating societies bring constantly new recruits and lists of books may be posted in shops and mills. Lastly, to make your work a success, choose carefully the assistants who come directly in contact with the people. They should be sympathetic and tactful, and yet have sufficient personal dignity to command respect.

A report of other club meetings was given by Hiller C. Wellman, who described the Magnolia conference and the Lake Placid meeting of the New York Library Association.

The afternoon session opened with business. There was a brief report by the secretary of the institute held in Granville. Mention was made of two more institutes to come, one in Miller's Falls, Nov. 7, the other in Haydenville, Nov. 14. Miss Farrar reported upon the recent meeting of the Cape Cod Library Club, which, too, is pushing the work by means of the library institute.

The first topic was "The rules which are really essential in the dealings of the library with the public," by C. A. Cutter, of the Forbes Library, of Northampton. This was followed by papers on "The treatment of pamphlets," read by Miss Farrar and Miss Tracy. Among the suggestions were: Bind pamphlets of permanent value, group by classes in boxes of uniform size made of strawboard and costing about five cents. Place in boxes 18 inches long by seven wide and 10 deep, arrange one behind another like cards on end in a drawer, reading from left to right. After a short discussion the meeting was adjourned.

Library Schools and Training Classes.

DREXEL INSTITUTE LIBRARY SCHOOL.

PERSONAL NOTES.

Charles E. Janvrin, class of '02, has been appointed librarian of the Jefferson Medical College, Philadelphia.

Miss Ada F. Liveright, class of '96, has been appointed cataloger in the Library of the College of Physicians, Philadelphia.

Miss Kathrine McAlarney, class of '02, has accepted a position in the Free Library of Philadelphia.

Miss Hetty S. Johnston, class of '99, has been engaged as an assistant in the Drexel Institute Library.

Miss Alvaretta P. Abbott, class of '99, is organizing the Union Library of Hatboro, Pa.

Miss Miriam B. Wharton, class of '02, is organizing the Public Library of McVeytown, Pa.

The annual meeting of the Drexel Institute Library School Association was held Oct. 29, after which a reception was tendered the incoming class.

IOWA SUMMER SCHOOL.

A report of the 1902 session (June 16-July 26) of the summer school for library training conducted by the Iowa Library Commission, at the State University, is given in the October number of the commission *Bulletin*. There were 26 students enrolled for the six weeks' course, and in addition 16 students entered for the special two weeks' course in library work with children given by Miss Annie Carroll Moore, head of the children's department of the Pratt Institute Free Library of Brooklyn.

"The school," it is said, "is no longer an experiment. It has been given a cordial reception by the university authorities and was provided this year with admirable rooms for lectures and practice work in the handsome new hall of liberal arts. The attendance is all that can be desired, if a high standard of work is to be maintained. The school exists primarily to raise the standard of library work in Iowa and the attendance from the state indicates that it is appreciated."

NEW YORK STATE LIBRARY SCHOOL.

CALENDAR, 17TH SCHOOL YEAR, 1902-3.

School opens Wednesday, a.m., October 1.
Election Day, holiday, Tuesday, November 4.

Thanksgiving recess begins Wednesday noon, November 26.

Thanksgiving recess ends Monday noon, December 1.

Lectures begin Monday p.m., December 1.

Christmas recess begins Wednesday a.m., December 24.

Christmas recess ends Monday p.m., January 5, 1903.

Lectures begin Tuesday a.m., January 6.

Lincoln's Birthday, holiday, Thursday, February 12.

Washington's Birthday, holiday, Monday, February 23.

Visit to New York, Philadelphia, Washington and Baltimore libraries, Tuesday evening April 7-Monday, April 20.

Lectures begin Tuesday a.m., April 21.

Decoration Day, holiday, Saturday, May 30.

Summer course begins Wednesday a.m., May 20.

School closes Friday p.m., June 26.

Summer course closes Tuesday p.m., June 30.

NOTES AND NEWS.

The students have been interested in watching the Carnegie library campaign, which culminated on election day, Nov. 4. The following question was submitted to the people on a separate ballot: Shall the city of Albany accept the offer of Mr. Andrew Carnegie of \$150,000 for public library purposes? The offer was rejected by a majority of 5056. There were 7152 votes for and 12,208 votes against the proposition, 23,334 being the total city vote cast for Governor. Only four out of 19 wards gave a majority for the library.

The new senior class is taking up energetically the weekly library letter in the *Albany Argus*, which was begun by the class of 1902.

The junior class has elected as its officers for the coming year Mr. Harold L. Leupp, of New York City, for president, and Miss Beatrice J. Barker, of Providence, R. I., for secretary-treasurer.

The officers of the senior class were re-elected. Mr. Malcolm G. Wyer, of Excelsior, Minn., president; Miss Ella R. Seligsberg, New York City, secretary-treasurer.

SALOME CUTLER FAIRCHILD.

PRATT INSTITUTE LIBRARY SCHOOL.

The library school has admitted a special student to the general course this year, Mr. Henry Forster Marx, of Easton, Pa., who is under appointment as librarian of the new Carnegie Library, soon to be built at Easton.

In the list of accepted applicants for the class of 1903 (printed in the *LIBRARY JOURNAL* for August), the name of Mr. George M. Churchill, Elmwood, Mass., was given. Mr. Churchill was obliged to withdraw before the opening of the school, and the vacancy has been filled by Miss Helen M. Clarke, of New York.

Miss Edith E. Hunt, class of '95, has been appointed as cataloger in the Brooklyn Public Library.

APPOINTMENTS.

Of the class of 1902, the following appointments have been made:

Lillian Burt, cataloger, Marietta College, Marietta, Ohio.

Agnes Cowing, circulating department, Pratt Institute Free Library.

Adelaide F. Evans, cataloger, Pratt Institute Free Library.

Jane E. Gardner, librarian, People's Library, Newport, R. I.

Edith A. Gillespie, assistant, Hampton Institute Library, Hampton, Va.

Ruth S. Granniss, assistant, open shelf department, Pratt Institute Free Library.

Louise Merrill, cataloger, Library of New York Bar Association.

Antoinette P. Metcalf, assistant in reference department, Pratt Institute Free Library.

Hermann H. B. Meyer, New York Public Library.

Frances N. Northrop, assistant, circulating department, Carnegie Library, Pittsburgh, Pa.

Lillian M. Pospishil, assistant, Public Library, Cedar Rapids, Iowa.

Cornelia B. Ward, assistant, Public Library, Montclair, N. J.

Hester Young, indexer and secretary, Hampton Institute, Hampton, Va.

GRADUATES' ASSOCIATION OF PRATT INSTITUTE FREE LIBRARY SCHOOL.

The annual reception given by the Graduates' Association to the library class was held Thursday evening, Nov. 6, in the library class rooms, which were prettily transformed for the occasion. There were about 70 present, all of whom were subjected to a test of their five senses. Those who were found deficient in taste or smell showed no less relish of coffee and other refreshment than if they had been able to distinguish gasoline from kerosene; and if some of the guests could not name an L.B. book-support or a shelf-list card at sight, they proved the more interesting companions to those to whom such objects were all too familiar. The reunion was a very cordial home-gathering of graduates and students, welcomed by Miss Plummer, and Miss Hutchinson, president of the Graduates' Association. I. A. H.

SIMMONS COLLEGE LIBRARY TRAINING COURSE.

Simmons College, which opened Oct. 9, at Boston, Mass., is the first institution in New England to give to women both collegiate and technical training at the same time. Library science is one of the regular four-year courses of the college. The purpose is to cover essentially the same ground as the older accredited training schools. This present year freshman work only is offered.

The students in the department are:

Allchin, Florence Stratton, Auburndale, graduate Newton High school.

Bonney, Bessie Avis, Stoneham, graduate Stoneham High school.

Bradley, Lucy Watson, West Newburyport, graduate West Newburyport High school.

Bragg, Laura May, Bristol, N. H., Amesbury, Mass., High school, 1896-'99; Lisbon, N. H., High school, 1899-1900.

Comer, Anne Sanford, Winthrop, graduate Winthrop High school, Boston Normal School of Gymnastics, 1901-'02.

Daggett, Mary Augusta, Cambridge, Wellesley College, 1891-'93; Wilson College, 1901-'02.

Dunmore, Jennie Elizabeth, Haverhill, graduate Haverhill High school.

Farrell, Winfred Sampson, Bedford, graduate Concord, Mass., high school.
 Finley, Florence Gertrude, Haverhill, graduate Haverhill High school.
 Harkins, Gertrude Marie, Brookline, graduate Emerson College of Oratory.
 Harwood, Maude Davis, Ware, graduate Ware High school.
 Higgins, Alice Gertrude, Quincy, graduate and post-graduate Quincy High school.
 Hubbard, Minerva, Pasadena, Cal., Capen school, Northampton, Mass., 1892-'95.
 Jones, Elizabeth Belle, Concord Junction, Mass., Belfast, Me., High school, 1892-'95; Bridgewater Normal school, 1895-'97.
 Luard, Lucy Dalbiac, Wollaston, graduate Quincy High school.
 Magrath, Ethel, Cambridge, Mass., private schools.
 Metcalf, Elsie Raymond, Franklin, Mt. Holyoke College, 1901-'02.
 Mitchell, Grace Mary, Akron, O., B.A., Puchtel College, 1900.
 Nelson, Dorothea, Marshfield Hills, Mrs. Piatt's school, Utica, N. Y.
 Norris, Helen, Brighton, graduate Boston Girls Latin school.
 Parker, Harriet Gardner, Everett, graduate Drury Academy, North Adams.
 Pollister, Alma Hodsdon, Portland, Me., graduate and post-graduate Portland High school.
 Rathbun, Mary Elizabeth, Boston, Smith college, 1893.
 Richards, Eleanor Mayhew, Brookline, Brookline High school, 1900-'01.
 Sander, Elfriede M., Jamaica Plains, private school, Dresden, Germany.
 Smart, Mary Farrington, Lafayette, Ind., Purdue university, 1898-1900.
 Walley, Theresa Bates, Boston, graduate Girls High school.
 Winn, Edna Florence, Fall River, graduate Durfee High school.

Reviews.

LUNDSTEDT, Bernhard. *Sveriges periodiska litteratur. Bibliografi enligt Publicistklubbens uppdrag utarbetad af Bernhard Lundstedt. III.: Landsorten 1813-99, med supplement [etc.].* Stockholm, Aktiebolaget H. Klemmings Antiquariat, 1902. [1], 658 p. 24 x 16cm. 12.50 kr.; complete in 3 vol.; 1895-1902, 25 kr.

With this volume Dr. Lundstedt's bibliography of the periodical literature of Sweden is completed. It catalogs 3208 different publications, covering the years 1645-1899. The first volume deals with the periodicals of the whole kingdom from 1645 to 1812, aggregating 425 publications; the second with those published in Stockholm from 1813 to 1894, 1045 publications, and the third with those

published outside of Stockholm from 1813 to 1899, 1560 publications, besides giving 178 new periodicals published in Stockholm from 1895 to 1899, and 136 supplementary notices to titles in the first two volumes.

The bibliographical notes are very complete; full titles and all changes in titles are given, the year, the month and date of first issue, as well as of the last, if discontinued. If still in existence the words "fortgår [-continues] 1900" are added, and here the criticism may be made that "living" periodicals should be more clearly distinguished from "dead" ones. It requires some little effort to tell what periodicals are still in existence. The frequency of publication is given, and the days of publication of those issued on certain weekdays; further, the folding symbols, number of columns to the page and the size of the letterpress in centimeters. Publishers, *i.e.*, the persons who, at various times, have registered the periodicals with the copyright authorities, editors, and chief contributors are also given.

The titles are arranged in the first two volumes chronologically by the year of first issue, in the third volume alphabetically by the place of publication, and thereafter chronologically. The first volume has a topographical index to the periodicals published outside of Stockholm. Each volume has an alphabetical index of titles, and the third volume has an index of names of persons mentioned in all three volumes, an index of pseudonyms and initials, and a classified list, arranged by the Decimal classification. The second and third volumes mention 212 periodicals, registered with the copyright authorities between 1813 and 1899 but either not published, or not seen by the author who has used exclusively the collections in the Royal Library at Stockholm. Only of 42 of these does the author know they were never published. Of the remainder 88 were registered to be published in Stockholm, and it is reasonable to think that the majority, if not all, of these were really never published. There remain, however, 82 periodicals, published outside of Stockholm, of which it is possible that about one-half really were published, but never deposited in the Royal Library as required by law. It must be presumed, although the author does not say so, that inquiries have been made at the two other copyright depositories, the university libraries of Upsala and Lund, about the publications not found in Stockholm; but probably the publications not deposited at Stockholm were not sent to either of the other depositories; nor have the authorities of these institutions made such efforts to collect all Swedish imprints, as did the late chief librarian at Stockholm, Dr. G. E. Klemming.

It is really a remarkable fact, that of the whole of Sweden's periodical publications of which titles are known, all but about five per cent. are to be found in its national library.

ASKEL G. S. JOSEPHSON.

Library Economy and History.

GENERAL.

ABBOTT, Allan. Reading tastes of high-school pupils: a statistical study. (*In School Review*, October, 10:585-600.)

A very interesting study of the reading tastes of nearly 2500 boys and girls between the ages of 14 and 19. The study was made on the list of books, 178 in all, published in a pamphlet by Harvard in 1897, and entitled "English in the secondary schools," and that given in the report of the subcommittee on English to the National Educational Association Committee on College Entrance Requirements. The negative results of this investigation are that the interest of high school boys and girls "is always in contents rather than in style; in the direct story, rather than in one to any degree satiric or symbolic. They do not care for the attempt of one man to interpret the ideals of another, for literary criticism, nor for experiments in rhetorical art." On the positive side the tables show that "Boys and girls both like: Dickens, Hope, Longfellow, Scott, Sienkiewicz, Westcott. Boys, alone, like: Blackmore, Cooper (Mohicans), Churchill, Dumas, Ford, Henty, Hughes, Kipling, Stevenson. Girls, alone, like: Alcott, Barrie, Brontë, Bulwer, Lamb, Shakespeare, Stowe, Tennyson."

The *Bulletin of the Association of Medical Librarians* (Quarterly) for July-October, 1902 (vol. 1, no. 3-4, double numbers), is of unusual interest to librarians generally. Dr. William Osler's presidential address at the meeting of the Association of Medical Librarians, Saratoga June 10, 1902, is the opening paper, its title being "Some aspects of American medical bibliography." He calls attention to a large number of the early medical writers of America, many of whose books are of general interest. Of the use of medical libraries he says: "In the recent history of the profession there is nothing more encouraging than the increase in the number of medical libraries. The organization of a library means effort, it means union, it means progress. It does good to men who start it, who help with money, with time and with the gift of books. It does good to the young men, with whom our hopes rest, and a library gradually and insensibly moulds the profession of a town to a better and higher status." Charles Perry Fisher, the librarian, contributes an historical account of the "Library of the College of Physicians of Philadelphia," the oldest medical library in the United States. It now contains more than 65,000 volumes. Nearly 40 pages of the *Bulletin* are given to the classifications of two most important medical libraries—the library of the College of Physicians, Philadelphia, and the library of the Surgeon-General's Office, Washington.

GOOD, Jessie M. The travelling library as a civilizing force. (*In Chautauquan*, Oct., 1902, 36:65-78.) il.

The first of a series of articles on "Civic progress." Outlines the travelling library movement from the time of Rev. Thomas Bray to the present.

LOCAL.

Albany, N. Y. The question of accepting Andrew Carnegie's offer of \$165,000 for a public library building was submitted to popular vote on Nov. 4, and defeated by an overwhelming majority.

Baltimore. Enoch Pratt F. L. More than a year ago the Enoch Pratt Free Library began the experiment of alternating fortnightly some of the cataloging force with the delivery desk attendants, the object being to improve the service by keeping the desk attendant more in touch with the other work of the library. This has proved so satisfactory that beginning with Oct. 1 this year, the system of alternation has been extended to include the custodians of the branch libraries. Some of these custodians have not worked at the central library, where all the catalog work is done, for more than 10 years. By bringing them to the central library for a period of three months it is believed that the service to the public will be still further improved, at the same time stimulating in the custodians a more lively interest in library affairs generally.

Boston (Mass.) P. L. (50th rpt.—year ending Jan. 31, 1902.) Added 35,835, of which 10,092 were accessions to the branches; total 812,264. For the central library 13,741 v. were purchased, for the branches 9437. The sum paid for books, periodicals and newspapers was \$49,232.21, as against \$44,575.20 for the preceding year. Issued, home use, from central lib. 324,527; from branches, stations and other agencies 1,158,966; total recorded, home use, 1,483,513; recorded ref. use in central lib. 379,423. New registration 11,562; cards in use 72,902. Receipts \$328,229.90, of which \$183,525.12 were devoted to salaries and \$97,110.36 to general maintenance.

The record of the year is, as usual, "one of large expansion." The library system now includes 117 agencies, as against 87 last year. "These comprise the central library, 10 branches, 21 delivery stations, 44 schools, 33 engine houses, and 8 city institutions. Not merely have new stations been established, but the hours during which many are kept open have been extended."

Numerous important accessions have been made to the collection, especially in illuminated mss., incunabula, American colonial histories, old Boston newspapers, and old English literature and drama; also books in Polish and modern Hebrew. The more not-

able titles are recorded. In current purchases, 3938 v. of fiction were added, and replacements and duplicates brought the total up to 8041 v., at a cost of \$7868.12, making the fiction expenditure about 28 per cent. of the total city appropriation spent for books. The trustees express their opinion that "most of the books of this character now published have little permanent or even temporary value," and approve of the present practice of diminishing purchases of such books "until their value can be tested by time." The special fiction committee has continued its work of reading and reporting upon current novels. Of 763 books—including children's books—so read, 422 were accepted by the trustees, including 27 unfavorably reported on by the committee, and 335 were rejected, including 107 favorably reported on.

The Bates Hall card catalog has been practically reorganized, a change involving the trimming and punching of some 1,200,000 cards and their readjustment in the 2100 cases of the catalog. "There have been printed, headings written for, and filed the past year 232,321 cards, as against 167,430 in 1900, and 153,500 in 1899. Of these 67,021 were placed in the special libraries. In addition 32,741 have been written and sent to the branches. In 1901, therefore, 265,062 cards were placed in the catalogs, as against 93,000 10 years ago. This is an illustration of the development of the library since it was moved to Copley Square."

The considerable increase in registration of borrowers is largely due to lowering the age limit from 12 to 10 years, and to library visits to the public schools, where applications for cards were received in large numbers. Reports are summarized from the various departments. Exhibitions of pictures have been continued in the children's room, and this department has been more largely used than ever before, especially in the branches. Especially interesting is the report of Langdon L. Ward, supervisor of branches and stations. Special effort has been made to make the branches centers of co-operation with the schools: "1, to serve the schools as city institutions; 2, with the assistance of the teachers to cultivate in the pupils the habit of reading at the time in their lives when they are best capable of acquiring it; 3, to make the school children so familiar with the public library that they will be likely to use it on leaving school, when the library may be their only educational opportunity."

Brooklyn, N. Y. Pratt Institute F. L. Several courses of lectures or instruction in the use of books have been planned for the winter season, if sufficient demand is found to exist. They include: 1, a course of 10 lectures for teachers, on the works of reference in the library useful to teachers and pupils, one lecture to be given each week, at a fee

of \$2.50 for the course; 2, instruction to students in the making of reading lists or bibliographies; 3, talks on the selection of books for children, intended for parents and teachers or for any one upon whom devolves the work of buying or recommending books for children; 4, special advice or reading lists for any persons engaged in any skilled manual labor or handicraft who desire such help. For these various lessons and courses a nominal fee will be charged.

Brooklyn (N. Y.) P. L. On October 6 the trustees received and granted application for a year's leave of absence without pay, made by Mrs. Mary E. Craigie, in charge of the travelling libraries department. At a later meeting, on Oct. 21, a letter was received from Mrs. Craigie withdrawing her application, and the leave of absence granted was rescinded. On October 30, Mrs. Craigie was formally suspended from her connection with the library, on charges of incapacity and insubordination. The charges specify carelessness and inaccuracy in keeping necessary records, cataloging, etc., the giving of unauthorized interviews on library affairs to local newspapers, infraction of rules as to library hours, and lack of discrimination in the selection of books for the travelling library collections. The charges were presented, and a hearing given to Mrs. Craigie, on Oct. 30, by the administration committee of the library board, which will report its findings at the next meeting of the library board.

Buffalo (N. Y.) P. L. The fifth volume of the "Publications" of the Buffalo Historical Society contains (p. 361-76) "An historical sketch of the Buffalo Library prior to the free library movement," by J. N. Larned; and "The Buffalo free library movement in the year 1897," by Henry L. Elmendorf (p. 377-84).

Davenport (Ia.) P. L. On Oct. 9 the trustees decided that the library should be known hereafter as "The Davenport Public Library on the Andrew Carnegie Foundation."

Dubuque, Ia. Carnegie-Stout F. L. The new Carnegie-Stout Public Library was opened to the public for the issue of books Oct. 20. No formal program was observed, but on the 17th the building was given over to the mayor of the city and by him in turn to the library board, after which public receptions were given on Friday and Saturday. The building is of the Roman-Corinthian style of architecture with the front of Bedford stone, and cost \$60,000. The architects were W. G. Williamson, of Chicago, and John Spencer, of Dubuque. About 18,000 volumes were turned over to the library from the Young Men's Library Association.

Kansas City (Mo.) P. L. (21st rpt.—year ending June 30 1902; in lib. *Quarterly*, October.) Added 2426; total not given. Issued, home use, 212,411, an increase of 8147 over the previous year; reading room use 61,917. No. borrowers 24,444.

"The most effective work of the library in recent years has been the establishing of sub-stations in outer districts. There are now 12 sub-stations placed in the schools furthest removed from the library. To provide from 200 to 350 books each month to each of these stations taxes the resources of the library to the utmost, more especially the children's department, for from this room the greater number of the books are selected."

During the year free access to the fiction shelves was permitted, and the two-book system was adopted.

New Haven, Ct. Young Men's Institute L. The 76th report, as printed in the local press, gives no statistics, but records a successful year's work. "Over a year ago a system of home delivery was inaugurated for the benefit of subscribers. The system, however, is not a great success, and is hardly likely to be a source of much profit. Recently, as contracts have expired, we have limited our subscribers to books that we would purchase in any event, and have advanced the subscription price to cover the expense of delivery. It is certain that the opportunity to read once a week a new or popular book is very attractive to some people, many of whom are too busy to go regularly to the library for the purpose of selection. But we cannot afford to do business at a loss."

New York P. L. — Astor, Lenox and Tilden foundations. (Rpt.—year ending June 30, 1902; in lib. *Bulletin* October, p. 388-415.) Added, circulation department, 15,986; total 218,818. Added central ref. lib. 33,741 v. (of which 12,951 were purchases), 128,270 pm.; total "on shelves and available for use" 571,081 v., 206,687 pm. Issued, home use, from circulation dept. 2,014,653; ref. use, Astor and Lenox buildings, 411,883. Visitors to periodical dept., central lib., 23,640.

The two fields of work represented in the library system—the home issue and school use of books through the circulation department, and the development and use of the great reference collections of the Astor and Lenox buildings—are so distinct that they cannot well be summarized together. During the year two more libraries have been merged into the circulation system—the St. Agnes Library, now the St. Agnes branch, and the Washington Heights Free Library, now the Washington Heights branch. The four reading rooms opened in 1901 in public school buildings were closed at the end of that year, owing to lack of funds by which the board of education could continue their support. The total home circulation of 2,014,685 v. was at-

tained through 202 distributing agencies, the travelling libraries alone having circulated 248,791 v. A list of the agencies is appended, which is striking in its revelation of the many points at which the library is brought in contact with educational, social and home life.

"The number of books lost by theft during the year in the circulation department is very large, as is the case in all open shelf libraries. The total number reported missing at the monthly partial inventories during the year at the 14 branches was 3480. This doubtless represents a permanent loss of at least 2000. Thus the annual loss from theft is one per cent. of the total number of volumes on the shelves, and one-tenth of one per cent. of those circulated. Of the total expenditures of the department, about 1.3 per cent. is for replacement of stolen books, and nearly 12 per cent. of the book appropriation is so expended."

The steps taken toward the erection of Carnegie branch buildings are noted; one site (for the Yorkville branch) has been secured and contracts signed for the building; the purchase of two others has been authorized, eight sites have been agreed upon, and 10 others have been approximately selected.

For the reference library the work of the various departments is reviewed, and statistics of accessions and use are given. In the document department extensive additions were made to the collection of American municipal documents. "Preliminary work on the index to United States documents relating to foreign affairs has been completed, a total number of 45,000 cards having been written to cover the period from 1810 to 1896." From the print department a series of exhibitions were held at the Lenox branch, which were examined by 13,294 visitors. Dr. Billings says: "As stated in my last report, the fund available for purchase of books for the reference department is not more than half the amount required to keep it up to date, and the selection for purchase has continued to be made in accordance with the rules stated in that report. The most urgent demands upon the library are for works in applied science, in political science, and the industrial arts, in American and English history, and for public records and documents, and serials of all kinds, and these demands have been met as far as possible."

Newport, R. I. Redwood L. and Athenaeum. (172d rpt.—year ending Aug. 20, 1902.) Added 1236; total 44,835. Issued, home use 15,958. Receipts and expenses, \$13,984.94.

In the spring a new two-story stack—the gift of the late George H. Norman—was installed. This will hold about 25,000 v. and is expected to meet the library's needs for a number of years to come.

The rearrangement of books, and greater freedom of space thus made possible have

proved a great advantage. There is still, however, an unrelieved congestion of books in the fiction room. New regulations have been adopted, restricting the issue of new books to not more than two new books, one non-fiction — although all borrowers are permitted to draw three books at a time, if desired — and refusing admission to the stack-room to the public and to transient visitors.

Niagara Falls (N. Y.) P. L. (7th rpt. — year ending June 30, 1902.) Added 2425; total 11,636. Issued, home use 76,148 (fict. 49,083; juv. fict. 16,756) of which 23,884 were circulated from the branch. New registration 4398. Receipts \$8872.62; expenses \$7945.63.

"Our work for blind readers is perhaps unique for a small library and may be of general interest. In 1898 two blind citizens made a modest request of the librarian for a few books. A 'Friend' hearing of this donated \$20 for the purpose. The gift was highly appreciated and the library supplemented it by a few dollars. We afterwards received a few additional books through the influence of one of our trustees, so that we now have about 50 well-chosen volumes. This has opened a new world to our readers who had read their few home books over and over again. The New York State Library, appreciating the great need throughout the state, has since started a travelling library for the blind, so that each reader in the state is entitled to a book sent carriage free both ways and the book may be exchanged at the end of a month. Ours was the first library to avail itself of this privilege and now our four readers have new books and music at will. With the addition of the two newspapers which we have on file they are well supplied with good reading."

Pawtucket (R. I.) P. L. The dedication of the beautiful Deborah Cook Sayles Memorial Building, the gift of Hon. Frederic C. Sayles as a memorial to his wife, was held on the afternoon of Oct. 15. Addresses were delivered by Col. Alonzo E. Pierce, chairman of the library board; Hon. Frederic William Holls, of New York; Mayor John J. Fitzgerald; and Rev. George Harris, president of Amherst College.

The library building was described and illustrated in the *LIBRARY JOURNAL* at the time when plans were accepted (*L. J.*, 24:258.) It is a beautiful structure of the Grecian type, and no pains or money have been spared to make its equipment complete in every detail.

Pittsfield, Mass., Berkshire Athenaeum. (Rpt., 1902.) Added 3351; total 42,092. Issued, home use 101,503; new registration 951; cards in use 6939. Receipts \$17,553.65; expenses \$16,539.06.

Mr. Ballard says: "One of the most important experiments for the year is the recent inauguration of the Tabard Inn Library system. The Tabard Inn Library is an out-

growth of the Book-lovers' Library, and under the same management. The payment of three dollars makes one a life member of the Tabard Inn Library, branches of which are being installed in all the important towns of the United States. Members draw books upon payment of five cents for each exchange, and are permitted to change them at any Tabard Inn Station which may be most convenient." Arrangement has been made, whereby for a fixed rental, the library receives the Tabard Inn service for a year. "For a yearly rental of \$150 we are provided with a large revolving book-case, now stationed near the delivery desk, and with 125 books per month for one year. This rental includes transportation both ways. At the end of the first month we are to return to Philadelphia the 125 books first received, or as many of them as we may choose, and receive in exchange an equal number for use during the second month, and so on.

"This means that during the year we may secure 1500 of the newest and most popular books of our own selection from a large catalog, for \$150, for 10 cents a volume. We are saved the expense and time of cataloging these books, an expense in itself equal to the amount paid for the entire service; and what is of more consequence, at the end of the service we are relieved of all the books. This frees us from the embarrassment of purchasing books to supply a temporary demand and should save the library about \$400 per year, besides affording a better service to the public. Each of the Tabard Inn books comes already labeled and ready for immediate delivery. The library makes no charge to its patrons for these books, which are placed upon precisely the same footing as our order, except that the time for which they are loaned is limited to one week. Any one, therefore, may draw one of these books from our library, carry it with them to read on the cars or elsewhere, exchange it in Boston or San Francisco, or any other city, for another Tabard Inn book, and return that one to us in place of the one borrowed here, paying five cents for the exchange in other cities. Thus far the experiment has proved successful and popular, and being unable to discover any possible objection to it I recommended the immediate extension of the service to 250 books per month. This should provide a sufficient number of such books as we do not care to acquire as a permanent possession, but which we much need during the period of their popularity."

St. Louis (Mo.) P. F. L. The library issues simultaneously, in separate form, its annual reports for the years 1897-8, 1898-9, 1899-1900, 1900-01. Heretofore the annual library report has been included in the mayor's messages and accompanying documents, and afterwards reprinted by the library. The present late appearance and simultaneous issue of

these four reports is due to the fact that for three years the last city administration printed no reports, and these are now published directly by the library board. As the record of the earlier years has been duly noted in these columns, it is necessary only to review the work reported upon for 1900-01.

Accessions for the year were 14,011, of which 10,485 were purchased at a cost of \$9913.96; total 144,625. Issued, home use 740-179, of which 189,306 were drawn from the main issue desk, 140,233 from open shelves, 156,544 from the juvenile department, and 254,096 from the delivery stations; ref. use 49,738. New registration 19,462; total cards in force 51,193, of which 12,934 are held by men. Receipts \$107,250.80 (city appropriation \$79,033.58); expenses \$89,053.67.

An interesting and well-arranged report. The circulation was considerably affected by the prolonged street-car strike, of May and June, yet there was, nevertheless, a gain of 32,356 in home reading and 3640 in reference use. "Of the total home issue more than one-third (34.3 %) of the books were drawn through the delivery stations and depositories; and of the issue on adult cards at the library 42½ % consisted of books drawn from the open shelves. For this department, instead of a sort of enlarged alcove, we need a special room with at least ten times the space now available. With such a room adequately supplied with the best books in each line, forming a select library of 15,000 to 25,000 volumes, it is fair to assume that the present percentage would increase to more than 50 %. Besides serving the convenience of the public it guides many readers to better books than they would otherwise read. It introduces many to good books which they never heard of before, and which they would not be likely to choose from a catalog."

The use made of library books in the public schools is given special attention, and the report includes a series of interesting statements made by school principals upon the value of library co-operation in this direction. Mr. Crunden also says: "An interesting experiment in the teaching of literature was tried in the St. Louis High School the past season. Principal Bryan applied to the library for as many copies as it could supply of the most popular works of the leading American and English writers of the 19th century. The list consisted chiefly of pure literature, including the best novels of Scott, Hawthorne, Cooper, Bulwer, Kingsley, Dickens, Thackeray, and George Eliot; the essays of Lamb, DeQuincy, Irving and Carlyle; and poetry of Southey, Burns, Wordsworth, Moore, Tennyson, Poe, Holmes, and Whittier. A few historical works were also sent, including those of Parkman, Morley, and Prescott, besides a few histories of Greece and Rome. In all, about 500 volumes, with as many as 10 copies of the more popular books, were supplied. Principal Bryan and vice-principal Schuyler pronounce

the experiment a success, and are this year extending it, especially in the study of history — calling on the library for as many copies of leading histories as can be furnished. Nothing can be more significant than the obvious growth of the pupils in mental grasp under the stimulus and the nourishment of this reading. Mr. Buck reports that in March they could comprehend and enjoy books which they vainly tried to read in November."

San Francisco (Cal.) Mercantile L. The library property was on Oct. 9 sold to Henry Kahn, for \$125,000, to be used for hotel purposes. Only a small part of the library collection was stored in the building, the present library headquarters being upon Sutter street.

The Mercantile Library, which was the pioneer institution of its kind in San Francisco, has been most unfortunate in its real estate investments. Organized in 1852 and incorporated in January, 1853, the Mercantile Library led a nomadic existence for many years. In 1865 the trustees determined that the time had come for the association to own a building of its own, and the mistake was made of going deeply into debt, purchasing a lot and building in the down-town business part of the city. By great effort the indebtedness was cleared off, but the competition of the Odd Fellows' and Mechanics' libraries came to be disastrously felt, and the value of the library property became a burden because of the heavy taxation and the fact that the character of the building was not such as to produce sufficient revenue. It was under these conditions that the trustees decided to erect a new building on the northeast corner of Van Ness avenue and Golden Gate avenue. The old property was sold in a depressed market for \$157,000, and the new lot was purchased for \$70,000, nearly \$100,000 additional being expended on the library structure. The experience of the first site was renewed on Van Ness avenue. The location was unpopular, and the inability of the Mercantile Library Association to pay either the principal or the interest of its indebtedness proved to be a millstone around its neck. It was at first found necessary to move out of the building and finally to sacrifice the property to avoid foreclosure of mortgage. As it is, probably not more than \$25,000 will be saved from the wreck.

Somerville (Mass.) P. L. The following circular letter has been sent to the various local Sunday-schools and churches:

"The Somerville Public Library has now decided to supply books to all Sunday-schools in Somerville which may desire such service. These books can be selected by any person or persons, designated by the respective Sunday-schools, and can be retained for a period of one month. Any number desired up to 100 may be so selected. No seven-day books can be selected for this service, and the library will retain the privilege of withholding any

other books in great current demand. The Sunday-schools must pay all express charges and be responsible for all damage done to the books.

"If your Sunday-school should desire this service, the public library will be glad to render it."

Washington (D. C.) P. L. The Carnegie building will be dedicated on December 16, when it is expected that Andrew Carnegie will be present.

Waterloo (Ia.) F. P. L. (4th rpt.—year ending Sept. 30, 1902.) Added 1231; total 6793. Issued, home use 45,473 (fict. 89 %). Cards in force 2917. Receipts \$176.76; expenses \$157.80.

FOREIGN.

Bodleian L., Oxford. Recent articles evoked by the Bodleian tercentenary celebration on Oct. 8 are:

The Bodleian and its founder. *Illustrated London News*, Oct. 11, 121:538-9. il.

The Bodleian commemoration. *Saturday Review*, Oct. 11, 94:452-3.

The Bodleian Library. *Gentleman's Magazine*, October, p. 327-32.

The Bodleian tercentenary. *Fortnightly Review*, October, p. 637-47.

The tercentenary of the Bodleian Library. *Speaker*, Oct. 18, 7:63-4.

Cambridge University. On Oct. 26 it was announced that John Morley had presented to Cambridge University the famous private library of the late Lord Acton, which had been the gift of Andrew Carnegie to Mr. Morley. In his letter offering the collection Mr. Morley said: "For some time I played with the fancy of retaining this library for my own use and delectation, but I am not covetous of splendid possessions. Such a collection is more fit for a public and undying institution." He said that Lord Acton's guiding object in the collection of these sixty or seventy thousand volumes was the securing of a history of the gradual substitution of freedom for force in government, and he expressed the desire that its unity be kept intact.

Hawarden, Wales. The library at Hawarden erected as a national memorial to the late William E. Gladstone, which cost \$50,000, was opened by Earl Spencer on Oct. 14. It contains Gladstone's private collection. Among the speakers on the occasion was Andrew Carnegie.

Leeds (Eng.) P. F. Ls. (32d rpt.—year ending March 25, 1902.) Added 212,396, of which 2325 were added to the ref. lib., 2321 to the central lending lib., and 13,039 to the branches. Issued, home use 366,266 from the central lending lib., and 493,371 from the branches. Visitors to central and branch newsrooms, 1,662,000. Cards issued 30,492. A new branch building was opened at Wood-

house Moor on March 12, in which "a new department of work was inaugurated in what is known as the juvenile reading room."

Trinity College, Dublin. DIXON, W. Macneile. Trinity College, Dublin. (College histories.) London, F. E. Robinson & Co., 1902. 17+298 p. 12°.

The chapter on the library of Trinity College (p. 220-233) gives an interesting sketch of its history and contents.

Gifts and Bequests.

Evansville, Wis. By the will of the late Almeron Eager, of Evansville, Wis., \$10,000 is bequeathed to that town for a free public library, to be known as the Eager Library, and to contain a marble bust of the donor.

Portsmouth (N. H.) P. L. By the will of the late Hon. Frank Jones, of Portsmouth, the library will receive a bequest of \$5000.

Librarians.

AYER-BLACKWELL. Clarence W. Ayer, librarian of the Brockton (Mass.) Public Library, was married on Oct. 1 to Miss Grace Blackwell, of Brockton.

CAMPBELL, Miss J. Maud, assistant in the reference department of the Newark (N. J.) Free Public Library, has been appointed librarian of the Passaic (N. J.) Public Library, succeeding Miss Cecelia Lambert, resigned. Miss Campbell has been connected with the Newark library, since its opening in its new building 18 months ago. She is a graduate of the Edinburgh Ladies' College, and holds a certificate from Edinburgh University. The engagement has been announced of Miss Lambert, for several years librarian of the Passaic Public Library, and Mr. William Lord Lyall, of Passaic.

CRANE, Walter, librarian of the Carnegie Library of Braddock, Pa., died at his home in Hawkins, Pa., on Oct. 19, aged 45 years. Mr. Crane was born in Rosshire, Scotland, and was educated in Glasgow and in Aberdeen. In 1881 he went to Boston, where he was admitted to the bar, later practicing at the bar. He gave up the law some 14 years ago and went to Joliet, Ill., where he founded a combination club house and library for the working men employed in the steel mill at Joliet. Here he came into connection with Andrew Carnegie, who later placed him in charge of the library and club work at Braddock. He had been a member of the American Library Association for three years. Mr. Crane is survived by a widow and five sons.

HARTSWICK, Howard B., assistant in the Pennsylvania State Library, has resigned that position to take up law practice.

HENLEY, Miss Daisy, has been appointed librarian of the Carnegie Library, of Wabash, Ind., succeeding Mrs. Anna Ziegler, resigned.

MARVIN, Miss Mabel, cataloger at the University of Wisconsin Library, has been appointed librarian of the Jacksonville (Ill.) Public Library.

MEAD, H. Ralph, for two years assistant in the reference department of Cornell University Library, has accepted a position on the library staff at the University of California and began his duties Nov. 1.

REED, Dr. George Edward, state librarian of Pennsylvania, resigned that office on October 26. The resignation was understood to be the result of Dr. Reed's desire to take active part in the campaign for governor. His successor, even if promptly appointed, would not have long to serve, unless reappointed, as Dr. Reed's four years' term of office expires on Jan. 31 next. Dr. Reed is also president of Dickinson College, and has long been prominent in political and educational circles in the state.

STROHM-McCONNELL, Adam J. Strohm, librarian of the Trenton (N. J.) Free Public Library, was married on October 30 to Miss Cecelia McConnell, of Chicago.

WANDELL, Miss Caroline, cataloger at the library of the University of Texas, has been appointed cataloger at the Carnegie Library of Houston, Tex.

Cataloging and Classification.

BALTIMORE MONTHLY MEETING OF THE SOCIETY OF FRIENDS. A list of books especially adapted for children and young people. Baltimore, 1902. 25 p. 16°.

This list of 200 books was prepared for the members of the Baltimore Yearly Meeting, whose membership extends through Maryland, Virginia and parts of Pennsylvania. It is classified and annotated. Publishers and prices are given.

THE BOSTON BOOK CO. *Bulletin of Bibliography* for October contains "Venice, a bibliography," by Edith H. Cobb, a list of "Best editions of James Russell Lowell," by Martha Thorne Wheeler, and a continuation of Mr. Cole's bibliographical record of "Bermuda in periodical literature."

THE BOSTON P. L. *Bulletin* for November contains a short reading list on "The Parthenon," and continues its reprinting of historical manuscripts with some interesting letters on the "raising" of bills of credit in 1776, and on bounties to soldiers in 1780.

DETROIT (Mich.) P. L. Municipal affairs: books and articles in the library. 1902. 44 p. nar. O.

A comprehensive classed list, including many analyticals, but exclusive of periodical references and municipal reports.

OSTERHOUT F. L., *Wilkes-Barre, Pa.*, has been publishing in its *Bulletin* a series of excellent lists on Architecture. These have appeared in the *Bulletin* for May, June, September and October.

PATENT OFFICE, *Great Britain*. Subject list of works on the textile industries and wearing apparel, including the culture and chemical technology of textile fabrics, in the Library of the Patent Office. (Patent Office library ser., no. 10; bibliographical ser., no. 7.) London, Patent Office, 1902. 128 p. S. 6d.

PEABODY INSTITUTE, *Baltimore*. Second catalogue of the library, including the additions made since 1882. Part 6, N-R. Baltimore, 1902. p. 3355-4118. 4°.

Among the most extensive subjects in this part of the catalog are New York, state and city, and Pennsylvania.

THE SALEM (Mass.) P. L. *Bulletin* for October, contains special reading lists on Autobiography and Benjamin Franklin.

U. S. DEPARTMENT OF AGRICULTURE L. Bulletin 43: Accessions to the department library, April-June, 1902. Washington, Gov. Print. Office, 1902. 37 p. (printed on one side.) O.

UNIVERSITY OF CALIFORNIA publications. Library bulletin no. 1, 3d enl. ed.: Co-operative list of periodical literature in libraries of Central California. Berkeley, Cal., 1902. 130 p. O.

This is a revision and extension of the list issued in earlier editions in 1880 and in 1892, the former covering the periodical sets in nine libraries of San Francisco and vicinity, the latter including the sets in 12 libraries. The present issue covers periodicals in 18 libraries, including one private collection—that of Dr. J. C. Branner, of Stanford University. It is a compact, title-a-line list in one alphabet, giving place of publication, year of issue, and number of volumes. Libraries in which sets may be found are indicated by abbreviations, and the extent of the sets available is also noted. There are about 4500 periodicals represented, at a general estimate; and the list should be a useful guide in its special field.

WISCONSIN F. L. COMMISSION. Buying list of recent books, recommended by the library commissions of Wisconsin, Iowa, Minnesota, Idaho, Nebraska and Delaware. no. 6, Oct. 15, 1902. 4 p. O.

FULL NAMES.

 Wooldridge, Charles William, 1847- (Perfecting the earth).
 Young, Gustaf Aron, 1865- (Hjälpreda för bibelskolan).

Bibliography.

DRAGON-FLIES. Harvey, Frances LeRoy. A catalogue and bibliography of the odonata (dragon-flies) of Maine, with an annotated list of their collectors. (University of Maine studies, no. 4.) Orono, Me., August, 1902. 16 p. O.

The bibliography covers four pages, and is arranged by authors.

EDUCATION. Cubberley, Elwood P. Syllabus of lectures on the history of education, with selected bibliographies. New York, Macmillan Co., 1902. 129 p. 4°.

There is a general bibliography of four pages, with special bibliographies for the lectures.

—WYER, J. I. Recent educational bibliography. (*In School Review*, October, 1902: 605-614.)

This fifth annual summary gives a critical account of 16 recent bibliographies on education.

FOSSILS. Hay, Oliver Perry. Bibliography and catalogue of the fossil vertebrata of North America. (Bulletin U. S. Geological Survey, 179.) 877 p. O. 45 c.

Contains bibliography and catalog of all the species of fossil vertebrates which have been described, up to the end of 1900, from all that part of the continent of North America lying north of Mexico.

FRENCH, Henry. Of bibliophilism and the preservation of books. (*In The Bibliographer*, October. 1:304-8.)

GEOGRAPHY. The bibliography of geographical literature for the year 1901, published in the September number of the *Annales de Géographie*, makes the eleventh annual issue of this useful record. It includes titles of more than 1000 publications, in 14 languages, most of them annotated. The editor is M. Louis Raveneau, who has been aided by 55 collaborators of various nationalities. The list is classified according to subjects and countries, with numerous cross-references and an index of about 2000 names of travellers and authors whose works have been recorded and analyzed.

NEGRO. Tillinghast, Joseph Alexander. The negro in Africa and America. (*In Publications of the American Economic Association*, May, 1902 [published in October], 3d ser., vol. 3.) 231 p. 8°.

Contains a 3-page bibliography covering the negro in West Africa, The negro under American slavery, and The negro as a free citizen.

NIAGARA. The fifth volume of the "Publications" of the Buffalo Historical Society,

edited by Frank H. Severance, secretary (Buffalo, 1902), contains (p. 433-95) a valuable bibliography entitled "Contributions toward a bibliography of the Niagara region: the Upper Canada rebellion of 1837-8." It is remarkably complete, with annotations for the more important titles, and reproduction of title-pages of rare volumes.

PERIODICAL LITERATURE. Marillier, Harry Currie. University magazines and their makers: being a paper read before the Sette of Odd Volumes. London, Howard Wilford Bell, 1902. 95 p. 24°.

Pages 71-93 contain a synopsis of the Oxford and Cambridge university undergraduate magazines and periodicals, from 1643 to 1899, with remarks as to the character, the number published and, in many cases, the chief contributors to each.

SAVINGS BANKS. Hamilton, James Henry. Savings and earnings institutions. New York, Macmillan Co., 1902. 436 p. 12°.

Contains a 4-page selected bibliography.

WINSOR, Justin. Yust, W: F. A bibliography of Justin Winsor, superintendent of the Boston Public Library, 1868-1877, librarian of Harvard University, 1877-1897. (Library of Harvard University: Bibliographical contributions, ed. by W: C. Lane, no. 54.) Cambridge, Library of Harvard University, 1902. 32 p. O.

It is a pleasure to note the resumption, after a four years' interval, of the valuable series of Harvard bibliographical contributions, and it is especially fitting that this number should record the literary activities of the man under whose direction the previous issues were prepared. Mr. Yust's bibliography is a most careful piece of work, and reveals to a surprising extent the variety of Mr. Winsor's literary work and the course of its development. The record is chronological, the first entry being the "History of the town of Duxbury," published in 1849, before Winsor entered college; from 1852 to 1868, it is made up of literary articles, reviews, verse, and metrical translations from the German; from 1867, when Mr. Winsor's first connection with the Boston Public Library began, bibliographical subjects dominate, and from 1878 to 1897 covers the period of his historical work. A list of obituary and biographical notices of Mr. Winsor is appended. Titles listed are given as fully as possible, and great pains have evidently been taken to trace fugitive writings and verify dates.

WOMEN. Bibliographisches Verzeichniss der französischen Litteratur über die Frauenfrage; von Tony Kellen. (*In Börsenblatt*, Oct. 3, 4, 1902, p. 7899-7903. 7940-7941; concluded Oct. 10, p. 8140-46.)

“METALLIC *versus* WOODEN FURNISHINGS”

is the title of an attractive little Brochure lately issued by us. We shall be pleased to put it into the hands of Librarians or Trustees interested in the **best** fittings for library buildings.

The growth in these lines has been so rapid that many officials are not yet conversant with their merits, but the question of Complete Furnishings for any modern library will not have been exhausted without an examination of these fixtures.

The very large demand for them for Commercial uses has indicated clearly their adaptability to library requirements; an indication substantiated by the increasing call for them for this purpose.

Our **Steel Card Index Drawers** are a prominent feature of this line, among whose merits may be mentioned—Durability, Incombustibility, Freedom from Vermin and Cleanliness.

Copies of our “Complete Library Catalogue” or “Library Plans” also sent on application.

Art Metal Construction Co.,

Ten Branch Offices.

JAMESTOWN, N. Y.

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

~~JENAMIN FRANKLIN STEVENS.~~

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,

4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Book-sellers of Europe.

Lists of Considerata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders or by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Subscriptions to Foreign Periodicals.

LIBRARIANS and others are requested to note the following prices of Annual Subscriptions to English Periodicals, which include postage from our New York Agency. The service will be found most punctual and reliable.

Academy, \$3.75; *Analyst*, \$2.56; *Annals of Botany*, \$7.67; *Annals and Magazine of Natural History*, \$8.75; *Antiquary*, \$1.70; *Architect*, \$5.25; *Army and Navy Gazette*, \$7.12; *Art Journal*, \$4.75; *The Artist*, \$3.25; *Athenaeum*, \$3.70; *Badminton Magazine*, \$3.40; *Banker's Magazine*, \$5.48; *Black and White* (incl. The Smith Premier Typewriter

*With CARD PLATEN
has been found invaluable*

MORE than 50% of the large libraries, using the typewriter for indexing, employ the Smith Premier. It does the work required in the most satisfactory manner and without any difficulty.

Used exclusively in such libraries as the Carnegie at Pittsburgh, the U. S. Patent Office Scientific, at Washington, and many others. Send for Free Catalogue.

THE SMITH PREMIER TYPEWRITER CO., Syracuse, N. Y., U. S. A.

OUR BOOK DEPARTMENT carries a larger and more general stock of the publications of all American publishers than any other house in the United States. Not only do we have the regular publications of all the prominent publishers of miscellaneous, technical, scientific, and school and college textbooks, but also thousands of publications of the lesser known publishers and thousands of volumes for which there is only a limited demand and which are not carried by the general bookseller.

We will gladly quote our prices to intending buyers, and invite librarians and book committees to call upon us and avail themselves of the opportunity to select from our large stock, and of the facilities and conveniences of our library department.

A Valuable Genealogical Library For Sale

WE have for sale a very remarkable and complete collection of books (about 4500 volumes) relating to British Genealogy and Local History, and comprising general and special works on family history, county and town histories, antiquities, heraldry, etc., etc. The collection is the result of some thirty-five years' diligent search and purchase by an intelligent and careful buyer who let no opportunity pass to secure valuable works on these subjects whenever offered for sale either abroad or at home.

Many of the most valuable publications, such as Parish Registers, were issued in very limited editions (sometimes restricted to from 20 to 50 copies only) which were generally all subscribed for in advance by libraries, and rarely, if ever, come into the market for sale. Complete sets of many of the Proceedings of genealogical and historical societies and kindred periodicals are included. The whole forms a very complete and unique working library for the student of genealogy and local history whose researches lead him into the rich field of British authorities on those subjects. To the seeker after the origins of American family history in England during the 17th and 18th centuries this collection is invaluable, and its peer probably cannot be found in any library in the country.

The owner having determined to part with it, has commissioned us to offer it for sale as a whole at a price which is not only less than its cost to him, but, considering the great labor and time necessary to gather such a collection, must be considered a bargain.

Further particulars may be learned by addressing us on the subject.

Very truly,

W. H. LOWDERMILK & CO.

We make a specialty of the correct arranging and lettering of works in foreign languages.

HENRY MALKAN

Library Department

THERE are two lines of our business that are of particular interest to librarians:

(1) We can furnish new books as cheaply and promptly as they can be bought anywhere. We are doing a large business in competition with the best New York houses.

(2) We have a constant supply of standard editions, reference works, etc., that we are selling at a discount of 20 to 50 per cent. from the regular price.

There are several reasons why we are selling books so low. We are always in the market to take off the hands of any publisher any remainder lot of really good or desirable books, if he will make the price low enough. Again we have our representatives in the auction rooms of New York, Boston, Philadelphia and London, and we are able to buy standard, rare and valuable books at a small part of their actual worth. As we pay cash we have no difficulty in securing plenty of genuine bargains.

The following list fairly illustrates the low prices we are offering on reference books:

Encyclopedia Britannica. Ninth Edinburgh Edition (Scribner). 25 vols.,

\$150; our price \$65.00

International Cyclopedia. 1900 Edition. 18 vols., cloth, \$54.00; our

price \$36.00

International Library of Famous Literature. With introduction

by Donald G. Mitchell and Andrew Lang. 20 vols., \$60.00; our price \$40.00

Ridpath's Library of Universal Literature. 25 vols., \$50.00; our

price \$34.00

Universal Encyclopedia. 12 vols., cloth, \$54.00; our price . \$45.00

We have a number of sets bound in roan and morocco which we will quote at low prices. Correspondence invited.

Warner's Library of the World's Best Literature. 45 vols.,

\$180; our price \$90.00

The World's Great Classics. 62 vols., \$228.75; our price . \$150.00

The Universal Anthology. By Richard Garnett and others. 33 vols.,

cloth, \$105.50; our price \$75.00

The World's Great Books. 40 vols. Library leather, \$200; our

price \$100.00

Larned's History for Ready Reference. Library leather \$36.00;

our price \$27.00

Special Notice to Librarians.

British Catalogues of New and Old Books posted by every mail.

Books sent by Mail, Parcel, or as Heavy Consignments.

Advance Auction Catalogues of Rare Book Sales.

Newspapers, Scientific Serials and Periodicals supplied promptly by mail or otherwise.

Librarians who require Books from Great Britain are advised to lose no time in stocking their shelves.

British published Books are becoming daily scarcer, owing mainly to the enormous increase of Public Libraries, and the widely spreading demand for British published Books.

The following opinion was recently received from a correspondent:

"For some five or six and thirty years you have given us a service which in point of intelligence, accuracy and promptness could not in my opinion be surpassed. We have never had occasion to correct an account or to complain of delay. The various duties of collecting blue-books, pamphlets, continuations, rare books, etc., and of binding and shipping, have been discharged with energy, rapidity and economy. Your advice has always been sound and to our advantage; and I must add that my most cordial acknowledgment is due to you for your constant patience and courtesy in the tasks I have so often gratuitously imposed on you—*in re*, case of public men visiting London and requiring assistance and advice. Wishing you every success in your affairs."

EDW. G. ALLEN believes that he may fairly claim to be a Benefactor to the Intellectual Life of America, having, during his long experience of Library Work, shipped to American Libraries over two million Books, of course involving a very large expenditure of money.

1856—1902.

THE LIBRARY JOURNAL

VOL. 27.

DECEMBER, 1902.

No. 12

THERE has been within the last few years a greatly increased interest among librarians in that branch of bibliographical effort termed either the "appraisal" or "evaluation" of literature. For this the persistent championship and generous support of Mr. George Iles has been mainly responsible, and the publication last summer of the "Guide to the literature of American history," made possible by his efforts, has put the "appraisal" principle on a practical basis that demands thoughtful consideration. Elsewhere is given a series of statements by librarians interested in the subject, dealing not only with the question of appraisal as represented by the Iles-Larned volume, but with the possible development of the scheme into that "universal bibliography" which has always flourished in the bibliographical Utopia. Although easily overlapping, these are really two distinct questions. The "Guide to the literature of American history" represents appraisal work that is to a degree practical. The cost must necessarily be in excess of the returns, but still it is within fairly reasonable bounds; and to its usefulness the librarians who have tested it bear witness. Time alone can give the final test, but there is no doubt that a series of such annotated lists for science, useful arts, biography, and other classes would be most useful tools to librarians and to students, and would help toward the more effective use of books. The Publishing Board of the American Library Association has made a beginning in work of this sort, and the improved facilities that the Carnegie endowment have given it should result in more extended work in this field which, within the limitations that practical considerations impose, is quite as much "selection" as "appraisal."

WHEN we take up the second phase of the appraisal question we are at once launched into the realms of theory. The proposal of Dr. Emil Reich, in the *London Times* last July, for the establishment of a central bu-

reau for the record and appraisal of the existing literature of the world, is one that has a perennial fascination for the bibliographer; but it is based upon a theory and not upon conditions. As Dr. Richardson points out, the difficulties in the way of such an organization—difficulties in the apportionment of subjects, in finding the men for the work, in getting the work done after the men are found, in handling the material, in maintaining the immense machinery required, not to mention the difficulty of keeping appraisal up to date for many classes of books, especially in applied science—make it an interesting exercise for the imagination rather than a matter of practical possibility. Dr. Billings' remark that with the expenditure of \$150,000 a year for the next 20 years some interesting bibliographical results might be secured, is caustic, but it represents fairly enough the attitude of the practical mind toward any scheme in which cost of equipment and maintenance is so disproportioned to the hypothetical results. The universal bibliography, if it comes, is more likely to be the result of the gradual fusing of different enterprises, each developed to meet the demand of its own constituency, than to be the new and independent creation of endowment or philanthropic effort.

ONE of the most important additions yet made to the materials of national bibliography has been the development during the past year of the card catalog system on a national scale by the Library of Congress. In the annual report of the Librarian of Congress, just issued, this enterprise is reviewed, and the plans for its extension are outlined. So far as the twelvemonth's experience goes to show, it has been proved practical and effective in method and a great convenience and advantage to libraries. In its relation to the individual libraries of the country this enterprise is a most interesting one, but it is even more notable as the most important piece of national bibliography yet

undertaken, with the possible exception of the British Museum catalog. As the issue of these printed catalog cards is extended backward to cover the full collection of the Library of Congress, and as the mass of current literature becomes more and more fully covered by them, there must necessarily be built up what the continental bibliographers have termed a "national repertory." This is exactly what the Library of Congress is creating, not only in the issue of these cards for its own collection, but in receiving and filing in one immense catalog the printed cards issued by other libraries for books not covered by the Library of Congress cards. To a very large degree, then, the work so successfully begun at Washington is to be regarded as closely connected with any general "appraisal" scheme, in that it gives the material for a current working bibliography, national if not yet universal.

In the report of the Librarian of Congress there is outlined an interesting enterprise, for which Congressional authorization and appropriation are asked. This is nothing less than an index to comparative legislation, covering the laws of the various legislative bodies of the civilized world. Presumably it will do for legislation in general, and on a broader scale, what the New York State Library has done for the legislation of the several states in its valuable annual summary of legislation. Mr. Putnam's scheme includes a descriptive statement of the laws recorded, reference to preceding statutes, and brief abstracts indicating the course of legislation, and it would involve periodical publication, probably monthly. He points out that its value is not only as a guide to the sources, but as a record of the trend of legislation, and especially as making available the immense mass of legislative material stored in the Library of Congress. This is an example of the sort of semi-bibliographical undertakings developed to meet special needs, which are important factors in strengthening and developing the general bibliographical equipment. The Library of Congress enterprise naturally offers many difficulties, in its world-wide scope and the provision for periodical publication; but if it is carried out it is to be expected that it will maintain the standard of

effective and careful work set by the New York index to state legislation, and will be of practical utility in a varied field.

Communications.

FRANCIS BACON'S TITLE.

BACON's title as viscount seems to be regularly given in library catalogs as St. Albans. This form is to be found in the catalog of the British Museum, the Peabody Institute, the Boston Athenæum, the Astor Library, and the Library of Congress. This is not surprising. It is not only the form of the title of the peerage now in existence, but it is also the form in which Bacon's title has been given (with or without an apostrophe) by the majority of those who have mentioned it; for instance, Horace Walpole ("Noble and royal authors"), De Brett ("Peerage," 1803), Macaulay (in his essay), Courthope-Nicolas ("Historic peerage," 1857), Dean Church (Bacon, p. 118, "English men of letters"), Burke ("Dormant peerages," 1883), and S. R. Gardiner (article Bacon, "Dictionary of national biography"). Bacon's title was so written by others than Bacon himself in the very year that it was bestowed (Spedding, "Life and letters," vii. 167 and 228).

For all this apparent weight of authority, the true form is not St. Alban, but St. Alban. So Bacon signed all his letters from 1621 until his death; so Bacon wrote the title in his letter to King James to thank the latter for the honors bestowed upon him (Spedding vii. 168); so Bacon's name was given in his sentence (Spedding vii. 270); and so it appeared on the title-page of the 1625 edition of his "Essays," as reproduced in the edition by W. A. Wright.

The title is correctly given as Viscount St. Alban by Spedding (vii 166), by Adamson (article Bacon, *Encycl. Brit.*) and by Doyle ("Official baronage"). W. STRUNK, JR.
CORNELL UNIVERSITY.

"LORD'S BEACON LIGHTS OF HISTORY."

I AM inclined to offer to my associates in library work the benefit of my researches into the way in which this work has been expanded, in the new edition now offered, to 15 volumes. The contents of the 10 volumes of the former edition have been largely rearranged, the volumes of the new edition being smaller in extent than in the old, and the chapters put together differently. Several chapters have been inserted from Dr. Lord's "Ancient states and empires" and from his "Old Roman world." Then vol. 13 is partly and vol. 14 wholly made up of chapters, some new and some republished by other authors, while vol. 15 is occupied by indexes and tables. This rearrangement of the contents invalidates the references in the A. L. A. Index for those who have the new edition.

W. I. FLETCHER.

AMHERST COLLEGE LIBRARY.

"THE APPRAISAL OF LITERATURE": COMMENTS AND OPINIONS.

IN view of the general interest among librarians on the subject of the systematic "appraisal" or "evaluation" of literature, especially as exemplified by the work of Mr. George Iles in the recent "Guide to the literature of American history,"* it has been thought desirable to give in compact form the opinions and comments of some representative librarians on this topic. The desire has been to obtain, so far as possible, opinions on the "appraisal" scheme as a whole—its practicality and working value—comment on the methods heretofore followed or suggestions for those to be developed, and indication of subjects that seem next to demand appraisal. The "appraisal" theory, of which Mr. Iles has been for so long the exponent, hardly requires re-statement. Briefly, it would provide for the publication, in all fields of literature, of exhaustive bibliographies, with annotations "appraising" or "evaluating" the worth or worthlessness of the books recorded, these annotations to be the work of specialists, each an authority in his own field, the whole appraisal scheme thus representing what Mr. Iles has called "the consensus of the competent" as to existing literature. The publication last summer of the "Guide to the literature of American history," as a result of the generous services of Mr. Iles, gave an excellent working example of appraisal, and has drawn renewed attention to the subject. The theory has been made the basis of various schemes for co-operation or consolidation of bibliographical effort, among the most recent being the plan of Dr. Emil Reich, outlined in the London *Times* last July (see L. J., September, p. 823) for a great elective bibliography to be carried through as a national or international undertaking. Dr. Reich's scheme elicited a somewhat varied correspondence from persons interested, among them being Dr. Richard Garnett, who pointed out some of the difficulties in the way of its execution. His suggestion is also akin in some respects to the proposal for a Bibliographical Institute presented at Magnolia last June.

* The literature of American history: a bibliographical guide [etc.]; ed. for the Am. Library Association by J. N. Larned. See L. J., August, p. 784-6.

The statements of those contributing to the present symposium follow:

ERNEST C. RICHARDSON,
Librarian of Princeton University.

IT must be said without reserve that Mr. Iles has put all librarians and students under obligations to him by his appraisal scheme. The essence of the plan is not new, but the plan itself as now understood is original, as against all predecessors, in its insistence on *quality* of evaluation, in its systematic character, and especially in the provision that the plan should not remain a theory but actually be carried out. Mr. Iles' work has made evaluation a felt need of librarians and students alike. It belongs therefore to the order of plans which are wholly good in essence, however one's taste may be as to detail.

The question of method is another matter and here there is room for difference of taste.

Mr. Iles' plan is really a double or triple one: Appraisal by selection, appraisal by annotation, and appraisal, perhaps, by classification.

Selection is in itself appraisal and generally involves also classification according to the readers for whom intended ("the young" or "English readers") which, in turn, is in itself true appraisal of an important and practical kind.

Appraisal by annotation is, however, the most characteristic part of Mr. Iles' plan and through his work this has been fixed upon us as essentially a part of modern practical bibliography.

Appraisal by selection is, of the two, it must be confessed, the more important, and all appraisal should start with the most careful attention to this method which declares that the book at least (1) is valuable, (2) is better than others in its subject, or (3) is better for certain readers.

This matter of selection is, as everyone knows, a most delicate and difficult one, and it is perhaps only saying what must be said of every selection when one says that Mr. Iles' Guide fails rather in selection than in annotation.

It is this most difficult matter of selection

which Dr. Reich's scheme means to meet. His plan requires, however, unlimited funds and unlimited time. Except with a positive genius for organization at the helm, it would take as many years as he asks months to carry out his idea with his methods. How much time will it take, *e.g.*, for each of ninety scholars to make up his graded list of 1500 books? Did Dr. Reich ever make such a list himself?

The scheme calls for (1) preparation of a Universal Bibliography of all subjects by a central office, (2) finding ninety scholars who will try to make the graded lists of 1500 books in their specialties within a reasonable time, (3) making them do it.

If Dr. Reich has made an exhaustive bibliography of any subject he will know how long the process is. If he has tried to make a select graded list of 1500 books he knows how much harder this is than one thinks. It is an exclusive work for at least two months for each man. How will he find ninety "scholars" to give their time unless it be spread over at least one year? And if he gets ninety unchallenged scholars who consent to try it in a year, he would not, unless he were a genius, get the work of 50 per cent. in less than fifteen months and of the other 50 per cent. in less than two years.

The plan itself of 50,000 selected works is a most admirable one. It is practically an ideal improvement of that very useful work, Sonnenschein's "Best books." If a select list were prepared in a central office by really competent bibliographers and then submitted to the scholars for addition and subtraction and, what is most important, for evaluation, the plan would become practical and relatively inexpensive. The plan of three original lists whose object is coincidence of opinion would get very little value at a very great expense. Three independent corrections of one original list would be not only simpler and cheaper but very much better.

If such a scheme as that of Dr. Reich's were ever to be put into actual operation Mr. Iles' idea of appraisal by annotation should certainly be joined to it. Even the scanty annotation of Sonnenschein we find of the greatest practical value and if to this should be added real criticism by competent men from various points of view, it would make an invaluable instrument.

If this should be done, the question of the method of annotation would become a most important one. The great objection that I find personally to Mr. Iles' method, in my own use, is that it gives only the authority of one man. This, to me, is nothing more than I get in reading a single review, whereas, what I want is the collated result of the opinions of several men.

I also find that almost all of the notes are too diffuse for the best use. What we want is the gist of the facts condensed in a very few words, which need not necessarily have even the form of a complete sentence. This economy of annotation is a matter of great importance.

In view, therefore, of the fact that we have two schemes of evaluation, (1) laying stress on the selection, (2) on annotation, and each open to certain objections in its methods, I suggest the following constructive scheme for an appraisal suited to the needs of the day:

(1) A list of the best 50,000 books in English, French and German (not more than half in any general class to be foreign) with the books best suited to the intelligent general reader starred, but no provision being made for babes and sucklings, who ought to be provided for (and certainly provided for) by nurses rather than by such a tutor.

(2) This list to be appraised by annotation.

(3) The first list to be made by a bibliographical bureau rather than by "scholars" and the first appraisal to be a very condensed digest of the best published reviews; this digest being also made by the bureau.

(4) This whole product to be submitted to comment and criticism to not less than three scholars in each subject and their opinions re-digested into both selection and annotation.

The following is the opinion of Mr. V. Lansing Collins, reference librarian of the university, who is by way of often testing the Iles'-Larned book: "Have used the book a great deal and found it useful, but think the list already needs revision.

"As for the general idea of appraisal—I think it is of greatest value in connection with reference books, but in the case of

general works it is not of great value, the evaluation of such books being generally a matter of personal taste."

W. I. FLETCHER,

Librarian of Amherst College.

THE beginning of the "appraisal of literature" for the benefit of library users is apparently found in the Boston Public Library's "Catalogue of books belonging to the Lower Hall . . . in the classes of History, Biography and Travel," published in 1873. That catalog was prepared under the direction of Justin Winsor, then superintendent, and in the preface signed by him we find the following statement:

"Some important changes have . . . been made in the manner of the cataloging: . . . 4th. Under the principal subject-references notes have been appended, concisely sketching, in some cases, the history of the literature pertaining to it, and often characterizing important or representative books, where the title does not sufficiently do it, in the hope to assist the reader to select books more nearly in accordance with his needs, or at least to advise him of the marked character of certain works, or of their general repute. . . . In this first attempt to add information of this kind to a popular catalog, there may appear errors of judgment, both in matter inserted and omitted; but if the plan proves, on trial by the public, to be of practical usefulness, it will doubtless be carried further towards perfection in subsequent editions."

As is well known, this new departure in cataloging was regarded as a long step in real library progress, and had a large share in making Dr. Winsor's well-earned reputation for practical bibliography. The "educational catalog," as it was called, of the Thomas Crane Library of Quincy, Mass., issued in 1875 under the editorial care of Mr. Charles Francis Adams, exhibited an extension of this method of annotation to an entire library, and was the model on which many other catalogs and finding lists have been based.

The new phase of book appraisal, of which Mr. George Iles has the honor of being the apostle and prophet, represents the effort to do centrally for the benefit of all libraries and their users what these annotated catalogs did for the individual libraries issuing them. It is thus a perfectly legitimate part of the work undertaken by the American Library Association through its Publishing Board, which is simply an attempt to do for libraries

in general by the agency of a central office and the printing press what the larger and better endowed libraries were doing for themselves, and by co-operation improve upon even that.

Looked at in this light, and this is its true light, this appraisal must meet the hearty approval of all library users, to whom it is of immense service.

But questions have arisen, and doubts have been expressed, as to the propriety of any attempted authoritative pronouncement upon the merits or demerits of certain books. It seems evident that if the appraisal becomes an expression of opinion, passing over from the descriptive character to the critical, it may be extremely difficult to justify it as a function of a library, a library board or a library association. The appraisal which is mostly wanted and which is represented in the "Annotated lists" so far issued by the Publishing Board aims to be mainly descriptive, as were the notes in the "educational catalogs." If it can be kept pretty completely within that field it is an entirely proper work for the Association, and one immensely useful to the libraries and the public.

The experience thus far had with it, however, goes to show pretty conclusively that good work of this kind is far too expensive to find support in the public patronage. Only by generous endowment can such undertakings be made feasible. Mr. Iles has proved his faith by his works, and furnished a liberal endowment for the work so far done. Even the gift of \$100,000 made by Mr. Carnegie to the Association for its Publishing Board work will not furnish the means for any considerable extensions of this work, and it remains to be seen whence the necessary endowment will come.

JAMES K. HOSMER,

Librarian Minneapolis Public Library.

IN our day, when books abound as never before, it is inevitable that the world should seek for some means of judging between the good and the worthless. If there were only some way of having books properly appraised! Are there authorities who, after reading books, will freely and frankly express opinions upon which we may rely in making our selection?

Feeling that the critical judgments of per-

sons of only ordinary capacity and knowledge have little value, we are turning to evaluation by specialists; and the hope seems to be entertained that if specialists can only be brought to bear upon literature as it flows, all will be well: we shall have guidance that can be trusted. The "Literature of American history," of Messrs. Larned and Iles, has been welcomed warmly as a noble step in the right direction. Similar compends of expert opinion are looked for in other departments of knowledge than history. In the matter of trustworthy criticism we feel that a better day is at hand.

But how far really can we trust the specialist? If we desire to look at him with care, we cannot do better than study the portrayal of him by Dr. Holmes. The Poet at the Breakfast Table finds seated next to him a singular looking figure: he is bald and spare; he often "wears goggles," he is habited in black which has become shiny as a beetle's carapace by much attrition, he diffuses a faint camphorated odor as of something escaped from a specimen case, his arms suggest antennæ, and he has "limbs with bends like a grasshopper—looks as if he might straighten them out all of a sudden, and jump, instead of walking."

The Poet feeling it a duty to cultivate so near a neighbor, tries to draw him out, venturing on a topic, as he thinks, of universal interest. "How do you think the vote will go to-morrow in the election?" "O, the election isn't to-morrow," replies the Poet's neighbor, "but next month." It presently comes out that the neighbor knows nothing of the city election, but is thinking of the election to the presidency of the Entomological Society, where, as he informs the Poet, the Dipterists and the Lepidopterists are to have a hot contest. "Are you an entomologist?" inquires the Poet. "Heaven forbid!" is the reply. "No one man can claim to be that: the subject is far too vast. You might possibly call me a Coleopterist, but I should be arrogant to claim even that. It is only one kind in which I feel an interest and my more proper title would be a Scarabeeist." The Poet takes him at his word, and the queer neighbor figures as the "Scarabee," in the annals of the Breakfast Table. When presently the boarders are invited to view a magnificent celestial phenomenon through

the telescope at the observatory, the Scarabee is too busy to accept. He is engaged in an investigation of the utmost importance, to discover whether or not the *Pediculosus Melittæ* is the larva of *Meloe*. The creature, it turns out, is a microscopic parasite, harboring in the bristly coat of the bumble-bee. The Scarabee has no interest beyond that; and if his investigation shall lead to certainty, as he hopes, he wishes no other epitaph, than that he is the man that put that vexed question to rest.

Dr. Holmes' Scarabee is not altogether a caricature. Nor are students of bugs any more liable to become thus narrowed, undergoing an atrophy of all wide sympathies, than students in other directions. Specialization tends to limit the interest of him who gives himself to it. His range becomes restricted: his eyes are trained to see only one thing; and human nature being what it is, all desire and all power to be broad are too often lost. Dr. Holmes might as well have taken a botanist, a chemist, or a geologist, as his student of bugs; or indeed, a historian, a theologian or a sociologist. Courts of justice have queer times with experts, as any old lawyer will attest. In any direction a student may specialize; and the tendency among all specialists, a tendency too often not adequately resisted, is to shut out of sight everything but the pin-points upon which attention has become concentrated.

Suppose, now, the Scarabee to be induced to take part in our scheme for the appraisal of literature. As a specialist his evaluation is sought of a book on entomology. Straightway the question will present itself to him; does the author show proper respect to the Coleoptera in general; and in particular, is he or is he not, heretical as regards the identity of my pet parasite with the larva of *Meloe*? The likelihood will be that if the author comes short as to the critic's especial points, his book, however complete and learned, will be denounced; or what is worse, damned with faint praise.

The writer has a specialist friend, who at the same time is candid and conscientious. Having in hand lately a critical task, he uttered himself in terms about as follows: "Whenever I set out to judge a book, I frankly confess I am beset by the tempter. The book I have in hand may be profound in

its scholarship, broad in its grasp, logical in its method, and eloquent in its diction. But the tempter suggests to me that these things be postponed. Has my pet hero been recognized as he should be? My own little theory as regards the coming to pass of this or that historic adjustment, has it been kept in view? Has not the writer spoken disrespectfully, or indeed ignored entirely, my *Pediculosus Melitta*? I frankly confess that in dealing as a critic with books, my especial tastes, possibly my fads and fancies, tend to cloud my judgment, making it not easy to do full and catholic justice. My besetting fiend is obstinate. 'This kind goeth not out but by prayer and fasting'; and I am forced to fortify myself for my critical work by careful exorcism, by mortification, and stern self-questioning."

Though this valiant striver may escape, too many an expert critic falls into the diabolical clutch. Many a noble book has been stabbed to death by expert criticism, not at all because the critics were malicious, but because they had become purblind through excessive study of details. It is necessary to recognize the peril, while we are calling for appraisal, and by critics of special knowledge rather than by the ignorant. But the ideal appraisal will not be reached until a specialization can be gained that is not handicapped for properly broad and generous evaluation, by petty narrowness and prejudice.

JOHN THOMSON,
Free Library of Philadelphia.

EVERY effort made in the direction of furnishing short bibliographical notes on publications must prove of great value to librarians who have the responsibility of selecting books for public institutions. It is an impossibility to have in any one library every book on an important subject or even to be certain of buying the best books without assuming to possess an almost universal knowledge. It seems, therefore, simple justice to regard all books prepared in the direction of an appraisal of literature with generous consideration rather than to hold up the selection of criticisms made by any one editor or by a committee of editors to a very severe standard. It matters very little how familiar a person is with books dealing with one par-

ticular subject for, as he discusses various volumes put forth on a matter with which perhaps he considers himself well acquainted, he will find such varying appraisals of the works in question, that the more he knows on the matter, the less positive and dictatorial he will be. The value of elective bibliographies must be of a limited character. In the case of great national libraries there is little use for these elective bibliographies, as the librarian is bound to secure (whether under the laws of copyright, the powers of persuasion, or purchase) pretty nearly everything that is written and published. Elective bibliographies become in such institutions books of reference only.

The second division of public library book collections will again be broken up into many classes. In cases where libraries can expend from \$10,000 to \$100,000 a year on the purchase of books, elective bibliographies have a very great value. For one instance in which they could be used as a guide to the librarian in the selection of books, they would have fifty users of the volume as a book of reference, affording to the student or reader a general knowledge of the books published on any particular subject or line of thought. If these considerations are founded on truth, then the question of the desirability of publishing volumes, purporting to afford to readers a just appraisal of literature, must depend to a large extent on what would be the use made of such books of reference and in a more important degree what would be the standard or critical value of the notes appended to the bibliographical description of a book, in so far as such notes would be a discrimination of the value of the work criticised. All such discriminations will, after all, depend upon the weight of the name and literary position of the writer of the note. It would seem in the publication of any such book, to be of prime value, that the name of the writer should be appended to each note and that the notes should be received and appended rather through professors in the line of study of each book than by way of extracts from reviews, even if such reviews are taken from the best and most highly esteemed periodicals. The fact that the A-, the B-, the C-, *Review* and so on, highly praise, severely condemn, or lukewarmly notice a book is not of much moment as compared with the expressed

opinion over his signature of a past master or expert in a particular line of study. The majority of review notices are written in "strenuous," and therefore very frequently useless, haste. They are written to be first to review a book and without proper consideration. The best reviews written weeks and perhaps months after a book is published are those most worth consideration, but to the newspaper and review mind are regarded with pity. You can hear the strenuous man: "What, only just reviewed? Why, that book was published the week before last!"

In some important books of appraisal, it has been found desirable not to insert one judgment or criticism only but to give at least three which may fairly set forth the varieties of judgment that are certain to exist on most books. As it is certain that in a short description of a book, uniformity of opinion will never be obtained, so in the appraisal of a book, diversity is equally certain to exist.

In all books of "evaluation" or "appraisal" or howsoever they may be termed, the principal value will always be in their giving a clever and accurate description of the scope of the work. Herein will lie the real success and value of the best "appraisals of literature."

JOHN S. BILLINGS,

Director New York Public Library.

THE world's literature down to about 1880 has been fairly well appraised, and the results are given in the larger encyclopædias, in the histories of literature, art, science, etc., and in collections of various kinds. The average man will, I think, obtain more information, and stimulus to further inquiry, from an appraisal of the epoch-making accounts of discoveries, theories, practical applications, or original productions in any branch of literature, if this is presented in the narrative form of an historical outline of the development of that branch, than he will if it is put in the form of a bibliography, which last will, as a rule, be used only by the special student.

Probably some interesting results could be obtained by the expenditure of \$150,000 a year for the next twenty years upon a Bibliographical Institution, but more interesting and valuable results can probably be obtained by expending the same amount in any one of a dozen other fields of work.

EDWIN H. ANDERSON,

Librarian Carnegie Library of Pittsburgh.

DR. REICH's scheme is interesting. Similar projects have been discussed from time to time in this country among those interested. There can be no doubt about the great value of such bibliographies to public libraries. It is easier, however, to plan the machinery for their production than to secure competent men to do the actual work. Dr. Garnett speaks with the wisdom of experience when he says, "the foreseen difficulties of any undertaking are nothing to the unforeseen." It seems to me that the difficulties incident to such schemes as those of Dr. Reich and Mr. Iles should be thoroughly understood, so that too much may not be expected of them. These projects seem to presuppose an approximate omniscience which may be hired in the market-place. Is there any such thing, even, as a "consensus of the competent"? If there were, outside the domain of physical fact, the world would be less interesting than it is. Are great scholars free from the influence of intellectual weather, of literary fashion? Is there not such a thing as the geography and climate of opinion? In compiling judgments concerning the best books in a given field shall allowance be made for these influences, and a thousand others; and if so, how much? The sitting in judgment on all opinions of mankind is no meek task. If it is frankly conceded and always remembered that select bibliographies merely represent the opinion of a few fallible scholars, such bibliographies will be of the greatest use to public libraries. If more is claimed for them, are they not barricades across the path to knowledge?

Looking at it from this point of view, the "Guide to the literature of American history," which Mr. Larned and Mr. Iles have so generously provided, is of the greatest value. I should like to see the literature of European and Oriental history similarly covered. I wish there were two or three such bibliographies for every branch of literature. We could then check one against the other and eliminate a good deal of the personal equation.

N. D. C. HODGES,

Librarian Cincinnati (O.) Public Library.

FIRST, I wish to make known my appreciation of the work of those who have given us the "Guide to the literature of Ameri-

can history." It is always an easy task to sit down alone with the cold results of another's work and find the weaker portions open to criticism. I have that respect for those who made the "Guide" to believe that in all the circumstances they produced the best their judgment dictated.

I query sometimes whether there is not a restless spirit among librarians which is urging them to do that which the best use of books does not necessitate. I query whether there has not been some over-cataloging and some over-indexing. Such books as the "Guide to the literature of American history" are certainly useful, but they are more useful to the librarian who is buying books, to the librarian without a library, to the embryo librarian in apprenticeship, than to the experienced librarian with books and with a library. The experienced librarian can carry in his head the general purport of anywhere from ten to a hundred thousand books. I think the late Dr. William F. Poole put the estimate at the latter figure. The experienced librarian should know all of the books mentioned in the "Guide," but if he were buying books for empty shelves doubtless the "Guide" would furnish him with a list and save him time and trouble.

The proper preparation of bibliographies is not so easy to-day. The stock of human knowledge has been increased many fold within a hundred years. President Eliot, of Harvard, has stated that not ten per cent. of the studies now taught at that university could have been taught at the beginning of the nineteenth century. Ninety per cent. of the contents of books are quite recent acquisitions to the world's learning. I am thinking at present of the subjects called "scientific." So much has scientific investigation been differentiated that it is little exaggeration to say that there are hardly a hundred people, very likely not more than twenty, in all the world directly interested in any one scientific paper, not to consider the few papers which chance to attract especial attention. The authors of such papers, having a sufficient knowledge of the special subjects, alone can prepare the bibliographies. Every well-prepared paper now published carries with it a bibliography and the same is true of books. The well-made book of to-day, in whatever the field, contains its bibliography and that

bibliography has been made by an author who has given to the subject all the time that the writing of the book necessitated. Of course, there are good books and poor books, and nothing is easier to ask than, Why has the author omitted a reference to this authority or that? The author may have given anywhere from six months to ten or twenty years to the writing of his manuscript and would, if present, give in a very few words a sufficient answer to a carping critic, ventilating ideas gathered in half an hour's perusal of the printed pages.

I do not wish to be considered as voting no on the proposal to have prepared an extensive appraisal of literature. Only it has been my observation that literary and scientific men when any such plan containing so many germs of usefulness is presented to them are inclined to give it their approval without much thought. The results of literary work and the results of scientific work are not measurable in dollars and cents. Every literary or scientific undertaking which commends itself to competent writers or investigators is worth carrying through. There are elements in the librarian's work—the bringing of books and readers together—which make it more akin to commercial enterprise and necessitate constantly asking the question—whether the greatest results can be obtained by the expenditure of a given sum of money in this direction or some other. The philologist or the physicist or the artist can do well only such work as from time to time appeals to him. Pot-boilers by any of these are failures. The librarian leads a comparatively work-a-day existence and when any new plan is suggested must ask himself whether by following that plan the expenditure of a dollar will produce greater results than its expenditure in some other way. The mental attitude of the scholar is by rights so different that his assent to the indexing and cataloging of late years suggested by librarians has perhaps been too easily obtained. I hope the evaluation of books will be given very careful thought before anything more is done.

WILLIAM E. FOSTER,

Librarian Providence Public Library.

1. *The appraisal principle in general.*

I favor the general principle of appraisal,

and shall be very glad to see it extended to other departments than American history. Professor Richard T. Ely's able arguments on the other side (in his paper at the Waukesha conference) should be carefully read by anyone who is interested in the subject. Nevertheless, the benefits would appear, to my mind, very largely to outweigh the disadvantages; and the latter are plainly more operative in some fields of reading than in others.

2. *Methods.*

I have no suggestions to make in regard to methods, other than those which I have already made—namely, that the annotations (whatever the subject) need to be as specific as possible. This is a point in which I have been especially interested; and in writing my annotations for the volume already published, I naturally aimed to give due attention to this need. In doing so, I found it a convenience to keep constantly before me a list of about thirty "searching" questions, of which the following are typical: "What facilities has this writer for treating this particular subject?" "Does the book aim to cover the whole ground?" "If it treats only a limited field, what is that field?" "Is the book essentially for reference, or for continuous reading?" "What audience does the author aim to address—the general public, or the special student only?" "In what respects, if any, does it supersede previous works on the same subject?"

There is another question about which it seems desirable to have as wide an expression of opinion as possible—whether worthless books ought not to be omitted from the list altogether, instead of being mentioned and condemned. There is perhaps something to be said on both sides of this question; but I will simply point out that in the volume already published ("The literature of American history"), it was frequently, and perhaps usually, the case that the selection of titles had not been made by the contributor who annotated them. The latter simply took the titles placed before him, and set down what there was to say of them.

3. *Other fields for appraisal.*

In a letter of mine, which is already in print, I have mentioned the subjects of natural science and applied science as calling for similar treatment. Conversation with other li-

brarians has developed other suggestions, as follows: European history, biography, geography, and bibliography. We shall "want" them all, but as we cannot have all that we want, it is plainly a perplexing matter to choose among them.

HENRY L. ELMENDORF,

Librarian Buffalo (N. Y.) Public Library.

THE appraisal of literature seems to me the most important subject, and the most difficult problem, now before the library world. We need elective bibliographies with notes to aid in the selection of books. We need annotated lists also to aid those who use the libraries in their choice of books. Such a book as the "Guide to the literature of American history," while extremely useful as a library tool, can be used by few out of the readers of American history in public libraries.

A distinction should be made between descriptive notes which give information in regard to the scope and character of books, tell the ground covered and the manner of treatment of the subject and other points that are a matter of fact and not of opinion, and critical notes which appraise the book, pass judgment upon it and assign it to its place in the literature of the subject. Of the first class of notes, given only that they are accurate and truthful, we cannot have too many. The second class is a very different matter, and we should be careful in our schemes of appraisal that we do not gather a mass of material more confusing than helpful. There are very few books, even in pure literature, that can be appraised once and for all. It has been said that every printed catalog is out of date before it leaves the press, and this is equally true of annotations, particularly on scientific and technical books. The books characterized as "the best" are soon superseded.

Opinions on books should be signed, or in case they are quoted the authority given, and dated in every case. We want to know whose opinion we have, whether it is the judgment of a known and trusted authority upon the subject, or the say so of some more or less competent readers' committee. We need to know, not only who gives the opinion, but when it was given. Take a well-known book for an example: Max Müller's "Science of language," 2d v., Low, 1861 and 1863, last

ed. 1899: "These lectures soon raised him to the rank of the standard authority on philology in the estimation of the English public. Though much of what is contained in them is now out of date, there can be no doubt that they not only for the first time aroused general interest in the subject of comparative philology in England, but also exercised in their day a valuable stimulating influence on the work of schools." Prof. A. A. McDonnell in *Sup. Dict. Nat. Biog.*, 1901. Such a note, dated and signed, will do to copy on the cards of our catalog, or print in our annotated lists.

It seems necessary that the appraiser should possess, not only a great knowledge of his subject, but that he should have great adaptability and a knowledge of people as well, that will enable him to discriminate between the notes suited to the "elective bibliography," the library tool, and readers' or students' aids.

The most needed appraisals from the library view-point seem to me those on technical and scientific subjects, which are the most difficult to obtain, and the soonest out of date. To be of value to libraries in selecting books, some plan should be devised to have books of this class competently passed upon promptly upon publication.

R. G. THWAITES,

Secretary Wisconsin State Historical Society.

If a reference librarian could have telephonic connection with one acknowledged authority in each branch of knowledge—or better yet, with a specialist in each of its subdivisions—upon whom she might at any hour call for guidance whenever a reader sought advice as to the bibliography of the subject, then I fancy she would adjudge her lot to be a happy one. Of course, were she a worldly-wise, discriminating young person, she would be aware of the existence in the world of other specialists than the one whom she was at liberty to ring up; she would understand that no two specialists in any field always agree as to the merits of the literature of the subject; she would not be liable to consider the judgment of her adviser as the last word upon the subject; she would be aware that another man at the end of the line, equally well-informed and disinterested, might give her a quite different reply, or that the same man might a year hence change his own views on the sub-

ject. Nevertheless, she would have reason for contentment; for the advice of any competent, fair-minded specialist, who understands the needs of the people for whom the librarian is catering, is doubtless far better than her own, and probably is the nearest approach to correct advice that is available in this world.

It is exactly this sort of special service that has been aimed at by Mr. Iles and his editor, Mr. Larned; it was the sort of thing striven for in the former's "List of books for girls and women and their clubs," and the admirable evaluation of books on art edited by Mr. Sturgis. All three of these gentlemen and surely each of their contributors appreciate the limitations of any system of evaluation which is to consist merely of one man's opinion, although that man be a specialist. The resulting guides have surely been and will long continue to be of great practical assistance to librarians and to readers. The only point to be remembered is, I repeat, that they should not be, as I fear they sometimes have been, accepted by our craftspeople as the definitive judgment of the great body of experts; but merely as the carefully-prepared opinions of certain men who know these books intimately, but who may entertain for them opinions differing materially from certain other men who know them quite as well. If the discriminating librarian understands this while citing the guides to her readers, she will properly be duly grateful for the possession of something which at least approximates the judgment of posterity. More than this, neither Mr. Iles nor Mr. Larned would expect.

Taking this qualified view of the importance of the well-edited evaluations thus far published under Mr. Iles' wise patronage and practical guidance, I am unequivocally of the opinion that further efforts in the same direction are well worthy of being made. The field of biography might profitably be tilled in like manner; so also economics, the social sciences, the science of government, and some of the useful arts and applied sciences. Perhaps biography at present offers the best opportunity; for many of the other fields mentioned are in a stage of such rapid transition that a volume of evaluation as delayed as necessarily was that on American history, might reach its public long after the books mentioned had ceased to be in repute.

J. C. DANA,
*Librarian Newark (N. J.) Free Public
 Library.*

THAT portion of the public which patronizes public libraries will rarely use an appraised list of books like the "List of books for girls and women and their clubs." Very few of this section of the public have ever been taught that there are experts in the field of belles lettres, or even that there are experts in the fields of history and science. They trust their doctors, rather blindly—unless they happen to be diverted to a Christian scientist; but the casual reader—a woman, for example, who attends to the preparation of meals every day in her life, and never has learned, and can't be taught, that experts have written cook books that must be exactly followed to get good results—how are we to expect her to learn that there are experts who can tell her what is better in poetry, history, fiction, travel, etc.?

On the other hand a few teachers and a few parents and a few librarians have made most excellent use of the particular list I have mentioned, and such lists are worth making for the use of these few. Many thousands of students and readers of the more serious kind, and many librarians in thousands of cases, have given thanks to President Adams for his manual of historical literature. How much more valuable in a like field will Mr. Larned's book on American literature prove to be! Appraisal, then, as Mr. Iles understands it, I most heartily believe in. Librarians should assist in the preparation and distribution of appraisal lists. I look forward with confidence to a time when the libraries of the country, having learned what co-operation really means, will issue from week to week a periodical containing estimates by experts of the latest publications in every field. If we were not as a body a little too much inclined to worry over the details of library economy, the minutiae of book-lending, etc., we would see even now the importance of more general co-operation and would be ready to produce, along the lines of Mr. Iles' suggestion, such a periodical as I have mentioned.

The time not being ripe for this, what topic shall be taken up in some other way, and in what way? The most important subject to

libraries and the one, as far as practical results are concerned, most valuable to the general public, is fiction. But I don't believe we are yet ready to undertake seriously fiction appraisal. It would be better for the present to encourage individual libraries to make select lists, to investigate the character of the fiction actually read in public libraries, and to try experiments in fiction supervision, and meanwhile to work out some system on which fiction appraisal lists can later be issued.

Much has been said by librarians about the use of libraries by mechanics and artisans. The figures of circulation show that this use is relatively very small indeed. Much more has been said in this direction than has been done. There is need of a series of brief lists of books on subjects included in the general term mechanic arts. The lists should include annotations and evaluations of the several books on them. They should contain from six to twenty titles each. They could be published first, perhaps, in one volume and then reprinted in separate lists to be sold at a moderate price per thousand. One list, of six books on electricity, for example, might include only such works as a small library would be likely to have or could afford to purchase. These same books would be in the largest libraries. This particular list would find users all over the United States. Another list on electricity might be one of 12 titles including only the most elaborate and most advisable works on some one subdivision of the subject like dynamos.

Next after this the most important field, from the popular point of view, would seem to be that of social science. There should be published a revision of Bowker and Iles' "Readers' guide." I understand this is not at present possible; but portions of it might be brought down to date and republished, in the form of brief lists, like those I have suggested in mechanic arts.

H. L. KOOPMAN,
Librarian of Brown University.

I FIRMLY believe in the "appraisal of literature." I have no fear that any active librarian will ever find too many helps provided for him in the selection of books, nor that any independent one will ever be in

danger of slavishly following their guidance. The value of a good annotated list is immense, not to the specialist, but to the general student and the librarian.

It should be decided whether books disapproved by the appraisers should be included in the lists. I believe they should in many cases. The more widely a poor book is circulated the greater reason for warning the public against it. But it would be foolish, for the sake of bibliographical fulness, to pull a book up out of oblivion merely to set it in the pillory. One thing is sure as regards methods: they must vary widely with different subjects.

As to new themes for appraisal, let me suggest one, topical fiction of literary value. This is a wider field than historical fiction, while the literary limitation may be drawn at such a line as to prevent the book from becoming too large. Another subject that appeals to me is description and travel. This is one of the few fields in which books grow more valuable with age. The appraised list, therefore, would never lose its value, as in the case of rapidly developing sciences and arts.

PURD B. WRIGHT,

Librarian St. Joseph (Mo.) Free Public Library.

SPEAKING from the standpoint of the smaller library, there can be no question either as to the practicability or value of any good, well-digested appraisal or evaluation of literature. To the librarian with countless duties to perform, time is the scarcest thing imaginable. Anything which will give an authoritative evaluation as to books on given subjects, without the necessity of spending hours with reviews, supplies an openly acknowledged need. The necessity is not for an annotated bibliography of all books published on a given subject, or of books not obtainable, so much as it is of books of positive working value. The Larned list must have demonstrated its great usefulness in all libraries, as well as to all students in the line sought to be covered, ere now. Emphasis may be laid on the worth of the appendix, comprising "Selected titles for students and readers," compiled by Professor Channing. To the little library, just starting, it must seem indispensable. When the supplement, bringing the subject up to date, is out, it might prove profitable for the A. L. A.

to publish this revised appendix separately in a cheaper form.

In any work of this magnitude little things must creep in now and then, it would seem, if only to emphasize the care required. An evaluation which says of a work, "It is the best book . . . which the author has written," and in mentioning other titles by the same author does not point out any of specific value is, of course, not perfect. No more than one book can be the very best on the same subject, hence it is a little disquieting to the would-be buyer with small purse to find a work described as "one of the very best of the state histories," and on another page a history of the same state, by another author, referred to conclusively as the "standard history" of that state. As a matter of fact, both titles were found to be out of print. These lines are not intended as criticisms of the "Literature of American history." The immensity of the work done by Mr. Larned, its rare worth, would disarm even the real critic — the critic competent to criticise.

As adding to the usefulness of future publications, it might be suggested that books of material value which cannot be obtained in the open market should be marked o. p. This is not of so much consequence to the student as to the librarian, but it will unquestionably save annoyance and loss of time to both. The page itself should afford reasonable space for marginal notes. In any such list, many books are reviewed and thrown out as "undesirable," to say the least. These may be referred to by author and title only, so that those interested will know that such titles have been passed upon. If placed at the end of the division or period sought to be covered, in small type, little space would be sacrificed.

The general plan of appraisal suggested by Dr. Reich, if carried out, would be simply beyond value to the library worker. One trouble is that it sounds too difficult to be probable. While it is being considered, and the vast amount of intricate human machinery arranged, much valuable time would be lost.

Meantime, work along the line already so admirably started should not be permitted to lag. Volumes comprising evaluations of English and French history, followed by American literature, English literature (fiction being barred in the two last named), biography, sociology, the sciences, would

prove of great usefulness to any library, whether in this exact order or not.

FREDERICK M. CRUNDEN,

Librarian St. Louis (Mo.) Public Library.

I BELIEVE that no other list would be of quite so great practical service as an annotated list of fiction. It seems to me that it would be well, also, to classify the list. Since the novel is now the popular form of treatise on any sort of subject, it would be a decidedly valuable thing to have a list of novels treating of specific topics. For example, all novels dealing distinctively with sociology might be sub-classed under

various heads, such as labor and capital, strikes, the land question, the marriage question. Then there might be lists of musical novels, and lists of novels of various countries, etc., etc. This classification in itself would be a valuable thing, and if the individual titles were also annotated, it seems to me the volume would be of great service. Next to this I think I should place the subject of biography, though almost alongside of this I would place annotated lists of the histories of various countries, beginning with English history, followed by French, Italian, German, and general European history.

CRITICAL BIBLIOGRAPHY, AND BOOK ANNOTATION.

By W. DAWSON JOHNSTON, *Library of Congress.*

THERE exists to-day some confusion as to the respective functions of the critic, the reviewer, and the bibliographer. This is shown both in the inexact use of these terms, and also in the tendency of critics, reviewers, and bibliographers to usurp each other's functions. The term critic is applied to the Hebraist, the journalist, and the bookman alike; the bookman passes beyond an examination of the book to that of the doctrines it contains, and the literary newsmonger assumes the airs of the critic.

It should be recognized that though criticism is proper to each of the branches of learning—historical, biological, bibliographical and all, there is criticism which never appears in the form of book reviews or bibliographies; it should be recognized, too, that there are reviews which are critical and reviews which are merely appreciations or advertisements, and that there are bibliographies which are critical and bibliographies which are mere lists or catalogs. In short it must be recognized that the critical or non-critical character of a piece of investigation or bit of literature depends upon its author and its object. When these things are recognized it will be easy for the reviewer and bibliographer, on the one hand, to distinguish the province of criticism, and no less easy for the critic, on the other hand, to perceive the value of the review and the bibliography. It will become evident that criticism will and must be heard in reviews, as elsewhere, and in bibliography, as in the other

sciences, and that there may be reviews and bibliographies which may be useful though not critical.

The function of the bibliographer and of the bibliographical note is to use not the evidence of the laboratory and the field, of archives and of logic, but the evidence of the library, with a view to describing not the character of the doctrines presented in a book, but with a general view to describing the character of the book itself. The value of such work as this has been questioned, and quite naturally.*

The first step in the development of a science comes when the question is asked, Is it worth while? Before that there has existed only a mass of uncritical knowledge; after that there is the possibility of an organized science. In the development of bibliographical science we have questioned in turn the value of the book preface, the value of the book index, and the value of the book note. In the last case as in the other cases the question is a rational one; amateurs have written amateurish notes and we have asked with reason, Are such notes worth much, if anything, to anyone except the author of them? But to condemn these notes and the system of book annotation together is wrong: the question, Are these notes worth while? should be resolved into the question, How

* See Richard T. Ely, "The trusteeship of literature," in *LIBRARY JOURNAL*, 26:22, and "Dr. Ely and bibliography," by the present writer, in the same volume, p. 670.

may these notes be made worth while? How may our empirical efforts be made scientific? How may these amateurs be converted into professional bibliographers? Has bibliography a distinct function in this connection? Has it a method and a terminology which may be employed in the execution of this function? To answer these questions is the object of this paper.

The first concern of those bibliographers who desire to add to their ancient function of cataloging this new one of book annotation is to determine the proper object of this function, the point of view of the scientific annotator. This has within recent years been commonly defined by the terms, "evaluation" or "appraisal of literature." It may be that this term will be found permanently useful; the dangers in its use should, therefore, be clearly recognized. Among them I have noted the following: it misleads the critic and is misunderstood by the reader; it leads the author of bibliographical notes to attempt too much, and it leads the user of them to expect too much; it implies the use of moral terms rather than scientific, of didactic rather than bibliographical, of epigrammatic rather than statistical, of vague and general terms rather than exact and specific, of verbs in the subjunctive mood and of adjectives in the superlative degree. In fine it places the bibliographer in the position of judge or priest of literature, and calls for judgment and for advice where neither are necessary or possible.

The primary object of the bibliographer and of the book note is the description of books and not the advice of readers. In the bibliographical description of a book the title, imprint, and collation, in more or less detail, stand first. After these comes the note. Sometimes this is a quotation from the preface, but in most cases this course is so inadequate that it has seldom been pursued by bibliographers. Oftener the note is a copy of the table of contents, but because of its formal character this is in many cases quite unnecessary, in many more, quite insufficient, and in more still, absolutely misleading. A still more common practice is to quote from reviews, but here the advantage is rather apparent than real; judicious quotation is possible only for the specialist, and for the specialist it is difficult to quote anything from a

review that will answer as a note. In short a bibliographical description of a book, on botany for example, is the work not of the botanist, either author or reviewer, but of the bibliographer. He may, and, indeed, he will use the preface, the table of contents, and the reviews of a book in discovering its character, but merely as evidence; the investigation will be bibliographical and the result original, and, if too much is not attempted, that result will be good.

This observation raises the secondary questions as to the content and scope of the book note. In this connection it may be worth our while to repeat that the bibliographer is concerned not with matters of doctrine but of fact, and that his relation to the book is not that of proof reader, reviser, editor, or reviewer. The truth of these general statements being recognized, it may be added that the note should consist of positive statements rather than negative.* There is no room in a note as there is in a review for the proper qualification of negative statements, nor is there much use in calling a work inaccurate unless we point out the inaccuracies. The inaccuracy and incompleteness of any work may be taken for granted. But, on the whole, a book that has passed the publisher's reader, and been accepted in the market is good; the question is, Good for what? On the other hand, our positive statements should not be composed of adjectives, least of all adjectives in the superlative degree. The words better and best, for example, are not applicable to the more valuable scientific publications, each of which stands alone in its field. They may be used in the description of manuals and general treatises, perhaps, but here the number of works belonging to the same class renders exact judgment and an exact use of these terms almost, if not altogether, impossible. Who that has used more than one text book of English history, for instance, would be willing to say which was the best? In short, in the case of either scientific or popular works the question with which we are confronted is not a moral one but

* I do not underestimate the value of negatives in the right place and from the right source; negation is as vital a process as affirmation, and the best way of describing what a book is, sometimes, is to tell what it is not. In exceptional cases bibliographers of exceptional learning should do this, but as a rule, I believe, it is undesirable.

a bibliographical one, a question not of characterizing a book but of analyzing it, of stating its permanent rather than its temporary attributes. The composite character of books must be more generally recognized; this is particularly true of biographies. What is original in a work must be discovered and indicated; of what authority it is and for what purpose composed, etc. And always it must be remembered that what is most obvious about a book to the specialist who has it in hand may be least obvious to the student who has not seen the book, to the student of the future, and to the beginner. We have touched upon this question of the content of the book note but briefly, but we must pass on to the other question of scope.

It has been said that mere literature and merely technical literature do not fall within the province of annotation.* It is not my intention in this place to demonstrate the error of this opinion, but simply to ask, Would it not sometimes be well to indicate that a given book is mere literature, if it is—that, for example the work on the construction of sheepfolds by that great sinner in the matter of titles, John Ruskin, is not a technical work but something else? I should like to ask also, whether the beginner in literature and the arts is not as much in need of bibliographical information as the beginner in other branches of learning?

In sooth we seem to be in less danger of falling into error in the annotation of current literature of this kind than in the annotation of the older literature of other types. The difficulty of finding the value of old books, and the difficulty of expressing that value are again and again seen. A given book in 1850 made certain definable additions to science. In a year or two that new knowledge became common property; and the new information which this book had supplied could be found in several books, modified and refined by subsequent observation and investigation. To fail to distinguish these dead books from the living is the greatest danger of the ambitious bibliographer; to confine himself to a description of the current literature of his subject is the safer, and, in many cases, the only wise course.

Finally, we must indicate how the scientific

description of books in all branches of learning is facilitated by the existence of bibliographical terminology. The terms, compends, comprehensive works, theses, monographs; the terms, standard, official, authorized, authoritative, and many more have come to have quite definite meanings, and in the description of books are quite sufficient and easily understood.

We have indicated above how the primary, the scientific object of bibliography may be realized in the description of a book. But the bibliographer has a duty to the reader of the book as well as to the book. The description of the book is of distinct and primary importance, for a knowledge of the book must precede knowledge of the uses of the book. But bibliographers must assist in the diffusion as well in the increase of knowledge; they must furnish bibliographical guides as well as bibliographical surveys. It is out of the question, as a rule, to indicate in a book note both the character of the book and the class of readers to whom it may be most useful. If the description of a book is accurate the class of readers to whom it may be useful, may usually be inferred. But whether it can be or not is of little moment, seeing that the reader who requires guidance needs a description of the standard literature of a subject, not of the current literature, and for such the special bibliographical guides intended for different classes, for Frenchmen, for Americans, for sociologists, for historians, for chemists, for women, and for children, are necessary. These guides are not in the nature of record, but are merely suggestive, and of merely temporary value. It is impossible for the bibliographer to do more than assist the librarian, the teacher, and the parent in directing reading; and it is often impossible for him to recommend the same book to-morrow that he recommended to-day. Because of the educational character which guides have, therefore, it is important that the most rigid care be taken in the selection of the books to be described. And it is because they must be select lists that I would have them annotated. In short, I would compel the compiler to give some reason for the selection which he has made. Then, perhaps, we might have more judgment in the preparation of our guides, fewer imposing book lists and more useful ones, less clerical labor and more scientific work.

* "The appraisal of literature," *Nation*, July 31, 1902, p. 88.

KRUPP FREE CIRCULATING LIBRARY
AT ESSEN, PRUSSIA.*

IN 1897 Mr. F. A. Krupp, the well-known "iron-king" of Germany and son of the founder of the Krupp Works, conceived the idea of adding a free circulating library to the many other beneficial institutions established by him at Essen, the home of the Krupp factories. Works of a purely scientific character, presupposing thorough technical training, were not admitted, such books being found in the valuable collection of scientific and technical publications which form a special library attached to the Works, and is always kept up to date. In May, 1898, work was begun and ten months later, on March 1, 1899, the library was opened with 8000 cataloged volumes on its shelves. Bound copies of a printed catalog of the collection were placed in the shops and "colonies" (*i.e.*, settlements and villages) built, owned, and controlled by Mr. Krupp, which house the many thousands of his employees. This catalog of 362 pages may also be bought at the "book hall" for 50 pf. (about 12c.).

The opening of this library marked a new departure, public or semi-public libraries in our sense of the word being practically unknown in Germany. English and American institutions served as models. Local conditions, however, necessitated modifications of the original plans, a few of which it may be worth while to review. The privileges of the library are confined to persons connected with the Works and their immediate families. This relegates it to the rank of a semi-public library, although the circulation equals and exceeds that of many public libraries of moderate size. As a matter of fact it is principally frequented by the skilled and unskilled workmen and the minor officials, the higher officials having other resources. During the first year of its existence, 8000 additional volumes were purchased and prepared for circulation, making a total collection of 16,000 volumes at the end of the first twelve months. A large percentage of this latter purchase consisted of works of non-fiction, or to be more precise, scientific and technical books of a standard which presupposed a trade or technical school training. The German taste for serious reading had asserted itself, many preferring no book at all to a work of fiction, so that these additions became imperative. To cite one example of many observed by the directors: a workman, in selecting his first book, asked for a work on "the hygiene and sanitary conditions and regulations in ancient Rome"; the second time he requested a treatise on medical plants, as he wished to familiarize himself with their healing properties, while the third book he asked for was one on phrenology. The directors found by

adroit questioning that not only had he read all three books, but that he had been able to sift and extract the particular information he wanted.

The library board looks forward to the time when circumstances shall warrant the installation of a gentleman capable of acting as adviser and informant, a man of breeding and culture, whose knowledge shall be at the service of the borrowers during library hours.

Although the writers of fiction are well represented novels as such do not form a class alone, but are combined with other classes, *e.g.*, Class D, History, includes all books bearing on that subject, hence historical novels are found in this class, or division as it is termed. In Class B, Belles-lettres, which also contains the greater proportion of the novels, though novels by no means form the bulk of this class, are found the classics of all ages, and all German translations of foreign literature, whether fiction or non-fiction. Books not desirable for young people (not necessarily children) are specially marked and not given to them. The staff, it would appear, has experienced no difficulty thus far in handling crowds, even in the beginning when it sometimes happened that over 100 people remained to be dispatched at closing time. It takes from two to three minutes to discharge a returned book and to supply the borrower with a new one, and seldom even during a rush is a reader obliged to wait longer than five minutes from the moment he hands in his books. Pictures with explanatory notes line the walls of the delivery room, and sliding frames render frequent changing of these pictures easy. In the delivery room stands a table with paper for wrapping the books, which every borrower is required to do before leaving the building; he returns his book in the same wrapper. The kind of work these people are engaged in necessitates this precautionary measure. When one considers that a large percentage of them handle machine oil and are surrounded by soot and dust all day, it is encouraging to note that only an average of 868 new covers were needed per month while the circulation fluctuated between 7648 and 19,126 volumes.

Every employee is available for membership, but at the termination of his connection with the firm, when drawing his last pay, he must return his membership card to the pay-bureau where the rosters are kept. On the rosters the letter *L* after a man's name indicates that he is a member of the library. The pay-bureau in turn sends the membership card back to the library, as a guaranty that all books were returned before the borrower left the Works. The management is averse to the infliction of fines and prefers persuasion, or moral suasion. During the year 1899-1900, with a circulation of 94,305 volumes, but one book was lost and only 111 were soiled and injured, and of these but 39 to a degree which

* The recent death of Herr Krupp, soon after this article was written, gives a special interest to this account of the library maintained at his famous Works.

necessitated the exaction of a fine. During 1900-1901, with a circulation of 141,000 volumes, none were lost, 30 books were soiled and injured, and 19 fines were inflicted. Books may be kept three weeks and then renewed if desired, and more than one book may be drawn on one card. Access to the shelves has not yet been introduced, and readers fill out slips from which the attendant makes selections. Books are reserved on request and readers are notified gratis when the book is ready for them. If a book is kept over time a "reminder" is sent on blue paper, the receipt of which the borrower is obliged to acknowledge. Should the "reminder" not have the desired effect a "notification" follows, leaving it to the tardy reader to either bring back the book himself, or to employ the library messenger (whom he must pay) for the purpose. Should the "notification" fail, the culprit receives a "summons" to appear in person at the library, and thus far it would seem that no further steps have been found necessary. The library retains possession of the borrower's card while he has a book out. The board of trustees, aided by the suggestions of a number of gentlemen who are interested in the Works and well-versed in book-lore, sees to the selection and purchase of all books. The books are accessioned as soon as received and marked with the date and accession number, thus: '00-2358. The accession book, in addition to the customary entries, has a space for the date of paid bills. After being accessioned the books are turned over to the cataloger with the exception of parts of continued publications of any kind, which are all held until the entire work has been completed and received.

The classification and grouping of books differ materially from the Dewey or the Cutter systems. The trustees in their endeavor to make things as easy as possible for their readers have let simplicity rank above bibliographic features. This, happily, has not led to serious omissions; on the contrary, great attention has been bestowed upon contents of compilations and upon cross-references. Titles, however, particularly in belles-lettres, had to be shortened, entries shorn of much not absolutely necessary, biographies entered only under the name of the subject. In the case of scientific works the dates of the different editions are carefully given. The books appear under 15 main classes, 13 of which have from two to seven divisions, two only of the latter being subdivided. The main entries are:

- A—General and miscellaneous works, with 4 divisions.
- B—Belles-lettres, with 7 divisions.
- C—History of literature, with 4 divisions.
- D—History, with 5 divisions.
- E—Biographies, Recollections, Correspondence, with no divisions.
- F—Geography and travel (*Länderkunde*) and Ethnology, with 6 divisions and 2 subdivisions.

- G—Natural science, with 5 divisions and 4 subdivisions.
- H—Arts, with 3 divisions.
- I—History of civilization, Mythology, Folklore and Fairy-tales, with 2 divisions.
- K—Law and Political science, with no divisions.
- L—Philosophy and Religion, with 2 divisions.
- N—Commerce, Trade, Technology, Domestic economy, Agriculture, Education, Sports and Hygiene, with 4 divisions.
- O—Heimatliches (anything of local interest), with 2 divisions.
- P—Foreign (any work in a foreign language), with 4 divisions.
- R—Books for the young (*Jugendschrifte*), with 3 divisions.

The Library Bureau catalog cards are used in all the card catalogs. Of these there are several—an author catalog, a subject catalog, which seems to be a combination of our subject and title catalogs, a so-called place or location catalog, valuable for statistics, and a fourth which serves as a basis for the printed one. These are the main catalogs, the rest seem to have more the character of special lists, compiled from the cards of the first named catalogs, to serve certain purposes. Lists of new books are promptly issued and freely consulted by the borrowers.

From the cataloging department the books, which are usually published in paper form in Germany, are sent to the binder, who binds them in accordance with a special contract, which covers his work in detail. All books are bound in half calf and sewed, tape being used in books larger than 15 cm. All maps are mounted on linen, with a margin left as wide as possible. Each book is treated in the same way and paid for according to size and a specific schedule, excepting when special cases require special treatment. The best material only being used, the binding is supposed to last and to withstand hard usage. The binder pays the return cartage. Any rebinding or doctoring of books is done in the "home-bindery" located in the library building. Upon their return from the binder all books are covered with a blue cover, which can be washed either with water or benzine. On this cover are pasted conspicuously the rules of the library and the words: "Be careful with this book and return it in time, for others wish to read it also." On the back of each book, near the upper edge is pasted a label on which are noted the class and book numbers, which include the size number. When a work of any description, already represented as a separate book in the library, is bound with or forms part of another, a dummy is placed next to the original copy on the shelves; this dummy bears at the top the marking of the separate copy and below this marking the class and book numbers of all publications in which it may be found. This, of course, would not apply to mere duplicates, which are simply stamped *A*, *B*, *C*, etc., and

placed next to the original copies. The books, instead of having Cutter numbers, have running numbers, D 134 meaning the 134th book in class D, etc., all subdivisions being ignored in the placing and arranging, and only main-divisions and the saving of room considered. Thus, it not infrequently happens that a book on sport is supported on one side by a cook book and on the other by a work on railroad transportation, for all three belong in class N, while in class A the ancients may be discovered hobnobbing with the most modern writers, or in class D the most exact of histories is looked down upon by the most inexact of historical novels. All books are measured and marked according to size, four sizes being recognized:

Up to 20 cm.....	size 1
From 20 to 30 cm.....	2
" 30 to 40 ".....	3
Over 40 cm.....	4

The size number is added to the call number thus: D 134².

In addition to the technical library, previously mentioned, there exist several collections of books which were all put in working order during the opening year of the free circulating library and by its staff. The reading room of the "Essener Hof" (Hotel) boasts of a fine collection of encyclopædias, dictionaries, grammars and reference books for general information, in all 192 volumes. The Casino collection of 723 volumes consists of scientific reference books and the classics of the world's literature. The 45 magazines and 42 newspapers kept in these two places are in charge of the free circulating library staff, and as soon as a volume of any magazine is completed, it is bound and becomes the property of the free circulating library. A third collection, numbering about 900 volumes of light literature, is placed in the hospital.

As a whole this latest undertaking of Mr. Krupp's has flourished and singularly few mishaps have been encountered. The library has grown steadily and now numbers 20,254 volumes. The opening of reading rooms, delivery stations, and branches is contemplated, in fact a beginning has already been made, and a cross between a branch and a delivery station has been opened at Cronenberg. It is located in the schoolhouse, near the main street, which leads to two other colonies. Being supplied from the central library, it has proved a boon to these colonies, particularly to the younger people; 20,220 volumes were circulated in 11 months. About 400 volumes are kept on its shelves independently of the requisitions from the main library, and these form a nucleus from which in time a branch will be developed. Mr. Krupp's "book hall" has been here considered only in its relations to its immediate community, but its influence does not stop there. In its maintenance Mr. Krupp has again assumed the rôle of pioneer, bearing in mind his father's motto:

"The purpose of labor is the common weal;
Only so will labor become a blessing,
Only so labor becomes a prayer."

His library is the first of its kind in Germany and is still in its infancy; and, although any knowledge concerning it which may have reached wider circles of the Fatherland has been gained incidentally, requests are constantly received from all sides, either for publications, information in regard to management, or advice and help as to the starting of similar institutions, so that the example it has set is likely to be followed elsewhere.

HERESA HITCHLER.

A METHOD OF KEEPING STATISTICS OF EXPENDITURES FOR BOOKS IN COLLEGE DEPARTMENTS.

IN a college library there are three questions regarding the expenditure of money for books which the librarian should be able to answer by consulting her records at any moment. These questions are: How much money is appropriated annually from different funds for the purchase of books? How is this money apportioned among the departments, Art, Biology, Chemistry, English, etc.? How much money has already been spent from the annual appropriation from each fund and for each department?

Generally such statistics are kept in books, the writing of which requires much time, and also quite a little expense if ledgers are printed especially for the purpose. Wishing to economize both time and money, we have devised the following plan for use in Wells College Library.

Our income for purchase of books is derived from different funds, and from each fund a certain amount is appropriated annually for each department. We use the Library Bureau order slips, making a card for each book ordered, and keep them arranged alphabetically by authors in an "Ordered" list, until the books are received. When the books arrive they are compared with the order slips, checked up on the bills, and the list price and cost of the books transferred to the order slips in the usual manner.

It is the use to which these order slips of books received are now put which forms our unique system of keeping accounts. Instead of filing the slips alphabetically by authors in one "Received" list, as is the usual custom, we divide them into as many groups as we have departments in college, *e.g.*, Art, Biology, Chemistry, English, German, etc., arranging the groups alphabetically by the names of the departments. As each order slip bears the name of the professor ordering the book, it is easy to locate its department. In front of each group of cards is placed a guide card containing the following items: first, the name of the department, *e.g.*, Eng-

lish, placed in the center of the guide card; second, the name of the fund, followed by the appropriation for the year, e.g., General fund, Appropriation, \$250, S 1901-Je 1902; third, the amount expended to date from the appropriation, e.g., Spent, \$25; this amount being increased on each invoice of books to the department.

But the fact that each department receives appropriations from different funds necessitates the division of groups within groups, e. g.: In the English department we have an appropriation from a general fund and one from the Morgan fund. Hence the slips for books bought with these funds are divided into their respective groups with a guide card placed in front of each group. The guide card for the general fund bears the heading "General fund," that for the Morgan fund has substituted upon it in place of "General fund," "Morgan fund."

In this manner any number of groups can be indicated at any time by inserting in alphabetical order by name of the special fund under the department a guide card showing the same. Hence, the arrangement is first, alphabetical by names of departments; second, alphabetical by names of special funds.

The "Ordered" and "Received" lists are kept in a case in the library where the faculty may consult them at any time and ascertain without questioning anyone how much money they have spent for books, and by comparing with the appropriation may quickly see how much is still available.

The objection may be made that there may be some outstanding orders, the cost of which must be taken into consideration. True, but there is the "Ordered" list beside the "Received," and the professor, knowing what he has ordered, looks for the card for the book or books in the "Ordered" list and notes the list price. From this he can make his estimates.

Another objection which someone might make is that the file of several years' lists would occupy considerable space. Certainly two or three years' accounts could be kept available on file, and then if desired stored in the boxes in which the order slips are purchased. After a few years the "Received" list slips would be of no particular use any way, as the guide cards could be preserved, if desired, and all other information on the slips would be available in the accession-book, catalog, or shelf-list.

The advantages of the system are, statistics are available in a concise form at any moment; no time is required for writing of records in a book or books, it being necessary simply to write the guide cards, which with us is done on the typewriter at the beginning of the college year, or as a new fund arises; no expenditure is necessary for the purchase of books for keeping the statistics.

Alice Evelyn Sanborn,
Librarian Wells College, Aurora, N. Y.

REPORT OF THE LIBRARIAN OF CONGRESS.

THE report of the Librarian of Congress, for the year ending June 30, 1901, just issued, is an interesting record of the steady growth of the national library in activity and usefulness. It is compact and largely statistical, dealing fully only with the two undertakings of most present significance—the reclassification and the catalog, and the distribution of the printed catalog cards. Accessions for the year amounted to 81,971 books and pamphlets, 62,913 manuscripts, 4896 maps and charts, 34,491 pieces of music (of which 12,906 were gained by transfer from the main collection), 20,676 prints, and 1961 volumes for the law library. The total number of books and pamphlets in the library was ascertained by a new count made in June to be 1,114,111, of which 92,582 are contained in the law library in the capitol; of this total 799,497 are classed as books of all kinds, the remainder being pamphlets. The recorded number of visitors to the library was 694,009; and in the main reading room 415,911 v. were issued to 119,382 readers, the highest issue for one day being 3348 v. In the reading room for the blind there was an attendance of 10,284 at the various readings. "The increase in number of readers compared with last year was 6488, or over 500 per month. The increase in the number of books issued over last year was 14,399, or 1200 per month. Over 40 per cent. of the books supplied to readers in the main reading room related to history, science, belles-lettres, and political science. Fiction found 11 per cent."

The library force now consists of 289 employees, of whom 231 are in the library proper and 58 in the Copyright Department; there are 91 persons in the Catalogue Division. "Nearly one-half the force is composed of women, at salaries ranging from \$360 to \$1400, inclusive." The increase in the last appropriations made possible a considerable addition to the force, which has now reached practically a normal mean. Among the more notable appointments were those of Worthington Chauncey Ford, as head of the Division of Manuscripts, of Oscar George Theodore Sonneck, in charge of the Division of Music, of James David Thompson, and of Theodore Wesley Koch. On the appointment to the library staff of specialists in various fields, Mr. Putnam says: "Such additions notably strengthen the judgment of the library in departments of knowledge where it has been deficient. . . . A library is not itself a laboratory either of science or of the arts. But a great reference library handling the advanced literature of science and of the arts requires for the classification and cataloging of this, and especially for its interpretation, besides bibliographers, a certain number of men who have also had specific training and actual experience in the methods and operations of science and of art. Such experts alone can

realize the need of the inquirer, can assume for the time being his point of view, can translate the language of his science or art into the language of the classification and catalog. The particular branch of science or of the arts which they have pursued is of less concern, an education sound and thorough in one branch being an education in *method*, applicable to all branches."

The more important accessions to the various departments are noted, among them being a complete set of the codes and rites of China, in 131 volumes, presented by W. W. Rockhill, who contributes an interesting description of the valuable collection of Tibetan books previously given by him to the library. Much has been done toward rounding out the collections of periodicals, and documents, and it is urged that Congressional action be taken authorizing the library to receive copies of the confidential publications of the Congressional committees, which are now not regularly received.

Special attention is given to the work of the Catalogue Division, and the report of Mr. Hanson, chief of the Division, is appended in full. Mr. Putnam says "The force in the Catalogue Division is now considerable in number and in a high degree expert. And it is a force pervaded by the professional spirit, which insures a high ideal, exclusive devotion, mutual helpfulness, and the sacrifice of personal interest and individual preference. It is, I believe, certain to make the most of the opportunity which is before it, an opportunity greater than is within reach of any such organization in any other library of the world, in that its benefits will extend beyond the particular institution to the entire country." Special effort has been made to advance the reclassification, which now covers bibliography, the greater part of history, and a large portion of the sciences. It has been found necessary to carry on the reclassification and the recataloging independently of each other, and when the main classes have been classified and shelf listed the efforts of the Division will be concentrated on recataloging. Naturally, the printing of catalog titles for distribution to other libraries, begun in December, 1900, has materially affected the work and organization of the Catalogue Division, and the beginning of card distribution in October, 1901, necessitated other changes. It is believed, however, that "when the library has once mastered the more difficult problems of internal administration which still remain, chiefly in connection with the arrears of cataloging and classification, it will be possible to bring this branch of its activity to a high degree of efficiency."

The process of preparation of the printed catalog cards is briefly outlined by Mr. Hanson, and Mr. C. H. Hastings, in charge of the Card Distribution Section, presents an interesting report of the work of that department, which has been developed to a remarkable degree of promptness and efficiency.

"The question how far the Library of Congress may properly allow its purchases to be influenced by the demand for cards has been much debated during the past 12 months. Many orders are received for cards for books which are merely reissues of books already in the library, but issued in more attractive or more convenient form. In regard to such books the decision has been that they should not be recommended for purchase unless there is good reason for supposing that they will contribute to the resources of the Library of Congress as a working library. Thus it frequently happens that hundreds of cards, ordered for some popular work of ephemeral interest, can not be supplied.

"One of the most serious difficulties in the work has proved to be the variation in edition between the book for which cards are wanted and that for which the Library of Congress has cards. The copyright law requires that to secure copyright protection a new edition must be recopyrighted if it contains substantial changes. But what constitutes a substantial change is left an unsettled question. As a result new editions are usually not recopyrighted, and in consequence cards cannot usually be furnished which will fit the new edition. This difficulty in the case of copyright books comes out, especially in the case of cards for recataloged books in American history. Standard and useful works, which are on the shelves of many libraries and for which numerous cards are likely to be ordered, are precisely the works of which it is likely that two or more editions have been issued.

"In the case of noncopyright books the Library of Congress does not usually care to purchase more than one edition. The library ordering cards may have another. In connection with noncopyright books the further difficulty arises that many important English books are published in New York with an American imprint. Many of the larger libraries now ordering L. C. cards buy the English edition of such books. Most of the smaller libraries, and some of the larger ones, buy the American edition. The Library of Congress usually buys the English edition, but sometimes it buys the American edition. It is evident that misfits between cards and books must occur frequently.

"Reprints of both copyright and noncopyright books with a new title-page are also a source of difficulty. A mere change in date calls for a corresponding change in the catalog card.

"For the difficulty in variation in edition no satisfactory remedy has appeared. If it were not for the fact that the English edition of books can usually be imported at considerably less than the price of the American edition, one element in the problem would perhaps settle itself, as libraries would naturally buy the American edition. If the copyright law were made more stringent in regard to

new editions and could be more strictly enforced, it would of course cover the other principal element. Publishers who abstain from the pernicious practice of changing the title-page of reprints, and of editions which are 'new' in little more than the name, help to solve the problem and should receive the commendation of all libraries."

Nevertheless it is estimated that over 90 per cent. of the cards for current copyright books are ready for distribution when ordered; for noncopyright books the percentage of cards received varies from 75 to 25 per cent. The various details of the card distribution work are fully described, and Mr. Hastings' report should receive the careful attention of all librarians interested in this important branch of co-operative work. As a supplement to its own resources, the Library of Congress has arranged to receive from the largest libraries now printing their catalog cards, all cards thus far printed and all cards to be printed hereafter. "From this source many thousand titles have been received during the year. These are now being arranged. The collection is already proving helpful to the Catalogue Division, and it will gradually become of great utility to scholars, since those working in the Library of Congress will be able to find out readily the resources of the other largest libraries of the country."

Mr. Putnam refers to Dr. Biagi's outline of the card distribution scheme, in the *Revista delle Biblioteche* for April, with his suggestion of a similar international enterprise; and to the report on the use of the cards, given in the LIBRARY JOURNAL for June, 1902—which, however, is erroneously ascribed to "a committee of the American Library Association." He adds: "The full significance of the distribution of cards by the National Library can be appreciated only after consideration of the various proposals and projects for co-operative cataloging which have been put forth in years past." The report reviews somewhat fully the activities of the various divisions, noting the publications of the Division of Bibliography, the reading room use, including the successful results of Sunday opening, and the work done in the reading room for the blind, where 169 readings and 41 musicales were given during the year.

For the fiscal year 1904 increased appropriations are asked, covering: increase of force, i.e., five stenographers and typewriters for the library; at \$4700, and nine persons in the copyright office at \$9020; increases of salary, in repetition of recommendations previously made, "to equalize certain salaries with certain others already paid in other divisions of the library involving no greater responsibility"; \$10,000 for opening the library for reference use from 2 to 10 p.m. on Sundays and legal holidays; \$4900 for service in connection with the card distribution work and other publications of the library; \$28,000 for the preparation of an Index to Compara-

tive Legislation; and \$105,000 (instead of \$85,000) for purchase of books, periodicals, etc.

The suggestion for an Index to Comparative Legislation is interesting, touching upon an entirely new undertaking. What is proposed is a comprehensive record of "the laws that are being enacted by the various legislative bodies of the civilized world. An index that would cover promptly, intelligently, and accurately the current legislation of the world would render a great public service—a service to the legislator in Congress, to the executive branch of the government in its diplomatic relations, to the scientific bureaus of the government, and to all students of current political and economic facts and tendencies. Published periodically, say monthly, it can be made to broaden its service to the aid of legislators, administrators, and investigators in all parts of this country and in other countries. The work should be done at Washington. It can only be done at the National Library, where the material is to be found or (with the aid of the consular and diplomatic representatives of the United States) can most effectively be secured. It will require not merely the current statutes promptly upon their enactment, but the files showing the legislation of the past. It will require subscription to a considerable amount of material which cannot be secured by the library as gift. It will require a systematically organized corps of special workers, besides the routine service for recording, classifying, and correspondence. If such a work can be organized at the Library of Congress it will do more than any other expenditure of a similar amount to make useful the great mass of legislative documents which are accumulating within its walls, and which it has an opportunity to accumulate unequalled by any other institution in the world."

The report of the Register of Copyrights is appended. It records a total of 92,978 entries, of which 84,345 were titles of works by residents of the United States; the total fees for these entries were \$50,805.50. The various articles deposited in compliance with the copyright law amounted to 169,726, a gain of 7443 over the previous year. An inventory has been taken of the whole collection of articles deposited to complete copyright up to October 1, 1902, giving a total of 1,052,906, of which 320,949 are books or pamphlets. The work of the office is summarized in careful detail, and Mr. Solberg again calls attention to the need of revision of the copyright laws and urges the appointment of a copyright commission to undertake that task. He says: "Our law as it stands is not only inadequate by reason of being based on antiquated models and because its modification has not kept pace with the great material development of the last quarter of a century; but it is difficult of interpretation, application, and administration because of textual inconsisten-

cies and contradictions. In justice to the interests of the literary and artistic producers of the United States, and also of foreign countries, the various copyright acts now in force should be welded into one consistent statute, simple in phraseology, broad and liberal in its principles, and framed to secure not only the fullest protection within our own widely extended territory, but the reciprocal international exchange of copyright privileges."

As its final appendix the report contains "A bibliography of co-operative enterprises and cataloging," compiled by Torstein Jahr and Adam Strohm.

CATALOGING AND THE NEW A. L. A. RULES.

THE publication of the revised A. L. A. rules by the Library of Congress, which has accepted them almost *in toto*, naturally makes catalogers consider to what extent they shall depart from their existing practice to conform to these rules. Large libraries can not very well make any radical changes but will adapt the printed cards to their own rules rather than aim to have their catalog cards consistent in minor points. The small library, the medium sized library, and any library undergoing revision, will try to come into accord with the A. L. A. rules because the Library of Congress through the means of the printed card will be looked to as the final authority on cataloging. Librarians purchasing the printed cards wish to have their rules uniform with those of the Library of Congress so far as the differences in the nature of the libraries will permit, in order that as little alteration of the printed cards as possible may be required.

It may be well to glance at some of the perplexities which arise in the mind of a cataloger after reading these rules and examining the printed cards. A large number of libraries at present use the Library School Rules with more or less modification. The large number of catalogers who have been trained in the various library schools according to the Library School Rules follow the order of author, title, edition, collation and imprint as therein given, which differs in some important particulars from the order of these items according to the new rules. Is it worth while to change? And is there any material difference in the case of reading a manuscript card when the imprint follows rather than precedes the collation? Some catalogers think there is such difference and that the imprint should come last. It is not an important point and must be solved by each library for itself, but in starting a new catalog or revising an old one it is best to follow the order as recommended in the new A. L. A. rules, which will also be adopted by Mr. Cutter in the fourth edition of his "Rules for a dictionary catalogue." One good argu-

ment for following the rule placing imprint, *e.g.*, place, publisher, date, after the title is that that information naturally follows on the title-page, while the collation must be obtained from an examination of the volume or volumes which necessitates turning back to the title-page for the imprint. There is a slight saving of time in its favor besides being bibliographically more correct. In putting the place and publisher's name on the written card, it is best to give only the first place of publication and the surname of the publisher.

The small library need not elaborate the details of paging, illustrations, etc. Economy of time in cataloging and the necessity of compressing the items on one card will make it necessary to shorten the collation. This can be done without radically departing from the Rules. The size mark can be determined by each library for itself (the letter symbol being generally in use in the newest libraries).

The edition should be considered a part of the title according to the recommendation of the committee, and should be given as it appears on the title-page, omitting only unnecessary words. This is bibliographically the correct way to treat edition, although it departs from the practice of many catalogers.

The chief difficulty occurs in deciding with regard to the heading, and just here comes in the necessity of considering the differences between cataloging for a large library and for a small one. No set of rules can be made to fit both kinds in all points. This is one of the things which it is difficult to make clear to the cataloger who has not worked in both, but it is exceedingly important to bear it in mind in deciding upon rules. The rules as finally agreed upon by the committee were designed primarily for the printed cards of the Library of Congress—the largest library in the country—which cards were intended to suit the needs of libraries of all sizes, from upwards of a million volumes to five or ten thousand, or less. What will suit a library of ten or twenty thousand volumes may be absolutely out of the question for a library of five hundred thousand. In the fulness of author's names for example, it was found necessary to recommend the fullest form of name in order that the large libraries could use the cards. A public library must find it more convenient to enter authors who write under pseudonyms under the pseudonym because the readers in most cases know no other name. A good rule to adopt for a public library (except perhaps the very largest closed shelf library) is to use the best known form of name and in case of doubt the real name of the author. This will apply not only to pseudonyms, but to names of married women, and others who change their names.

A radical change and one that is troubling catalogers is in the rule relating to books written by more than one author. Putting the name of the first author only in the heading is well enough for printed cards where

each card has the full title with the names of the authors in the title, the name of the second author being filled in at the top of the second card. On a manuscript card, economy of time has tended to shorten all secondary cards, so that on the title card appears merely the brief title of the book and the author's name. I believe that, where the present added entry cards are written, it is best to give the names of joint authors when not more than two in the heading, when more than two writing the first "*and others*," making the necessary added entries.

The ideal catalog card is one that gives the fullest and most accurate description of the book. The largest libraries find this an almost indispensable requirement for their proper working. With the multiplication of authors and editions the minutest differences must be brought out. The printed catalog card can give this information in a compact space while the written card must be condensed in order to compress the facts on one card if possible. The small and medium sized libraries do not require the same bibliographical fullness. Depending as they have heretofore upon written cards, as much compression as possible has been introduced not only for the sake of clearness but also for economy of the cataloger's time. The fact that the details are given in full is not a strong objection against using the entries of the Library of Congress cards in a small library, although that library would omit a large portion of the items on its written cards. A reader is not so apt to be confused by full title and collation if printed as he is if they are written out even in the best library hand writing.

The Committee has not as yet considered the rules for manuscript catalogs, its first object being to make a code of rules for the printed cards. It is for this reason that the subject of cross references and added entries was not discussed. The cataloger must remember that these are most essential and Cutter's Rules and the Library School Rules should be referred to when in doubt. The Library of Congress on its printed cards does not specify added entries and references, so that these must be supplied by the cataloger. A good plan for the cataloger using the new A. L. A. rules is to go over them carefully and write the word "refer" opposite each rule where a reference card is necessary, e.g., in the case of joint authors, pseudonyms, etc.

The advance edition of the Rules while printed as "advance" is not subject to any radical change. Alterations of some minor rules may be made, but the rules as printed can now be adopted without fear of many decided changes in the future. Cataloging is at the best a complicated subject, comprising many differences of opinion among catalogers, and even frequent changes of opinion in the expert cataloger as new prob-

lems confront him, so that we can not expect a code absolutely final in every detail. The best advice to a cataloger is to cast aside prejudice as much as possible and to consider fairly new developments in his subject, especially when these are largely the result of the experience of catalogers in such libraries as the Library of Congress and others. Be willing to change your rules even at the expense of inconsistency if something better can be found. A catalog should be judged by its usefulness to the public and not by its beauty nor its consistency, if these conflict with its usefulness.

ALICE B. KROEGER,
Drexel Institute Library.

A. L. A. CATALOG OF 1904.

INSTEAD of supplementing the A. L. A. catalog of 1893, as at first proposed, it has been decided to revise and enlarge it to about 8000 v., as the main exhibit of the American Library Association at the Louisiana Purchase Exposition at St. Louis in 1904. While the work will center in the New York State Library, the catalog will represent, as its name implies, the best judgment of the many members of the A. L. A. interested in providing the most practical guide for librarians and readers. Although comparatively few can be called on by name, every one is as cordially invited to lend a hand as if asked personally. Specially welcome will be opinions as to usefulness of specified books arising from actual experience, dissent from leading reviews based either on experience or definite knowledge and original or quoted notes.

From the 1893 catalog should clearly be dropped books out of print (unless easily obtainable), as well as superseded books and editions, but by the present plan other titles will be retained as representing the best judgment of the most competent members of the association, which for standard literature is as valid to-day as 10 years ago. Is it the general opinion that their selection should be challenged, or accepted as the best foundation on which to add the best books of the succeeding 10 years? Are there too many expensive and scholarly works of not enough service in small libraries to justify buying in the first 500 or 8000 v.? On these and any other points the editor will be glad to hear, either directly or through the *LIBRARY JOURNAL* or *Public Libraries*.

It will be a great convenience if contributors will send titles and notes on slips of standard catalog card size (7.5 x 12.5 cm.), so that they can be inserted in the official file without copying.

Proofs will be mailed to those willing to read tentative lists, and return them with criticisms, if they will send their addresses, specifying subjects they wish to see, to the editor, Melvil Dewey, State Library, Albany, N. Y.

THE CASE OF THE DESK ASSISTANT.

ALTHOUGH thoroughly in accord with everything the desk assistant has to say regarding library hours, I cannot see that she has even suggested a way out of the difficulty. Let me suggest two, although I believe only in the second.

1. Close all libraries between the hours of six and seven.

This may not seem practicable, as the public would surely protest, and the assistant would have to live near the library or get her dinner nearby.

2. Employ a day force and a night force. This is feasible, but the outlay is only possible to a few of the large libraries.

The desk assistant time schedules quoted in the article under discussion are fixed and do not vary from week to week. Am I then so very far wrong in thinking that the irregularity of the meal hours in a library being a regular irregularity is not as harmful as one might suppose? The question of the library stomach ought to be an interesting one to the medical profession.

From personal observation I have discovered that library assistants as a class object to changes in an established time schedule.

The library with which I am connected is conducted under time schedule B (as per *LIBRARY JOURNAL*). The necessity for employing another assistant arose recently in the delivery department, and the hours were fixed from 10.30 until 6 daily, except Saturday, when the hours were from 1.30 until 9.

This meant a hot dinner every night in the week but one, and the hours were offered to every one in the department and refused, because every assistant was perfectly satisfied with the hours she had and would feel it a hardship to have to change. They all preferred having time off until 3.30 every other day to the hot dinner and the extra evenings.

Some years ago I asked the assistants in a particular branch of a large library why they did not give up their day off a week and work seven and a half hours each day to make up their required 45 hours per week, instead of the long nine-hour day five days per week, but they all answered with one voice that they preferred a nine-hour day with the day off to the arrangement offered.

What I have said is simply in the hope that some remedy may be suggested by the desk assistant herself, for I am certainly heartily in sympathy with any movement which tends to her relief, and since librarians are without ideas upon the subject let her agitate the matter still further.

I do, however, wish to take issue with her upon the erroneous interpretation of a portion of the "Imaginary conversation" between a librarian and a desk assistant, printed in the May number of the *LIBRARY JOURNAL*.

When the librarian says that "you can hardly expect the library to take cognizance of your affairs outside of the seven or eight

hours for which you were engaged," etc., nothing was further from the thought of the writer than the fact "that the desk assistant has no requirements apart from her work in the library, to which she must gradually sacrifice strength, health and social life."

It seems almost trite to say that what was meant was simply this, that no one can attain to the highest positions, whether in a library or any other profession, without spending time and strength outside their working hours on their chosen life-work.

If this is an impossibility owing to lack of health, family or other reasons, what can the librarian do?

He usually takes a general interest in all his assistants, and knows their virtues and their faults pretty thoroughly, but it must be remembered that the librarian of a modern library expends in a far greater measure than any assistant his energy, strength, and thought upon the institution committed to his care, and it would be a physical impossibility to take that extreme personal interest in every assistant which the writer of the article seems rather to expect. BEATRICE WINNER.

PRESIDENT ROOSEVELT ON PUBLIC DOCUMENTS.

From the President's Message, Dec. 2, 1902.

THERE is a growing tendency to provide for the publication of masses of documents for which there is no public demand and for the printing of which there is no real necessity. Large numbers of volumes are turned out by the government printing presses for which there is no justification. Nothing should be printed by any of the departments unless it contains something of permanent value, and the Congress could with advantage cut down very materially on all the printing which it has now become customary to provide. The excessive cost of government printing is a strong argument against the position of those who are inclined on abstract grounds to advocate the government's doing any work which can with propriety be left in private hands.

It could be categorically proved that the best results in this world, either in books or life, had never been attained by men who always insisted on doing their own steering. The special purpose of a great book is that a man can stop steering in it, that one can give up oneself to the undertow, to the cross-current in it. One feels oneself swept out into the great struggling human stream that flows under life. One comes to truths and delights at last that no man, though he had a thousand lives, could steer to. Most of us are not clear-headed or far-sighted enough to pick out purposes or results in reading.

GERALD STANLEY LEE.

A WEEK'S WORK IN THE CHILDREN'S DEPARTMENT OF THE PROVIDENCE PUBLIC LIBRARY.

To the *Providence Journal* of December 1, Mr. W. E. Foster contributes an interesting outline of "a week of work" in the children's department of the library. Somewhat condensed, it is as follows:

On Monday morning, various memoranda are received from the Sunday attendant, relating to the work of the day before, and call for extended consideration, especially some of them which relate to reference work undertaken with the children using the library on that day. In no previous year has the volume of work on Sundays and holidays, and also in the evening been so great. On this morning also memoranda are made in regard to periodicals needed in this department during the coming year. In the afternoon there is a steady stream of young readers, both new and old. Several children come in and quietly establish themselves in the class room, adjoining the children's reading room, for the consultation of the useful little collection of reference books to be found there. They know what they want, and they know how to find it.

During the next forenoon the children's librarian takes down the pictures which have been hanging on the wall of the class room, and replaces them with a new collection. The latter comprise portraits and views of American authors and their homes, also English authors, and also American public men. The whole is placed there in connection with certain school exercises. In the afternoon a class of about 80 pupils from one of the grammar schools is welcomed to the privileges of the library, and the methods of using the library are explained to them, in accordance with a prearranged program drawn up in consultation with the Superintendent of Public Schools. This program provides for a visit to the library by the ninth grade classes of all the grammar schools in succession, each class in charge of two of its teachers. At the appointed hour the children arrive, take seats in the large lecture room, which is conveniently situated on the same floor with the children's library, and listen to the suggestions made by the children's librarian. These suggestions are of the most practical nature. They draw attention to the important or significant features of a book, as the title page, copyright date, table of contents and alphabetical index. They include also the use of the most serviceable books of reference, as cyclopædias, atlases, biographical dictionaries, etc. They include also the use of the card catalog, the blackboard being pressed into service, to show in a graphical way what the form, the arrangement and the purpose of the catalog cards really are. For an hour or more after the conference in the

lecture room these children are to be seen in the children's library, putting the principles which they have received into practice; and this is, of course, only the first of many successive visits. The best of all is that the visit not only constitutes the child's introduction to the library, but to a library attendant with whom he is immediately placed on terms of confidential intimacy, and whom he will from that time turn to as one of his best friends.

The next morning is largely given up to a conference with the director of the "home libraries" movement. This admirable feature of philanthropic work has been developed largely under the charge of a committee of the local societies, and the visitors are connected with that organization; but these attractive little collections of books are always sent out from the Public Library, and call for no little intelligent planning and sympathetic suggestion on the part of the children's librarian. In the afternoon there are visits from several of the teachers who have taken the trouble to come personally to the library, and make copious notes of the materials to be found there, which they can turn to advantage in connection with their classes. At this time also occurs the monthly meeting of the ninth grade teachers, always held at the library, in the educational study room, on the same floor with the children's library.

The next morning several boxes of books are called for, to be shipped to the various schools, in accordance with the plan authorized by the Superintendent of Public Schools. These deliveries of books at the school building represent at least two different types of work with the schools. In one the books are retained at the school building itself for a month, being used in connection with the courses of study in the school. In the other, on arriving at the school building, they are at once charged over again (by the teacher, or by some pupil appointed to serve as "librarian"), and thus go into the homes of the pupils. During the forenoon also the loan collection of pictures in the lecture room is taken down, carefully packed in the box prepared for it, and shipped to another library. In their place a new collection is put up, the list (or "guide") referring to the pictures being posted near the entrance, and a collection of the books in the library relating to the same subject being brought in and placed on the adjoining shelves. A memorandum of this new picture collection is sometimes sent to such of the schools as are likely to find it serviceable in connection with their courses. In the afternoon some of the representatives of a girls' club bring in lists of the books which they wish to have sent out to them. A teacher comes in with a part of a class to occupy the class room for the study of some subject, a large number of volumes on their subject being sent for from the stack

and other parts of the building. During the afternoon the children's librarian gives notice to one and another of the children of whose interest she is sure, of an exhibition of lantern slide views of the West India Islands in the lecture room on some evening of the next week, and engages them to come.

The next morning the children's librarian starts on the preparation of some greatly needed lists of books, but is very soon interrupted by the appearance of a children's librarian from some distant city, drawn hither by a desire to study the methods of this children's department. Later, the teacher of one of the "special schools" comes in to arrange for some of her pupils to come to the library, a few at a time. In the afternoon some of the pupils, who had been present at an earlier visit of a class to the building confidentially inform the children's librarian that their teacher has assigned them an essay on "How to look up a subject," apropos of the suggestions made on the occasion of their earlier visit. Several pupils come to the children's librarian with some additional questions, not to be answered in this department, and are sent to the information desk down-stairs, with a letter or other message to the reference librarian, explaining their desires.

The next morning a selected list of "Good books for boys from 12 to 16 years old," and also an illustrated bird bulletin are posted. A call from the curator of the Natural History Museum is made the occasion for examining critically the collection of colored illustrations of birds, posted from time to time in the library and for "retiring" any which are not in any way a faithful reproduction of the original. Later in the forenoon, a young man comes in with half a dozen bright-faced youngsters, of from 8 to 12 years of age, comprising a part of a boys' club, who are one and all anxious for books about fishing. This most interesting group is speedily absorbed in the books and pictures brought them in the class room. In the afternoon a note comes in haste, asking for a list of topics to be used in "story-telling" at school. Fortunately, the children's librarian has already had experience in story-telling, to small children, and the preparation of such a list is a matter of no great difficulty. . . . This expanding reference use of the children's library is a significant indication of the extent to which the co-operative methods with the schools have been developed.

The last thing before going home at night the children's librarian has an extended conference with several teachers, who are desirous of having a "catalog of the books for school use," prepared and circulated here, on the plan of the admirable Pittsburgh catalog. No question can be raised as against the enormous usefulness of such a list, but here again the expense stands in the way of realizing the ideal.

The end of the imaginary week ("imaginary" in order of incidents only, for there is no one of them which has not occurred at some time), finds the shelves sadly depleted. It finds the children's librarian also with a somewhat divided mind—happy that so many children had been supplied with books, but busily revolving plans for remedying the deficiencies. At the beginning of the current year the equipment of books on the shelves of this room consisted of 2675 volumes. Of these, about half were non-fiction, comprising history, biography, geography, nature, industries, art, and also literature, (including poetry). Since the beginning of the year about 600 volumes have been worn out and withdrawn from circulation, and although additions are made from time to time, they do not keep pace with the withdrawals. The circulation for the first seven days of the present month (in this children's library alone), was 1668, and when it is remembered that about 400 volumes are out at any one time, in the school buildings, it will be seen on how small a capital this children's library is forced to do business. A large sum could at once be used in duplicating, on a large scale, those volumes which have stood the test of time, or, in other words, those books which are always called for, and of which there is never a supply which comes anywhere near meeting the demand.

BIBLIOGRAPHICAL SOCIETY OF CHICAGO.

THE Bibliographical Society of Chicago held its first regular meeting for the year at University College, November 14, 1902. The secretary reported that he had received a letter from the chairman of the committee on the organization of an American bibliographical society, stating that, on account of the illness of one of the members, no meeting of the committee had as yet been held, but that the committee hoped to meet in the near future.

The secretary also reported that Mr. Merrill had turned over to him and Mr. Roden his notes on general and national bibliographies, and that the list would be prepared by the three of them in conjunction.

This list would contain:

- a. under General bibliographies.
 1. Attempts at universal catalogs, *e.g.*, Georgi's "Allgemeines europäisches Bücher-Lexikon."
 2. Complete catalogs of the large national libraries, *e.g.*, British Museum.
 3. Comprehensive catalogs of restricted periods, *e.g.*, Hain's "Repertorium" of works printed previous to 1500.
 4. Catalogs of "rare books" of a more universal character, *e.g.*, Brunet.

5. Catalogs of selected books, if of comprehensive character.
6. General lists of current publications, *e.g.*, Brockhaus' "Allgemeine Bibliographie."
7. Union list of accessions to the libraries of a certain country, *e.g.*, the accessions catalog of the Swedish libraries.
- b. under National bibliographies.
 1. Comprehensive bibliographies of the whole national literature of a nation, either from the introduction of printing or from a certain later date, but kept up to the date of publication, *e.g.*, Heinsius.
 2. Comprehensive catalogs of restricted periods, *e.g.*, Brunet's catalog of French incunabula.
 3. Catalogs of special collections of national literature in public libraries, if reasonably full and if the bibliography of the literature in question is otherwise meagre or less accessible, *e.g.*, the catalog of the Ticknor collection in the Boston Public Library.
 4. Catalogs of "rare books," with the same restrictions as in paragraph 3.
 5. Catalogs of selected books, if of a comprehensive character, *e.g.*, Stevens' "My English library."
 6. Lists of current publications, especially trade bibliographies, *e.g.*, *Publishers' Weekly*.

The following classes of books, though giving information as to general and national bibliography, would not be included in the present list, but might be subjects for special monographs:

1. General encyclopedias and biographical dictionaries with bibliographical material, *e.g.*, "La grande encyclopédie" or "Dictionary of national biography."
2. Literary periodicals, devoted mainly to book reviews and giving lists of current publications, *e.g.*, "Deutsche Literatur-Zeitung."
3. General bibliographies of special classes of books, such as anonyms and pseudonyms, *e.g.*, Quérard and Barbier.
4. Bibliographies of special subjects or of special classes of books restricted as to nationality or language, *e.g.*, lists of university dissertations.

Mr. W. Irving Way had sent in a short paper on the Caxton Club and its publications, which in his absence was read by Miss Mabel McIlvaine. Mr. Andrews supplemented the paper by telling of the club's publishing plans for the future and commenting on the commercial value of the club publications, especially those relating to the history of the Mississippi Valley.

AKSEL G. S. JOSEPHSON, *Secretary*.

American Library Association.

President: Dr. J. K. Hosmer, Public Library, Minneapolis, Minn.

Secretary: J. I. Wyer, Jr., University of Nebraska, Lincoln, Neb.

Treasurer: Gardner M. Jones, Public Library, Salem, Mass.

25th General meeting: Niagara Falls, June, 1903.

MEETING OF EXECUTIVE BOARD.

A meeting of the executive board of the American Library Association was held on Tuesday, Dec. 9, at 10 a.m., at the office of Dr. John S. Billings, in the New York Public Library. There were present Dr. J. K. Hosmer, Dr. James H. Canfield, Dr. Billings, F. W. Faxon, Gardner M. Jones, Miss Helen Haines, and Frank P. Hill, as a member of the council.

Appointment of secretary. The resignation of Mr. Faxon, as secretary, was presented and accepted with regret, and James I. Wyer, Jr., librarian of the University of Nebraska, was elected to that office, to serve until the close of the 1903 conference.

Place of 1903 meeting. It was voted that the conference of 1903 be held at Niagara Falls, N. Y., during the last full week in June, if practicable.

Appointment of committees, etc. Miss Nina E. Browne was reappointed registrar, and the appointment of committees was then taken up. Announcement of the appointments made will be given later.

A. L. A. PUBLISHING BOARD.

REMOVAL OF OFFICE.

The Publishing Board moved December 1 into the room on the first floor of the Boston Athenæum formerly occupied by the American Academy of Arts and Sciences. The entrance is the first door at the left after entering the building.

The trustees of the Athenæum have for six years generously given desk room to the secretary of the board in a biographical alcove, during which time the work has so increased that larger quarters were needed. The board is still indebted to the trustees of the Athenæum for the increased accommodation.

The Publishing Board will now handle its own publications, which heretofore have been sold through the Library Bureau, and Houghton, Mifflin & Co. Orders should therefore be sent direct to A. L. A. Publishing Board, 10½ Beacon st., Boston, Mass. Miss Nina E. Browne, secretary of the board, will have charge of the office, assisted by Mr. B. A. Whittemore, who will attend especially to the orders. All librarians, trustees or assistants are invited when in Boston to use the new room, if it will add to their convenience or pleasure in any way.

BOOK PUBLICATIONS.

Guide to reference books, by Alice B. Kroeger. Cloth, \$1.25 net (postage 11 c.)

Literature of American history, edited by J. N. Larned. Cloth, \$6 net (postage 32 c.); sheep, \$7.50 (postage 33 c.); hf. morocco, \$9 (postage 33 c.)

— Supplement for 1900-1901. Cloth, \$1 (postage 4 c.)

A. L. A. Index to general literature. New edition. Cloth, \$10 (postage 52 c.); hf. morocco, \$14 (postage 53 c.)

Bibliography of fine art. Paper, 50 c. net; cloth, \$1 net.

Books for girls and women. Paper, 50 c. net; cloth, \$1 net.

Also issued in 5 parts, small size, 12.5 cm.

Reading for the young. Paper, 75 c.; cloth, \$1; hf. mor., \$1.50.

A few copies still remain.

— Supplement, with subject index. Paper, 75 c.; cloth, \$1.

— Complete edition. Cloth, \$1.50.

A few copies still remain.

A. L. A. Index to portraits. *In preparation.*

Small series. Each 10 c.

List of French fiction. 50 copies, \$2; 100 copies, \$3.

Books for boys and girls. 50 copies, \$2; 100 copies, \$3.

Books for girls and women. 5 parts.

Also issued in the larger series in one vol.

Paper and ink. 100 copies, \$1.10.

Library tracts. Each 5 c., or \$2 per 100 in lots of 50 or more.

1. Why do we need a public library?

2. How to start a public library, by Dr. G. E. Wire.

3. Travelling libraries, by F. A. Hutchins.

4. Library rooms and buildings, by Charles C. Soule.

5. Supplementary to no. 4, giving plans, *is in preparation.*

CARD PUBLICATIONS.

1. Catalog cards for current periodical publications. 250 periodicals indexed. Subscription (a) for the complete series, \$2.50 per 100 titles (2 cards for each title); (b) for cards for selected periodicals, \$4 per 100 titles (2 cards for each title.)

2. Catalog cards for various periodicals and for books of composite authorship. Price 75 cents per 100 cards. Suggested subject headings are printed at the bottom of the card, and enough cards are provided to furnish for each title an author entry and the requisite number of subject entries.

The following sets are in stock:

Johns Hopkins University studies, v. 1-15. \$2.44.

*U. S. Geological Survey, Monographs, v. 1-28. 66 c.

*— Bulletins, 1883-1897. \$2.78.

* Current numbers are included among the periodicals in series 1.

U. S. Geological and Geographical Survey of the Territories. Reports, 1-13. 26 c.

— Miscellaneous publications, 12 nos. 23 c.

*Annals of the American Academy, v. 1-18. \$5.88.

Bibliographica, 3 v. \$1.31.

British Parliamentary Papers. \$13.39.

Warner library of the world's best literature. \$6.

The Publishing Board would like to receive from librarians suggestions of sets for which they would like to have catalog cards printed.

3. Catalog cards for current books on English history, with annotations, 1897-date. Cards per year, \$2; pamphlet, \$1; both, \$2.50.

4. Catalog cards for bibliographical serials. 21 publications are indexed. Subscription same as for series 1.

State Library Commissions.

MARYLAND STATE LIBRARY COMMISSION: Bernard C. Steiner, secretary, Enoch Pratt Free Library, Baltimore.

The commission has now prepared 22 travelling libraries of 35 volumes each, which are to be sent out to communities throughout the state.

NEBRASKA PUBLIC LIBRARY COMMISSION: Edna D. Bullock, secretary, Lincoln.

The commission held its annual meeting on November 18, the members present being: Frank L. Haller, Omaha; Leo Herdman, state librarian, Lincoln; William K. Fowler, superintendent of public instruction, Lincoln; E. Benjamin Andrews, chancellor of the state university, Lincoln; James I. Wyer, librarian of the university; Edna D. Bullock, secretary of the commission.

The secretary made a report of the work of the year. There has been correspondence with 25 towns where no libraries exist, concerning the way to establish them. Five new libraries have been established, all with more or less help from the commission. The travelling libraries have made 64 trips, going to 43 places in 30 counties. The Osceola Public Library is the first fruit of the travelling library system, having in six months evolved from an applicant for a travelling library to the passage of a free library ordinance by the village board. The 21 travelling libraries of which reports have been made show that they have reached a constituency of 1000 borrowers and have been loaned 5521 times—an average of 6.5 a volume.

Other business transacted included the re-election of the present officers, fixing estimates of expenditure for the next two years, and providing for the printing of the biennial report of the commission.

State Library Associations.

GEORGIA LIBRARY ASSOCIATION.

President: W. B. Hill, University of Georgia.

Secretary-Treasurer: Miss Anne Wallace, Carnegie Library, Atlanta, Ga.

The Georgia Library Association held its fourth annual meeting at the Carnegie Library of Atlanta, Nov. 5-6, 1902. There was a joint meeting between the Library Association and the Georgia Federation of Women's Clubs at three o'clock, Nov. 6. The meeting was of unusual interest, as practically the travelling libraries of Georgia are supported by the women's clubs, there being no state aid. Much interest was manifested in the new \$50,000 library to be erected at the state university, the \$25,000 Carnegie Library at Columbus, Ga., and the \$10,000 library, also made possible by Mr. Carnegie's generosity to the city of Newnan. The meeting was enthusiastic, although small. Many of the state librarians having visited the new Carnegie Library of Atlanta during the summer and fall, found it impossible to again leave their libraries.

Library Clubs.

CHICAGO LIBRARY CLUB.

President: Miss Irene Warren, Chicago Institute Library.

Secretary: Miss Renée B. Stern, 6037 Monroe avenue.

Treasurer: C. A. Torrey, Chicago University.

A special meeting of the Chicago Library Club was held at the Chicago Historical Society building, on Oct. 31. After a few words of welcome to the club by Mr. Dent, as representative of the Historical Society, Miss Warren introduced Mr. Melvil Dewey, the guest of the evening, who delivered an address on "The place of the library in the community." Mr. Dewey gave a rapid survey of the growth of libraries from mere store-houses, where literature was inaccessible to the masses, to the most modern method, which sends not only the travelling library to outlying districts, but also sends with it the travelling librarian. He spoke also of the value of poor reading matter as being the first step from no reading matter to the best literature.

In response to the 600 invitations issued (200 to members of the Historical Society) an audience of about 150 greeted Mr. Dewey, most of whom remained after the address to meet him personally.

The entire building of the Historical Society had been placed at the service of the club and an excellent opportunity was thus afforded to examine the various collections the building contains.

The regular November meeting of the club was held on Thursday evening, Nov. 13, in

the Fine Arts Building, the president, Miss Warren, in the chair.

The resignation of Miss Elizabeth P. Clarke was read and accepted, and 10 new members were elected.

A letter from Mr. Merrill was read explaining his inability to accept the office of second vice-president. By unanimous vote Mr. Herbert Gould was elected to fill the vacancy.

The program for the evening was as follows: Miss Zonia Baber, president Chicago Geographical Society, "Maps and the reading of maps"; Mr. R. H. Allin, of Rand, McNally & Co., "Making of a map"; Mr. C. W. Andrews, John Crerar Library, "Maps in public libraries."

Both Miss Baber and Mr. Allin had brought a number of maps to illustrate their subject. Mr. Andrews spoke on the various map collections in America and showed the difficulties in the way of making such collections, and also spoke of the best methods of arrangement.

A lively discussion followed. Mr. W. G. S. Adams, of the University of Chicago, was called upon and spoke of the value of maps, especially maps of distribution, in class work. Miss Chapin and Mr. Waterman spoke on the need of maps in the work in grade and high schools, and urged that a collection be made by some Chicago library.

RENÉE B. STERN, *Secretary.*

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION.

President: Thomas H. Clark, Law Library.

Secretary: Robert K. Shaw, Library of Congress.

Treasurer: Frederick E. Woodward, 11th and F sts., N. W.

The November meeting of the District of Columbia Library Association was held Nov. 12, at the Columbian University, with the president, Mr. Thomas H. Clark, in the chair, and 32 members attending. Under the heading of general business the most important item was the admission to membership in the association of 22 persons, largely from the Catalogue Division, Library of Congress.

Mr. Spofford, being asked by the president to make remarks on his recent western trip, entertained the association by speaking at some length on his visit to several libraries of the Pacific states. The most interesting collection referred to by Mr. Spofford was the Hubert Howe Bancroft library of 40,000 volumes and 3000 manuscripts, stored in a special building two miles from the center of San Francisco. The collection consists largely of literature on the Pacific states, including much material in Spanish. Of the manuscript portion the most unique feature, Mr. Spofford stated, is a collection of 593 personal narratives of pioneers upon the Pacific coast, the manuscripts varying from 10 to 400 pages in length. Representing, as they frequently do, impressions or traditions rather than facts,

they cannot, in the opinion of Mr. Spofford, be rated very highly as original authorities.

The collection as a whole has been for some time for sale, but the high figure of \$300,000 has thus far frightened away all purchasers. Mr. Spofford mentioned, also, among others, the Sutor library of San Francisco, a miscellaneous collection of 40,000 volumes recruited from the most famous auction sales of America and Europe.

Dr. Henderson Presnell, of the Bureau of Education, the principal speaker of the evening, chose for his subject "The origin and uses of the A. L. A. catalog of 5000 volumes," reviewing its inception, preparation and the use made of it. He said that nearly 100,000 copies have been distributed throughout the country to libraries and individuals, and the demand for the book is still very brisk.

R. K. SHAW, *Secretary*.

NEW YORK LIBRARY CLUB.

President: Frank B. Bigelow, Society Library.

Secretary: Silas H. Berry, Y. M. C. A. Library, 317 W. 56th st.

Treasurer: Miss Theresa Hitchler, Brooklyn Public Library.

A meeting of the New York Library Club was held in the assembly hall of the New York Board of Education, 59th street and Park avenue, Friday, Nov. 14, at 3.30 p.m. Eighteen persons were elected to membership, and the treasurer presented a report showing expenses of \$413.45 and a balance of \$117.30.

The general theme of the meeting was "Libraries and schools in their inter-relations."

Dr. Edgar D. Shimer, district superintendent of New York public schools, gave an address on "Public school libraries." Dr. Shimer called attention to the fact that New York city had committed itself to the public school library at the beginning of the 19th century, and called attention to the interesting historical matter to be found in the club's handbook under "New York public school libraries." He said that the largest sum ever appropriated in one year for this purpose was \$12,000; this was doubled by the state, and as the money does not revert to the general treasury, it has at times been allowed to accumulate; but even with the accumulated funds but little can be done in such a broad field. There is now in preparation under Dr. Maxwell's guidance a list of suitable books for school children, graded to suit the school grades; these lists carefully annotated should establish friendly relations between teachers and librarians, and the aid of librarians is needed in carrying this out.

Dr. Edward W. Stitt, principal of public school no. 89, gave an address on "A boy's education as influenced by libraries." He showed that interest in really good and wholesome books could be encouraged in the school

room by reading to a class selections from good, strong and wholesome stories, following this with the information as to the source of the selection. In this connection he mentioned "Janice Meredith," "Tom Brown's school days," "Dream life," and other books. He also gave figures from a table, showing that the best workers in school read most, or that those who do the most reading are the best workers in school.

Miss Julia Richman gave an address on "Two unusual phases of library reading by public school girls," in which she showed that excellent results had been secured by the teacher awakening the interest of the girls, and leading them on in the use of books outside of the school text books. Among other methods suggested were the giving out of topics for investigation, either to be written about or discussed, such as "Instances in which the Monroe doctrine has been called in question," "Some differences between the tariff regulations of the United States and other countries," "The times of Oliver Goldsmith and the writings of his contemporaries," "How the English language was made," etc. Miss Richman described the sympathetic interest of certain teachers in the girls under their care, and showed that much more could be done by both teacher and librarian.

Miss Adelaide E. Brown explained briefly how the New York Public Library undertakes to meet the needs of the schools by supplying travelling libraries selected to suit the various grades, and exchanged as desired. The meeting then adjourned.

PENNSYLVANIA LIBRARY CLUB.

President: Dr. I. Minis Hays, American Philosophical Society.

Secretary: Miss Edith N. Gawthrop, University of Pennsylvania Library.

Treasurer: Miss Louise F. Buhrman, Girls' Normal School.

The first meeting of the Pennsylvania Library Club for the year was held at the Widener Branch of the Free Library on the evening of Nov. 10.

Dr. Hays outlined the work it was hoped the club would accomplish during the year. Progress was reported in the preparation of the union list of periodicals in the libraries in and near Philadelphia, and the attention of the club was called to the fact that the first of a series of library institutes under the immediate supervision of Miss Kroeger, Miss Lord and Mr. Bliss was at that time in session.

After the regular business of the meeting had been disposed of, Mr. John Cotton Dana, of the Newark Public Library, gave an interesting address on the subject "Library notes." The speaker spoke of many phases of library work. A plea was made for more business-like methods in library administration. The time has already come when books must be handled with less labor and expense. The

collecting and publishing of annotated lists was urged as one of the most important parts of the library work. Mr. Dana hoped that the time is not far distant when librarians may combine in the publication of a critical journal devoted to a fair and impartial appraisal of literature.

Upon the adjournment of the meeting the many members present were delightfully entertained at an informal reception and tea, given in the beautiful rooms of the Widener Branch. EDITH NEWLIN GAWTHROP, *Sec'y.*

LIBRARY INSTITUTE HELD IN PHILADELPHIA.

In October the Keystone State Library Association, at its annual meeting, decided to follow the example of New York, Massachusetts and Wisconsin by organizing library institutes. It was considered best to leave the matter in the hands of the local clubs wherever practicable and the Pennsylvania Library Club was therefore asked to conduct them for the vicinity of Philadelphia. The first institute was held November 10-11 at the Drexel Institute, Philadelphia, under the auspices of the Pennsylvania Library Club. It was conducted by Miss Kroeger, assisted by other librarians. There were five sessions, the regular meeting of the club, falling on the evening of November 10, constituting one of them. Librarians of the small public libraries in villages and towns within 25 miles of the city were invited. Philadelphia is surrounded by a large number of suburbs, many of which are struggling to maintain public libraries. The committee having the institute in charge thought that the first meeting might be held to advantage in the city in order to see what need there might be for conducting them in the several towns. As a result librarians of 15 Pennsylvania towns near Philadelphia attended. In addition there were five New Jersey libraries and one library of Delaware represented, besides several small libraries of the city. Three persons came all the way from Bethlehem, a distance of 57 miles, to attend. The attendance at each session averaged more than 30.

The discussions were informal and covered the general field of work for the small public library. A small exhibit illustrated the points brought out in the discussion. One of the interesting features was a practical illustration of mending books by Mr. Emerson, binder for the Free Library of Philadelphia. Mr. Hastings, of the Library of Congress, attended one session and explained the use of the printed cards. Many of the librarians attended the evening session where Mr. Dana, of the Newark Public Library addressed the club. The committee feels after the first meeting that there is a real need for the institutes in the state and they are hopeful for the work in the future.

WESTERN MASSACHUSETTS LIBRARY CLUB.

President: Frank G. Willcox, Public Library, Holyoke.

Secretary: Miss May Ashley, Public Library, Greenfield.

Treasurer: Mrs. A. J. Hawks, Meekins Memorial Library, Williamsburg.

The Western Massachusetts Library Club closed its autumn record of library institutes with three most successful meetings, held respectively at Enfield, Nov. 5; Miller's Falls, Nov. 10, and Haydenville, Nov. 14.

At Enfield a welcome was extended by Rev. J. C. Andrus, president of the Enfield Library Association, and Mr. Willcox, the president, outlined the field of the library institute. The subjects presented were: "Book diet; or, literature and dyspepsia," by Rev. Bradley Gilman, of Springfield; "What libraries have accomplished," by Miss Alice Shepard, of the Springfield City Library; and "What the library can accomplish," by Miss M. Anna Tarbell, president of the Bay Path Library Club. In the afternoon there was a general informal discussion, with short talks, on "Children and books," and an address on "Use and advantage of a library to a community," by Rev. W. E. Waterbury.

The institute at Miller's Falls was presided over by W. I. Fletcher, and was welcomed by Rev. D. A. Hudson. F. P. Davison, superintendent of schools at Turner's Falls, spoke on "Books and young people," and A. R. Webster read a paper on "The school and the library—how each may help the other."

The two papers were followed by a practical discussion on the possibility of travelling libraries for district schools. In the evening addresses were delivered by Mrs. A. J. Hawks on "How to start a reading room," and by W. I. Fletcher, on "The value of the library to citizens." The discussion which closed the meeting was about the possibility of opening a reading room at Miller's Falls.

At the Haydenville institute Mr. Fletcher again presided. The chief speakers were Mary A. Jordan, of Smith College, on "What we can get from books," and E. W. Goodhue, superintendent of schools of Haydenville, on "Libraries as educators," and there was a good general discussion. At the evening session the subjects were "How I use the public library," by George A. Denison, and "Why every citizen should value a library," by Rev. John Pierpont, of Williamsburg. Miss Farrar, of the Springfield City Library, talked for a few moments to the boys and girls present, and the institute closed with a short general discussion.

The towns represented were: Springfield, Chicopee, Northampton, Florence, Leeds, Williamsburg, Conway, Greenfield, Amherst College, Mt. Holyoke College.

Library Schools and Training Classes.

ILLINOIS STATE LIBRARY SCHOOL.

Early in November the school was favored with a visit from Mr. Dewey. On the evening of his arrival the members of the university senate and of the Chicago Library Club were given an opportunity to meet him personally at a reception given in his honor at the library by the library staff. During his stay of four days he delivered one public lecture before the university community and devoted the rest of the time to the library students.

NEW YORK STATE LIBRARY SCHOOL.

POSITIONS FILLED SINCE JUNE, 1902.

Class of 1902.

Barr, Charles James, reference librarian in the John Crerar Library.
Colcord, Miss Mabel, cataloger at the State University of Iowa.
Fuller, Miss Francis Howard, children's librarian and library hostess of the Millicent Library, Fairhaven, Mass.
Gay, Ernest Lewis, has been engaged to catalog a collection of 15,000 French books, a recent gift to Harvard University Library.
Hawkins, Miss Emma Jean, cataloger in the Bryn Mawr College Library.
Lamb, Miss Eliza, librarian of Western College.
Mann, Miss Olive Louise, assistant in the Cataloging Division of the Library of Congress.
Mullon, Miss Lydia, cataloger at McGill University Library, Montreal.
Rodgers, Miss Anna Hendricks, librarian of the Pruyn Library, Albany.
Smith, Miss Mary Alice, assistant, History Division, New York State Library.
Taber, Miss Josephine, assistant in the loan department, Carnegie Library, Pittsburgh.
Whittemore, Benjamin Arthur, assistant in the Home Education department of the N. Y. State Library. Mr. Whittemore has since been appointed assistant to the Publishing Board of the American Library Association.
Whittier, Miss Florence Bertha, assisted June 26 to August 6 in the University of California, Summer School of Library Science. Miss Whittier has since been appointed classifier at the Mechanics' Institute, San Francisco.
Wiggin, Miss Pauline Gertrude, librarian of the University of West Virginia.

Students in school, 1901-2.

Brown, Miss Zaidee Mabel, reviser in the N. Y. State Library School.
Hazeltime, Miss Alice Isabel, assisted during July and August in the Chautauqua Summer School for library training.
Larsen, Miss Martha Emely, librarian of the Folke bibliothek, Trondhjen, Norway.

Marvin, George Ritchie, assistant librarian of the New England Historic Genealogical Society, Boston.

Patterson, Miss Marian, assistant in the Millicent Library, Fairhaven, Mass.

Earlier classes.

Keller, Miss Helen Rex, class of 1901, cataloger at the Iowa State Library.

Phelps, Miss Anna Redfield, class of 1901, assisted in the Chautauqua library school during July and August. Miss Phelps has since begun the reorganization of the Lenox (Mass.) Library.

Sanderson, Miss Edna M., class of 1901, has been appointed vice-director's assistant in the N. Y. state library school, in place of Miss Florence Paine, resigned.

Smith, Miss Marie Martin, 1899-1900, children's librarian, Lawrenceville Branch, Carnegie Library, Pittsburgh.

Woodin, Miss Gertrude Lee, 1899-1900, assistant in the library of the Department of Agriculture, Washington, D. C.

Noyes-Paine. Miss Florence Augusta Paine, class of 1900, and Mr. George Raphael Noyes, of Berkeley, Cal., were married July 31, at Boston, Mass.

Shaw-Brown. Miss Bertha Mower Brown, class of 1900, and Mr. Robert Kendall Shaw, of Washington, D. C., class of 1899, were married September 20, at Eau Claire, Wis.

Wright-Wood. Miss Gertrude Pamilla Wood, 1898-99, and Mr. John Aubrey Wright, of Bellevue, O., were married September 29, at Bridgeport, Ct.

Hyatt, Miss Bertha Evelyn, class of 1899, assistant in the Catalogue Division of the Library of Congress.

Williams, Miss Mary Floyd, class of 1899, was director of the Summer School of Library Science held at the University of California, June 26 to August 6.

Morse, Miss Anna Louise, class of 1897, librarian of the Reuben McMillan Free Library, Youngstown, O.

Waterman, Miss Lucy Dwight, class of 1897, assistant in the reference department of the Carnegie Library, Pittsburgh.

Hopkins, Miss Julia Anna, 1895-96, has resigned her position as librarian of the Wyllie avenue branch, Carnegie Library, Pittsburgh, and has been appointed librarian of the Public Library in Madison, Wis.

Denio, Herbert Williams, librarian of the Westfield (Mass.) Athenæum in place of G. W. C. Stockwell, resigned.

Gibson, Miss Irene, class of 1894, assistant in the Order Division of the Library of Congress.

Robbins, Miss Mary Esther, class of 1892, acted as chief instructor at the Chautauqua Summer School during July and August. Miss Robbins has since been appointed instructor in Simmons College Library Training Course.

SALOME CUTLER FAIRCHILD.

Reviews.

KROEGER, Alice Bertha. Guide to the study and use of reference books: a manual for librarians, teachers and students; issued by the Publishing Board of the American Library Association (A. L. A. annotated lists). Boston, Houghton, Mifflin & Co., 1902. 8+104 p. O. \$1.25 net.

Miss Kroger's manual is sure of a wide usefulness, and meets a demand that has largely developed within the past three or four years. It is not to be judged as a comprehensive or elaborate bibliography of reference books, but, as its title indicates, simply as a guide to the more accessible and better known reference literature. To a large degree it is elementary, intended to aid library school students, assistants, and users of libraries in general, rather than for the thorough investigator or the expert reference librarian. It is modelled upon the general style of the previous "A. L. A. annotated lists," arranged in class divisions, with further subject grouping, and giving publisher, date, price and essential imprint data, with descriptive annotations; the D. C. number is also indicated for each entry.

The general field of reference literature is covered with fair comprehensiveness, following practically the course of study in reference books given at the leading library schools. The guide itself is preceded by a list of "books and articles on reference books," largely analytical of the *LIBRARY JOURNAL* and *Public Libraries*, and followed by a very good "Suggestive list of 100 reference books," which should be most helpful to the smaller public libraries; there is also a full and careful index. The various classes presented cover encyclopædias, dictionaries, and reference works on special subjects—philosophy, religion, art, literature, biography, periodicals, society publications, government documents, bibliography, etc., with many subdivisions. Each main division is prefaced by a bibliographical and descriptive introduction, noting articles upon the subject and giving suggestions for the reference worker. Thus, the division "Government documents" is introduced by a citation of "references" to the literature of the subject, followed by a clear statement of the nature of United States public documents, and the methods of their publication and distribution. The selection of books is well adapted to the purpose of the work. Criticisms of omissions and inclusions might be made—which is true of any list of any kind, but on the whole Miss Kroeger has carried out her purpose with skill and common sense. Of the usefulness of the "Guide" there can be no question. It will certainly be a permanent help to more intelligent and effective use of the reference department of the public library.

NIELD, Jonathan. A guide to the best historical novels and tales. New York, G. P. Putnam's Sons, 1902. 6+122 p. O. net, \$1.75.

This is an excellent little manual, simple and unpretentious, but based upon knowledge of its subject, sound judgment and literary feeling. In an introduction of 16 pages Mr. Nield outlines the characteristics of the historical novel, and gives critical suggestions regarding its value and place in literature. Then follow, in tabulated form, lists of novels dealing with historic periods from the pre-Christian era to the last quarter of the nineteenth century, a "supplementary list of notable novels, which, while not strictly 'historical' in some way represent bygone periods," two suggested courses of reading, for boys and girls respectively, on English history since the Conquest, and an interesting selected bibliography of critical writings or essays dealing with historical romance. Author, title and publisher are given for all books recorded in the lists, and the period or special subject of each is indicated in addition to the general period groupings. The selection is on the whole very good indeed, and it is apparent that, as the compiler says, "no book has been inserted without *some* reason," and that care has been taken to obtain accuracy of description. Mr. Nield's work should be a welcome aid to librarians, and a source of pleasure and profit to many readers.

Library Economy and History.

GENERAL.

BOSTWICK, Arthur E. Scientific reading in a public library. (*In Popular Science*, October, p. 524-527.)

An analysis of the reading roughly classed as "science" in public library statistics of circulation. The analysis was confined to the circulating branches of the New York Public Library for the month of May, 1901. During that month the sciences formed 6.5 per cent. of the total home circulation, and even this percentage is considerably reduced when school readers, animal stories, and the like, are eliminated.

HOWELLS, W. D. What should girls read? (*In Harper's Bazar*. November. 36:956-960.)

Mr. Howells comes to the conclusion that a good rule for a girl in her reading is pleasure, first, last and all the time. There are inferior authors, and inferior readers who read with pleasure the inferior books of the inferior authors. Girls should shun lists of hundred best books and the like, because "they are often the inventions of vulgar and mediocre minds—at the best, of academic minds." For a man who has published nearly

two score of novels the following is interesting: "Most novels are worse than worthless, not because they are wicked, but because they are silly and helplessly false. Among the worst of the worse than worthless are the historical novels, which pervert and distort history, not so much because the authors are wilfully indifferent to the facts, as because they have not the historical sense."

LEE, Gerald Stanley. *The lost art of reading.*

New York, G. P. Putnam's Sons, 1902. 10 + 439 p. D.

This volume includes Mr. Lee's amusing and suggestive plea, "Wanted, an old-fashioned librarian," and other essays on books and reading that are welcome in permanent form.

PUTNAM, Herbert. *The year among the libraries.* (*In Independent*, Nov. 27, p. 2753-2756.)

A review of the chief questions — supply of current fiction. President Eliot's suggestion for segregating "dead" books, co-operative cataloging work of the Library of Congress, etc. — that have been debated in library circles during the year just closing.

LOCAL.

Brooklyn (N. Y.) P. L. The case of Mrs. Mary E. Craigie, suspended for incapacity and insubordination, was reported upon by the administration committee to the board of directors at the board meeting of Nov. 18. The report recommended that Mrs. Craigie be removed from the employment of the library. It was accepted by a vote of 14 to 4.

The anticipated home circulation for 1902 was a million volumes at least. This mark was passed between Jan. 1 and Oct. 15.

The travelling libraries department is being reorganized by Mr. Benjamin Adams, librarian-in-charge of one of the branch libraries, who took up the work on Nov. 24.

The cataloging department has had five catalogers added to its force, making a total of 17 besides the superintendent. The plan is that this department should be sufficiently strong to handle the back work of those branches which came into the Brooklyn Public Library system as independent libraries with their books either uncataloged or cataloged by some different system.

The Fort Hamilton branch moved on Dec. 2 into its new quarters — a church building which had been fitted up for the purpose.

For the coming year 174 different magazines have been ordered for the library. Of these 1450 copies are taken, 1200 for reading-room use and 250 for circulation.

The apprentice class which entered May 1 completed its term of service on Oct. 31, passed the practical test of work in branches and departments as well as the examination test, and has been certified to the Civil Service Commission for the eligible list. The experiment will now be tried of having only

one apprentice class a year, to enter May 1 and serve till Nov. 1. During the remaining six months of the year classes will be carried on among the library staff for the study of the technical, educational and bibliographical sides of library work. The first of these classes, consisting of 44 students, began a course in reference work on Dec. 1. The only room which could be used for the class was in the Administration Building, where there were few reference books, so arrangements were made with the Pratt Institute Library School by which the class is held in the Pratt school room and conducted by Miss Rathbone. The expense is borne by the Brooklyn Public Library, and the time which is given to the course is deducted from the working hours of the students.

At the staff meeting of Nov. 25 over half an hour was given to the discussion of the time schedules and working hours at the 18 branches, which are being readjusted to meet changed conditions. For the last year the branch librarians and assistants have worked 42 hours a week, the length of each day's work varying from three to eight and one-hour hours, with a weekly half holiday. The two conditions which make the branch work wearing are the necessity for evening work, and, in consequence, for taking meals at irregular hours, the hearty meal being at 12 or 2 one day and at 5 or 7 o'clock the next. All agreed that this was a strain, but the librarians-in-charge agreed also that the evening work was the most important done by the library, and that they would not be willing to give it up themselves nor to have it delegated to any inferior force of evening workers.

It was suggested by the superintendent of branches that evening work every night in the week for six months, followed by a period of six months with no evening work would be less of a strain, but even more unpopular. One of the librarians-in-charge at once volunteered to have this experiment tried at her branch for one year, and it went into practice Dec. 1.

Buffalo (N. Y.) P. L. The Mutual Benefit Association of the Buffalo Public Library has recently been organized by the library staff, every person connected with the library having become a member. As the name indicates, it is a beneficiary society, and was formed for the purpose of providing benefits in the case of the illness or death of its members. The membership is 70. The officers are: president, Walter L. Brown; vice-president, Miss Lucia T. Henderson; secretary, Miss Mary J. Briggs; directors, Mr. John Krieg, Mr. C. G. Leland and Miss Harriet A. Beach.

Cartersville (Ga.) P. L. The cornerstone of the library building erected by the Women's Cherokee Club of Cartersville was laid on the afternoon of Nov. 15. This will be the first public library in the state erected by a women's club.

Enoch Pratt F. L., Baltimore, Md. Beginning Dec. 1 the position of superintendent of outside work was established, being filled by the appointment of Mrs. Sarah Mahool Grimes. This work covers the sending of books to schools, delivery to stores, institutions, branches, stations, etc. It has developed remarkably within a short time, nearly two score of books going out in a single morning.

Evanston (Ill.) F. P. L. (29th rpt.—year ending May 31, 1902.) Added 2809; total 29,614. Issued, home use, 89,729; ref. use, 22,184; circulated through the schools 59,222. New registration 2255; cards in use 4343. Receipts \$16,544.47; expenses \$7572.76.

The chief event of the year was the publication of the "Graded and annotated list of the 500 books" in the school libraries.

Hagerstown, Md. Washington County F. L. (1st rpt.—year ending Oct. 1, 1902.) This report is practically a record of organization and most interesting development. The library was opened to the public on Aug. 27, 1901, with 6365 volumes on the shelves. Its use proved almost immediately to be far greater than had been anticipated and an increased supply of books was imperatively required. By Oct. 1, 1902, the accessions had brought the total collection to 9770 v. During the year 3335 residents of Hagerstown and 532 county residents were registered as borrowers. The circulation, to borrowers and to the various branches, was 71,060. Miss Titcomb says: "For want of a better title we dignify by the name of branches the small collection of books placed at various points in the county for the use of the public. Each branch consists of an assortment of 50 fresh readable books, in a case somewhat after the travelling library order, placed, as a rule, in the general store or postoffice. The books remain either 60 or 90 days in charge of the merchant or postmaster, as the case may be, and are then returned to the central library for an exchange. Twenty-three of these branches have been established in the voting districts or other villages of the county during the year, 2777 v. having been issued to them from the central library, resulting in an aggregate circulation of 6974 volumes. If so desired, these branches may also be used as delivery stations, borrowers having the privilege of ordering through them on one day in the week. This service is absolutely without expense to the public. The library not only pays for the cases and the transportation of the branches to and from the library, but the express or postage on books sent and returned through them as delivery stations."

Teachers are allowed to draw 10 books at a time for school use, and during the winter months a teachers' reading class held weekly meetings in the library lecture-room. Several exhibits were displayed. The card catalog has been brought up to date and three

printed bulletins have been issued. Plans for the future work of the library, as a county library, include "more branches, home libraries for clusters of houses remote from any rural center, closer relations with the schools, and more particular work for and with the children."

Jacksonville, Fla. The proposition to accept Andrew Carnegie's offer of \$50,000 for a library building, on the usual conditions of maintenance, was carried at the general election on Nov. 4 by a majority of 13. There were 640 votes cast in favor of the gift and 627 in opposition. The final decision is now referred to the city council. The vote is not regarded as especially indicative of public opinion, as there are over 4200 registered voters in the city, and only about one-fourth were represented in the library vote.

Kensington, Ct. Peck Memorial L. The library building, which is the gift of H. H. Peck, of Waterbury, was dedicated on the evening of Nov. 5. The building cost \$10,000 and is of cut stone, granite and white brick. It contains one large book room, with the librarian's office at the entrance, a fireplace at the opposite end, and the book shelves ranged at the side. All the woodwork is of dark polished oak, and the vaulted ceiling is done in dark blue. In the basement is a room that it is hoped may be fitted up as an amusement room for boys. The library now contains about 14,000 volumes, and is free from debt.

Lawrence (Mass.) P. L. (30th rpt.—year ending Dec. 31, 1901.) Added 1560; total 52,742. Issued, home use, 110,464 (fict. 43.8%; juv. 32.3%). Receipts \$13,246.64; expenses \$13,124.58.

It is recommended that a "duplicate pay collection" of more popular books be started as an experiment. The two-book system has recently been adopted.

Marinette (Wis.) P. L. The cornerstone of the library building given to Marinette by Isaac Stephenson, of that city, was laid on Nov. 17.

New York P. L. The first of the Carnegie library buildings in Greater New York—the Yorkville branch, at Second avenue and 79th street—was formally opened to the public on the afternoon of Dec. 13. The attendance was by invitation, and the exercises were held in the children's room on the second floor. Owing to this fact this department was not completely equipped until after the opening exercises, but the first floor was shown with its full equipment, as was also the reading room on the third floor, where a small exhibition of prints was displayed. Mr. Carnegie was not able to be present, but sent a message of regret through Dr. Billings, who told of the inception of Mr. Carnegie's great gift. Ad-

dresses were also made by Lewis Cass Ledyard and A. E. Bostwick. President Cantor, of the Borough of Manhattan, presided, as a representative of the municipal government. The work has begun on the new building for the Chatham Square branch, which will be the second of the Carnegie library buildings, and the basement walls have nearly been completed.

Northampton, Mass. Forbes L. A review of "The library facilities of Northampton," contributed by C. A. Cutter to Charles F. Warner's "Northampton of to-day" has been reprinted in leaflet form. It is a brief description of the three public libraries of Northampton—the Forbes, the Clarke, and the Lilly—all of which are owned by the city, "but with different governing boards, funds, staff and stock." Thus the supply of books is unusually large in proportion to the number of inhabitants, being 6 2-3 volumes per head. The total circulation from the three libraries is 7 1-3 volumes per head. "This is partly due to the presence of Smith College, but the same phenomenon does not appear in any other college city in the state, and if the whole issue of books to students were to cease the issue in Northampton would still be double the Massachusetts average. It is, therefore, mainly to be attributed to the large supply of books and to the freedom with which they are lent."

Pawtucket (R. I.) P. L. The *Pawtucket Gazette and Chronicle* issued on Oct. 17 a special "Deborah Cook Sayles Library dedication supplement," in honor of the dedication, on Oct. 15, of the memorial building given to the public library by Hon. Frederic Clark Sayles. The supplement contains a full report of the dedication exercises, with illustrations of the building and its decorations, and portraits of Mr. and Mrs. Sayles, members of the library board, and the librarian, Mrs. Minerva A. Sanders.

Peoria (Ill.) P. L. (22d rpt.—year ending May 31, 1902.) Added 4700; total 78,090. Issued, home use, 183,500 (fict. 71 %, incl. juv. fict.). New cards issued 4232; total cards in force 8068. Receipts \$17,350.40; expenses \$16,550.40.

From the libraries of from 200 to 400 volumes each, placed in 11 public schools furthest removed from the center of the city, there were circulated 31,729 v., or 17 $\frac{9}{100}$ per cent. of the total issue. Mr. Willcox makes an urgent plea for an increased city appropriation.

Pittsburgh, Pa. Carnegie L. The library has now six deposit stations in operation, three located in stores and three in school buildings. It is planned to establish several more, and five more schools have offered the use of rooms for this purpose. So far the stations have been started and carried on by

the branch libraries. "The method of procedure is generally as follows: Having obtained the use of a room and made the necessary announcements by postal cards, placards, etc., the branch librarian selects from 150 to 200 books from her collection that seem best adapted to the needs of the community to be served by the deposit station. This collection is then sent to the station. Later books are or course added, or withdrawn, as occasion demands. The deposit station is open for the circulation of books and issue of borrowers' cards, one afternoon or evening of each week, assistants from the branch library being in charge. Betweenwhiles the station is closed. Overdue books may be returned at the branch library to avoid the accumulation of fines."

An apprentice class has been formed from applicants for positions on the waiting list. Vacancies in the staff will be filled as far as possible from those who have completed the apprentice course.

Plainfield (N. J.) P. L. The first of a series of book exhibits on special subjects was held at the library on Nov. 22. It dealt with "Practical philanthropy," and the books displayed were divided into four sections, each one in charge of a woman interested in the subject. The sections were: "Working classes—plans for their social and economic betterment"; "Social reform—six good stories dealing with social reform"; "Dependent classes—a suggestive list of books especially recommended"; and "Christianity and social reform."

Providence (R. I.) P. L. On Nov. 2 the reference room of the library was opened to the public for the first time on Sunday. Heretofore Sunday and holiday opening has included only the periodical room, together with the second floor. The opening of the reference room is regarded for the present as an experiment, to test the extent and character of the use made of it.

Randolph, Mass. Turner F. L. During the year ending with November the library has received 730 volumes of accessions, including a carefully selected French collection of 200 v., and a German collection of nearly 200 v. An art department has been opened, of which the local art clubs make good use, and a free lecture hall, where students and teachers may meet and have placed at their service such works as can aid them in their studies. The librarian, Dr. Charles C. Farnham, has just completed his 27th year as head of the library.

U. S. Department of Agriculture L., Washington. Miss Josephine Clark, the librarian, in a report to the 15th annual convention of the Association of American Agricultural Colleges and Experiment Stations, also issued in separate form, reviews the condition of the

libraries connected with the various agricultural colleges, and urges the need of uniform methods of cataloging and classification. She says:

"Arrangements are in prospect of fulfillment by means of which there may be a number of assistants at the library of the Department of Agriculture, who shall be preparing for such work as I have outlined as necessary in agricultural college libraries. The department library contains the largest collection of publications on agriculture in the country, and in the allied sciences its collections rank among the highest. It therefore offers exceptional facilities to prospective librarians of agricultural colleges who wish to become familiar with the literature of agriculture. The request has already come to the department from one agricultural college for such an assistant, and it has been met in an exceptional way. One of the assistants who has cataloged a large part of the department library, and is familiar with agricultural publications, has been detailed to classify and catalog this college library and introduce modern methods of administration. This is an experiment, the result of which remains to be seen. Another request has been more recently made by an assistant in an agricultural college library to be permitted to spend her winter vacation in the department library for the purpose of studying its collections and their arrangements. This is a step in the right direction, as it will tend to bring about a closer relationship between the college libraries and the department library which seems desirable."

Upper Iowa Univ. L., Fayette, Ia. The new library building given to Upper Iowa University by Hon. D. B. Henderson was dedicated on Nov. 11, coincident with the installation of Rev. Thomas J. Bassett as president of the university. The chief address was made by Mr. Henderson.

Washington (D. C.) P. L. The dedication exercises of the Carnegie library building have been postponed from Dec. 16 to Jan. 7, owing to the inability of Mr. Carnegie to be present at the former date.

FOREIGN.

French prizes for essays on insects destructive to books. The awards were recently announced in the prize competition for essays on the best means of preserving books from the ravages of book worms and other destructive insects, established at the Congress of Librarians held in Paris in August, 1900. (See L. J., 25:569, 581-2.) Twenty-three essays were received, and the prizes are awarded as follows: The Congress prize of \$200 to Johann Bolle, an agricultural chemist, of Gontz, Austria; the Marie Pellechet prize of \$100 to Constant-Houlbert, a professor at the Lycee of Rennes. The second prize, offered by the late Mlle. Pellechet, of

\$200, has not yet been awarded. It is understood that the two successful monographs will be published in due course.

Halifax, N. S. On Nov. 18 the city council voted to rescind its action of last April accepting Andrew Carnegie's offer of \$75,000 for a public library building, and to refuse the gift. This is the result of prolonged controversy regarding the site of the proposed building, and was the first step in a further complication of affairs. It was followed by the issuance of an injunction, on application of interested citizens, restraining the mayor from carrying into effect the order of the council rescinding the Carnegie gift, and also from notifying Mr. Carnegie of the council's action. This injunction was served on the mayor on Nov. 20. On Dec. 2 the supreme court gave judgment that the council's previous vote to accept \$75,000 from Mr. Carnegie and the fixing on a site in accordance with Mr. Carnegie's desire amounted to a contract which could not be annulled.

Montreal, Can. On Nov. 3 the city council passed, in curtailed form, the bylaw providing for the maintenance of the public library building for which Andrew Carnegie has offered to give \$150,000. As passed, the provisions of the draft bylaw relating to management and involving the question of censorship were omitted. On Nov. 24 the council appointed a library committee of nine aldermen to have charge of the administration of the library.

Gifts and Bequests.

Harvard Univ. L., Cambridge, Mass. The library has received from John Drew, the actor, a gift of the collection of theatrical history and biography of the late Robert W. Lowe, who died in London last summer. The collection contains several hundred extremely rare books and pamphlets, which by special arrangement were offered to Harvard for \$1000 before being placed on general sale in London.

Librarians.

BISHOP, William Warner, librarian of the Polytechnic Institute, Academic Department, Brooklyn, N. Y., has accepted the position of head cataloger at Princeton University Library.

BURTON-RESAG. Mrs. Mary A. Resag, for eight years assistant librarian of the Wilmington (Del.) Institute Free Library, was married on Nov. 19 to W. E. Burton, of Brooklyn, N. Y.

HUNT, Miss Clara Whitehill, head of the children's department of the Newark (N. J.) Free Public Library, has been appointed superintendent of the children's department of the Brooklyn (N. Y.) Public Library.

LYALL-LAMBERT. Miss Cecilia Lambert, formerly librarian of the Passaic (N. J.) Public Library, was married on Dec. 3, at Newark, N. J., to Mr. William Lord Lyall, of Passaic, N. J.

MORSE, Miss Anna Louise, New York State Library School, class of 1897, has been elected librarian of the Reuben McMillan Free Library, of Youngstown, Ohio, succeeding Miss Minnie Gibson, resigned.

WALES, Miss Elizabeth, formerly librarian of the Quincy (Ill.) Public Library, has undertaken the reorganization of the Frost Library, Marlboro, N. H.

WHITTINGHAM, Miss Margaret H., librarian of the Whittingham collection (a part of the Maryland Diocesan Library, at Baltimore) since its foundation 22 years ago, resigned Dec. 1. For many years Miss Whittingham was librarian of the Maryland Diocesan Library, a position now held by Mr. George B. Utley. Much of the fame of this unique library is due to the work of Miss Whittingham, who is a daughter of the founder, the late Bishop Whittingham, of Maryland.

WING, George W., has been appointed state librarian of Vermont, succeeding the late Hiram A. Huse.

WINSER, Miss Nathalie, has been appointed librarian of the newly organized Public Library of Perth Amboy, N. J.

Cataloging and Classification.

BROOKLINE (Mass.) P. L. List of books in the school reference collection, arranged, 1, by subjects (including list for primary grades); 2, by authors. Brookline, Mass., October, 1902. 83 p. D.

A good, practical list; very little fiction is included, save for a few stories illustrating special subjects or historical periods. There are brief descriptive annotations.

DANFORTH, George F., librarian of Indiana University, publishes through the Index Publishing Co., of Bloomington, Ind., a cumulative *Quarterly Bibliography of Books Reviewed in Leading American Periodicals*. The third issue, for October, covers the record from January to September, inclusive, and makes a number of 144 pages. The list is alphabetical by authors, giving publisher and price, and indicating the number and page of one or more periodicals in which reviews have appeared. The review references are made to 29 periodicals. Mr. Danforth's enterprise must to a large degree be a labor of love, but it deserves recognition as an interesting effort to aid librarians in the selection of books. Its special value, of course, is to librarians, in affording a guide to the reviews of such books as they are most likely to pur-

chase, and making it possible to look up the reviews of a given title before adding it to their order list. The publication is issued at \$1.50 per year. Single numbers are 50 c., 75 c., \$1 and \$1.50 respectively for the first, second, third, and fourth issues of the year.

The FITCHBURG (Mass.) P. L. *Bulletin* for November contains a reference list on the subject "Woman in the world."

JOHN CRERAR L., *Chicago*. A list of current periodicals in the reading room. June, 1902. Chicago, 1902. 97 p. O.

In three divisions: Alphabetical list, Classified list, Periodicals in foreign languages. The classified list is especially interesting in its presentation of the extent and variety of the library's collection of periodicals. The list is a compact and careful piece of work.

The NEW YORK P. L. *Bulletin* for November is mainly devoted to a classed list of works on electricity contained in the Astor building, covering 38 pages. It is preceded by an outline of the classification, which is closely subdivided under the five headings General works, Production, Transmission, Applications, Electro- and Magneto- optics.

The NEWARK (N. J.) F. P. L. issues an excellent little "Record of winter reading, 1902-1903" (8 p.), compiled by Miss Clara Hunt, and intended to serve children both as a reading list and a record of books read. The list proper includes only 67 titles, and is followed by blank pages for the record of books read which are not included in the list. The books chosen are varied, and include many children's classics, one purpose of the selection being "to include such books as would give children a background for understanding such literary allusions as 'the heel of Achilles,' 'Sowing the dragon's teeth,' 'King Stork and King Log,' 'The roc's egg,' etc." The list is enclosed in a neat manila pocket, and is to be used in some of the grammar schools as a guide to the pupils' reading during the winter.

The SALEM (Mass.) P. L. *Bulletin* for November devotes its special reading lists to Architecture and Belles lettres, "a few books that are worth reading for their style."

U. S. DEPARTMENT OF AGRICULTURE L. Bulletin 44: Accessions to the Department library, July-September, 1902. Washington, Gov. Print. Office, 1902. 51 p. O.

WISCONSIN. List of books for high school libraries of the state; issued by the state superintendent, L. D. Harvey; compiled, classified, and annotated by the librarian, Anne H. McNeil, November, 1902. Madison, 1902. 489 p. O.

A full annotated classed list followed by

author and title index, on the style of the previous lists issued from this office. The selection of books is fairly good; the annotations are poor—diffuse, trite, and frequently untrustworthy, as witness the remarkable statement regarding Alfred the Great (note to Hughes' biography, p. 13): "The Saxon king is a true representative of the nation in contrast to Cæsar, *so nearly his contemporary!*" The volume is too heavy for convenient use.

Bibliography.

BLANC, Elie. Répertoire bibliographique des auteurs et des ouvrages contemporains de langue française ou latine, suivi d'une table méthodique, d'après l'ordre des connaissances; avec la collaboration de Hugues Vaganey. Paris, Charles Amat, 1902. 500 p. 8°. 6 fr.

BOTANY. U. S. Department of Agriculture L. Bulletin no. 42: Catalogue of publications relating to botany in the library; prepared under the direction of the librarian. Washington, Gov. Print. Office, 1902.

There are 2574 entries, recorded in an author list and a list of serial publications, followed by a subject index.

COOKERY. Ellwanger, George H. The pleasures of the table: an account of gastronomy from ancient days to present times. New York, Doubleday, Page & Co., 1902. 12+477 p. il. O. \$2.50 net.

Contains a 20-page bibliography of selected works on cookery and gastronomy.

COPEPODS. Wilson, Charles Branch. North American parasitic copepods of the family argulidæ, with a bibliography of the group and a systematic review of all known species; from the proceedings of the U. S. National Museum, v. 25, p. 635-742. Smithsonian Institution [no. 1302]. Washington, Gov. Print. Office, 1902. O.

The bibliography, chronologically arranged, includes 67 titles.

DUMAS, Alexandre (père). Davidson, Arthur F. Alexandre Dumas (père): his life and works. Westminster, Archibald Constable & Co., Ltd., 1902. 15+426 p. 8°.

Pages 385-417 are bibliographical. The dramas are arranged in the order of representation, giving the title, description, theatre and date of production and notes. Fiction (novels and stories) is arranged alphabetically, giving also the number of volumes and pages in the Lévy edition, the date of original publication and notes. The historical works, arranged in chronological order, also give

the volumes and pages in the Lévy edition, with the date of first publication and notes. The books of travel and the miscellaneous work (critical, biographical, etc.) are also given with the volumes and pages of the Lévy edition, date of first publication and notes. The historical novels are in the order of sequence of time, with indications of those which form series, giving the date when each story begins, the reign and notes. These several lists are all helpful. There is also a list of French authorities on Dumas.

GREEN, Samuel Abbott. Ten facsimile reproductions relating to New England. Boston, [G. E. Littlefield], 1902. 54 p.+pl. 1. Q.

Similar to Dr. Green's previous volume of facsimiles of Harvard College. Its contents are: Stephen Daye, the earliest printer in this country; Map of Massachusetts, 1637; Benjamin Tompson, the earliest American poet; The names of streets, etc., in Boston, 1708; Blodgett's plan of the battle near Lake George, 1755; The stamp act, 1765; The seat of war, near Boston, 1775; Gen. Rufus Putnam's plan of towns in Worcester county, 1785; Dr. Prescott's plan of Groton, Mass., 1794; State street, Boston, 1801.

IRRIGATION. U. S. Department of Agriculture L. Bulletin 41: list of references to publications relating to irrigation and land drainage; comp. by Ellen A. Hedrick. Washington, Gov. Print. Office, 1902. 181 p. O.

An alphabetical author list, followed by a list of periodicals, and a subject index. There are 1778 items listed.

STATE PUBLICATIONS: a provisional list of the official publications of the several states of the United States from their organization; compiled under the editorial direction of R. R. Bowker. Part 2: North central states: New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Wisconsin. New York, Office of the Publishers' Weekly, 1902. p. 101-285. O.

WRIGHT, William. Catalogue of the Syriac manuscripts preserved in the library of the University of Cambridge; with introd. and appendix by Stanley A. Cook. 2 v. Cambridge, University Press, 1902.

Reviewed in *Athenæum*, Nov. 22, p. 681.

INDEXES.

REVIEW OF REVIEWS (*London*). Index to the periodicals of 1901. London, 1902. 8+263 p. O.

This is the 12th annual issue of this useful index, and contains a preface by W. T. Stead, reviewing the development of periodical literature since the index was begun, in 1890.

“METALLIC *versus* WOODEN FURNISHINGS”

is the title of an attractive little Brochure lately issued by us. We shall be pleased to put it into the hands of Librarians or Trustees interested in the **best** fittings for library buildings.

The growth in these lines has been so rapid that many officials are not yet conversant with their merits, but the question of Complete Furnishings for any modern library will not have been exhausted without an examination of these fixtures.

The very large demand for them for Commercial uses has indicated clearly their adaptability to library requirements ; an indication substantiated by the increasing call for them for this purpose.

Our **Steel Card Index Drawers** are a prominent feature of this line, among whose merits may be mentioned—Durability, Incombustibility, Freedom from Vermin and Cleanliness.

Copies of our “Complete Library Catalogue” or “Library Plans” also sent on application.

Art Metal Construction Co.,

Ten Branch Offices.

JAMESTOWN, N. Y

THE AMERICAN NEWS COMPANY,

BOOK DEPARTMENT.

HAVING successfully conducted an extensive Library Department for the past several years, handling with complete satisfaction the entire library business of some of the largest libraries of the country, we call to your attention the elaborate facilities at our disposal ; not only as to the prompt and complete despatch of all such business, but the great saving to the library in the matter of receiving exceptional discount. A request for estimate on any miscellaneous list of publications will receive the same painstaking care and minute attention that an order involving thousands of dollars would receive. Books published abroad are secured within a very short time after order is placed—our own branch houses in London, Paris, Berlin, as well as two Canadian houses, enable us to accomplish this.

We solicit correspondence, and extend a most cordial invitation to all interested in the Free Public, School, Circulating, or Private Libraries to visit our mammoth establishment, where the thousand upon thousands of miscellaneous volumes are at your full access.

Yours very respectfully,

THE AMERICAN NEWS COMPANY,

39-41 CHAMBERS STREET, NEW YORK.

~~JENAMIN FRANKLIN STEVENS.~~

HENRY JOHN BROWN.

B. F. STEVENS & BROWN,

American Library and Literary Agents,

4 TRAFALGAR SQUARE, CHARING CROSS, LONDON.

THIS Agency was established in 1864 for supplying American Public Libraries, Institutions, and Book Collectors, with English and Continental Books, Manuscripts, Drawings, Philosophical Apparatus, etc., at the lowest London prices.

Special attention is paid to the selection and purchase of rare old books and manuscripts. Auction sales are carefully watched and good knowledge kept of the stocks of the old Booksellers of Europe.

Lists of Desiderata have the best attention and Librarians are respectfully requested to test the value of the Agency by sending trial orders or by submitting lists for Estimates for goods to be delivered, either free in London or New York, as desired.

Auction Catalogues when printed in advance and Catalogues issued by Publishers and Second-hand Booksellers are mailed to Customers when desired.

Large shipments are sent by cheapest and quickest route, or as ordered. Small shipments are made weekly through our New York Agency, at a minimum of expense and trouble to purchasers, or single books are sent by mail on receipt of order.

Special attention is given to Bindings in all styles.

Periodicals are supplied either direct by mail from London or by mail from New York Agency at lowest rates for prompt and efficient service. Send for Lists.

Payments may be made either direct to London or in U. S. Currency through our New York Agency.

Subscriptions to Foreign Periodicals.

LIBRARIANS and others are requested to note the following prices of Annual Subscriptions to English Periodicals, which include postage from our New York Agency. The service will be found most punctual and reliable.

Academy, \$3.75; *Analyst*, \$2.56; *Annals of Botany*, \$7.67; *Annals and Magazine of Natural History*, \$8.75; *Antiquary*, \$1.70; *Architect*, \$5.25; *Army and Navy Gazette*, \$7.12; *Art Journal*, \$4.75; *The Artist*, \$3.25; *Athenaeum*, \$3.70; *Badminton Magazine*, \$3.40; *Banker's Magazine*, \$5.48; *Black and White* (incl. For **LIBRARY CATALOGUING** and **INDEXING**

The Smith Premier Typewriter

*With CARD PLATEN
has been found invaluable*

MORE than 50% of the large libraries, using the typewriter for indexing, employ the Smith Premier. It does the work required in the most satisfactory manner and without any difficulty.

Used exclusively in such libraries as the Carnegie at Pittsburgh, the U. S. Patent Office Scientific, at Washington, and many others. Send for Free Catalogue.

THE SMITH PREMIER TYPEWRITER CO., Syracuse, N. Y., U. S. A.

OUR BOOK DEPARTMENT carries a larger and more general stock of the publications of all American publishers than any other house in the United States. Not only do we have the regular publications of all the prominent publishers of miscellaneous, technical, scientific, and school and college textbooks, but also thousands of publications of the lesser known publishers and thousands of volumes for which there is only a limited demand and which are not carried by the general bookseller.

We will gladly quote our prices to intending buyers, and invite librarians and book committees to call upon us and avail themselves of the opportunity to select from our large stock, and of the facilities and conveniences of our library department.

A. C. McCLURG & CO.,

215-221 WABASH AVENUE,
CHICAGO.

STATE PUBLICATIONS

A Provisional List of the Official Publications of the
Several States of the United States from
their Organization

COMPILED UNDER THE EDITORIAL DIRECTION OF

R. R. BOWKER

PART I: NEW ENGLAND STATES—Maine, New Hampshire, Vermont,
Massachusetts, Rhode Island, Connecticut

This first part of the bibliography of State Publications includes preface giving a sketch of State Bibliography, and 99 pages covering the issues of the New England States from their organization, with blank space for extensions.

Now Ready:

PART II: NORTH CENTRAL STATES—New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Wisconsin.

Part II, after much unavoidable delay, is now complete. It includes 150 pages of document bibliography prepared with the co-operation of State and other librarians in the States covered, and, like Part I, blank space for future additions.

The complete work, exceeding 300 pages, will be furnished at \$5, and the first two parts will be sent, only to those subscribing for the whole, on the receipt of subscription and \$2 remittance.

 *But 500 copies have been printed and there are no plates.*

The attention of State libraries, of the central public libraries, and of foreign libraries is especially called to this publication, but it is also important to that larger number of libraries which cannot undertake to collect the State publications even of their own State, and yet should be able to inform students and inquirers as to what is to be found in the publications of their own State and of other States. What New York and Massachusetts are doing in forestry, for instance, is of importance in all States and to foreign students of the subject.

LIBRARY AGENTS.

MESSRS. PUTNAM have peculiar facilities for handling all library business intelligently and to the best advantage of their customers.

Their Branch House in London (through which they receive English orders for American books) enables them to supply, promptly, English books, without the commission usually paid by American dealers.

Their extensive miscellaneous and retail business makes it practicable to buy all books at the lowest prices, to carry a large stock of standard books in every department of literature, and to keep in touch with the current publications of the day. Their business experience covers more than half a century.

CHARLES SCRIBNER'S SONS,

153-157 Fifth Avenue, New York

Librarians and others will do well to communicate with us before placing their orders.

The latest publications of all the leading American and English publishers are kept in stock, thereby enabling us to fill orders with utmost despatch.

Special attention is asked to our facilities for importing books free of duty.

Correspondence solicited. Send for catalogues and specimen copy of **THE BOOK BUYER**, a monthly magazine devoted to books, authors, and literary affairs.

HENRY MALKAN

Library Department

ON the Eve of the Holidays, Library Business is popularly supposed to be practically at a standstill, but we are very happy to be able to state that quite the contrary is actually the case so far as we are concerned. The reason for this state of affairs is not difficult to discern, as librarians know a bargain about as soon as any class of people, and we flatter ourselves that it would be a librarian of very poor judgment who could not tell by a reading of our advertisements, that we are selling Books for less money than they have ever been sold heretofore. Low Prices, Prompt Service and Generous Treatment make the keystone of the success of the Library Department, which we are pleased to acknowledge is our special pride. Our Library Trade is increasing at a most wonderful rate, we having sold more books to libraries in the past month than ever before in the same period. We still have some of the following sets on hand:

Encyclopedia Britannica. Ninth Edinburgh Edition (Scribner). 25 vols., \$150; our price \$65.00

Farrow's Military Encyclopedia. 3 vols., cloth, \$30.00; our price, \$20.00

International Cyclopedia. 18 vols., cloth, \$54.00; our price \$36.00

International Library of Famous Literature. With introduction by Donald G. Mitchell and Andrew Lang. 20 vols., half morocco, \$60.00; our price \$40.00

Johnson's Universal Cyclopedia. Illustrated with maps, plans and engravings. Revised edition, 8 vols., half morocco, \$56.00; our price \$32.50

Lydekker (Richard). New Natural History. 6 vols., gilt top, half leather, \$32.00; our price \$22.50

Universal Encyclopedia. 12 vols., cloth, \$54.00; our price . . . \$45.00

We have a number of sets bound in roan and half morocco which we will quote at low prices. Correspondence invited.

Warner's Library of the World's Best Literature. 30 vols., half morocco, \$84.00; our price \$50.00

The Universal Anthology. Edited by Richard Garnett and others. 33 vols., cloth, \$105.50; our price \$75.00

The World's Great Books. 40 vols. Library leather, \$200.00; our price \$100.00

Larned's History for Ready Reference. Latest Edition. 6 vols. Library leather, net \$36.00; our price \$27.00
